LifePoint Health, Inc., a Delaware corporation, acting through its subsidiaries, owns or leases and operates community hospitals, regional health systems, physician practices, outpatient centers, and post-acute facilities. At December 31, 2020, on a consolidated basis, LifePoint Health, Inc. operated 88 hospital campuses in 29 states throughout the United States ("U.S.").

Unless otherwise indicated or the context otherwise requires, references throughout these notes to the consolidated financial statements to the "Company" or "LifePoint" refer to LifePoint Health, Inc., and each of its consolidated subsidiaries after giving effect to the LifePoint/RCCH Merger (defined below) and (ii) "RCCH" refer to RegionalCare Hospital Partners Holdings, Inc. and each of its consolidated subsidiaries before giving effect to the LifePoint/RCCH Merger. References in this Report to the "Sponsor" refer to certain funds that are affiliates of the Company (the "Apollo Funds") that are ultimately controlled and/or managed by Apollo Management VIII, L.P. ("Apollo Management" and, when acting on behalf of the Apollo Funds, "Apollo"), which is an affiliate of Apollo Global Management, Inc.

Additionally, references throughout these notes to the consolidated financial statements to the "LifePoint/RCCH Merger" refer to the merger, which was effective on November 16, 2018, of Legend Merger Sub, Inc., a Delaware corporation and wholly owned subsidiary of RCCH ("Legend Merger Sub"), with and into LifePoint Health, Inc., a Delaware corporation ("Legacy LifePoint"), with Legacy LifePoint surviving the LifePoint/RCCH Merger as a subsidiary of RCCH. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint changed its name from "LifePoint Health, Inc." to "Legacy LifePoint Health, Inc." and, immediately following the effective time of the LifePoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners, Inc." to "LifePoint Health, Inc."

Principles of Consolidation

The accompanying consolidated financial statements include the accounts of the Company and all subsidiaries and entities controlled by the Company through majority voting control and variable interest entities which the Company controls. All significant intercompany accounts and transactions within the Company have been eliminated in consolidation. Noncontrolling interests in non-wholly-owned consolidated subsidiaries of the Company are presented as noncontrolling interests and redeemable noncontrolling interests and distinguish between the interests of the Company and the interests of the noncontrolling owners. Net income attributable to noncontrolling interests and redeemable noncontrolling interests represents the amounts attributable to the noncontrolling interests for each of the applicable periods presented. Investments in entities the Company does not control but does have a substantial ownership interest and can exercise significant influence are accounted for using the equity method.

The Company's financial statements have been presented on the basis of push down accounting in accordance with Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") No. 805-50-S99. Under the push down basis of accounting, certain transactions incurred by the parent company which would otherwise be accounted for in the accounts of the parent are "pushed down" and recorded on the financial statements of the subsidiary. Accordingly, certain items resulting from the acquisition by Apollo have been recorded on the financial statements of the Company.

Use of Estimates

The preparation of financial statements in conformity with U.S. generally accepted accounting principles ("GAAP") requires management to make estimates and assumptions that affect the amounts reported in the Company's accompanying consolidated financial statements and notes to the consolidated financial statements. Actual results could differ from those estimates.

Revenue Recognition and Accounts Receivable

Overview

The Company recognizes revenues in the period in which performance obligations are satisfied. Generally, the Company bills patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. The Company's ability to collect outstanding receivables is critical to its results of operations and cash flows. Amounts the Company receives for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, health maintenance organizations ("HMOs"), preferred provider organizations ("PPOs") and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in the Company's financial statements are recorded at the net consideration to which the Company expects to be entitled to receive in exchange for providing patient care.

The majority of the Company's performance obligations are satisfied over time for the delivery of patient care in both outpatient and inpatient settings. Revenue for performance obligations satisfied over time is recognized based on actual charges incurred in relation to total expected charges for services anticipated to be provided. The Company believes that this method provides a faithful depiction of the transfer of services over the term of the performance obligation based on the remaining services needed to satisfy the obligation. Generally, unsatisfied or partially unsatisfied performance obligations at the end of the reporting period are related to patients admitted to the Company's hospitals that have not yet been discharged. The performance obligations for these patients are typically satisfied when the patients are discharged, which generally occurs within a matter of days of admission. Patients are generally billed when discharged, though they may be billed on an interim basis for longer stays. Accordingly, because all of the Company's performance obligations are part of a contract that is expected to have a duration of one year or less, the Company has elected to apply the exemption provided by ASC 606, "Revenue from Contracts with Customers" ("ASC 606") to not disclose the aggregate amount of the transaction price allocated to performance obligations that are unsatisfied or partially unsatisfied as of period end.

Subsequent adjustments that are determined to be the result of an adverse change in the patient's or the payer's ability to pay are recognized as bad debt expense. With the adoption of ASC 606, bad debt expense is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations, instead of separately as a deduction to arrive at revenue. Bad debt expense for the years ended December 31, 2020, 2019 and 2018 was not material for the Company.

Change in Accounting Estimate

During the year ended December 31, 2018, the Company recorded a decrease to revenues of $17.0 million as a result of a change in its accounting estimate of the collectability of accounts receivable. During the year ended December 31, 2018, the Company identified additional information which indicated that its current collection estimates might be different from its historical collection estimates. Management utilized this new information to further refine its estimation procedures to more precisely estimate the collectability of accounts receivable. The Company's change in its estimation procedures of the collectability of its accounts receivable is considered a change in accounting estimate in accordance with ASC 250, "Accounting Changes and Error Corrections."

Contractual Discounts

The Company derives a significant portion of its revenues from Medicare, Medicaid and other payers that receive discounts from the Company's established billing rates. The Company must estimate the total amount of these discounts to prepare its financial statements. The Medicare and Medicaid regulations and various managed care contracts under which these discounts must be calculated are complex and are subject to interpretation and adjustment. The Company estimates contractual discounts on a payer-specific basis given its interpretation of the applicable regulations or contract terms. These interpretations sometimes result in payments that differ from the Company's estimates. Additionally, updated regulations and contract renegotiations occur frequently, necessitating regular review and assessment of the estimation process by management. Subsequent changes in estimates for contractual discounts are reflected as an adjustment to revenues in the period of the change. Medicare, Medicaid and other discounted payer accounts receivables are written off after they have been final settled with the payer.

Cost Report Settlements

Cost report settlements under reimbursement agreements with Medicare, Medicaid and certain other payers for retroactive adjustments due to audits, reviews or investigations are considered variable consideration and are included in the determination of the estimated transaction price for providing patient care. These settlements are estimated based on the payment terms of the reimbursement agreement with the payer, correspondence from the payer, and the Company's historical experience. Estimated settlements are adjusted in future periods as final settlements are determined. There is a reasonable possibility that recorded estimates will change by a material amount in the near term. For the years ended December 31, 2020, 2019 and 2018, the net adjustments to estimated cost report settlements and other reimbursement adjustments resulted in an increase to revenues of $33.5 million, an increase to revenues of $17.2 million, and a decrease to revenues of $4.0 million, respectively.

The net cost report settlements due from the Company at December 31, 2020 and 2019 were $2.0 million and $6.6 million, respectively, and are included under the caption "Other current liabilities" on the accompanying consolidated balance sheets. The Company's management believes that adequate provisions have been made for adjustments that may result from final determination of amounts earned under these programs consistent with the constraints that are required by ASC 606.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. The Company evaluates these patients, after the patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. The Company estimates the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that the Company utilizes include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that the Company expects to collect. Because the Company provides care to patients regardless of their ability to pay, the Company has determined that the differences between the amounts it bills based on gross or discounted charges and the amounts the Company expects to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and the Company accounts for this variable consideration in accordance with the provisions of ASC 606. Self-pay accounts receivable are written off after collection efforts have been followed in accordance with the Company's policies.

Charity Care

The Company provides care without charge to certain patients that qualify under the local charity care policy of each of its hospitals. For the years ended December 31, 2020, 2019 and 2018, the Company estimates that its costs of care provided under its charity care programs approximated $26.8 million, $34.1 million and $16.8 million, respectively. The Company does not report a charity care patient's charges in revenues or in the provision for doubtful accounts as it is the Company's policy not to pursue collection of amounts related to these patients, and therefore contracts with these patients do not exist.

The Company's management estimates its costs of care provided under its charity care programs utilizing a calculated ratio of costs to gross charges multiplied by the Company's gross charity care charges provided. The Company's gross charity care charges include only services provided to patients who are unable to pay and qualify under the Company's local charity care policies. To the extent the Company receives reimbursement through the various governmental assistance programs in which it participates to subsidize its care of indigent patients, the Company does not include these patients' charges in its cost of care provided under its charity care program.

Financing Component

The Company has elected to apply the practical expedient permitted under ASC 606 and does not adjust the estimated amount of consideration from patients and third-party payers for the effects of a significant financing component due to the Company's expectation that the period between the time the service is provided to a patient and the time that the patient or a third-party payer pays for that service will be one year or less.

Rental Income

The Company leases certain real estate assets it owns to unrelated third parties, primarily medical office buildings to non-employed physicians. The Company recognizes rental income for these operating lease arrangements in which the Company is the lessor on a straight-line basis over the lease term in accordance with ASC 842, "Leases" ("ASC 842").

Concentration of Revenues

The Company's revenues by payer and approximate percentages of revenues were as follows for the years ended December 31, 2020, 2019 and 2018 (dollars in millions):

	2020		2019		2018	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,134.0	38.6 %	$ 3,338.1	38.1 %	$ 1,105.3	39.8 %
Medicaid	1,392.4	17.1	1,495.3	17.1	486.3	17.5
HMOs, PPOs and other private insurers	3,381.9	41.6	3,698.6	42.3	1,113.8	40.1
Self-pay	54.5	0.7	59.2	0.7	17.2	0.6
Other	142.7	1.8	143.6	1.6	49.4	1.8
Revenue from contracts with customers	8,105.5	99.8	8,734.8	99.8	2,772.0	99.8
Rental income	16.4	0.2	18.0	0.2	6.1	0.2
Revenues	$ 8,121.9	100.0 %	$ 8,752.8	100.0 %	$ 2,778.1	100.0 %

During the years ended December 31, 2020, 2019 and 2018, approximately 55.7%, 55.2% and 57.3%, respectively, of the Company's revenues related to patients participating in the Medicare and Medicaid programs, collectively. The Company's management recognizes that revenues and receivables from government agencies are significant to the Company's operations, but it does not believe that there are significant credit risks associated with these government agencies.

Any changes in the current demographic, economic, competitive or regulatory conditions, or to Medicaid programs could have an adverse effect on the Company's revenues or results of operations. The Company's management does not believe that there are any other significant concentrations of revenues from any particular payer or geographic area that would subject the Company to any significant credit risks in the collection of its accounts receivable.

The Company's revenues by primary service type and approximate percentages of revenues were as follows for the years ended December 31, 2020, 2019 and 2018 (dollars in millions):

	2020		2019		2018	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Inpatient services	$ 3,379.0	41.6 %	$ 3,524.0	40.3 %	$ 1,188.3	42.8 %
Outpatient services	4,583.8	56.4	5,067.2	57.9	1,534.3	55.2
Non-patient (a)	159.1	2.0	161.6	1.8	55.5	2.0
Revenues	$ 8,121.9	100.0 %	$ 8,752.8	100.0 %	$ 2,778.1	100.0 %

(a) Represents revenues from ancillary goods, services and rental income.

General and Administrative Costs

The majority of the Company's operating expenses are "cost of revenue" items. Operating costs that could be classified as "general and administrative" by the Company would include its corporate overhead costs, excluding depreciation and amortization, debt transaction costs and merger, integration and other transaction-related costs, which were $175.9 million, $179.5 million and $72.4 million for the years ended December 31, 2020, 2019 and 2018, respectively.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash on hand and short-term investments with original maturities of three months or less. The Company places its cash in financial institutions that are federally insured in limited amounts.

Inventories

Inventories of supplies are stated at the lower of cost (first-in, first-out) or market and consist of purchased items. Inventories acquired in connection with business combinations are recorded at fair value which approximates replacement cost. Inventory items are primarily operating supplies used in the direct or indirect treatment of patients.

Investments

The Company accounts for its investments in entities in which the Company exhibits significant influence, but not control, under the equity method of accounting in accordance with ASC 323, "Investments – Equity Method and Joint Ventures" ("ASC 323"). The Company does not consolidate its equity method investments but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses during the period. Refer to Note 9 for further discussion of the Company's equity method investments.

Property and Equipment

Purchases of property and equipment are recorded at cost. Property and equipment acquired in connection with business combinations are recorded at estimated fair value in accordance with the acquisition method of accounting as prescribed in ASC 805, "Business Combinations" ("ASC 805"). Routine maintenance and repairs are charged to expense as incurred. Expenditures that increase capacities or extend useful lives are capitalized. Fully depreciated assets are retained in property and equipment accounts until they are disposed. The Company capitalizes interest on funds used to pay for the construction of major capital additions and such interest is included in the cost of each capital addition.

Depreciation is computed by applying the straight-line method over the estimated useful lives of buildings, improvements and equipment. Assets under capital and finance leases are generally amortized using the straight-line method over the shorter of the estimated useful life of the assets or life of the lease term, excluding any lease renewals, unless the lease renewals are reasonably assured. Capitalized internal-use software costs are amortized over their expected useful life, which is generally four years. Useful lives are as follows:

	Years		
Buildings and improvements (including those under finance leases)	3	-	40
Equipment	2	-	15
Equipment under finance leases	3	-	6

Depreciation expense (including amortization of finance lease obligations) totaled $376.1 million, $374.7 million and $128.5 million for the years ended December 31, 2020, 2019 and 2018, respectively.

Whenever events or changes in circumstances indicate that the carrying values of certain long-lived assets may be impaired, the Company projects the undiscounted cash flows expected to be generated by these assets. If the projections indicate that the reported amounts are not expected to be recovered, such amounts are reduced to their estimated fair value based on a quoted market price, if available, or an estimate based on valuation techniques available in the circumstances.

There were no long-lived asset impairments recorded for the years ended December 31, 2020 and 2019. For the year ended December 31, 2018, the Company recognized an impairment charge of $24.5 million to reduce the carrying amounts of certain long-lived assets at one of its facilities to their estimated fair values, which is included under the caption "Impairments of goodwill and long-lived assets" in the accompanying consolidated statements of operations for the year ended December 31, 2018.

Goodwill and Intangible Assets

The Company accounts for its acquisitions in accordance with ASC 805 using the acquisition method of accounting. Goodwill represents the excess of the cost of an acquired entity over the net amounts assigned to assets acquired and liabilities assumed. In accordance with ASC 350, Intangibles – Goodwill and Other ("ASC 350"), goodwill and intangible assets with indefinite lives are reviewed by the Company annually for impairment on October 1. Prior to the LifePoint/RCCH Merger, the Company historically determined that each of its hospitals represented a reporting unit in accordance with ASC 280, "Segment Reporting" ("ASC 280") and ASC 350. Due to the significance of the LifePoint/RCCH Merger and its impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280 and ASC 350 during 2019 and determined that the consolidated business comprises a single reporting unit for goodwill impairment testing purposes. For the annual impairment evaluation, the Company determines fair value using a discounted cash flow ("DCF") analysis and consideration of certain market inputs including those of guideline public companies. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates, profitability and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing the Company's assumptions. The cash flows employed in the DCF analysis are based on the Company's most recent financial budgets and business plans and, when applicable, various growth rates and profitability for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the reporting unit.

The Company's intangible assets primarily relate to contract-based physician minimum revenue guarantees; certificates of need and certificates of need exemptions; and licenses, provider numbers, accreditations and other. Contract-based physician minimum revenue guarantees are amortized over the terms of the agreements. The certificates of need, certificates of need exemptions, licenses, provider numbers, accreditations and other have been determined to have indefinite lives and, accordingly, are not amortized. Refer to Note 5 for further discussion of the Company's goodwill and intangible assets.

Income Taxes

The Company accounts for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in the income tax provision in the period that includes the enactment date. The Company assesses the likelihood that deferred tax assets will be recovered from future taxable income. To the extent the Company believes that recovery is not likely, a valuation allowance is established. The establishment or increase in a valuation allowance is included as an expense within the provision for income taxes in the consolidated statements of operations. The Company classifies interest and penalties related to its tax positions as a component of income tax expense. Refer to Note 6 for further discussion of the Company's accounting for income taxes.

Reserves for Self-Insurance Claims

Given the nature of the Company's operating environment, the Company is subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, the Company maintains insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("SIR") and deductible levels. At December 31, 2020, the Company's SIR for professional liability claims is $15.0 million per claim at the majority of its facilities. Additionally, the Company participates in state-specific professional liability programs in Colorado, Indiana, Kansas, New Mexico, Pennsylvania and Wisconsin. At December 31, 2020, the Company's deductible for workers' compensation claims was $1.0 million per claim in all states in which it operates except for Montana, Ohio, Oklahoma, Washington and Wyoming. The Company participates in state-specific programs for its workers' compensation claims arising in these states. The Company's SIR and deductible levels are evaluated annually as a part of the Company's insurance program's renewal process.

The Company's reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. The Company's expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of the Company's self-insured retention and deductible levels; and interest expense related to the discounted portion of the liability. The Company's expense for self-insurance and deductible claims was approximately $85.0 million, $75.6 million and $20.7 million for the years ended December 31, 2020, 2019 and 2018, respectively.

The Company's reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. These reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. The Company's reserves for self-insured claims have been discounted to their present value using a discount rate of 1.7% at December 31, 2020, 1.9% at December 31, 2019, and 1.8% at December 31, 2018. The Company's management selects a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Accordingly, the Company's reserves for self-insured claims, comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period, include both a current and long-term component. The current portion of the Company's reserves for self-insured claims is included under the caption "Other current liabilities" and the long-term portion is included under the caption "Other long-term liabilities" in the accompanying consolidated balance sheets.

The following table provides information regarding the classification of the Company's reserves for self-insured claims at December 31, 2020 and 2019 (in millions):

	2020	2019
Current portion	$ 82.3	$ 64.5
Long-term portion	205.0	196.5
	$ 287.3	$ 261.0

The following table presents the changes in our reserves for self-insured claims for the years ended December 31, 2020 and 2019 (in millions):

	2020	2019
Reserve at the beginning of the period	$ 261.0	$ 264.7
Increase for the provision of current year claims	88.3	69.2
Increase (decrease) for the provision of prior year claims	(4.4)	6.7
Payments related to current year claims	(5.9)	(5.2)
Payments related to prior year claims	(48.8)	(75.8)
Provision for the change in discount rate	1.1	(0.3)
Non-cash change in reserve for claims in excess of SIR levels	(4.0)	1.7
Reserve at the end of the period	$ 287.3	$ 261.0

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of the Company's quarterly and semi-annual actuarial calculations resulted in changes to its reserves for self-insured claims for prior years. As a result, the Company's related self-insured claims expense decreased by $4.4 million for the year ended December 31, 2020, increased by $6.7 million for the year ended December 31, 2019 and decreased by $3.9 million for the year ended December 31, 2018.

Point of Life Indemnity, Ltd.

The Company operates, with approval from the Cayman Islands Monetary Authority, a captive insurance company under the name Point of Life Indemnity, Ltd. Through this wholly-owned subsidiary of the Company, the captive insurance company issues malpractice indemnity policies to certain subsidiaries employing physicians and advanced practice providers and contracting with physicians. Fees charged to these subsidiaries are eliminated in consolidation. Reserves for the Company's estimate of the related outstanding claims, including incurred but not reported losses, are actuarially determined and are included as a component of the Company's reserves for professional liability self-insurance claims.

Self-Insured Medical Benefits

The Company is self-insured for substantially all of the medical expenses and benefits of its employees. The reserve for medical benefits primarily reflects the current estimate of incurred but not reported losses based upon an annual actuarial calculation as of the balance sheet date. The undiscounted reserve for self-insured medical benefits was $37.7 million and $53.8 million at December 31, 2020 and 2019, respectively, and is included in the Company's accompanying consolidated balance sheets under the caption "Other current liabilities".

Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to the Company. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues, and expenses at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes as a separate component of earnings that portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company. Refer to Note 10 for further discussion of the Company's noncontrolling interests and redeemable noncontrolling interests.

Variable Interest Entities

The Company's consolidated financial statements at December 31, 2020 include eight facilities that qualify as a variable interest entity in which the Company is the primary beneficiary under the provisions of ASC 810, "Consolidation," and in which the Company owns a controlling economic interest.

Stock-Based Compensation

The Company's indirect parent, DSB Parent L.P., a Delaware limited partnership ("DSB Parent"), has issued profits units (the "Units") to certain employees, directors and consultants under the terms and conditions of the Amended and Restated Limited Partnership Agreement of DSB Parent dated of December 3, 2015 (the "DSB Parent Partnership Agreement") and forms of award agreements. The Company accounted for these stock-based awards in accordance with the provisions of ASC 718, "Compensation – Stock Compensation" ("ASC 718"). In accordance with ASC 718, the Company recognized compensation expense based on the estimated grant date fair value of each stock-based award. The Company recognizes forfeitures of Units as they occur. Refer to Note 13 for further discussion of the Company's accounting for the Units.

Defined Benefit Pension Plans

In connection with the LifePoint/RCCH Merger, the Company acquired certain assets and assumed certain liabilities associated with two separate defined benefit pension plans covering certain employees at two of Legacy LifePoint's facilities. The Company accounts for its defined benefit pension plans in accordance with ASC 715, "Compensation – Defined Benefit Plans", ("ASC 715"). In accordance with ASC 715, the Company recognizes the unfunded liability of its defined benefit pension plans in the Company's consolidated balance sheets and unrecognized gains (losses) and prior service credits (costs) as changes in other comprehensive income (loss). The measurement date of the defined benefit pension plans' assets and liabilities coincides with the Company's year-end. The Company's pension benefit obligations are measured using actuarial calculations that incorporate discount rates, rate of compensation increases, when applicable, expected long-term returns on plan assets and consider expected age of retirement and mortality. Refer to Note 12 for further discussion of the Company's defined benefit pension plans.

Defined Contribution Plans

The Company maintains two separate defined contribution retirement plans covering a majority of the Company's employees. These defined contribution retirement plans contain discretionary matching contribution formulas and definite non-elective contribution formulas for employees at certain facilities. Refer to Note 12 for further discussion of the Company's defined contribution plans.

Reclassifications

Certain reclassifications have been made to the prior years to conform to current year presentation. These reclassifications had no effect on results of operations, financial position or cash flows as previously reported.

Adoption of Recently Issued Accounting Standards

Accounting Standards Update ("ASU") 2016-02, "Leases"

In February 2016, the FASB issued ASU 2016-02, "Leases" (Topic 842) along with subsequent amendments, updates and an extension of the effective date (collectively, "ASU 2016-02"). ASU 2016-02 requires the rights and obligations arising from lease contracts, including existing and new arrangements, to be recognized as assets and liabilities on the balance sheet. As permitted, the Company adopted ASU 2016-02 early, during the fourth quarter of 2020, with an effective transition date of January 1, 2019 and retrospective application. As a result, the accompanying consolidated financial statements as of and for the year ended December 31, 2019 have been restated in accordance with the adoption of ASU 2016-02. The Company applied certain available practical expedients to facilitate the adoption of ASU 2016-02, including the package of practical expedients to not reassess whether a contract is or contains a lease, the lease classification and the initial direct costs. In conjunction with the adoption of ASU 2016-02, the Company has implemented a new information technology application as well as new processes, policies, procedures and controls. Refer to Note 8 for additional information regarding the impact of the adoption of ASU 2016-02.

Note 2. CARES Act

Overview

On March 27, 2020, the Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act") was signed into law. The CARES Act is intended to provide over $2 trillion in stimulus funding for the U.S. economy. Among other things, the CARES Act contains a number of provisions that are intended to assist healthcare providers as they combat the effects of the COVID-19 pandemic. Those provisions include, among others:

- the temporary suspension of Medicare sequestration from March 1, 2020, to December 31, 2020;
- the delay of the planned reductions to the Medicaid disproportionate share hospital ("DSH") payments program until December 1, 2020;
- an appropriation of $180 million to Health Resources and Services Administration's Federal Office of Rural Health Policy that will be awarded to small rural hospitals by the states through the Small Rural Hospital Improvement Program;
- an appropriation of $250 million to the Hospital Preparedness Program; and
- an appropriation of $100 billion to the Public Health and Social Services Emergency Fund (the "Emergency Fund") for a new program to reimburse, through grants or other mechanisms, hospitals, healthcare providers and other approved entities for COVID-19-related expenses or lost revenues.

The Paycheck Protection Program and Health Care Enhancement Act was enacted on April 24, 2020, which, among other things, provides an additional allocation of $75 billion to the Emergency Fund and an allocation of $25 billion for COVID-19 testing.

On December 21, 2020, Congress adopted the Consolidated Appropriations Act, 2021 ("CCA"), which provides an additional $900 billion in COVID-19 relief, including an additional $3 billion allocation to the Emergency Fund. In addition, the CCA also, among other things, further extends the temporary suspension of Medicare sequestration through March 31, 2021, delays the planned reductions to the Medicaid DSH payments program through FFY 2023, adds additional reductions to the Medicaid DSH payments program in FFYs 2026 and 2027, provides for a 3.75% increase in PFS rates in CY 2021 and allocates $30 billion for the purchase and administration of COVID-19 vaccines and related therapeutics.

Direct Grant Aid Payments

With respect to payments being made to providers from the Emergency Fund, beginning April 10, 2020, the Emergency Fund distributed $50 billion to hospitals based on their 2018 net patient revenue. The remaining $50 billion originally appropriated to the Emergency Fund is being distributed to providers in areas particularly impacted by the COVID-19 outbreak, rural providers (including hospitals and rural health clinics), skilled nursing facilities, providers of services with lower shares of Medicare reimbursement or who predominantly serve Medicaid beneficiaries, and providers requesting reimbursement for the treatment of uninsured patients.

Payments made by the Emergency Fund to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers are required to file attestations acknowledging receipt of the payments and must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients and not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse. The Department of Health and Human Services ("HHS") has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the Office of Inspector General ("OIG"), will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

The Company has accounted for the direct grant aid payments received as a government grant related to income in a manner consistent with International Accounting Standards 20, "Accounting for Government Grants and Disclosure of Government Assistance" ("IAS 20"). In accordance with IAS 20, government grants are recognized either as other income or a reduction to a related expense when there is reasonable assurance that the grant will be received, and the entity will comply with any conditions attached to the grant. For the year ended December 31, 2020, the Company recognized $646.3 million of direct grant aid payments as other income under the caption "Government stimulus income" in the accompanying consolidated statement of operations.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, HHS temporarily expanded the Centers for Medicare and Medicaid Services ("CMS") Accelerated and Advance Payment Program to a broad group of Medicare Part A and Part B providers. Under the expanded Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period. The repayment of these accelerated/advance payments does not begin until one year after the date of the provider's or supplier's receipt of the payment, which means repayment of these amounts will not commence until the second quarter of 2021. Once the repayment period starts, the amounts previously advanced to the provider or supplier will automatically be recouped from the provider's or supplier's new Medicare claims at a rate of 25% for a period of 11 months. After the end of that 11-month period, the amounts previously advanced to the provider or supplier will be automatically recouped from the provider's or supplier's new Medicare claims at a rate of 50% for a period of six months. At the end of the 17-month recoupment period, a letter requesting repayment of any remaining balance will be issued, and the provider or supplier will have 30 days from the date of the letter to repay the balance in full. If the remaining balance is not repaid after 30 days, the unpaid balance will accrue interest at a rate of 4% from the date of the demand letter until the balance has been repaid in full.

Through December 31, 2020, the Company received a total of $991.0 million of Medicare advance payments under the Accelerated and Advance Payment Program, of which $369.8 million and $621.2 million are included under the captions "Current portion of Medicare advance payments" and "Long-term portion of Medicare advance payments", respectively, in the accompanying consolidated balance sheet at December 31, 2020. The Company does not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program.

Note 3. Merger, Acquisitions, Divestitures and Joint Ventures

LifePoint/RCCH Merger

Summary

On July 22, 2018, RCCH, Legend Merger Sub and Legacy LifePoint entered into an agreement and plan of merger, pursuant to which, effective November 16, 2018, Legend Merger Sub merged with and into Legacy LifePoint, with Legacy LifePoint surviving the merger as a wholly-owned subsidiary of RCCH. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint changed its name from "LifePoint Health, Inc." to "Legacy LifePoint Health, Inc." and, immediately following the effective time of the LifePoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners Holdings, Inc." to "LifePoint Health, Inc."

The Company accounted for the LifePoint/RCCH Merger in accordance with ASC 805 under the acquisition method of accounting. The results of operations of Legacy LifePoint are included in the Company's results of operations beginning on November 17, 2018. Revenues from the operations acquired in the LifePoint/RCCH Merger included in the Company's consolidated statements of operations were $754.9 million for the year ended December 31, 2018. Income before income taxes from the operations acquired in the LifePoint/RCCH Merger was $50.9 million for the year ended December 31, 2018.

For the years ended December 31, 2019 and 2018, the Company recognized merger and integration-related costs of $47.1 and $134.7 million, respectively, primarily related to legal and transaction advisory services as well as employee severance and retention and other integration-related expenses in connection with the LifePoint/RCCH Merger. Included in the 2018 merger-related costs is a $55.0 million transaction fee paid by the Company to an affiliate of its Sponsor upon the closing of the LifePoint/RCCH Merger.

Equity Contribution

In connection with the LifePoint/RCCH Merger, the Apollo Funds, together with certain other co-investors investing through a co-investment vehicle controlled by the Company's Sponsor or its affiliates, indirectly contributed $1,000.0 million of newly invested capital to DSB Parent, which is the Company's indirect parent and is owned by the Apollo Funds, such co-investment vehicle and certain current or former directors, members of management, employees and consultants of the Company, and the $1,000.0 million of newly invested capital was further contributed to the Company to be used to partially fund the LifePoint/RCCH Merger.

Financing Transactions

Concurrently with the closing of the LifePoint/RCCH Merger, the Company (1) issued $1,425.0 million principal amount of 9.750% Senior Notes due 2026 (the "9.75% Unsecured Notes"), (2) entered into a new senior secured asset-based revolving credit facility (the "ABL Facility") in an aggregate principal amount of $800.0 million with a maturity of five years, (3) terminated its existing senior secured asset-based revolving credit facility, entered into on April 29, 2016 (the "Prior ABL Facility"), (4) entered into a senior secured term loan credit facility (the "Term Loan Facility") in an aggregate principal amount of $3,550.0 million with a maturity of seven years, and (4) repaid in full its $150.0 million term loan facility, entered into on April 25, 2018 (the "Prior Term Facility").

Acquisitions

Lourdes Health ("Lourdes")

At the close of business on August 31, 2018, the Company acquired Lourdes for $21.3 million, of which $17.5 million was financed from a sale-leaseback transaction with an affiliate of Medical Properties Trust ("MPT"), a Maryland corporation operating as a real estate investment trust. Lourdes is comprised of a 95 bed medical center and a 32 bed counseling center each located in Pasco, Washington. The results of operations of Lourdes are included in the Company's results of operations beginning on September 1, 2018.

Trios Health ("Trios")

At the close of business on August 3, 2018, the Company acquired Trios for $18.0 million. Trios is comprised of two hospital campuses with a total of 111 beds each located in Kennewick, Washington. In connection with the Trios acquisition, the Company entered into a sale-leaseback arrangement for a hospital building whose rent is contingent on the financial performance of the hospital and a sale-leaseback arrangement for a medical office building. The results of operations of Trios are included in the Company's results of operations beginning on August 4, 2018.

Pacific Medical Data Solutions ("PMDS")

Effective April 1, 2018, the Company acquired PMDS for $10.7 million. PMDS is a healthcare technology and software services company that provides revenue cycle, billing automation and software solutions to multi-specialty physician groups, ambulatory surgery centers and urgent care clinics.

Divestitures

Capital Medical Center

On December 23, 2020, the Company entered into a definitive agreement with an unrelated third-party to sell its majority ownership interest in Capital Medical Center, located in Olympia, Washington. Upon entry into the definitive agreement, the Company received a deposit of $5.0 million from the purchaser, which is included under the caption "Other current liabilities" in the Company's accompanying consolidated balance sheet at December 31, 2020. The Company anticipates receiving additional cash proceeds of approximately $35.0 million upon the close of the transaction in exchange for its majority ownership interest, subject to the finalization of net working capital, in addition to the purchaser's assumption of certain finance lease obligations. The Company expects the transaction to close during the first half of 2021.

In connection with the entry into a definitive agreement to sell the Company's majority ownership interest in Capital Medical Center, the Company reclassified $142.9 million in total assets, comprised of property and equipment, allocated goodwill and working capital assets, and $129.4 million in total liabilities, comprised of finance lease obligations and working capital liabilities, to assets and liabilities held for sale, which are included under the captions "Other current assets" and "Other current liabilities", respectively, in the Company's accompanying consolidated balance sheet at December 31, 2020.

Teche Regional Medical Center ("Teche")

Effective October 1, 2019, the Company terminated its lease of Teche, located in Morgan City, Louisiana, and transferred the owned assets and operations of Teche to a new operator. Included in the Company's consolidated results of operations for the years ended December 31, 2019 and 2018 are net operating losses before income taxes attributable to Teche of $1.4 million and $0.6 million, respectively.

Joint Ventures

Emory Healthcare

Effective January 1, 2020, the Company formed a new joint venture with Emory Healthcare, Inc. ("Emory") to operate St. Francis Hospital ("St. Francis") located in Columbus, Georgia. Upon formation of the joint venture, the Company reclassified $26.1 million of its equity in St. Francis to redeemable noncontrolling interests representing the estimated fair value of Emory's ownership interest in St. Francis. The Company maintains a controlling interest in St. Francis such that it will continue to be included in the Company's consolidated financial statements. Additionally, the Company retained 100% ownership of the real and personal property of St. Francis through a wholly-owned subsidiary of the Company and leases such real and personal property to the joint venture.

In-Home Healthcare Partnership

The Company maintains a joint venture with a wholly-owned subsidiary of LHC Group, Inc. ("LHC"), In-Home Healthcare Partnership ("IHHP"), the purpose of which is to own and operate the Company's home health agencies and hospices and certain of LHC's home health agencies and hospices. The Company accounts for its ownership interest in IHHP as an equity method investment in accordance with ASC 323, "Investments." Effective January 1, 2020, the Company sold a portion of its ownership interest in IHHP to LHC for cash proceeds of $23.6 million.

Note 4. Long-Term Debt

The Company's long-term debt, including current portions and finance leases, consists of the following at December 31, 2020 and 2019 (in millions):

	2020	2019 [(a)]
Senior borrowings:		
ABL Facility	$ -	$ -
Term Loan Facility	3,214.5	3,523.4
6.75% Secured Notes	600.0	-
4.375% Secured Notes	600.0	-
8.25% Secured Notes	-	800.0
9.75% Unsecured Notes	1,425.0	1,425.0
5.375% Unsecured Notes	500.0	-
11.5% Unsecured Notes	-	350.0
Finance lease obligations	1,048.2	1,128.3
Unamortized debt issuance costs and premium	(151.8)	(191.8)
	7,235.9	7,034.9
Subordinated borrowings, net	-	1.6
Total debt	$ 7,235.9	$ 7,036.5

(a) The Company's finance lease obligations as of December 31, 2019 have been restated in accordance with the adoption of ASU 2016-02. Refer to Note 8 for additional information.

Maturities of the Company's long-term debt outstanding at December 31, 2020, excluding finance lease obligations and unamortized debt issuance costs and premium, are as follows for the years indicated (in millions):

2021	$	-
2022		-
2023		-
2024		-
2025		3,814.5
Thereafter		2,525.0
	$	6,339.5

ABL Facility

General

Effective November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, the Company and Legend Merger Sub (together, prior to the effective time of the LifePoint/RCCH Merger, the "Co-Borrowers") entered into the ABL Facility in an aggregate principal amount of $800.0 million with a maturity of five years. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint assumed all of the rights and obligations of Legend Merger Sub under the ABL Facility. The ABL Facility also includes both a letter of credit sub-facility and a swingline loan sub-facility (including in its capacity as co-borrower under the Term Loan Facility) entered into between the Co-Borrowers on November 16, 2018. In addition, the Company may request one or more incremental revolving commitments in an aggregate principal amount up to the greater of (x) the greater of (i) $255.0 million and (ii) 0.23 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, and (y) the amount by which the borrowing base exceeds the aggregate commitments under the ABL Facility, subject to certain conditions and receipt of commitments by existing or additional lenders.

As of December 31, 2020, the Company had no borrowings outstanding under the ABL Facility and approximately $45.3 million in letters of credit outstanding primarily related to the self-insured retention level of its general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements. Amounts available for borrowing under the ABL Facility were approximately $538.8 million as of December 31, 2020.

Collateral and Guarantors

All obligations under the ABL Facility are unconditionally guaranteed by DSB Acquisition, LLC, a Delaware limited liability company ("Holdings"), on a limited recourse basis and each of the existing and future direct and indirect material, wholly-owned domestic subsidiaries of the Co-Borrowers, subject to certain exceptions.

The obligations under the ABL Facility are secured by a pledge of the capital stock of the Co-Borrowers and substantially all of their assets and those of each subsidiary guarantor, including a pledge of the capital stock of all entities directly held by the Company (including Legacy LifePoint) and each subsidiary guarantor (which pledge is limited to 65% of the voting capital stock of first-tier foreign subsidiaries), in each case subject to certain exceptions. Such security interests consist of a first-priority lien with respect to the "ABL Priority Collateral" (which generally includes most accounts receivable and certain related assets of the Co-Borrowers and the subsidiary guarantors) and a second-priority lien with respect to the "Non-ABL Priority Collateral" (which generally includes most inventory and fixed assets, equity interests and intellectual property of the Co-Borrowers and the subsidiary guarantors). Additionally, certain of the Company's restricted subsidiaries that are not guarantors will pledge certain of their assets (the "Credit Support Party Collateral") on a first-priority basis, as further security of the obligations under the ABL Facility. The Credit Support Party Collateral will secure only the obligations under the ABL Facility.

All borrowings under the ABL Facility are subject to the satisfaction of customary conditions, including the absence of a default and the accuracy of representations and warranties.

Interest Rates and Fees

Borrowings under the ABL Facility bear interest at a rate equal to, at the Company's option, either (a) a London Interbank Offered Rate ("LIBOR") rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an initial applicable margin of 1.75% for LIBOR loans and 0.75% for base rate loans. The applicable margin for borrowings is subject to step-downs based on average availability thresholds.

In addition to paying interest on outstanding principal under the ABL Facility, the Co-Borrowers are required to pay a commitment fee under the ABL Facility in respect of the unutilized commitments under the ABL Facility at an initial rate equal to 0.375% per annum. The commitment fee may be subject to one step-down based on the average daily utilization under the ABL Facility. The Co-Borrowers will also be required to pay customary agency fees as well as letter of credit participation fees.

Restrictive Covenants and Other Matters

The ABL Facility contains certain customary affirmative covenants and events of default. The negative covenants in the ABL Facility include, among other things, limitations (none of which are absolute) on the Co-Borrowers and their subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates, enter into sale-leaseback transactions, change their lines of business, restrict dividends from their subsidiaries or restrict liens, change their fiscal year, and modify the terms of certain debt.

The ABL Facility requires that the Co-Borrowers and its restricted subsidiaries maintain a minimum fixed charge coverage ratio of not less than 1.00 to 1.00 at any time when availability is less than an agreed amount.

The ABL Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the ABL Facility are entitled to take various actions, including the acceleration of amounts due under the ABL Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the ABL Facility.

ABL FILO Term Loan

On April 13, 2020, the Company executed the ABL Facility Amendment that provided for an $80.0 million last-out term loan (the "ABL FILO Term Loan") with a maturity of 364 days, which was incremental to the existing $800.0 million of revolving commitments under the ABL Facility. The ABL FILO Term Loan was fully drawn at closing of the ABL Facility Amendment and then subsequently repaid in full on December 14, 2020, which effectively terminated the ABL FILO Term Loan.

Term Loan Facility

General

Effective November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, the Co-Borrowers entered into the Term Loan Facility, which is a senior secured term loan credit facility in an aggregate principal amount of $3,550.0 million with a maturity of seven years. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint assumed all of the rights and obligations of Legend Merger Sub under the Term Loan Facility (including in its capacity as a Co-Borrower under the Term Loan Facility). In addition, the Company may request one or more incremental commitments in an aggregate principal amount up to the sum of (x) the greater of (i) $800.0 million and (ii) 0.75 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, plus additional amounts subject to certain agreed leverage requirements, certain other conditions and receipt of commitments by existing or additional lenders.

On January 21, 2020, the Company amended its Term Loan Facility to, among other things, reduce the applicable interest rate margin for the term loans by 0.75% to 3.75% with respect to LIBOR-based loans and 2.75% with respect to base rate loans.

On January 23, 2020, the Company made a prepayment of $400.0 million of term loans outstanding under the Term Loan Facility with a portion of the net proceeds from the sale-leaseback transaction with Medical Properties Trust completed effective December 17, 2019 (the "2019 Sale Leaseback Transaction"), which is discussed further in Note 8. After giving effect to the prepayment, the Company had prepaid all remaining quarterly amortization payments in respect of the Term Loan Facility.

On February 24, 2020, the Company closed the issuance of $600.0 million of incremental term loans (the "Incremental Term Loan") under the Term Loan Facility. The Incremental Term Loan bears interest at a rate equal to, at its option, (a) a LIBOR rate plus an applicable margin of 3.75% or (b) a base rate plus an applicable margin of 2.75%. There are no scheduled amortization payments required on the Incremental Term Loan prior to maturity. The net proceeds from the Incremental Term Loan, together with the net proceeds from the 4.375% Secured Notes and cash on hand, was used to fund the settlement of the tender offer, the redemption of the Company's 8.25% Senior Secured Notes due 2023 (the "8.25% Secured Notes") and the redemption of the Company's 11.5% Senior Notes due 2024 (the "11.5% Unsecured Notes") and to pay certain fees in connection with the refinancing transactions described herein.

On December 4, 2020, the Company made an optional prepayment of $500.0 million of term loans outstanding under the Term Loan Facility with the net proceeds from the offering of $500.0 million in aggregate principal amount of 5.375% Senior Notes due 2029 (the "5.375% Unsecured Notes"), together with cash on hand.

Collateral and Guarantors

All obligations under the Term Loan Facility are unconditionally guaranteed by Holdings on a limited recourse basis and each of the existing and future direct and indirect material, wholly-owned domestic subsidiaries of the Co-Borrowers, subject to certain exceptions. The obligations under the Term Loan Facility are secured by a pledge of the capital stock of the Company and substantially all of its assets and those of each subsidiary guarantor, including a pledge of the capital stock of all entities directly held by the Company (including Legacy LifePoint) and each subsidiary guarantor (which pledge is limited to 65% of the voting capital stock of first-tier foreign subsidiaries), in each case subject to certain exceptions. Such security interests consist of a first-priority lien with respect to the Non-ABL Priority Collateral and a second-priority lien with respect to the ABL Priority Collateral.

Interest Rates

Borrowings under the Term Loan Facility bear interest at a rate equal to, at the Company's option, either (a) a LIBOR rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an applicable margin of 3.75% for LIBOR loans and 2.75% for base rate loans.

Restrictive Covenants and Other Matters

The Term Loan Facility contains certain customary affirmative covenants and events of default. The negative covenants in the Term Loan Facility include, among other things, limitations (none of which are absolute) on the Co-Borrowers and their subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates enter into sale-leaseback transactions, change their lines of business, restrict dividends from subsidiaries or restrict liens, change their fiscal year and modify the terms of certain debt or organizational agreements.

The Term Loan Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the Term Loan Facility are entitled to take various actions, including the acceleration of amounts due under the Term Loan Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the Term Loan Facility.

6.75% Secured Notes

On April 13, 2020, the Company completed the offering of $600.0 million in aggregate principal amount 6.750% Senior Secured Notes due 2025 (the "6.75% Secured Notes"). The 6.75% Secured Notes will mature on April 15, 2025. Interest on the 6.75% Secured Notes will accrue at 6.75% per annum and will be paid semi-annually, in arrears, on April 15 and October 15 of each year, beginning October 15, 2020. The net proceeds from the offering were used for general corporate purposes.

The Company's obligations under the 6.75% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility and the 4.375% Senior Secured Notes due 2027 (the "4.375% Secured Notes"). The 6.75% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 6.75% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to April 15, 2022, the Company may redeem the 6.75% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 6.75% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to April 15, 2022, the Company may also redeem up to 40% of the original aggregate principal amount of the 6.75% Secured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 106.750%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 6.75% Secured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after April 15, 2022, the Company may redeem the 6.75% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of April 13, 2020 (as amended or supplemented from time to time, the "6.75% Secured Notes Indenture").

The 6.75% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 6.75% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 6.75% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 6.75% Secured Notes Indenture also provides for customary events of default.

4.375% Secured Notes

On February 13, 2020, the Company completed the offering of $600.0 million in aggregate principal amount of its 4.375% Secured Notes. The 4.375% Secured Notes will mature on February 15, 2027. Interest on the 4.375% Secured Notes will accrue at 4.375% per annum and will be paid semi-annually, in arrears, on February 15 and August 15 of each year, beginning August 15, 2020. The net proceeds from the offering, together with the net proceeds from the Incremental Term Loan and cash on hand, were used to fund the settlement of the tender offer, the 8.25% Notes Redemption (as defined herein) and the 11.5% Notes Redemption (as defined herein) and to pay certain fees in connection with the refinancing transactions described herein.

The Company's obligations under the 4.375% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility. The 4.375% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 4.375% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to February 15, 2022, the Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 4.375% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to February 15, 2022, the Company may also redeem up to 40% of the original aggregate principal amount of the 4.375% Secured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 104.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 4.375% Secured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after February 15, 2022, the Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of February 13, 2020 (as amended or supplemented from time to time, the "4.375% Secured Notes Indenture").

The 4.375% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 4.375% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 4.375% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 4.375% Secured Notes Indenture also provides for customary events of default.

9.75% Unsecured Notes

On November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, the Company issued $1,425.0 million aggregate principal amount of 9.75% Unsecured Notes. The 9.75% Unsecured Notes will mature on December 1, 2026. Interest on the 9.75% Unsecured Notes accrues at 9.750% per annum and will be paid semi-annually, in arrears, on June 1 and December 1 of each year, beginning June 1, 2019.

The Company's obligations under the 9.75% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 9.75% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

Prior to December 1, 2021, the Company may redeem the 9.75% Unsecured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 9.75% Unsecured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. Additionally, prior to December 1, 2021, the Company may redeem in the aggregate up to 40% of the aggregate principal amount of the 9.75% Unsecured Notes in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 109.750%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 9.75% Unsecured Notes must remain outstanding after each such redemption. On or after December 1, 2021, the Company may redeem the 9.75% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of November 16, 2018 (as amended or supplemented from time to time, the "9.75% Unsecured Notes Indenture").

The 9.75% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 9.75% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 9.75% Unsecured Notes Indenture also provides for customary events of default.

5.375% Unsecured Notes

On December 4, 2020, the Company completed the offering of $500.0 million in aggregate principal amount of its 5.375% Unsecured Notes. The 5.375% Unsecured Notes will mature on January 15, 2029. Interest on the 5.375% Unsecured Notes will accrue at 5.375% per annum and will be paid semi-annually, in arrears, on January 15 and July 15 of each year, beginning July 15, 2021. The net proceeds of the offering, together with cash on hand, were used to prepay $500.0 million of the total aggregate principal amount outstanding under the Term Loan Facility and to pay related fees and expenses in connection with the offering.

The Company's obligations under the 5.375% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 5.375% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

Prior to January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 5.375% Unsecured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to December 4, 2023, the Company may also redeem up to 40% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 105.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of December 4, 2020 (the "5.375% Unsecured Notes Indenture").

The 5.375% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 5.375% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 5.375% Unsecured Notes Indenture also provides for customary events of default.

Tender Offer, Redemption and Discharge of 8.25% Secured Notes and 11.5% Unsecured Notes

On February 7, 2020, the Company commenced a tender offer and consent solicitation (the "tender offer") to purchase any and all of its outstanding (i) 8.25% Secured Notes issued pursuant to the indenture, dated as of April 29, 2016, among the Company, the guarantors party thereto and Wilmington Trust, National Association, as trustee (as amended, supplemented or otherwise modified, the "8.25% Secured Notes Indenture") and (ii) 11.5% Unsecured Notes issued pursuant to the indenture, dated as of April 29, 2016, among the Company, the guarantors party thereto and Wilmington Trust, National Association, as trustee (as amended, supplemented or otherwise modified, the "11.5% Unsecured Notes Indenture"). The early tender deadline for the tender offer was February 21, 2020, and the expiration date for the tender offer was March 6, 2020.

Upon expiration of the early tender deadline, on February 24, 2020, the Company accepted and purchased (i) $622.5 million of the aggregate principal amount of the 8.25% Secured Notes that were validly tendered for total consideration of $1,052.50 per $1,000 principal amount, plus accrued and unpaid interest thereon, and (ii) $84.1 million of the aggregate principal amount of the 11.5% Unsecured Notes that were validly tendered for a total consideration of $1,072.50 per $1,000 principal amount, plus accrued and unpaid interest thereon. Following the expiration of the tender offer, on March 9, 2020, the Company accepted and purchased an additional $0.2 million of the aggregate principal amount of the 8.25% Secured Notes that were validly tendered after the early tender deadline for a tender consideration of $1,022.50 per $1,000 principal amount, plus accrued and unpaid interest thereon. No additional 11.5% Unsecured Notes were tendered after the early tender deadline.

On March 9, 2020, (i) pursuant to the 8.25% Secured Notes Indenture, the Company provided notice to the holders that it had elected to redeem any and all of the 8.25% Secured Notes that remain outstanding after giving effect to the tender offer at a redemption price of 104.125%, plus accrued and unpaid interest thereon, on May 1, 2020 (the "8.25% Notes Redemption") and (ii) pursuant to the 11.5% Unsecured Notes Indenture, the Company provided notice to the holders that it had elected to redeem any and all of the 11.5% Unsecured Notes that remain outstanding after giving effect to the tender offer at a redemption price of 105.750%, plus accrued and unpaid interest thereon, on May 1, 2020 (the "11.5% Notes Redemption"). Concurrently with the delivery of the notices of redemption, on March 9, 2020, the Company (i) irrevocably deposited with the trustee for the 8.25% Secured Notes approximately $191.9 million, which was the amount sufficient to fund the 8.25% Notes Redemption and to satisfy and discharge the Company's obligations under the 8.25% Secured Notes and the 8.25% Secured Notes Indenture, and (ii) irrevocably deposited with the trustee for the 11.5% Unsecured Notes approximately $296.5 million, which was the amount sufficient to fund the 11.5% Notes Redemption and to satisfy and discharge the Company's obligations under the 11.5% Unsecured Notes and the 11.5% Unsecured Notes Indenture.

Debt Transaction Costs

During the year ended December 31, 2020, the Company recognized $115.4 million of debt transaction costs associated with the various debt financing activities completed during 2020. These debt transaction costs were comprised of $61.4 million of early termination premiums associated with the tender offer, 8.25% Notes Redemption and 11.5% Notes Redemption, the write-off of $47.4 million of previously capitalized debt issuance costs associated with the Term Loan Facility, the 8.25% Secured Notes and the 11.5% Unsecured Notes and $6.6 million of other miscellaneous legal and financing costs.

During the year ended December 31, 2018, the Company recognized $8.2 million of debt transaction costs associated with the extinguishment of the Prior ABL Facility and the Prior Term Facility.

Additionally, in connection with the offering of the 5.375% Unsecured Notes, the 6.75% Secured Notes, the 4.375% Secured Notes, the issuance of the Incremental Term Loan and the ABL FILO Term Loan, the Company capitalized $34.8 million of new debt issuance costs during the year ended December 31, 2020, which are included as a reduction to "Long-term debt, net" on the Company's accompanying consolidated balance sheet.

Finance Lease Obligations

Refer to Note 8 for discussion of the Company's finance lease obligations.

Interest Rate Swap Agreement

On December 21, 2018, the Company entered into an interest rate swap agreement with Citibank, N.A. as counterparty (the "Interest Rate Swap") whereby the Company pays a fixed rate of 2.63% on a notional amount of $1,100.0 million and receives one-month LIBOR. The Interest Rate Swap became effective on February 19, 2019 and is scheduled to mature on February 19, 2022. Refer to Note 11 for additional information regarding the Company's accounting for its Interest Rate Swap.

Note 5. Goodwill and Intangible Assets

Goodwill

The following table presents the changes in the carrying amount of goodwill for the years ended December 31, 2020 and 2019 (in millions):

Balance at January 1, 2019	$	2,567.6
Finalization of purchase price allocations for the LifePoint/RCCH Merger		381.1
Adjustments related to acquisitions		17.0
Impairments		(3.3)
Write-off allocation related to IHHP transactions		(1.2)
Balance at December 31, 2019		2,961.2
Acquisitions of ancillary businesses		0.6
Allocation to assets held for sale related to Capital Medical Center		(41.2)
Write-off allocation related to IHHP transaction		(2.1)
Balance at December 31, 2020	$	2,918.5

Prior to the LifePoint/RCCH Merger, the Company historically determined that each of its hospitals represented a reporting unit in accordance with ASC 280 and ASC 350. Due to the significance of the LifePoint/RCCH Merger and its impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280 and ASC 350 during 2019 and determined that the consolidated business comprises a single reporting unit for goodwill impairment testing purposes. There have been no changes in the Company's determination of reporting units for the year ended December 31, 2020.

Under the current methodology, for which the consolidated Company comprises a single reporting unit, the Company performed goodwill impairment tests as of October 1, 2020 and 2019 and did not incur any impairment charges. Under the prior reporting unit methodology, for which each of the Company's hospitals represented a reporting unit, the Company performed a goodwill impairment test as of October 1, 2019 and recorded a non-cash impairment charge of $3.3 million for the year ended December 31, 2019 related to one of its facilities. Additionally, for the year ended December 31, 2018, the Company recorded non-cash impairment charges in the aggregate of $53.9 million related to three of its facilities.

Intangible Assets

The following table provides information regarding the Company's intangible assets included in the accompanying consolidated balance sheets as of December 31, 2020 and 2019 (in millions):

	2020	2019 [(a)]
Amortizable intangible assets:		
Contract-based physician minimum revenue guarantees		
Gross carrying amount	$ 28.3	$ 34.7
Accumulated amortization	(12.1)	(12.7)
Net total	16.2	22.0
Other amortizable intangible assets		
Gross carrying amount	3.2	4.4
Accumulated amortization	(2.4)	(2.3)
Net total	0.8	2.1
Total amortizable intangible assets		
Gross carrying amount	31.5	39.1
Accumulated amortization	(14.5)	(15.0)
Net total	17.0	24.1
Indefinite-lived intangible assets:		
Certificates of need and certificates of need exemptions	29.3	29.3
Licenses, provider numbers, accreditations and other	12.0	12.0
Net total	41.3	41.3
Total intangible assets:		
Gross carrying amount	72.8	80.4
Accumulated amortization	(14.5)	(15.0)
Net total	$ 58.3	$ 65.4

(a) Certain of the Company's other amortizable intangible assets as of December 31, 2019 have been restated in accordance with the adoption of ASU 2016-02. Refer to Note 8 for additional information.

Contract-Based Physician Minimum Revenue Guarantees

The Company has committed to provide certain financial assistance pursuant to recruiting agreements, or "physician minimum revenue guarantees," with various physicians practicing in the communities it serves. In consideration for a physician relocating to one of its communities and agreeing to engage in private practice for the benefit of the respective community, the Company may advance certain amounts of money to a physician to assist in establishing his or her practice.

The Company accounts for its physician minimum revenue guarantees in accordance with the provisions of ASC 460, "Guarantees" ("ASC 460"). In accordance with ASC 460, the Company records a contract-based intangible asset and a related guarantee liability for new physician minimum revenue guarantees. The contract-based intangible asset is amortized as a component of other operating expenses, in the accompanying consolidated statements of operations, over the period of the physician contract, which typically ranges from four to five years. As of December 31, 2020 and 2019, the Company's liability for contract-based physician minimum revenue guarantees was $8.3 million and $9.3 million, respectively. These amounts are included as a current liability under the caption "Other current liabilities" in the Company's accompanying consolidated balance sheets.

Other Amortizable Intangible Assets

The Company has various other amortizable intangible assets that are amortized on a straight-line basis over the respective terms.

Certificates of Need and Certificates of Need Exemptions

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and certain equipment at the Company's facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of new services. The Company has acquired facilities in certain states that have adopted certificate of need laws. The Company has determined that these intangible assets have an indefinite useful life.

Licenses, Provider Numbers, Accreditations and Other

To operate hospitals, the Company must obtain certain licenses, provider numbers and accreditations from federal, state and other accrediting agencies. The Company has acquired facilities in certain jurisdictions that require licenses, provider numbers and accreditations. The Company has determined that these intangible assets have an indefinite useful life.

Amortization Expense

Amortization expense for the Company's intangible assets during the years ended December 31, 2020, 2019 and 2018 was $8.6 million, $14.1 million and $4.7 million, respectively.

Total estimated amortization expense for the Company's intangible assets during the next five years are as follows (in millions):

2021	$ 8.1
2022	5.0
2023	2.5
2024	1.2
2025	0.2
Thereafter	-
	$ 17.0

Note 6. Income Taxes

For the year ended December 31, 2020, the Company recognized a benefit from income taxes of $63.7 million, compared to a provision for income taxes of $77.9 million and $0.2 million for the years ended December 31, 2019 and 2018, respectively. The benefit from income taxes recognized for the year ended December 31, 2020 was primarily a result of significant revisions to the U.S. corporate tax laws due to the enactment of the CARES Act. The Company was most notably impacted by an increase in the limitation in the tax deductibility of interest expense from 30% to 50% of adjusted taxable income for the years ended December 31, 2020 and 2019, as well as the ability to carry back net operating losses to each of the five tax years preceding the tax year of such loss.

The (benefit from) provision for income taxes for the years ended December 31, 2020, 2019 and 2018 consisted of the following (in millions):

	2020	2019	2018
Current:			
Federal	$ (72.5)	$ 67.5	$ -
State	7.8	8.2	1.3
	(64.7)	75.7	1.3
Deferred:			
Federal	98.7	(80.6)	(27.1)
State	38.4	(19.9)	(10.0)
	137.1	(100.5)	(37.1)
Change in valuation allowance	(136.1)	102.7	36.0
Total	$ (63.7)	$ 77.9	$ 0.2

The following table reconciles the differences between the statutory federal income tax rate to the Company's effective tax rate on net income (loss) before income taxes and including net income attributable to noncontrolling interests and redeemable noncontrolling interests for the years ended December 31, 2020, 2019 and 2018 (in millions):

	2020	2019	2018
Federal statutory rate	21.0 %	21.0 %	21.0 %
State income taxes, net of federal income tax benefits	3.8	(26.3)	2.2
Change in valuation allowance	(56.5)	171.0	(12.5)
Tax effect of goodwill write-offs and impairments	0.2	1.8	(2.3)
Noncontrolling interests and redeemable noncontrolling interests	(1.9)	(7.4)	0.4
State net operating loss carryforward expirations, refunds and rate change	10.4	-	-
Rate benefit from federal net operating loss carryback to 35% year	(3.8)	-	-
Nondeductible acquisition and merger-related costs	-	(24.2)	(8.2)
Other nondeductible expenses and other items	0.4	7.1	(0.7)
Effective income tax rate	(26.4) %	143.0 %	(0.1) %

Deferred income taxes result from temporary differences in the recognition of assets, liabilities, revenues and expenses for financial accounting and tax purposes. Sources of these differences and the related tax effects were as follows as of December 31, 2020 and 2019 (in millions):

	2020	2019 [(a)]
Deferred income tax liabilities:		
Depreciation and amortization	$ (61.2)	$ (37.6)
Right-of-use operating lease assets	(99.0)	(98.4)
Tax deductible goodwill	(29.2)	(18.3)
Other	(6.2)	(6.3)
Total deferred income tax liabilities	(195.6)	(160.6)
Deferred income tax assets:		
Provision for doubtful accounts	63.8	48.1
Employee compensation	64.0	45.9
Acquisition and start-up costs	3.7	15.6
Net operating loss carryforwards	98.8	220.6
Insurance reserves	72.5	67.5
Prepaid rent	17.6	16.4
Section 163(j) interest expense carryforward	14.1	81.8
Investments in partnerships	60.3	14.3
Right-of-use operating lease obligations	99.9	99.6
Other	42.6	27.1
Total deferred income tax assets	537.3	636.9
Valuation allowance	(360.1)	(493.6)
Net deferred income tax assets	177.2	143.3
Deferred income taxes	$ (18.4)	$ (17.3)

(a) The Company's deferred income taxes as of December 31, 2019 have been restated in accordance with the adoption of ASU 2016-02. Refer to Note 8 for additional information.

Noncurrent deferred income tax liabilities totaled $18.4 million and $17.3 million at December 31, 2020 and 2019, respectively. As of December 31, 2020, the Company had no federal net operating loss carryforwards ("NOLs") and state and local NOLs of approximately $1.9 billion that expire at various dates between 2021 and 2039. The Company has established a valuation allowance for deferred tax assets at December 31, 2020 and 2019, due to the uncertainty of realizing these assets in the future. The valuation allowance decreased $133.5 million during the year ended December 31, 2020, primarily as a result of the projected utilization of all federal NOLs, as well as the significant revisions to the U.S. corporate tax laws due to the enactment of the CARES Act.

The Company made federal income tax payments of $33.0 million for the year ended December 31, 2020. No federal income tax payments were made during the years ended December 31, 2019 or 2018. Net refunds of federal income taxes paid by Legacy LifePoint for tax years ended December 31, 2017 and November 16, 2018 in the amount of $59.5 million and $54.1 million were received during the years ended December 31, 2019 and 2018, respectively. The tax year 2017 refund resulted from an automatic accounting method change, for tax purposes, relating to income recognition made by Legacy LifePoint. The November 16, 2018 tax year-end refund resulted from estimated tax payments made by Legacy LifePoint prior to the announced LifePoint/RCCH Merger that were not needed due to the taxable loss generated for the year. The Company made net state and local income tax payments in the amount of $5.0 million, $1.0 million, and $0.4 million for the years ended December 31, 2020, 2019 and 2018, respectively.

The Company's policy is to accrue interest and penalties related to potential underpayment of income taxes within the provision for income taxes. Interest is computed on the difference between the Company's uncertain tax benefit positions and the amount deducted or expected to be deducted in our income tax returns.

The Company files a consolidated U.S. federal income tax return, as well as income tax returns in various state jurisdictions. All of the Company's tax years are subject to examination by the Internal Revenue Service and various state taxing authorities.

Note 7. Other Current Liabilities

The following table provides information regarding the Company's other current liabilities, which are included in the accompanying consolidated balance sheets at December 31, 2020 and 2019 (in millions):

	2020	2019 [(a)]
Accrued interest	$ 33.4	$ 49.6
Current portion of self-insurance reserves	82.3	64.5
Self-insured medical benefits liabilities	37.7	53.8
Income taxes payable	-	71.8
Current portion of right-of-use operating lease obligations	44.2	43.9
Accrued property taxes	19.8	18.6
Liabilities held for sale	129.4	-
Accrued expenses and other	244.5	186.8
	$ 591.3	$ 489.0

(a) Certain of the Company's other current liabilities as of December 31, 2019 have been restated in accordance with the adoption of ASU 2016-02. Refer to Note 8 for additional information.

Note 8. Leases

Adoption of ASU 2016-02

The Company adopted ASU 2016-02 early, during the fourth quarter of 2020, with an effective transition date of January 1, 2019 and retrospective application. As a result, the accompanying consolidated financial statements as of and for the year ended December 31, 2019 have been restated in accordance with the adoption of ASU 2016-02. The Company applied certain available practical expedients to facilitate the adoption of ASU 2016-02, including the package of practical expedients to not reassess whether a contract is or contains a lease, the lease classification and the initial direct costs.

The following is a summary of the line items impacted by the adoption of ASU 2016-02 in the Company's consolidated statement of operations for the year ended December 31, 2019 (in millions):

	As Originally Reported	Adoption of ASU 2016-02	As Currently Reported
Other operating expenses, net	$ 2,140.6	$ 9.7	$ 2,150.3
Depreciation and amortization	$ 378.7	$ (2.2)	$ 376.5
Interest expense, net	$ 577.6	$ (9.0)	$ 568.6
Total expenses	$ 8,698.3	$ (1.5)	$ 8,696.8
Income before income taxes	$ 54.5	$ 1.5	$ 56.0
Net loss	$ (23.4)	$ 1.5	$ (21.9)
Net loss attributable to LifePoint Health, Inc.	$ (42.7)	$ 1.5	$ (41.2)

The adoption of ASU 2016-02 primarily impacted the Company's other operating expenses and interest expense as a result changes in the accounting classification of certain leases from finance to operating, in addition to the derecognition of interest expense associated with a variable lease agreement that was previously accounted for as a finance lease.

The following is a summary of the line items impacted by the adoption of ASU 2016-02 in the Company's consolidated balance sheet as of December 31, 2019 (in millions):

	As Originally Reported	Adoption of ASU 2016-02	As Currently Reported
Land	$ 236.1	$ (3.7)	$ 232.4
Buildings and improvements	$ 2,709.9	$ (83.0)	$ 2,626.9
Property and equipment	$ 4,478.2	$ (86.7)	$ 4,391.5
Accumulated depreciation	$ (618.8)	$ 2.3	$ (616.5)
Property and equipment, net of accumulated depreciation	$ 3,859.4	$ (84.4)	$ 3,775.0
Intangible assets, net	$ 73.5	$ (8.1)	$ 65.4
Other long-term assets	$ 380.0	$ 392.9	$ 772.9

The adoption of ASU 2016-02 primarily impacted other long-term assets and other long-term liabilities as a result of the recognition of right-of-use operating lease assets and obligations, respectively, on the Company's balance sheet. Additionally, the Company derecognized real property assets and finance lease obligations associated with a variable lease agreement, as well as changes in the accounting classification of certain leases from finance to operating. Lastly, the Company recorded a one-time transition adjustment through equity as a result of the derecognition of real property assets and finance lease obligations associated with a variable lease agreement, as well as changes in the Company's deferred income taxes.

Summary

The Company leases real property and equipment under finance and operating leases. The leases expire at various times and have various renewal options. For leases with terms greater than 12 months, the Company records the related assets and obligations at the present value of lease payments over the term. Interest rates used in computing the present value of the lease payments are based on the Company's incremental borrowing rate at the inception of the lease. The Company's lease agreements generally require the Company to pay maintenance, repairs, taxes and insurance costs.

The following table presents certain information related to the Company's lease assets and liabilities at December 31, 2020 and 2019 (dollars in millions):

	Balance Sheet Classification	2020	2019
Assets:			
Finance leases	Property and equipment	$ 678.3	$ 742.2
Operating leases	Other long-term assets	367.5	392.8
Total lease assets		$ 1,045.8	$ 1,135.0
Liabilities:			
Current:			
Finance leases	Current maturities of long-term debt	$ 30.0	$ 23.6
Operating leases	Other current liabilities	44.2	43.9
Long-term:			
Finance leases	Long-term debt, net	1,018.2	1,104.7
Operating leases	Other long-term liabilities	334.8	355.2
Total lease liabilities		$ 1,427.2	$ 1,527.4
Weighted-average remaining term (in years):			
Finance leases		22.6	24.5
Operating leases		12.9	13.5
Weighted-average discount rate:			
Finance leases		7.9 %	8.0 %
Operating leases		8.9 %	8.9 %

The following table presents certain information related to finance and operating lease expense for the years ended December 31, 2020 and 2019 (in millions):

	Statement of Operations Classification	2020	2019
Finance lease expense:			
Amortization related to lease assets	Depreciation and amortization	$ 46.8	$ 27.8
Interest related to lease liabilities	Interest expense, net	90.5	36.3
Operating lease expense	Other operating expenses, net	85.6	80.5

Less: current portion of lease obligations	(30.0)	(44.2)
Long-term portion of lease obligations	$ 1,018.2	$ 334.8

2019 Sale Leaseback Transaction

Effective December 17, 2019, certain subsidiaries of the Company (collectively, the "LifePoint Entities") entered into a Real Property Asset Purchase Agreement (the "Real Property APA") with certain subsidiaries of MPT (the "2019 Sale Leaseback Transaction"). Pursuant to the Real Property APA, the LifePoint Entities sold the real estate of eleven medical facilities (the "2019 Master Lease Facilities") to certain affiliates of MPT, and immediately thereafter certain LifePoint Entities and certain affiliates of MPT entered into an agreed upon Master Lease Agreement (the "2019 Master Lease") pursuant to which such LifePoint Entities now lease or sublease the land and the buildings associated with the 2019 Master Lease Facilities from certain affiliates of MPT. The 2019 Master Lease has an initial term of 20 years (the "Initial Term"). However, the LifePoint Entities who are parties to the 2019 Master Lease have the option to extend the Initial Term for two additional five-year periods.

In connection with the 2019 Sale Leaseback Transaction, the Company received an aggregate amount of sale proceeds of $700.0 million and incurred $18.1 million of transaction-related expenses, which is included under the caption "Merger, acquisition and other transaction-related expenses" in the accompanying consolidated statement of operations for the year ended December 31, 2019.

Lease Covenants

Certain of the Company's lease agreements contain financial covenants based on certain fixed charges. The failure to meet or obtain a waiver of such covenants or otherwise cure such non-compliance could result in an event of default under the applicable lease. The Company has received a waiver of compliance with respect to the financial covenants associated with its amended and restated lease agreement with affiliates of MPT related to Capital Medical Center through March 31, 2022. Additionally, as more fully discussed in Note 3, on December 23, 2020, the Company entered into a definitive agreement with an unrelated third-party to sell its ownership interest in Capital Medical Center.

Note 9. Investments

The Company accounts for its investments in entities in which the Company exhibits significant influence, but not control, under the equity method of accounting in accordance with ASC 323. The Company does not consolidate its equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses during the period. The Company's equity method investments totaled $255.6 million and $274.3 million at December 31, 2020 and 2019, respectively, and are included under the caption "Other long-term assets" in the accompanying consolidated balance sheets.

Note 10. Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to a parent. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues and expenses at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes as a separate component of equity and earnings on the portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company.

The following table presents the changes in the Company's noncontrolling interests during the years ended December 31, 2020 and 2019 (in millions):

Balance at January 1, 2019	$	29.9
Finalization of purchase price allocations for the LifePoint/RCCH Merger		(0.2)
Net income attributable to noncontrolling interests		4.4
Distributions		(8.2)
Balance at December 31, 2019		25.9
Net income attributable to noncontrolling interests		7.5
Distributions		(1.4)
Balance at December 31, 2020	$	32.0

Redeemable Noncontrolling Interests

Certain of the Company's noncontrolling interests include redemption features that cause these interests not to meet the requirements for classification as equity in accordance with ASC 480-10-S99-3, "Distinguishing Liabilities from Equity." Redemption features related to these interests could require the Company to deliver cash, if exercised. Accordingly, these redeemable noncontrolling interests are classified in the mezzanine section of the Company's accompanying consolidated balance sheets under the caption "Redeemable noncontrolling interests." Changes in the fair value of the Company's redeemable noncontrolling interests are recognized as adjustments to consolidated stockholders' equity.

The following table presents the changes in the Company's redeemable noncontrolling interests during the years ended December 31, 2020 and 2019 (in millions):

Balance at January 1, 2019	$	136.1
Finalization of purchase price allocations for the LifePoint/RCCH Merger		(4.6)
Net income attributable to redeemable noncontrolling interests		14.9
Fair value adjustments		11.2
Distributions and repurchases		(9.8)
Balance at December 31, 2019		147.8
Reclassification of equity to redeemable noncontrolling interests related to Emory joint venture		26.1
Net income attributable to redeemable noncontrolling interests		14.0
Fair value adjustments		5.0
Distributions and repurchases		(11.8)
Reclassification of redeemable noncontrolling interests related to Capital Medical Center to liabilities held for sale		(0.7)
Balance at December 31, 2020	$	180.4

Note 11. Fair Value of Financial Instruments

Fair Value Hierarchy

Fair value is a market-based measurement, not an entity-specific measurement. Therefore, a fair value measurement should be determined based on the assumptions that market participants would use in pricing the asset or liability. As a basis for considering market participant assumptions in fair value measurements, the Company utilizes the fair value hierarchy pursuant to ASC 820, "Fair Value Measurements and Disclosures" ("ASC 820") that distinguishes between market participant assumptions based on market data obtained from sources independent of the reporting entity (observable inputs that are classified within Levels 1 and 2 of the hierarchy) and the reporting entity's own assumption about market participant assumptions (unobservable inputs classified within Level 3 of the hierarchy).

The inputs used to measure fair value are classified into the following fair value hierarchy:

Level 1: Quoted market prices in active markets for identical assets or liabilities.
Level 2: Observable market-based inputs or unobservable inputs that are corroborated by market data.
Level 3: Unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Level 3 includes values determined using pricing models, discounted cash flow methodologies, or similar techniques reflecting the Company's own assumptions.

In instances where the determination of the fair value hierarchy measurement is based on inputs from different levels of the fair value hierarchy, the level in the fair value hierarchy within which the entire fair value measurement falls is based on the lowest level input that is significant to the fair value measurement in its entirety. The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment of factors specific to the asset or liability.

Cash and Cash Equivalents, Accounts Receivable, Accounts Payable and Other Current Liabilities

The carrying amounts reported in the accompanying consolidated balance sheets for cash and cash equivalents, accounts receivable, accounts payable and other current liabilities approximate fair value because of the short-term nature of these instruments.

Long-Term Debt

The carrying amounts and fair values of the Company's ABL Facility, Term Loan Facility, 6.75% Secured Notes, 4.375% Secured Notes, 8.25% Secured Notes, 9.75% Unsecured Notes, 5.375% Unsecured Notes and 11.5% Unsecured Notes, excluding unamortized debt issuance costs and premium, as of December 31, 2020 and December 31, 2019 were as follows (in millions):

	Carrying Amount		Fair Value	
	December 31, 2020	December 31, 2019	December 31, 2020	December 31, 2019
ABL Facility	$ -	$ -	$ -	$ -
Term Loan Facility	$ 3,214.5	$ 3,523.4	$ 3,210.5	$ 3,549.8
6.75% Secured Notes	$ 600.0	$ -	$ 640.5	$ -
4.375% Secured Notes	$ 600.0	$ -	$ 600.0	$ -
8.25% Secured Notes	$ -	$ 800.0	$ -	$ 849.0
9.75% Unsecured Notes	$ 1,425.0	$ 1,425.0	$ 1,556.8	$ 1,610.3
5.375% Unsecured Notes	$ 500.0	$ -	$ 496.3	$ -
11.5% Unsecured Notes	$ -	$ 350.0	$ -	$ 376.3

The fair values of the Company's long-term debt instruments were estimated based on the average bid and ask price as determined using published rates and categorized as Level 2 within the fair value hierarchy in accordance with ASC 820.

Interest Rate Swap

The Company measures its Interest Rate Swap at fair value on a recurring basis. The fair value of the Company's Interest Rate Swap is based on quotes from its counterparty. The Company considers those inputs to be Level 2 in the fair value hierarchy. At December 31, 2020 and 2019, the fair value of the Company's Interest Rate Swap was a total liability of $31.2 million and $24.6 million, respectively, of which $26.5 million and $10.7 million, respectively, is included under the caption "Other current liabilities" and $4.7 million and $13.9 million, respectively, is included under the caption "Other long-term liabilities" in the Company's accompanying consolidated balance sheets.

The Company has not designated its Interest Rate Swap as a cash flow hedge in accordance with ASC 815, "Derivatives and Hedging." Accordingly, all changes in the fair value of the Company's Interest Rate Swap are recognized through interest expense in its statement of operations. For the years ended December 31, 2020, 2019 and 2018, the Company recognized non-cash interest expense of $6.6 million, $18.8 million and $5.8 million, respectively, related to changes in the fair value of its Interest Rate Swap.

Changes in the fair value of the Company's Interest Rate Swap could result in a material effect on its consolidated results of operations and financial position; however, the Company does not anticipate that changes in the fair value of its Interest Rate Swap will have any impact on its cash flows. The counterparty to the Interest Rate Swap exposes the Company to credit risk in the event of nonperformance. However, the Company does not anticipate nonperformance by its counterparty. The Company does not hold or issue derivative financial instruments for trading purposes.

Financial Liabilities

The Company has a contingent consideration liability payable to the former owners of Canyon Vista Medical Center ("Canyon Vista") that represents the Level 3 estimated fair value of the contingent consideration using unobservable inputs and assumptions available to the Company. The key assumptions used in estimating the fair value of the Canyon Vista contingent consideration liability are the range of probabilities that the payments will be earned by the seller and a discount rate adjusted for the Company's credit risk.

At December 31, 2020 and 2019, the Canyon Vista contingent consideration liability was recorded at an estimated fair value of $18.8 million and $13.6 million, respectively, of which $2.0 million is included under the caption "Other current liabilities" at December 31, 2020, and $16.8 million and $13.6 million, respectively, is included under the caption "Other long-term liabilities" in the Company's accompanying consolidated balance sheets. For the year ended December 31, 2020, the Company recognized a non-cash charge of $5.2 million related to the change in the estimated fair value of the Canyon Vista contingent consideration liability, which is included under the caption "Other non-operating losses (gains), net" on the accompanying consolidated statement of operations.

Note 12. Employee Benefit Plans

Defined Benefit Pension Plans

In connection with the LifePoint/RCCH Merger, the Company acquired certain assets and assumed certain liabilities associated with two separate defined benefit pension plans (i) associated with certain employees of Marquette General Hospital covered by a collective bargaining agreement (the "Marquette Pension Plan") and (ii) associated with certain non-union employees of Bell Hospital (the "Bell Pension Plan" and, collectively with the Marquette Pension Plan, the "Pension Plans"). Both Pension Plans are closed to new participants. Participants in the Marquette Pension Plan are required to make annual contributions totaling 6% of annual compensation to the Marquette Pension Plan to continue accruing benefits. Participants in the Bell Pension Plan no longer accrue benefits. The Company makes contributions to the Pension Plans sufficient to meet its minimum funding requirements as prescribed by the Employee Retirement Income Security Act of 1974, as amended.

Status and Expense

The following table presents the changes in the benefit obligations and plan assets of the Pension Plans during the years ended December 31, 2020 and 2019 and the unfunded liability of the Pension Plans at December 31, 2020 and 2019 (in millions):

	2020	2019
Change in benefit obligation:		
Benefit obligation at beginning of year	$ 70.1	$ 58.6
Service costs	0.6	0.5
Interest costs	2.1	2.4
Participant contributions	0.3	0.3
Actuarial loss	5.6	10.2
Benefits paid	(2.1)	(1.9)
Benefit obligation at end of year	76.6	70.1
Change in plan assets:		
Fair value of plan assets at beginning of year	47.1	38.5
Actual return on plan assets	6.9	8.1
Employer contributions	2.1	2.1
Participant contributions	0.3	0.3
Benefits and expenses paid	(2.1)	(1.9)
Fair value of plan assets at end of year	54.3	47.1
Unfunded liability included in other long-term liabilities in the Company's accompanying consolidated balance sheet	$ 22.3	$ 23.0

The Company recognizes changes in the funded status of the Pension Plans as a direct increase or decrease to stockholders' equity through accumulated other comprehensive income (loss). For the years ended December 31, 2020 and 2019, the Company recognized comprehensive losses of $1.3 million and $4.4 million, respectively, as decreases in stockholders' equity through accumulated other comprehensive loss. The adjustments were primarily related to changes in the Company's unfunded pension liability due to changes in the discount rates and mortality assumptions used to measure the projected benefit obligation.

The following table summarizes the projected benefit obligation, accumulated benefit obligation and fair value of plan assets related to the Pension Plans as of December 31, 2020 and 2019 (in millions):

	2020	2019
Projected benefit obligation	$ 76.6	$ 70.1
Accumulated benefit obligation	$ 71.7	$ 65.4
Fair value of plan assets	$ 54.3	$ 47.1

The following table summarizes the weighted-average assumptions used by the Company to determine its benefit obligation as of December 31, 2020 and 2019 (in millions):

	2020	2019
Discount rate	2.5 %	3.1 %
Rate of compensation increases, when applicable	3.0 %	3.0 %

Plan Assets

The investment policy for the Pension Plans has been formulated to achieve a risk adjusted return that balances the need for asset growth against the risk of significant fluctuations in asset prices and the need for significant contributions from the Company. On a quarterly basis, or more frequently as necessary, the current risk levels, asset performance and expected return on assets are reviewed and evaluated against goals and targets by a committee appointed to oversee investment of the Pension Plans' assets (the "Investment Committee"). The Investment Committee strives to maintain a balance between risk and return through the use of modern portfolio theory methods, in conjunction with Monte Carlo modeling to evaluate the behavior of the portfolio under different scenarios. At December 31, 2020, the Pension Plans' investments include a balance of mutual funds and money market funds in order to achieve an overall rate of return that minimizes the need for additional employer contributions. The Company measures the fair value of its

Pension Plans' assets in accordance with ASC 820.

The Pension Plans' investments in mutual funds are valued at the net asset value ("NAV") of shares reported in the active market in which the funds are traded. Because quoted prices are available for mutual funds and the markets in which they are traded are generally considered active, the Company has classified each of them as a Level 1 investment. The Pension Plans' investments in money market funds are valued at quoted prices in markets that are not active by a combination of inputs, including but not limited to dealer quotes who are market makers in the underlying funds and other directly and indirectly observable inputs. Because the inputs used to value money market funds are either directly or indirectly observable, but are not quoted prices in active markets, the Company has classified these assets as Level 2 investments.

The following table summarizes the assets of the Pension Plans, measured at fair value as of December 31, 2020 and 2019, by major asset category and aggregated by level within the fair value hierarchy (in millions):

	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
December 31, 2020:				
Mutual funds	$ 52.6	$ 52.6	$ -	$ -
Money market funds	1.7	-	1.7	-
Total	$ 54.3	$ 52.6	$ 1.7	$ -
December 31, 2019:				
Mutual funds	$ 44.5	$ 44.5	$ -	$ -
Money market funds	2.6	-	2.6	-
Total	$ 47.1	$ 44.5	$ 2.6	$ -

The Company expects to contribute approximately $1.7 million to the Pension Plans during the year ended December 31, 2021. Additionally, the Company expects to make future benefit payments from the Pension Plans as follows for the years indicated (in millions):

2021	$ 2.5
2022	2.6
2023	2.9
2024	3.0
2025	3.2
Five years thereafter	18.0
	$ 32.2

Multiemployer Pension Plan

In connection with the LifePoint/RCCH Merger, the Company assumed the obligation to contribute to a multiemployer pension plan on behalf of certain employees covered by collective bargaining agreements, in accordance with the terms of such collective bargaining agreements. The Company's contributions to the multiemployer pension plan are determined based on the terms of the applicable collective bargaining agreements. Multiemployer plans are different from single-employer plans because assets contributed to the multiemployer plan by one employer may be used to provide benefits to employees of other participating employers. Also, if a participating employer stops contributing to the plan, the unfunded obligations of the plan may be borne by the remaining participating employers. If the Company stops participating in the multiemployer plan, the Company may be required to pay a withdrawal liability based on its portion of the unfunded status of the plan. Currently, the Company does not anticipate ending its participation in this plan.

Defined Contribution Plans

The Company maintains two separate defined contribution retirement plans covering a majority of the Company's employees. These defined contribution plans contain discretionary matching contribution formulas and definite non-elective contribution formulas for employees at certain facilities. The Company's expense related to its defined contribution plans was $31.4 million, $31.2 million and $5.6 million for the years ended December 31, 2020, 2019 and 2018, respectively.

Deferred Compensation Plans

The Company maintains supplemental deferred compensation plans with respect to certain of its employees and affiliated physicians. As of December 31, 2020 and 2019, the assets associated with these deferred compensation plans were $56.1 million and $46.2 million, respectively, and the liabilities were $60.4 million and $48.1 million, respectively. These amounts are included under the captions "Other long-term assets" and "Other long-term liabilities", respectively, on the accompanying consolidated balance sheets at December 31, 2020 and 2019.

Note 13. Stock-Based Compensation

DSB Parent is authorized to issue Units to employees, executives, consultants and directors of the Company, under the DSB Parent Partnership Agreement. The Company has determined that the Units are a substantive class of members' equity for accounting purposes because the Units are legal equity of DSB Parent, they have participation features, including distribution and liquidation rights which allow them to participate in the residual returns of the DSB Parent and vested interests are retained upon termination. As a result, these awards are accounted for under ASC 718.

There are 35,270,000 aggregate number of Units authorized for issuance. Service Units and Performance Units have been issued under the DSB Parent Partnership Agreement and forms of award agreements. The following table summarizes the activity with regards to units available for grant under the Company's stock-based compensation plan for the years ended December 31, 2020, 2019 and 2018:

	Units Available for Grant
January 1, 2018	5,407,989
Granted	(3,073,000)
Forfeited	1,653,720
December 31, 2018	3,988,709
Authorized for grant	16,400,000
Granted	(17,749,956)
Repurchased	3,750,184
Forfeited	735,704
December 31, 2019	7,124,641
Granted	(5,352,467)
Repurchased	57,498
Forfeited	240,100
December 31, 2020	2,069,772

Service Units

Service Units have been granted to certain members of the board of directors and Tranche A Units to certain employees, executives and consultants. Units that have been granted to members of the board of directors vest on a time-basis only, either in three equal installments on each of the first three anniversaries of the grant date or on the date that is the earliest of (i) six months and one day following November 16, 2018 or (ii) the date of the applicable director's termination of service due to death, disability or as a result of the director's removal from the board of directors other than for cause. Tranche A Units granted to certain employees, executives and consultants vest in equal installments on the last day of each of the first twenty calendar quarters that commence on or after the grant date or, in some cases, November 16, 2018. Service Units will automatically vest upon the sale of the Company. In the event of an initial public offering, all unvested Service Units will remain outstanding and continue to vest based on the stated vesting pattern. Unvested Service Units are forfeited upon a holder's termination of service.

Service Units are accounted for as equity awards and related compensation expense is recognized ratably over the vesting period. For employees and executives granted Service Units prior to November 16, 2018 who are severed during the 18-month period following the LifePoint/RCCH Merger under certain circumstances, Tranche A Units vest in full upon the eligible employee's termination date. On November 16, 2018, Service Units originally issued to approximately 40 employees and executives were modified in connection with the LifePoint/RCCH Merger. The Company calculated the fair value of the service units before and after the modification and recorded expense of $1.2 million and $2.4 million for the years ended December 31, 2020 and 2019, respectively, related to the modification and acceleration of service units. As of December 31, 2020, Service Units had unrecognized compensation expense of $7.9 million. The expense is expected to be recognized over a weighted-average period of 1.9 years from December 31, 2020.

Performance Units

Performance Units, which have been granted as Tranche B Units and Tranche C Units, will vest based upon equity holders of DSB Parent realizing certain targeted multiples of invested capital ("MOIC thresholds"). Performance Units are accounted for as equity awards with expense recognition occurring upon the realization of the stated MOIC thresholds due to a liquidity event. For employees and executives granted Performance Units prior to November 16, 2018 who were severed in connection with the LifePoint/RCCH Merger, Tranche B units vest in full upon the eligible employee's termination date and Tranche C units are forfeited in accordance with the original terms and conditions of the applicable Profits Units award agreement. On November 16, 2018, Tranche B Units previously issued to approximately 40 employees and executives were modified in connection with the LifePoint/RCCH Merger. The Company calculated the fair value of the Tranche B Units before and after the modification and recorded expense of $1.2 million and $2.7 million for the years ended December 31, 2020 and 2019, respectively, related to the modification and acceleration of Tranche B Units. For Performance Units not modified in connection with the LifePoint/RCCH Merger, the Company determined that a liquidity event was not probable, therefore no compensation expense has been recognized related to the unmodified Performance Units. Unvested Units that do not vest on termination are forfeited upon such termination, subject to certain conditions.

The following table summarizes the Company's total stock-based compensation expense for the years ended December 31, 2020, 2019 and 2018 (in millions):

	2020	2019	2018
Service Units	$ 2.4	$ 3.5	$ 3.4
Performance Units	-	1.3	3.6
	2.4	4.8	7.0
Modification expense for awards classified as a liability	2.5	2.8	-
Total stock-based compensation expense	$ 4.9	$ 7.6	$ 7.0

Valuation Assumptions

The fair value of all Units was determined using a Monte Carlo simulation framework. The following table shows the weighted average assumptions used by the Company to develop the fair value estimates and the resulting estimates of weighted-average fair value per Unit granted during the years ended December 31, 2020, 2019 and 2018:

	2020	2019	2018
Common equity value of the Company (in millions)	$ 1,999.0	$ 1,671.9	$ 624.1
Expected volatility	48.0 %	38.0 %	24.0 %
Risk-free interest rate	0.60 %	2.90 %	1.60 %
Expected dividends	-	-	-
Average expected term (years)	3.7	5.0	3.2

Units Activity

The following represents the activity of the Units for the years ended December 31, 2020, 2019 and 2018:

	Service Units		Performance Units			
	Tranche A and Units to the Board	Weighted Average Grant Date Fair Value per Unit	Tranche B	Weighted Average Grant Date Fair Value per Unit	Tranche C	Weighted Average Grant Date Fair Value per Unit
Unvested at January 1, 2018	3,801,029	$ 0.71	5,262,169	$ 0.41	2,631,085	$ 0.30
Granted	1,229,200	1.43	1,229,200	0.68	614,600	0.37
Vested	(2,054,331)	0.82	(1,636,959)	0.46	-	-
Forfeited	(266,140)	0.70	(379,400)	0.41	(1,008,180)	0.31
Unvested at December 31, 2018	2,709,758	0.97	4,475,010	0.47	2,237,505	0.31
Granted	6,996,576	1.23	6,868,920	0.80	3,884,460	0.63
Vested	(2,893,910)	1.07	(891,400)	0.54	-	-
Forfeited	(85,044)	1.18	(136,640)	0.60	(514,020)	0.38
Unvested at December 31, 2019	6,727,380	1.19	10,315,890	0.68	5,607,945	0.53
Granted	2,197,487	1.08	2,103,320	1.08	1,051,660	1.08
Vested	(2,217,947)	1.10	-	-	-	-
Forfeited	(75,100)	1.19	(110,000)	0.74	(55,000)	0.60
Unvested at December 31, 2020	6,631,820	$ 1.19	12,309,210	$ 0.75	6,604,605	$ 0.61

Note 14. Commitments and Contingencies

Capital Expenditure Commitments

The Company is reconfiguring some of its facilities to more effectively accommodate patient services and to provide for a greater variety of services. The Company has incurred approximately $84.9 million in costs related to uncompleted projects as of December 31, 2020, which is included under the caption “Construction in progress” in the Company’s accompanying consolidated balance sheet. At December 31, 2020, these uncompleted projects had an estimated cost to complete of approximately $124.0 million. The estimated timeframe for completion of these projects generally ranges from less than one year up to two years. Additionally, the Company is subject to annual capital expenditure commitments in connection with several of its facilities. At December 31, 2020, the Company estimated its total remaining capital expenditure commitments to be approximately $1,174.7 million, which generally have remaining terms of two to six years. Of this amount, more than one half represents obligations at certain facilities for which commitments are computed as a percentage of revenues, ranging from three to five percent, and for which the commitment periods generally span over a longer period of time.

Legal Proceedings and General Liability Claims

Healthcare facilities, including the Company and its facilities, are, from time to time, subject to claims and suits arising in the ordinary course of business, including claims for damages for personal injuries, medical malpractice, breach of contracts, wrongful restriction of or interference with physicians’ staff privileges and employment related claims. In certain of these actions, plaintiffs request payment for damages, including punitive damages that may not be covered by insurance.

In addition, the Company is subject to the regulation and oversight of various state and federal governmental agencies. Further, under the False Claims Act, private parties have the right to bring qui tam, or “whistleblower,” suits against healthcare facilities that submit false claims for payments to, or improperly retain identified overpayments from, governmental payers. Some states have adopted similar state whistleblower and false claims provisions. These qui tam or “whistleblower” actions initiated under the civil False Claims Act may be pending but placed under seal by the court to comply with the False Claims Act’s requirements for filing such suits. As a result, they could be proceeding without the Company’s knowledge. If a provider is found to be liable under the False Claims Act, the provider may be required to pay up to three times the actual damages sustained by the government plus substantial civil monetary penalties that are subject to annual adjustment for inflation for each separate false claim.

Although the healthcare industry has seen numerous ongoing investigations related to compliance and billing practices, hospitals, in particular, continue to be a primary enforcement target for the Office of Inspector General ("OIG"), the Department of Justice ("DOJ") and other governmental agencies and fraud and abuse programs. Certain of the Company's individual facilities have received, and from time to time, other facilities may receive, inquiries or subpoenas from Medicare Administrative Contractors, and federal and state agencies. Any proceedings against the Company may involve potentially substantial amounts as well as the possibility of civil, criminal, or administrative fines, penalties, or other sanctions, which could be material. Settlements of suits involving Medicare and Medicaid issues routinely require both monetary payments as well as corporate integrity agreements. Depending on whether the underlying conduct in these or future inquiries or investigations could be considered systemic, their resolution could have a material adverse effect on the Company's financial position, results of operations and liquidity.

The Company does not control and cannot predict with certainty the progress or final outcome of discussions with government agencies, investigations and legal proceedings against the Company. Therefore, the final amounts paid to resolve such matters, claims and obligations could be material and could materially differ from amounts currently recorded, if any. Any such changes in the Company's estimates or any adverse judgments could materially adversely impact the Company's future results of operations and cash flows.

On November 6, 2019, following an internal review conducted by the Company with the assistance of outside counsel, the Company and one of its hospitals and a related physician practice initiated a voluntary self-disclosure to the DOJ related to concerns regarding the medical necessity of certain interventional cardiology procedures performed at the hospital by a physician employed at the related physician practice and the appropriateness of that physician's coding for evaluation and management services. The related physician practice has terminated the employment of the physician who was the subject of the internal review and that physician no longer practices at the hospital. On October 28, 2020, the hospital and the related physician practice entered into a settlement agreement, the terms of which require the hospital and the related physician practice to pay approximately $14.7 million in exchange for a release of claims by the U.S. and provide that the agreement itself is not an admission of liability by the hospital or the related physician practice. The settlement was consistent with the amount previously accrued for loss contingencies related to this matter. It is reasonably possible that the Company could incur additional losses related to this matter, but the Company is not able to predict or estimate such amounts at this time.

The Company accrues an estimate for a contingent liability when losses are both probable and reasonably estimable. The Company reviews its accruals each quarter and adjusts them to reflect the impact of developments, advice of legal counsel and other information pertaining to a particular matter.

Note 15. Subsequent Events

In accordance with the provisions of ASC 855, "Subsequent Events," the Company evaluated all material events subsequent to the balance sheet date through March 4, 2021, the date of issuance, for events requiring disclosure or recognition in the Company's consolidated financial statements. There were no subsequent events requiring disclosure or recognition in the Company's consolidated financial statements.

SIGNATURES

LifePoint Health, Inc. has caused this Report to be signed on its behalf by the undersigned thereunto duly authorized.

TABLE OF CONTENTS

DISCLOSURE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report for the fiscal year ended December 31, 2021 (this "***Report***") contains forward-looking statements that involve risks and uncertainties. Forward-looking statements include any statements that address future results or occurrences. In some cases, you can identify forward-looking statements by terminology such as: "may," "might," "will," "would," "should," "could" or the negatives thereof. Generally, the words "anticipate," "believe," "continue," "expect," "intend," "estimate," "project," "plan" and similar expressions identify forward-looking statements. In particular, statements about our expectations, beliefs, plans, objectives, assumptions or future events or performance contained elsewhere in this Report are forward-looking statements. These forward-looking statements include statements that are not historical facts, including statements concerning our possible or assumed future actions and business strategies. We have based these forward-looking statements on our current expectations, assumptions, estimates and projections. While we believe these expectations, assumptions, estimates and projections are reasonable, such forward-looking statements are only predictions and involve known and unknown risks, uncertainties and other factors, many of which are outside of our control, which could cause our actual results, performance or achievements to differ materially from any results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following:

- uncertainty about the effect that the Kindred Transaction (as defined in this Report) may have on our employees, patients, local communities, business relationships and other parties, and the possibility that the anticipated benefits from the Kindred Transaction will not be realized within the timeframe expected or at all;
- the length and severity of the novel coronavirus ("***COVID-19***") pandemic, the measures we are taking to respond to the pandemic, the vaccination rates in the communities we serve, the number and severity of variants of the virus, the effectiveness of vaccines against the virus (and any variants) on a widespread basis and the impact of vaccine mandates;
- negative impacts on patient volumes and operating revenues for elective procedures and services provided to non-COVID-19 patients and the uncertainty of future patient volumes and related revenues, including shifts from in-person patient services to telehealth services;
- the impact of sudden increases and fluctuations in the volume of COVID-19 patients cared for across our facilities;
- the impact of existing or future COVID-19 related government and administrative regulation and stimulus, including the Families First Coronavirus Response Act, the Coronavirus Aid, Relief, and Economic Security Act (the "***CARES Act***") and other COVID-19 relief or stimulus legislation, and how these programs are administered and monitored and may be modified in the future;
- supply shortages, workforce disruptions or shortages and increased costs of providing care to our patients, including increased equipment, staffing and supply expenses and increased length of patient stay resulting from the COVID-19 pandemic;
- the emergence of and effects related to other pandemics, epidemics and highly contagious infectious diseases;
- payment changes, including policy considerations and changes resulting from federal and state budgetary restrictions;
- impact from or likelihood of the repeal of, or material modification to, the Patient Protection and Affordable Care Act, as amended by the Health Care and Education Reconciliation Act of 2010 (collectively, the "***Affordable Care Act***"), as a result of court or legislative action;
- potential impact from the repeal of the penalties associated with the "***individual mandate***" to purchase health insurance under the Affordable Care Act, included in the Tax Cuts and Jobs Act of 2017;
- impact from changes to or limitations on Medicaid supplemental payment programs;
- our compliance with new and existing laws and regulations, including laws and regulations adopted in connection with the COVID-19 pandemic, as well as costs and benefits associated with compliance;
- any potential action brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the "qui tam" or "whistleblower" provisions of the federal False Claims Act (the "***False Claims Act***");
- impact from the changes in payer mix marked by a shift of patients from private insurance to Medicare and Medicaid programs;
- our acquisition strategy, including integration risks relating to future acquisitions;
- the potential for material obligations if we acquire facilities with unknown or contingent liabilities;
- claims and legal actions relating to professional liabilities and other litigation risks;
- delayed payments and repayments resulting from reviews of claims to Medicare and Medicaid for our services;
- impact of controls imposed by payers designed to reduce inpatient services;
- risks associated with outsourcing functions to third parties;
- our relationships with our joint venture partners;
- changes in physician employment regulations;
- increases in the amount and risk of collectability of patient accounts receivable, particularly in connection with the increase in the unemployment rate and number of underinsured and uninsured patients as a result of the COVID-19 pandemic;
- our need to make investments continually in our processes and information systems to protect the privacy of patients, employees and other persons and reduce the risk of successful cybersecurity attacks;
- damage to our reputation, regulatory penalties, legal claims and liability under state and federal laws that we could suffer upon any cybersecurity or privacy breaches;
- anticipated capital expenditures, including routine projects, investments in information systems and capital projects related to acquisitions, construction of new facilities and construction projects and the expectation that capital commitments could be a component of future acquisitions;

- effects of competition in a facility's market;
- changes in industry and general economic trends, including macroeconomic conditions negatively impacted by the COVID-19 pandemic;
- recruitment and retention of senior executives, providers and other healthcare employees;
- our ability to acquire facilities on favorable terms and successfully complete asset sales and divestitures;
- effects of union organizing activities;
- potential recoupment of previously recognized income from electronic health record ("***EHR***") incentive programs;
- timeframes for completion of capital projects;
- changes in depreciation and amortization expenses;
- accounting estimates and the impact of accounting methodologies and new accounting pronouncements;
- changes in interpretations, assumptions and expectations regarding tax legislation, including provisions of the CARES Act, and additional guidance that may be issued by federal and state taxing authorities;
- consolidation of commercial insurance companies and patient shifts to lower cost healthcare plans, including association health plans and short-term limited duration health insurance plans, which generally provide lower payment for services rendered;
- participation in the healthcare insurance exchanges (the "***Exchanges***") and the impact of increasing enrollment by patients in insurance plans with narrow networks, tiered networks, high deductibles or high co-payments;
- governmental or third-party investigations, legal actions and voluntary self-disclosures relating to overpayments or other regulatory compliance matters;
- the ability of our local management teams to identify and meet the needs of our patients, medical staffs and their communities;
- the efforts of insurers, healthcare providers and others to contain healthcare costs;
- our ability to obtain adequate levels of general and professional liability insurance;
- our ability to implement initiatives promoting cost reductions and operational efficiencies;
- possible future indebtedness that may be incurred; and
- other factors referenced under the caption "Risk Factors" in this Report.

Given these uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements. We disclaim any obligation to update any such factors or to announce the result of any revisions to any of the forward-looking statements contained herein to reflect future results, events or developments.

Statements in this Report are made as of the date hereof unless stated otherwise. New factors emerge from time to time, and it is not possible to predict all such factors.

EXPLANATORY INFORMATION REGARDING THIS REPORT

This Report has been prepared in accordance with the obligations of the Company under (i) Section 4.02 of the Indenture, dated as of December 4, 2020 (the "***5.375% Unsecured Notes Indenture***"), among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, National Association, as trustee, relating to the Company's 5.375% Senior Notes due 2029 (the "***5.375% Unsecured Notes***"), (ii) Section 4.02 of the Indenture, dated as of April 13, 2020 (as amended or supplemented from time to time, the "***6.75% Secured Notes Indenture***"), among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, National Association, as trustee and notes collateral agent, relating to the Company's 6.750% Senior Secured Notes due 2025 (the "***6.75% Secured Notes***"), (iii) Section 4.02 of the Indenture, dated as of February 13, 2020 (as amended or supplemented from time to time, the "***4.375% Secured Notes Indenture***") among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, National Association, as trustee and notes collateral agent, relating to the Company's 4.375% Senior Secured Notes due 2027 (the "***4.375% Secured Notes***") and (iv) Section 4.02 of the Indenture, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***9.75% Unsecured Notes Indenture***" and, together with the 5.375% Unsecured Notes Indenture, the 6.75% Secured Notes Indenture and the 4.375% Secured Notes Indenture , the "***Indentures***"), among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, National Association, as trustee, relating to the Company's 9.750% Senior Notes due 2026 (the "***9.75% Unsecured Notes***" and, together with the 5.375% Unsecured Notes, 6.75% Secured Notes and the 4.375% Secured Notes, the "***Notes***"), (v) Section 5.04 of the Asset-Based Revolving Credit Agreement, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***ABL Agreement***"), among the Company, as Lead Borrower, DSB Acquisition, LLC, a Delaware limited liability company ("***Holdings***"), the lenders party thereto from time to time and Citibank, N.A., as administrative agent and collateral agent, and (vi) Section 5.04 of the First Lien Credit Agreement, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***Term Loan Agreement***" and, together with the ABL Agreement, the "***Credit Agreements***"), among the Company, as Lead Borrower, Holdings, the lenders party thereto and Citibank, N.A., as administrative agent and collateral agent. This Report has been prepared in all material respects in accordance with the rules and regulations of the Securities and Exchange Commission (the "***SEC***") applicable to an Annual Report on Form 10-K for the fiscal year ended December 31, 2021, except to the extent permitted to be excluded by the Indentures and the Credit Agreements.

USE OF NON-GAAP FINANCIAL INFORMATION

In this Report, we have provided pro forma same-facility information for the years ended December 31, 2021 and 2020, as if the Kindred Transaction had occurred on January 1 for each of the years then ended, EBITDA and Adjusted EBITDA (collectively, the "***Non-GAAP Measures***") because we believe they provide the holders of our Notes (the "***Holders***") and the lenders under our Credit Agreements ("***Lenders***") with additional information to measure our performance and evaluate our ability to service our indebtedness. We believe that the presentation of Non-GAAP Measures is appropriate to provide additional information to the Holders and Lenders about certain material non-cash items and about unusual items that we do not expect to continue or to continue at the same level in the future as well as other items. Further, we believe the Non-GAAP Measures provide a meaningful measure of operating profitability because we use them for evaluating our business performance and understanding certain significant items.

The Non-GAAP Measures are not presentations made in accordance with United States ("***U.S.***") generally accepted accounting principles ("***GAAP***"), and our use of these terms may vary from others in our industry. EBITDA and Adjusted EBITDA should not be considered as alternatives to operating income or any other performance measures derived in accordance with GAAP as measures of operating performance or cash flows as measures of liquidity. EBITDA and Adjusted EBITDA have important limitations as analytical tools, and you should not consider them in isolation or as substitutes for analysis of our results as reported under GAAP. Because of these limitations, we rely primarily on our GAAP results and use EBITDA and Adjusted EBITDA only as a supplement. Refer to "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" for a description of the calculation and limitations of these measures.

DOCUMENT SUMMARIES AND REQUESTS

This Report contains summaries believed to be accurate with respect to certain documents, but reference is made to the actual documents for complete information. All such summaries, which do not purport to be complete, are qualified in their entirety by such reference. Copies of the documents referred to herein will be made available without cost to Holders and Lenders by making a written or oral request to us. Any such request may be made to us at the following address and telephone number:

FISCAL YEAR

All references to "fiscal year" are to the twelve months ended December 31 of the year referenced.

OTHER ITEMS

LifePoint Health, Inc. (formerly known as RegionalCare Hospital Partners Holdings, Inc.), a Delaware corporation, along with each of its consolidated subsidiaries, is referred to herein as the "***Company***," "***LifePoint***," "***we***," "***our***," "***us***," and, before giving effect to the LifePoint/RCCH Merger (as defined below), "***RCCH***," in each case, unless the context otherwise requires.

References in this Report to the "***LifePoint/RCCH Merger***" refer to the merger, which was effective on November 16, 2018, of Legend Merger Sub, Inc., a Delaware corporation and wholly-owned subsidiary of RCCH ("***Legend Merger Sub***"), with and into LifePoint Health, Inc., a Delaware corporation ("***Legacy LifePoint***"), with Legacy LifePoint surviving the LifePoint/RCCH Merger as a subsidiary of RCCH. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint changed its name from "LifePoint Health, Inc." to "Legacy LifePoint Health, Inc." and, immediately following the effective time of the LifePoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners Holdings, Inc." to "LifePoint Health, Inc." Subsequently, Legacy LifePoint converted from a corporation to a limited liability company.

References in this Report to the "***Sponsor***" refer to certain funds that are affiliates of the Company (the "***Apollo Funds***") that are ultimately controlled and/or managed by certain affiliates of Apollo Management Holdings, L.P. ("***Apollo Management***" and, when acting on behalf of the Apollo Funds, "***Apollo***"), which is an affiliate of Apollo Global Management, Inc.

PART I

Item 1. *Business*.

Our Company

We are a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. We generate revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network comprised of 65 community hospital campuses, 28 inpatient rehabilitation facilities ("***IRFs***"), three behavioral health facilities, and additional sites of care that include acute rehabilitation units ("***ARUs***"), outpatient centers and post-acute care facilities. As of December 31, 2021, we operated 96 healthcare facilities in 29 states throughout the U.S. with approximately 10,000 licensed beds and approximately 50,000 dedicated employees.

We seek to fulfill our mission of Making Communities Healthier® by (1) delivering high quality patient care, (2) supporting our physicians, (3) creating excellent workplaces for our employees, (4) taking a leadership role in our communities and (5) ensuring fiscal responsibility. We strive to create places where people choose to come for healthcare, physicians want to practice and employees want to work.

Our Business Strategy

The key elements of our business strategy include:

- *Commitment to the Delivery of Exceptional Quality Patient Care*. Providing high quality patient care is essential to our mission and will always be our top priority. We believe our quality efforts are central to creating places where people choose to come for care, physicians want to practice and employees want to work. Our National Quality Program provides a structured, evidence-based approach to enhancing quality and patient safety and is nationally renowned. Several factors contribute to providing high quality patient care, including leadership and accountability at all levels of our organization, aligning ourselves with talented physicians and medical staff who share our commitment to quality, and providing a clinical environment that is satisfactory to our patients, physicians and employees. We continually strive to improve physician and employee satisfaction, which we believe is critical to delivering quality patient care. We also partner with academic medical centers, regional health systems and specialty providers to better serve the needs of our communities. In addition, demonstrating our results in delivering high quality patient care is increasingly vital to achieving our operating and financial success, including with governmental and commercial payers.

- *Continue to Grow in Existing Markets by Expanding Services and Access Points to Care*. We regularly conduct in-depth strategic reviews of the major service lines offered at each of our facilities and evaluate additional services through which we could better serve our communities and grow in our markets. We leverage our market-specific knowledge together with input and guidance from our local physician and community leaders to prioritize the healthcare services our communities are seeking. Focus areas include: expansion of specialty service lines to meet unserved or underserved patient needs; expansion of access points to care, including outpatient, ancillary, retail and virtual health services; and investment in technology and equipment. We invest strategically in our markets in order to increase the quality and scope of services we provide, meet the needs of our communities and maintain our strong reputation as the healthcare provider of choice. This in turn helps us to continue recruiting physicians and growing the revenue of our facilities.

- *Leverage LifePoint Forward Innovation Strategy to Develop Solutions that Transform and Improve Community-based Healthcare Delivery*. Through our innovation strategy, LifePoint Forward, we are developing meaningful solutions to enhance quality, increase access to care, and improve value across the LifePoint footprint and communities across the country. This includes a significant focus on digital health capabilities that span the healthcare continuum. For example, we have already invested in or implemented new technologies for on-demand telehealth services, artificial intelligence functionality, online scheduling for in-person and telehealth visits, virtual check-in and waiting room options, remote patient monitoring, next best action campaigns, and computational linguistics designed to identify at-risk patients.

- *Continue to Recruit and Retain Leading Physicians*. Our physician engagement strategies drive our ability to enhance and expand our services to meet the healthcare needs of our communities. We have a comprehensive recruiting program that is directed by an experienced department at our Health Support Center ("***HSC***") and is supported at the local level by our hospital system chief executive officers ("***CEOs***") and Boards of Trustees. We supplement our local teams with experienced specialists at our HSC and several third-party recruiting firms to assist us in identifying candidates that match the profile of our physician needs. We maintain a flexible approach to aligning our goals with our physician partners, including our willingness to recruit physicians through multi-year employment and/or income guarantee arrangements. In addition, we believe our physicians are attracted to our facilities because of several factors, including our commitment to quality care, our focus on employing and developing high quality nurses and support staff and our integration into, and support of, the communities we serve.

- *Routinely Optimize Our Portfolio to Strengthen Our Position in Existing Markets and Expand into New Markets*. We evaluate and selectively pursue acquisitions of hospitals, outpatient and ancillary clinics and other healthcare facilities in new and existing markets, with the goal of improving our operating performance and better meeting the healthcare needs of our communities. We employ a rigorous and disciplined approach to new market acquisitions and focus on a range of criteria, including expected financial returns and strategic benefits, to evaluate a target's suitability and fit within our portfolio. We seek to operate health systems that are, or have the potential to become, market leaders in communities with favorable demographic trends. Furthermore, we routinely evaluate our existing portfolio to assess whether we are meeting our strategic and financial objectives in our markets. We evaluate and may seek to opportunistically divest assets that do not meet our strategic and/or financial objectives and which may deliver more value to our stakeholders and the respective communities through a sale.

- *Continue to Engage in Strategic Relationships with Local Partners*. We partner with several academic medical centers and regionally significant health systems to better serve our communities. For example, we have established partnerships with Duke University Health System ("***Duke***"), Norton Healthcare, Inc. ("***Norton***"), LHC Group, Inc. ("***LHC***"), University of Washington Health, and Billings Clinic.

- *Continue to Focus on Operational Efficiency*. We strive to improve our operating performance by making our revenue cycle processes more efficient, making an even higher level of purchases through our group purchasing organization, operating more efficiently and effectively, and working to appropriately standardize our policies, procedures and practices across all of our affiliated facilities. As part of our ongoing efforts to further manage costs and improve the results of our revenue cycle, we have partnered with various third parties to provide certain nonclinical business functions, including payroll processing, supply chain management and revenue cycle functions. We believe this model is the most cost effective and efficient approach to managing these nonclinical business functions across multi-facility enterprises. Additionally, in connection with our efforts to responsibly manage purchasing costs, we participate along with other healthcare companies in a group purchasing organization, HealthTrust Purchasing Group, which makes certain national supply and equipment contracts available to our facilities. We also implement this operating discipline when we enter a new market through acquisitions, where we focus on optimizing staffing levels to reduce labor costs, leveraging our national scale and group purchasing organizations to reduce supply costs and standardizing revenue cycle and information technology ("***IT***") systems. We have made substantial progress implementing these initiatives consistently across our network, and we believe that opportunity exists for continued improvement in the near term, particularly among our recently acquired facilities.

- *Experienced Executive Management and Leadership Teams.* Our executive management team has an average of more than 20 years of healthcare industry experience with a proven record of achieving strong operating and quality results. The executive management team is highly respected in the healthcare industry and has significant experience in managing and acquiring hospitals. Our executive management team is led by David Dill, who serves as our Chairman and Chief Executive Officer. Mr. Dill has more than 20 years of operational and financial leadership experience in the healthcare industry.

Our Background

LifePoint/RCCH Merger

Summary

On July 22, 2018, RCCH, Legend Merger Sub and Legacy LifePoint entered into an agreement and plan of merger, pursuant to which, effective November 16, 2018, Legend Merger Sub merged with and into Legacy LifePoint, with Legacy LifePoint surviving the merger as a wholly-owned subsidiary of RCCH. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint changed its name from "LifePoint Health, Inc." to "Legacy LifePoint Health, Inc." and, immediately following the effective time of the LifePoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners Holdings, Inc." to "LifePoint Health, Inc." Subsequently, Legacy LifePoint converted from a corporation to a limited liability company.

Equity Contribution

In connection with the LifePoint/RCCH Merger, certain of the Apollo Funds, together with certain other co-investors investing through a co-investment vehicle controlled by our Sponsor or its affiliates, indirectly contributed $1,000 million of newly invested capital to DSB Parent L.P., a Delaware limited partnership (the "***Parent***"), which is our indirect parent and is indirectly owned by certain of the Apollo Funds, co-investment vehicles and certain current or former directors, members of management, employees and consultants of the Company and/or our affiliates, and the $1,000 million of newly invested capital was further contributed to the Company to be used to partially fund the LifePoint/RCCH Merger.

Financing Transactions

Concurrently with the closing of the LifePoint/RCCH Merger, we (1) issued the 9.75% Unsecured Notes, (2) entered into the ABL Agreement, which provides a senior secured asset-based revolving credit facility (the "***ABL Facility***") in an aggregate principal amount of $800 million with a maturity of five years, (3) terminated our existing senior secured asset-based revolving credit facility, which we entered into on April 29, 2016 (the "***Prior ABL Facility***"), (4) entered into the Term Loan Agreement, which provides a senior secured term loan credit facility (the "***Term Loan Facility***") in an aggregate principal amount of $3,550 million with a maturity of seven years, and (5) repaid in full our $150 million term loan facility, which we entered into on April 25, 2018 (the "***Prior Term Facility***").

Kindred Transaction

On June 18, 2021, we entered into a Securities Purchase Agreement (the "***SPA***") with TPG Kentucky Co-Invest, LP ("***TPG Co-Invest Seller***"), TPG VII Kentucky Holdings I, LP ("***TPG VII Seller***"), Kentucky Hospital Management, LLC ("***Management Seller***"), Kentucky Hospital GP, Inc. ("***Partnership GP Seller***" and each of TPG Co-Invest Seller, TPG VII Seller, Management Seller and Partnership GP Seller, a "***Direct Seller***"), TPG VII Kentucky AIV I, LP ("***TPG Blocker Seller***"), Welsh, Carson, Anderson & Stowe XII, L.P. ("***WCAS XII***"), Welsh, Carson, Anderson & Stowe XII Delaware, L.P. ("***WCAS XII Delaware***"), Welsh, Carson, Anderson & Stowe XII Delaware II, L.P. ("***WCAS XII Delaware II***"), Welsh, Carson, Anderson & Stowe XII Cayman, L.P. ("***WCAS XII Cayman***"), WCAS Management Corporation ("***WCAS Management***"), WCAS XII Co-Investors LLC ("***WCAS XII Co-Investors***," and collectively with WCAS XII, WCAS XII Delaware, WCAS XII Delaware II, WCAS XII Cayman and WCAS Management, the "***WCAS Blocker Sellers***"), Port-aux-Choix Private Investments Inc. ("***PSP Blocker Seller***" and each of TPG Blocker Seller, WCAS Blocker Sellers and PSP Blocker Seller, a "***Blocker Seller***" and, each of the Direct Sellers and each of the Blocker Sellers, a "***Seller***" and collectively, the "***Sellers***"), Kentucky Hospital Holdings JV, LP (the "***Knight***"), the indirect parent of Kindred Healthcare, LLC ("***Kindred***"), and solely in its capacity as the initial seller representative hereunder, Partnership GP Seller ("***Seller Representative***"), pursuant to which, upon the terms and subject to the conditions set forth therein and in accordance with applicable law, the Sellers, which directly and indirectly owned all of the issued and outstanding equity interests in the Knight and the Blockers (as defined in the SPA), agreed to sell such equity interests to LifePoint and/or affiliates of LifePoint. Upon the closing of the Kindred Transaction, as described below, the Company and Kindred established a new healthcare company operating under the name ScionHealth.

On November 30, 2021, Knight Health LLC, a Delaware limited liability company formed at the direction of certain affiliates of the Company ("***Knight Health***"), assumed from the Company and the Company assigned to Knight Health the rights and obligations of the Company under the SPA in respect of the purchase of all of the issued and outstanding equity interests of the Knight and the Blockers and the payment of the purchase price for such equity interests.

On December 23, 2021, the Company, Knight, Knight Health Holdings LLC (d/b/a ScionHealth), a Delaware limited liability company and direct parent of Knight ("***ScionHealth***"), and certain of their respective affiliates entered into reorganization agreements (the "***Reorganization Agreements***") that, among other things, provided for (i) the separation of the inpatient rehabilitation facility, behavioral health, contract rehabilitation service and certain support center businesses (collectively, the "***Knight Transferred Business***") from the businesses of Knight and its subsidiaries, (ii) the separation of the equity and assets comprising 18 select acute care hospitals of the Company (the "***Artemis Business***") from the business of the Company and its subsidiaries, (iii) the transfer of the Knight Transferred Business to the Company, (iv) the transfer of the Artemis Business to Knight (v) the acquisition by the Company of Class B Units of ScionHealth, with an aggregate value of $350 million, and (vi) reciprocal indemnification obligations with respect to the businesses transferred, in each case of clauses (i) through (vi), pursuant to the reorganization, separation and distribution steps described therein, including the assignment by Knight Health of certain rights and obligations under the SPA, including any post-closing purchase price adjustments (the "***Reorganization***"). The Class B Units of ScionHealth acquired by the Company are perpetual non-convertible non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price plus accrued, unpaid dividends.

On December 23, 2021, concurrently with the consummation of the Reorganization, the Sellers, the Seller Representative, Knight and the assignees of the rights and obligations of the Company as initial buyer under the SPA, including Knight Health, consummated the Kindred Transaction. Pursuant to the consummation of the Kindred Transaction and the Reorganization, (i) ScionHealth indirectly holds all of the transferred interests in the Artemis Business, (ii) ScionHealth directly holds all of the issued and outstanding limited partnership interests in Knight, (iii) Kentucky Hospital Holdings JV GP LLC, a Delaware limited liability company and direct subsidiary of ScionHealth ("***Knight GP***"), holds all of the issued and outstanding general partnership interests in Knight, and (iv) the Company holds all of the transferred interests in the Knight Transferred Business and the Class B Units of ScionHealth described above. We refer to the foregoing transactions as the "***Kindred Transaction***".

In connection with the Kindred Transaction, we have entered into a number of transition services agreements and other ancillary agreements with ScionHealth and its subsidiaries with estimated proceeds of $61 million per year to LifePoint and an estimated cost of $3 million per year to LifePoint. In addition, we and ScionHealth are party to a number of commercial services agreements, pursuant to which the Knight Transferred Business provides ScionHealth with therapy services and rehabilitation unit management and development services, among other commercial services.

Our Operations

Services

We operate health systems that provide a broad range of general and specialized healthcare services across inpatient and outpatient settings, including general surgery, internal medicine, cardiology, radiology, oncology, orthopedics, women's services, neurology, rehabilitation services, behavioral services, pediatric services, emergency services and, primarily through our joint venture with LHC, home health and hospice services. In some of our health systems, we offer specialized services such as open heart surgery, skilled nursing, psychiatric care and neurosurgery. In many markets, we also provide outpatient services such as same day surgery, clinical laboratory services, diagnostic imaging services, respiratory therapy services, sports medicine services, urgent care services and lithotripsy. The services provided in any specific health system depend on many factors, including the community need for the service, whether physicians necessary to safely operate the service line are members of the medical staff of that hospital and the existence of any contractual or certificate of need restrictions.

Impact of COVID-19

During March 2020, the global COVID-19 pandemic began to significantly affect our facilities, employees, patients, communities, business operations and financial performance, as well as the U.S. economy and financial markets, as a whole. More than two years into the pandemic, we continue to be deeply committed to protecting the health of our communities and are continuing to respond to the evolving COVID-19 situation across the country. Importantly, we are taking every precaution to ensure we can continue providing quality care and safeguard the health and well-being of patients, employees, providers, volunteers and visitors in each community we serve. The national footprint of our health system, along with our HSC, has enabled us to support our communities during this challenging time.

Our internal COVID-19 taskforce, which was established during the early stages of the pandemic continues to meet regularly. Additionally, in November 2020, we established a COVID-19 vaccine team to help facilitate the successful distribution and administration of vaccines across our markets. This team continues to meet regularly to discuss the latest vaccine developments and keep a pulse on potential barriers our facilities may encounter as they work to increase vaccination rates locally.

The number and severity of COVID-19 variants, including the Delta and Omicron variants, continue as a concerning threat for the national healthcare system, including our hospitals and the communities we serve. The rapid spread of the Delta and Omicron variants, through largely unvaccinated populations resulted in a sharp rise in COVID-19 cases across the country. This activity and the threat of other COVID-19 variants has further emphasized the need for our hospitals and providers to continue endorsing COVID-19 vaccination as the primary means for protection.

Our top priorities continue to be protecting our patients, supporting our people, being leaders in our communities, and managing our financial health. We have put in place a number of protocols to protect our patients, providers, employees, volunteers and visitors.

Our evaluation of the measures taken across our health system in response to COVID-19 and variants of the virus is ongoing and additional updates to our policies, procedures and operations could occur as best practices continue to evolve. Furthermore, our facilities are located across a wide geographic range of communities, which may require us to modify measures we take at specific facilities based on local conditions, including the severity of COVID-19 and variants of the virus in the community served by a facility and changes in state and local executive orders that may restrict certain services or activities.

Additionally, although we recently repaid or declined funds that were available to us and our facilities under the CARES Act and related stimulus legislation, we cannot predict if we will need to seek such funds in the future, and we cannot assure you that we will be able to access such funds in a timely manner or at all.

For additional information about the risks presented by the COVID-19 pandemic, our responses to the pandemic, and the resources available to healthcare providers, refer to "—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" below and "Part I, Item 1A. Risk Factors" and "Part II, Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Developments, Trends and Operating Environment—Impact of COVID-19" included in this Report.

Management and Oversight

Our executive management team has extensive experience in operating multi-facility hospital networks and plays a vital role in the strategic planning for our facilities. A hospital's local management team is typically comprised of a CEO, chief operating officer, chief financial officer and a chief nursing officer. Local management teams work with the hospital's Board of Trustees and our HSC management teams to develop annual operating plans setting forth growth strategies through the expansion of current services, implementation of new services and the recruitment and retention of physicians in each community, as well as plans to improve operating efficiencies and reduce costs. We believe that the ability of each local management team to identify and meet the needs of our patients, medical staffs and the community as a whole is critical to the success of our facilities. We base the compensation for each local management team in part on its ability to achieve the goals set forth in the annual operating plan, including quality of care, patient satisfaction and financial measures.

The Board of Trustees at each facility, consisting of local community leaders, members of the medical staff and the facility CEO, advises the local management teams and helps develop the strategic operating plan for their facility. In addition, it plays a key role in providing the patient care excellence that we demand. Members of each Board of Trustees are identified and recommended by our local management teams. The Boards of Trustees oversee policies concerning medical, professional and ethical practices, monitor these practices and ensure that they conform to our high standards. We maintain company-wide compliance and quality assurance programs and use patient care evaluations and other assessment methods to support and monitor quality of care standards and to meet accreditation and regulatory requirements.

The majority of our facilities have a physician engagement group ("***PEG***") or a physician leadership group ("***PLG***") comprised of key physicians and members of the facility's administrative team. The mission of the PEG or PLG is to provide ongoing dialogue between hospital facility administration and members of the medical staff and community physicians primarily in the areas of operations, quality patient care, employee satisfaction and community relations.

We also provide support to the local management teams through our HSC resources in areas such as revenue cycle, business office, legal, managed care, clinical efficiency, physician services and other administrative functions. These resources allow for sharing best practices and standardization of policies and processes among all of our facilities.

Cost Management

We strive to improve our operating performance by making our revenue cycle processes more efficient, making an even higher level of purchases through our group purchasing organization, operating more efficiently and effectively, and working to appropriately standardize our policies, procedures and practices across all of our affiliated facilities.

As part of our ongoing efforts to further manage costs and improve the results of our revenue cycle, we have partnered with various third parties to provide certain nonclinical business functions, including payroll processing, supply chain management and revenue cycle functions. We believe this model is the most cost effective and efficient approach to managing these nonclinical business functions across multi-facility enterprises.

Attracting Patients

We believe that the most important factors influencing a patient's choice in where to receive healthcare services are the quality of care delivered by the facility, the overall reputation of the facility, the availability and expertise of physicians and nurses, and the location and convenience of the facility. Other factors that affect utilization include local demographics and population growth, local economic conditions and the facility's success in contracting with a wide range of local payers.

Outpatient Services

The healthcare industry has experienced an accelerated shift during recent years from inpatient services to outpatient services as Medicare, Medicaid and managed care payers have sought to reduce costs by shifting lower-acuity cases to an outpatient setting. Advances in medical equipment technology and pharmacology also have supported the shift to outpatient utilization. However, we expect the decline in inpatient admission use rates to moderate over the long term as the baby boomer population reaches ages where inpatient admissions become more prevalent. We have responded to the shift to outpatient services through expanding service offerings and increasing the throughput and convenience of our emergency departments, outpatient surgery facilities and other ancillary units in our facilities.

Sources of Revenues

General

Our facilities generate revenues by providing healthcare services to our patients. Depending upon the patient's medical insurance coverage, we are paid for these services by governmental Medicare and Medicaid programs, commercial insurance, including health maintenance organizations ("***HMOs***"), preferred provider organizations ("***PPOs***") and plans offered through the Exchanges, private insurers, and directly by the patient. The amounts we are paid for providing healthcare services to our patients vary depending upon the payer. Governmental payers generally pay significantly less than the hospital's customary charges for the services provided. Insured patients are generally not responsible for any difference between customary hospital charges and the amounts received from commercial insurance payers. However, insured patients are responsible for payments not covered by insurance, such as exclusions, deductibles and co-payments.

Our revenues by payer and approximate percentages of revenues on a consolidated basis were as follows for the years ended December 31, 2021, 2020 and 2019 (dollars in millions):

	2021		2020		2019	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,368	37.7 %	$ 3,134	38.6 %	$ 3,338	38.1 %
Medicaid	1,645	18.4	1,392	17.1	1,495	17.1
HMOs, PPOs and other private insurers	3,691	41.3	3,382	41.6	3,699	42.3
Self-pay	55	0.6	55	0.7	59	0.7
Other	156	1.8	137	1.7	144	1.6
Revenue from contracts with customers	8,915	99.8	8,100	99.7	8,735	99.8
Rental income	22	0.2	22	0.3	18	0.2
Revenues	$ 8,937	100.0 %	$ 8,122	100.0 %	$ 8,753	100.0 %

Medicare

For the year ended December 31, 2021, approximately 37.7% of our revenues related to patients participating in the Medicare program. Medicare provides hospital and medical insurance benefits, regardless of income, to persons aged 65 and over, some disabled persons and persons with end-stage renal or Lou Gehrig's disease. All of our hospitals are currently certified as providers of Medicare services.

Over the years, Congress and the Centers for Medicare and Medicaid Services ("***CMS***") have made several sweeping changes to the Medicare program and its reimbursement methodologies, including the numerous changes contained in the Affordable Care Act. Many of these changes have resulted in decreased reimbursement to healthcare providers. In addition, the Budget Control Act of 2011 ("***BCA***"), which is intended to reduce the federal deficit, imposed a 2% reduction in Medicare spending which began on April 1, 2013. Congress has extended the 2% reduction in Medicare spending on numerous occasions. The CARES Act and the Consolidated Appropriations Act, 2021 (the "***CAA***") temporarily suspended Medicare sequestration from May 1, 2020 until March 31, 2021. The temporary suspension was subsequently extended through December 31, 2021, by HR 1868, which, to offset the cost of the suspension, extended Medicare sequestration through 2030. The Protecting Medicare and American Farmers from Sequester Cuts Act (the "***Sequester Cuts Act***"), which was adopted December 10, 2021, further extends the temporary suspension of Medicare sequestration through March 31, 2022, and reduces the sequestration cuts for the period of April 1, 2022 through June 30, 2022, to 1%. In addition, the American Rescue Plan Act of 2021 ("***ARP***") increased the federal budget deficit in a manner that triggers an additional sequestration mandated under the Pay As You Go Act of 2010 ("***PAYGO Act***"); however, Congress has delayed implementation of this payment reduction until 2023. Additional reductions in Medicare reimbursement could result from changes to the Affordable Care Act, or as a result of the enactment of Medicare reform, deficit reduction or other legislation.

Medicare Inpatient Prospective Payment System

Under the Medicare program, hospitals are reimbursed for the costs of acute care inpatient stays under an inpatient prospective payment system (the "***IPPS***"). Under the IPPS, our hospitals are paid a prospectively determined amount for each hospital discharge that is based on the patient's diagnosis. Specifically, each discharge is assigned to a Medicare severity diagnosis related group ("***MS-DRG***"), which groups patients that have similar clinical conditions and that are expected to require a similar amount of hospital resources. Each MS-DRG is, in turn, assigned a relative weight that is prospectively set and that reflects the average amount of resources, as determined on a national basis, that are needed to treat a patient with that particular diagnosis, compared to the amount of hospital resources that are needed to treat the average Medicare inpatient stay. The IPPS payment for each discharge is based on two national base payment rates or standardized amounts, one that covers hospital operating expenses and another that covers hospital capital expenses. The base MS-DRG payment rate for operating expenses has two components, a labor share and a non-labor share. Although the labor share is adjusted by a wage index to reflect geographical differences in the cost of labor, the base MS-DRG payment rate does not consider the actual costs incurred by an individual hospital in providing a particular inpatient service. In addition to IPPS reimbursement, Medicare also makes supplemental payments known as outlier payments to compensate hospitals for cases involving extraordinarily high costs.

The base MS-DRG operating expense payment rate that is used by the Medicare program in the IPPS is adjusted by an update factor each federal fiscal year ("***FFY***"), which begin on October 1 (for example, FFY 2022 began on October 1, 2021). The index used to adjust the base MS-DRG payment rate, which is known as the "hospital market basket index," gives consideration to the inflation experienced by hospitals in purchasing goods and services. For FFYs 2022, 2021, and 2020, the hospital market basket index increased 2.7%, 2.4%, and 3.0%, respectively. Generally, however, the percentage increase in the MS-DRG payment rate has been lower than the projected increase in the cost of goods and services purchased by hospitals. In addition, as mandated by the Affordable Care Act, the market basket increase is reduced by a productivity adjustment equal to the Bureau of Labor Statistics' 10-year moving average of changes in annual economy-wide productivity. For FFYs 2022, 2021, and 2020, the productivity adjustment equated to a 0.7%, 0.0%, and 0.4% reduction in the market basket increase, respectively. As a result of these reductions and other changes implemented by CMS, the MS-DRG-rate increased by 2.5% for FFY 2022.

On October 1, 2007, CMS replaced the previously existing 538 diagnosis related groups with 745 MS-DRGs. The MS-DRGs are intended to more accurately reflect the cost of providing inpatient services and eliminate any incentives that hospitals may have to only treat the healthiest and most profitable patients. The American Taxpayer Relief Act of 2012 ("***ATRA***") required CMS to recoup $11 billion from IPPS payments in FFYs 2014 through 2017 to offset an additional increase in aggregate payments to hospitals that Congress believes occurred from FFYs 2008 through 2013 solely as the result of the transition to the MS-DRG system. In FFYs 2014, 2015 and 2016, CMS applied negative 0.8% adjustments as part of the recovery process required by ATRA, and it applied a negative 1.5% adjustment in FFY 2017 to recover the remaining outstanding amount. CMS had previously indicated that the reductions required by ATRA would be fully restored in FFY 2018. However, under the Medicare Access and CHIP Reauthorization Act of 2015 ("***MACRA***"), those reductions will be restored in 0.5% increments over a six-year period from FFYs 2018 through 2023, which would result in a cumulative 3.0% increase in rates, which would be less than the 3.9% reduction that was imposed by CMS in FFYs 2014 through 2017. In addition, some of that restoration has been subject to further limits, such as under the 21st Century Cures Act (the "***Cures Act***") which further reduced the restoration for FFY 2018 from 0.5% to 0.4588%.

CMS has implemented a number of programs and requirements that are intended to promote value-based purchasing and to link payments to quality and efficiency. For example, all acute care hospitals are required to participate in CMS' Hospital Inpatient Quality Reporting Program (the "***IQR Program***") in order to receive the full hospital market basket update. Hospitals that do not participate in the IQR Program receive a 25% reduction in their IPPS annual payment update for the applicable FFY. Our acute care hospitals reported all quality measures required by CMS related to the IQR Program and nearly all will receive the full market basket update through FFY 2022. In addition, hospitals that are not meaningful EHR users are also subject to an additional 75% reduction of the hospital market basket increase.

In addition, the Affordable Care Act requires U.S. Department of Health and Human Services ("***HHS***") to implement a value-based purchasing program for inpatient hospital services. This program rewards hospitals based either on how well the hospitals perform on certain quality measures or how much the hospitals' performance improves on certain quality measures from their performance during a baseline period. As part of the program, the Affordable Care Act requires HHS to reduce inpatient hospital payments for all discharges by 2.0% each FFY. HHS pools the amount collected from these reductions to fund payments to reward hospitals that meet and exceed certain quality performance standards established by HHS. Under the program, each hospital's performance is evaluated during a specified performance period, and hospitals receive points on each of a number of pre-determined measures based on the higher of (i) their level of achievement relative to an established standard or (ii) their improvement in performance from their performance during a prior baseline period. Each hospital's combined scores on all the measures are translated into value-based incentive payments. Hospitals that receive higher total performance scores receive higher incentive payments than those that receive lower total performance scores. Because the Affordable Care Act provides that the funds pooled and otherwise set aside for the value-based purchasing program will be fully distributed, hospitals with high scores may receive greater reimbursement under the value-based purchasing program than they would have otherwise, and hospitals with low scores may receive reduced Medicare inpatient hospital payments.

Medicare also does not allow an inpatient hospital discharge to be assigned to a higher paying MS-DRG if certain designated hospital acquired conditions ("***HACs***") were not present on admission and the identified HAC is the only condition resulting in the assignment of the higher paying MS-DRG. In those situations, the case is paid as though the secondary diagnosis was not present. In addition, hospitals that fall into the top 25.0% of national risk-adjusted HAC rates for all hospitals in the previous year receive a 1.0% reduction in their total Medicare payments.

Furthermore, inpatient payments are reduced pursuant to the Affordable Care Act if a hospital experiences "excessive readmissions" within a 30-day period of discharge for certain conditions designated by CMS including heart attack, chronic obstructive pulmonary disease, heart failure, pneumonia, coronary artery bypass, and total hip arthroplasty. Hospitals with what HHS defines as "excessive readmissions" for these conditions will receive reduced payments for all inpatient discharges, not just discharges relating to the conditions subject to the excessive readmission standard. Each hospital's performance is publicly reported by HHS. HHS has the discretion to determine what "excessive readmissions" means, the amount of the payment reduction and other terms and conditions of this program. The basic maximum payment reduction amount is 3.0%. The Cures Act does, however, allow for an adjustment factor that would reduce the penalties imposed on hospitals, based on the portion of beneficiaries the hospitals serve that are eligible for both Medicare and Medicaid.

In response to the COVID-19 public health emergency, CMS has announced that it will temporarily suppress, or not use, certain hospital performance data that has been affected by COVID-19 in any of its hospital quality measurement and payment programs. In addition, CMS has also announced that for FFY 2022, all hospitals will receive a neutral adjustment under the Medicare value-based purchasing program that is equal to the 2.0% that is withheld under the program.

Medicare Hospital Outpatient Prospective Payment System and Other Outpatient Services

CMS reimburses hospital outpatient services under the Medicare hospital outpatient prospective payment system ("***OPPS***"), and generally uses fee schedules to pay for durable medical equipment and physical, occupational and speech therapy, clinical diagnostic laboratory and independent diagnostic testing facility services. Under the OPPS, hospital outpatient services are classified into groups called ambulatory payment classifications ("***APCs***"). Services in each APC are clinically similar and are similar in terms of the resources they require. Depending on the services provided, a hospital may be paid for more than one APC for an encounter. CMS establishes a payment rate for each APC by multiplying the scaled relative weight for the APC by a conversion factor. The payment rate is further adjusted to reflect geographic wage differences. The APC conversion factors for calendar years ("***CYs***") 2022, 2021, and 2020 were $84,177, $82.797, and $80.793, respectively, after the inclusion of the productivity adjustments and other reductions that were required by the Affordable Care Act. APC classifications and payment rates are reviewed and adjusted on an annual basis, and, historically, the rate of increase in payments for hospital outpatient services has been higher than the rate of increase in payments for inpatient services. To receive the full increase, acute care hospitals must satisfy the reporting requirements of the Hospital Outpatient Quality Reporting Program (the "***OQR Program***"). Hospitals that do not satisfy the reporting requirements of the OQR Program are subject to a reduction of 2.0% in their annual payment update under the OPPS. Our acute care hospitals reported all quality measures required by CMS related to the OQR Program and will receive the full market basket update through CY 2022.

Section 603 of the Bipartisan Budget Act of 2015 limits reimbursement for items and services that are furnished by certain off-campus outpatient provider-based departments ("***off-campus PBDs***") of hospitals. CMS included several provisions implementing Section 603 in the OPPS final rule for CY 2017. Under the final rule, CMS continues to make OPPS payments to off-campus PBDs that were billing Medicare as hospital departments under the OPPS prior to November 2, 2015 ("***grandfathered PBDs***"). However, grandfathered PBDs generally are not able to relocate, and CMS has indicated that it may adopt limitations on the expansion of the service lines provided at grandfathered PBDs in the future. In addition to grandfathered PBDs, CMS continues to reimburse all items and services that are furnished in a "dedicated emergency department" of a hospital, as such term is defined for the purposes of the Emergency Medical Treatment and Active Labor Act ("***EMTALA***"), regardless of whether the items and services are emergency items and services, and all items and services that are furnished in off-campus PBDs that are located within 250 yards of a remote location of a hospital, which is a facility that is either created or acquired by a hospital for the purpose of furnishing inpatient hospital services under the name, ownership, and financial and administrative control of the hospital, under the OPPS. All items and services not provided at a grandfathered or otherwise excepted off-campus PBD are generally paid by CMS under Medicare physician fee schedule ("***PFS***") rates that are approximately 40% of the applicable OPPS rate (the "***PFS Adjusted Rate***"). In addition, in 2018, CMS issued a final rule that generally reimburses clinic visit services provided at all off-campus PBDs, including grandfathered PBDs, at a reduced Medicare PFS-equivalent payment rate. The payment reduction for clinic visit services provided at off-campus PBDs was to be phased in over a two year period beginning in FFY 2019.

In December 2018, a lawsuit was filed challenging the portion of CMS' final rule that reduced reimbursement for clinic visit services provided at grandfathered PBDs to the lower Medicare PFS-equivalent payment rate. On September 17, 2019, the U.S. District Court for the District of Columbia ruled that the reduction in reimbursement for clinic services provided at grandfathered PBDs exceeded CMS' statutory authority. As a result of the ruling, CMS paid claims for clinic visit services provided at grandfathered PBDs in CY 2019 at the full OPPS payment rate. However, in the OPPS final rule for CY 2020, CMS noted that the court's ruling only applied to clinic visit services provided in CY 2019, and, as a result, CMS moved forward with the planned phase-in of the second year of the clinic visit service payment reduction in CY 2020 while it appealed the court's decision. A new lawsuit was filed on January 13, 2020, challenging the continued phase-in of the reduction for CY 2020. On July 17, 2020, the U.S. Court of Appeals for the District of Columbia reversed the lower court's ruling regarding the CY 2019 reductions and upheld CMS' reimbursement reductions for clinic visit services provided at grandfathered PBDs. The ruling of the U.S. Court of Appeals for the District of Columbia was appealed to the U.S. Supreme Court, but the Supreme Court declined to hear the appeal. CMS has since reprocessed claims for clinic services provided at grandfathered PBDs in CY 2019 at the reduced payment rate.

In addition to those reimbursement reductions and in furtherance of its efforts to increase site neutrality in Medicare payments, CMS announced in the OPPS final rule for CY 2021 that it would eliminate the Medicare program's inpatient only procedure list over a three-year period, beginning with the removal of approximately 300 primarily musculoskeletal-related procedures, with the list being completely phased out by CY 2024. The elimination of the inpatient only procedure list would have made those procedures eligible to be paid by Medicare in the hospital outpatient setting when outpatient care was appropriate. However, in the OPPS final rule for CY 2022, CMS reversed course and reinstated the Medicare program's inpatient only procedure list. As a result, almost all of the procedures that had been removed from the Medicare inpatient only procedure list for CY 2021 have been added back to the list for CY 2022.

As part of the OPPS final rule for CY 2018, CMS also finalized a change to the payment rate for certain Medicare Part B drugs purchased by hospitals through the 340B Drug Pricing Program (the "***340B Program***"). The 340B Program allows certain non-profit and governmental hospitals and other healthcare providers to obtain substantial discounts on covered outpatient drugs (prescription drugs and biologics other than vaccines) from drug manufacturers. Under the final rule, CMS pays for separately reimbursable, non-pass through drugs and biologicals (other than vaccines) purchased through the 340B Program at the average sales price ("***ASP***") minus 22.5% rather than ASP plus 6%. CMS estimated that this change reduced Medicare payments for drugs and biologicals by $1.6 billion in CY 2018. To maintain budget neutrality, CMS implemented an offsetting increase in the conversion factor. As a result, OPPS reimbursement rates for non-drug items and services provided by all hospitals, including those not eligible to participate in the 340B Program, were increased in connection with the reduction to 340B Program payments. In the OPPS final rule for CY 2019, CMS expanded the 340B Program payment reductions to drugs that are obtained through the 340B Program and furnished by non-excepted, off-campus PBDs.

In September 2018, a lawsuit was filed challenging the authority of CMS to make the 340B Program payment reductions set forth in the OPPS final rule for CY 2018. On December 27, 2018, the U.S. District Court for the District of Columbia held that the payment reductions exceeded CMS' statutory authority and entered a permanent injunction against the reductions. However, because the 340B Program payment reductions were made in a budget-neutral manner and the savings derived from the reductions were used to increase reimbursement for all of the other items and services provided under the OPPS, the court ordered the parties to submit briefs as to how the issue should be remedied. The lawsuit was subsequently expanded to include the 340B Program payment reductions that were made in CY 2019, and an additional lawsuit has been filed against the 340B Program payment reductions being made by CMS in CY 2020. CMS appealed the District Court's rulings, and, on July 31, 2020, the U.S. Court of Appeals for the District of Columbia reversed the lower court's ruling and upheld CMS' 340B Program payment reductions. The ruling of the U.S. Court of Appeals for the District of Columbia was appealed to the U.S. Supreme Court, and the Supreme Court heard arguments in the case on November 30, 2021. We cannot predict whether the appeal will be successful, and, if successful, the amount (if any) by which OPPS payments to hospitals may be reduced. If OPPS payments to hospitals are reduced (either retroactively or prospectively) in connection with the 340B Program, we would be materially adversely affected.

Medicare Disproportionate Share Hospital Payments

Hospitals may also qualify for Medicare disproportionate share hospital ("***DSH***") payments, if they treat a high percentage of low-income patients (as determined by a ratio involving Medicare and Medicaid patients eligible to receive Supplemental Security Income). DSH payments are determined annually based on certain statistical information specified by HHS and are paid as an addition to MS-DRG payments. The Affordable Care Act requires Medicare DSH payments to providers to be reduced by 75% beginning in FFY 2014, subject to adjustment if the Affordable Care Act does not decrease uncompensated care to the extent anticipated. The amount that is withheld is reduced by the percentage change in uninsured individuals under the age of 65, and then paid as additional payments to DSH hospitals based on the amount of uncompensated care provided by each hospital relative to the amount of uncompensated care provided by all hospitals receiving DSH payments during the applicable time period. The IPPS final rule for FFY 2022 established the uncompensated care amount which will be distributed to qualifying hospitals in FFY 2022 at approximately $7.2 billion, a decrease of approximately $1.1 billion from FFY 2021.

Medicare Dependent and Low Volume Hospital Programs

On April 16, 2015, MACRA was enacted. Among other things, MACRA extended the Medicare dependent hospital program, which provides enhanced payment support for rural hospitals that have no more than 100 beds and at least 60% of their inpatient days or discharges covered by Medicare, and the Medicare low volume hospital program, which provides additional Medicare reimbursement for general acute care hospitals that are located a certain distance from another general acute care hospital and have less than a certain number of Medicare discharges each fiscal year, through September 30, 2017. The Bipartisan Budget Act of 2018 extended both of these programs through FFY 2022.

Medicare Inpatient Rehabilitation Facility Prospective Payment System

Under the Medicare program, IRFs and ARUs in acute care hospitals meeting certain criteria established by CMS are reimbursed under the Medicare inpatient rehabilitation facility prospective payment system ("***IRF-PPS***"). Payments under the IRF-PPS are made on a per-discharge basis and cover the inpatient operating and capital costs of furnishing covered rehabilitation services (that is, routine, ancillary, and capital costs) and, for teaching institutions, are adjusted to include reimbursement for graduate medical education costs. Under the IRF-PPS, patients are classified into case mix groups that reflect the relative resource intensity typically associated with the patient's clinical condition. IRFs and ARUs reimbursed under the IRF-PPS are paid a predetermined amount per discharge that reflects the patient's case mix group that is adjusted for facility-specific factors, such as area wage levels, proportion of low-income patients, and location in a rural area. Each FFY, payment rates under the IRF-PPS are updated using a market basket index, which is reduced by a productivity adjustment. For FFY 2022, CMS increased IRF-PPS payment rates by 1.9% based on a IRF market basket update of 2.6% minus a productivity adjustment of 0.7%. To receive the full increase, IRFs and ARUs must satisfy the reporting requirements of the Inpatient Rehabilitation Facility Quality Reporting Program (the "***IRF QRP***"). IRFs and ARUs that do not satisfy the reporting requirements of the IRF QRP are subject to a reduction of 2.0% in their annual payment update under the IRF-PPS. Our IRFs and ARUs reported all quality measures required by CMS related to the IRF QRP and will receive the full market basket update for FFY 2022.

In order to qualify for reimbursement under the IRF-PPS, at least 60% of an IRF's or ARU's inpatients during the most recent 12-month CMS-defined review period must have required intensive rehabilitation services for one or more of 13 specified conditions. IRFs and ARUs must also meet additional coverage criteria, including patient selection and care requirements relating to pre-admission screenings, ongoing coordination of care and involvement of rehabilitation physicians. An IRF or ARU that fails to meet the 60% threshold, or other criteria to be reimbursed under the IRF-PPS, will be paid under either the Medicare IPPS or OPPS, which generally provide for lower payment amounts.

Cost Reports

Hospitals participating in the Medicare and some Medicaid programs, whether paid on a reasonable cost basis or under a prospective payment system, are required to meet certain financial reporting requirements. Federal and, where applicable, state regulations require submission of annual cost reports identifying medical costs and expenses associated with the services provided by each hospital to Medicare and Medicaid recipients.

Annual cost reports required under the Medicare and some Medicaid programs are subject to routine governmental audits. These audits may result in adjustments to the amounts ultimately determined to be payable to us under these reimbursement programs. Finalization of these audits often takes several years. Providers may appeal any final determination made in connection with an audit, and it is common to contest issues raised in audits of cost reports.

Medicare Bad Debt Reimbursement

Under Medicare, the costs attributable to the deductible and coinsurance amounts that remain unpaid by Medicare beneficiaries after reasonable collection efforts can be added to the Medicare share of allowable costs as cost reports are filed. Hospitals generally receive interim pass-through payments during the cost report year which were determined by the Medicare administrative contractor (*"**MAC**"*) from prior cost report filings.

The amounts uncollectible from specific beneficiaries are to be charged off as bad debts in the accounting period in which the accounts are deemed to be worthless. In some cases, an amount previously written off as a bad debt and allocated to the program may be recovered in a subsequent accounting period. In these cases, the recoveries must be used to reduce the cost of beneficiary services for the period in which the collection is made. In determining reasonable costs for hospitals, the amount of bad debts otherwise treated as allowable costs is reduced by 35%.

Medicare Physician Fee Schedule and other Medicare Part B Services

Professional medical services provided to Medicare beneficiaries by physicians, physician assistants, nurse practitioners, and certain other healthcare practitioners, outpatient physical, occupational, and speech therapy services, and telehealth services are reimbursed under the PFS. Under the PFS, CMS has assigned a national relative value unit ("***RVU***") to most medical procedures and services that reflects the various resources required by a physician or practitioner to provide the services relative to all other services. Each RVU is calculated based on a combination of work required in terms of time and intensity of effort for the service and the practice overhead and malpractice insurance expenses that are attributable to the service. These three elements are each modified by a geographic adjustment factor to account for local practice costs and are then aggregated. The aggregated amount is multiplied by a conversion factor to determine the payment rate for the service. The conversion factor is updated by CMS on an annual basis.

MACRA, which was adopted in 2015, significantly changed how CMS determines the annual updates to the PFS. Under MACRA, the PFS payment rates that were in effect when MACRA was enacted were extended through June 30, 2015, and then increased by 0.5% for the remainder of CY 2015. PFS payment rates were increased annually by an additional 0.5% for CYs 2016, 2017 and 2018 and, after the adoption of the Bipartisan Budget Act of 2018, were increased by 0.25% for CY 2019. PFS payment rates are scheduled to remain at their CY 2019 levels through CY 2025. The final PFS rule for CY 2022 sets the PFS conversion factor for CY 2022 at $33.59, which is a decrease of $1.30 from the CY 2021 PFS conversion factor of $34.89 and reflects, among other things, the required statutory update of 0.0% and the expiration of the temporary 3.75% PFS payment increase for CY 2021 that was provided by the CAA. However, the Sequester Cuts Act, which was enacted on December 10, 2021, temporarily increases the PFS conversion factor by 3.0% for CY 2022.

In addition to revising the methodology that is used to update payments that are made under the PFS, MACRA also established a Quality Payment Program ("***QPP***") for incentivizing physician and practitioner care that meets certain value, quality, cost, and performance criteria. Beginning in CY 2019, amounts paid to physicians and practitioners under the PFS are subject to adjustment through the QPP and participation in either the Merit-Based Incentive Payment System ("***MIPS***") or an Advanced Alternative Payment Model ("***APM***") program. Physicians participate in MIPS unless they are participants of specific forms of APM, are newly enrolled in Medicare, or see a low volume of Medicare patients. Groups or eligible clinicians who choose not to participate and fall within specified circumstances may request an exception through a hardship application and incur no MIPS impact on Medicare payments. CMS also permits hardship applications, including, in 2020 and 2021, hardships based on circumstances arising from COVID related operational issues, through which clinicians can request reweighing of any or all performance categories if they encounter an extreme and uncontrollable circumstance or a public health emergency.

Physicians and practitioners who participate in the MIPS program, which essentially consolidated the prior Physician Quality Reporting System, the Value-Based Modifier, and the Meaningful Use of EHR incentive programs, are subject to positive, zero, or negative performance adjustments depending on how the physician's or practitioner's performance compared to a performance threshold. The payment adjustments are based on the physician's or practitioner's performance in the year that is two years prior to the current payment period. As a result, PFS payments in CY 2022 will be based on CY 2020 performance scores, and so on for the following years. HHS and CMS revise the MIPS reporting measures on an annual basis and have indicated that they intend to routinely increase the performance thresholds in connection with those revisions. In addition, from CY 2019 through CY 2024, MACRA provides $500 million per year for an additional performance adjustment for physicians and practitioners who participate in MIPS and achieve exceptional performance. Physicians and practitioners who participate in a specified APM program, which, among other things, requires the physician or practitioner to receive a substantial amount of their revenue from an APM, will receive, from CYs 2019 through 2024, a lump-sum payment equal to 5% of their Medicare payments in the prior year for services paid under the PFS. Beginning in CY 2026, PFS payment rates for physicians and practitioners participating in an APM program would be increased by 0.75% a year. Payments for other physicians and practitioners would be increased by 0.25% per year.

Medicaid

For the year ended December 31, 2021, approximately 18.4% of our revenues related to patients participating in the various state Medicaid programs. Included in these payments are DSH and other supplemental payments received under various state Medicaid programs. Medicaid programs are funded by both the federal government and states to provide healthcare benefits to limited categories of low-income individuals under 65 years of age. These programs and the reimbursement methodologies are administered by the states under approved plans and vary from state to state and from year to year. Amounts received under the Medicaid programs are often significantly less than the hospital's customary charges for the services provided. Most state Medicaid payments are made under a prospective payment system, fee schedule, cost reimbursement program, or some combination of these three methods. All of our hospitals are currently certified to participate in their respective state Medicaid programs.

As enacted, the Affordable Care Act essentially required states to expand Medicaid coverage to all individuals under age 65 with incomes effectively at or below 138% of the federal poverty level ("FPL"). However, that portion of the Affordable Care Act was held to be unconstitutional by the U.S. Supreme Court, and, as a result, states may opt out of the expansion without losing their existing Medicaid funding. Therefore, the income level required for individuals to qualify for Medicaid varies widely from state to state. To offset the cost of the Medicaid program's expansion, the Affordable Care Act authorized the federal government to provide states with "matching funds," in the form of increases to the Federal Medical Assistance Percentage (the "***FMAP***" and, as increased, referred to as "***Enhanced FMAP***"), to cover the costs of covering the newly eligible individuals. The Enhanced FMAP was 100% for CYs 2014 through 2016; 95% in CY 2017; 94% in CY 2018; 93% in CY 2019; and will be 90% in CYs 2020 and thereafter. The ARP, which was signed into law on March 11, 2021, provides a new incentive, in the form of a temporary 5% increase to the FMAP, to states that have not yet expanded their Medicaid programs in an effort to encourage them to do so. In addition, to assist state Medicaid programs with the additional expenses attributable to the COVID-19 pandemic, the CARES First Act provides a 6.2% increase in the FMAP from January 1, 2020, until the Secretary of the HHS ends the official COVID-19 public health emergency.

In recent years, we have benefited from the expansion of Medicaid under the Affordable Care Act, and since January 1, 2020, Missouri, Oklahoma, and Utah, three additional states in which we operate, expanded their Medicaid programs. However, a number of states in which we operate have not expanded their Medicaid programs or are seeking waivers that could reduce their Medicaid-eligible populations. Several states have adopted or are considering legislation designed to reduce or control their Medicaid expenditures, including enrolling Medicaid recipients in managed care programs, and imposing additional taxes on hospitals to help finance such states' Medicaid systems. Given the reductions in the Enhanced FMAP, the temporary nature of the assistance provided by the ARP and the CARES Act, and the potential for further modifications to the Affordable Care Act, we are unable to predict how many, if any, additional states in which we operate will expand their Medicaid programs or how many, if any, of the states in which we operate that have expanded their Medicaid programs will keep their expansions in place in the future.

The Affordable Care Act also included a number of provisions that are intended to improve the quality of care that is provided to Medicaid beneficiaries. Among other things, the Affordable Care Act prohibits federal funds from being used to reimburse providers for services related to provider preventable conditions, such as HACs, wrong site surgeries and other provider preventable conditions that may be designated by each state Medicaid program.

Medicaid Supplemental Payments

Medicaid supplemental payments ("***MSPs***") are payments made to providers separate from and in addition to those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid DSH and Upper Payment Limit ("***UPL***") payments.

Medicaid DSH payments are federally required to be made by the states to hospitals that serve significant numbers of Medicaid and uninsured patients in recognition of the added costs incurred by hospitals in treating those patients. The federal government distributes federal Medicaid DSH funds to each state based on a statutory formula. The states then distribute the DSH funding among qualifying hospitals. Although federal Medicaid law defines some level of hospitals that must receive Medicaid DSH funding, states have broad discretion to define additional hospitals that also may qualify for Medicaid DSH payments and the amount of such payments. However, the total amount of Medicaid DSH payments a state may make and the total amount any one hospital may receive are both capped by federal law.

Pursuant to the Affordable Care Act, as amended by subsequent legislation, funding for Medicaid DSH programs was to be reduced by $4 billion in FFY 2020 and $8 billion per year from FFY 2021 through FFY 2025. Congress has delayed the reduction in funding for Medicaid DSH programs on a number of occasions, most recently through the CCA, which eliminates the scheduled Medicaid DSH reductions for FFYs 2021 through 2023 but adds additional Medicaid DSH reductions for FFYs 2026 and 2027. We cannot predict whether Congress will further delay or otherwise modify the reductions in the future. Because many of the states in which we operate have not expanded Medicaid programs as intended under the Affordable Care Act, the reduction in Medicaid DSH payments may take place without a coupled increase in the Medicaid eligible population, thus increasing the net amount of uncompensated care we provide.

Unlike Medicaid DSH payments, UPL payments are not required to be made by states under federal law. Rather, federal regulations establish an upper payment limit above which states may not receive federal matching dollars. UPL programs have expanded in recent years, and certain of our hospitals receive payments under such programs. Because services provided to Medicaid beneficiaries enrolled in managed care are not included in state UPL calculations, as states increase their use of managed care Medicaid programs, UPL MSPs could be reduced. UPL funding and matching federal funds may also be reduced or eliminated as a result of state or local governmental legislation, state changes to historical funding levels or related taxes, compliance reviews by CMS, or changes to federal Medicaid funding affecting such programs.

On November 18, 2019, CMS released a proposed rule, the Medicaid Fiscal Accountability Rule, that was intended to increase federal oversight of MSPs and state Medicaid financing policies. Among other things, the proposed rule would have added new reporting requirements on UPL payment arrangements, imposed limitations on UPL payments that are made to physicians and certain other practitioners, and imposed limits on the use of healthcare provider taxes, intergovernmental transfers and certified public expenditures. CMS withdrew the proposed rule in 2020. However, some of the reporting requirements contained in the Medicaid Fiscal Accountability Rule were included in the CCA, and, beginning in FFY 2022, each state will be required to provide CMS with, among other things, (i) a description of the stated purpose and intended effects of the state's MSPs, (ii) an explanation of how the state's MSPs will result in payments that are consistent with the requirements of the Medicaid program, including the program's standards with respect to efficiency, economy, quality of care, and access, (iii) the criteria used to determine provider eligibility for the state's MSPs, (iv) a comprehensive description of the methodology used to calculate the amount of, and distribute, MSPs to each eligible provider, and (v) an assurance that the total Medicaid payments made by the state to inpatient hospital providers, including any MSPs, will not exceed the UPL. The CCA also further clarifies how third-party payments are to be considered when determining Medicaid DSH hospital-specific limits. We cannot predict the impact, if any, that the reporting requirements and other Medicaid provisions in the CCA will have on MSPs and UPL payments that are made by state Medicaid programs or whether Congress or CMS will adopt any additional legislation or regulations that will eliminate or otherwise limit MSPs and/or UPL payments. In addition, we cannot predict whether MSP programs will continue (and, if continued, whether we will qualify for such programs) or guarantee that revenues recognized from these programs will not decrease.

Budget cuts, federal or state legislation, or other changes in the administration or interpretation of government health programs by government agencies or contracted managed care organizations could have a material adverse effect on our financial position and results of operations.

Medicaid Block Grants and Capped Federal Funding

As part of the movement to repeal, replace or modify the Affordable Care Act and as a means to reduce the federal budget deficit, there have been Congressional and administrative efforts to move Medicaid from an open-ended program with coverage and benefits set by the federal government to one in which states receive a fixed amount of federal funds, either through block grants or per capita caps, and have more flexibility to determine benefits, eligibility and provider payments. If implemented, we cannot predict whether the amount of fixed federal funding to the states will be based on current payment amounts, or if it will be based on lower payment amounts, which would negatively impact those states that expanded their Medicaid programs in response to the Affordable Care Act. Such efforts to modify or reduce federal funding of the Medicaid program, as well as those that would reduce the amount of federal Medicaid matching funds available to states by curtailing the use of provider taxes, could have a negative impact on state Medicaid budgets resulting in less coverage for eligible individuals or lower reimbursement rates.

On November 11, 2019, Tennessee, one of the states in which we operate, submitted an amendment to CMS for its Medicaid demonstration waiver that would convert federal funding for the Tennessee Medicaid program to a modified block grant program. CMS approved the amendment on January 8, 2021, and as required by state law, the Tennessee General Assembly approved the implementation of the amendment on January 15, 2021. Under the amendment, the Tennessee Medicaid program would receive federal matching funds for expenditures up to an aggregate annual cap. The aggregate cap would be based on the Tennessee Medicaid program's historical expenditures and would be increased to reflect a reasonable growth rate over time and for unexpected increases in enrollment. In exchange, the Tennessee Medicaid program would be given increased flexibility in how it operates and would be entitled to 55% of any savings that are achieved if spending is below the aggregate cap and the state meets certain quality targets. Any savings would generally be required to be re-invested in the Tennessee Medicaid or other health related programs. Despite being granted increased administrative flexibility, the Tennessee Medicaid program would be required to maintain the coverage and benefit levels that were in place as of December 31, 2020. A lawsuit was filed in the U.S. District Court for the District of Columbia on April 22, 2021, seeking to stop the conversion of the Tennessee Medicaid program to a modified block grant program. We cannot predict the outcome of that litigation, whether CMS will rescind its approval of the amendment to the Tennessee Medicaid program or the impact that the amendment and related changes to the Tennessee Medicaid program would have on our operations and revenues.

Recovery Audit and Other Review Contractors

Recovery audit contractors ("***RACs***") are used by CMS and state agencies to detect Medicare and Medicaid overpayments not identified through existing claims review mechanisms. The RAC program relies on private companies to examine Medicare and Medicaid claims filed by healthcare providers. RACs perform post-discharge audits of medical records to identify overpayments resulting from incorrect payment amounts, non-covered services, medically unnecessary services, incorrectly coded services, and duplicate services and are paid on a contingency basis. Any claims identified as overpayments are subject to a RAC program appeals process. In 2016, in connection with the procurement of the new recovery audit contracts, CMS made a number of enhancements to the RAC program, including the establishment of a RAC program Provider Relations Coordinator, requiring RACs to maintain an overturn rate of less than 10% at the first level of appeal, requiring RACs to maintain an accuracy rate of at least 95%, and establishing additional documentation request limits based on a provider's compliance with Medicare rules, that are intended to address provider and other stakeholder concerns. CMS has also limited the number of claims that RACs may audit by limiting the number of records that RACs may request from hospitals based on each hospital's claim denial rate for the previous year.

In addition to RACs, CMS employs Unified Program Integrity Contractors ("***UPICs***"), which integrate the functions of the former Zone Program Integrity Contractors, Program Safeguard Contractors, and Medicaid Integrity Contractors, to perform post-payment audits of Medicare and Medicaid claims and identify overpayments. A number of state Medicaid agencies and other contractors have also increased their review activities.

Although we believe our claims for reimbursement submitted to the Medicare and Medicaid programs are accurate, many of our facilities have had Medicare claims audited by the RAC program. While our facilities have successfully appealed many of the adverse determinations raised by Medicare RAC audits, we cannot predict if this trend will continue or the results of any future audits. We cannot predict the volume or outcome of any future audits conducted by the various RACs and other review programs to which our facilities will be subject.

Utilization and Claim Review

Federal law contains numerous provisions designed to ensure that services rendered to Medicare and Medicaid patients meet professionally recognized standards and are medically necessary and that claims for reimbursement are properly filed. These provisions include a requirement that a sampling of admissions of Medicare and Medicaid patients must be reviewed on a post-discharge basis by quality improvement organizations ("***QIOs***"), which review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of MS-DRG classifications and the appropriateness of cases of extraordinary length of stay or cost. QIOs may deny payment for services or assess fines and also have the authority to recommend to HHS that a provider which is in substantial noncompliance with the standards of the QIO be excluded from participation in the Medicare program. Utilization review is also a requirement of most non-governmental managed care organizations.

In addition to utilization reviews, CMS has also adopted a nationwide claim review and provider education program known as the Targeted Probe and Educate ("***TPE***") program, which is intended to reduce errors in the claims submission process and focuses on items and services that pose the greatest risk to the Medicare program or that have a high national error rate, such as short inpatient stays. Under the TPE program, MACs use data analysis to identify providers who, for a particular item or service, have high claim denial rates or billing practices that vary significantly from their peers. Once a provider has been identified, the MAC reviews between 20 and 40 of the provider's claims for the item or service and, if issues are noted, offers the provider an individualized education session that is based on the results of the review. The provider is then generally given 45 days to improve its systems and processes, and, after that period has ended, the MAC conducts another review of the provider's claims. If additional issues are identified, the provider is given the opportunity for another education session. Providers are typically given three rounds of review and education before being referred to CMS for further action, potentially including pre-payment review, referral for RAC review, or in some cases revocation of billing privileges.

HMOs, PPOs and Other Private Insurers

In addition to government programs, our facilities are reimbursed by differing types of private payers including HMOs, PPOs and other private insurers. Also included in this category are the patient responsibility portions for co-payment and deductible obligations under these programs. Our revenues from HMOs, PPOs and other private insurers were approximately 41.3% of our revenues for the year ended December 31, 2021. Revenues from HMOs, PPOs and other private insurers are subject to contracts and other arrangements that require us to discount the amounts we customarily charge for healthcare services or accept fixed, pre-determined fees for our services. These discounted contractual arrangements often limit our ability to increase charges or revenues in response to increasing costs. We actively negotiate with these payers in an effort to maintain or increase the pricing of our healthcare services; however, we have no control over patients switching their healthcare coverage to a payer with which we have negotiated less favorable reimbursement rates. In recent years, an increasing number of our patients have moved to lower cost healthcare coverage plans, and such plans generally provide lower reimbursement rates and require patients to pay an increased portion of the costs of care through deductibles, co-payments or exclusions. Additionally, plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices. If we provide services when we are not a participating provider in the network, it can result in higher patient responsibility amounts that a patient may not have the ability to pay or may choose not to pay. We expect these trends to continue in the coming years.

Self-Pay Patients

Self-pay revenues are primarily generated through the treatment of uninsured patients. Our revenues from self-pay patients were approximately 0.6% of our revenues for the year ended December 31, 2021. Beginning in 2014, our self-pay revenues began to decrease as a percentage of overall revenues due largely to a shift from self-pay to Medicaid and HMOs, PPOs and other private insurers for a portion of our patient population, which primarily has been a result of the Affordable Care Act and the expansion of Medicaid coverage in certain of the states in which we operate. These reductions partially offset trends our facilities experienced in prior years, which included increases in self-pay revenues due to a combination of broad economic factors, including high levels of unemployment in many of our markets and increasing numbers of individuals and employers who purchase insurance plans with high deductibles and high co-payments. We cannot predict how administrative or judicial interpretations, legislative actions or any other modifications to the Affordable Care Act that may be implemented or adopted, such as the cessation of cost sharing reduction payments or the repeal of the individual mandate, may impact our self-pay revenues. We also cannot predict whether the business closures and layoffs that are occurring as a result of the COVID-19 pandemic will increase the number of underinsured and uninsured patients that seek treatment at our facilities.

In addition, effective January 1, 2022, the No Surprises Act requires healthcare providers, including hospitals and other healthcare facilities, to provide uninsured patients with a good faith estimate of the provider's total expected charges for scheduled items or services, including any expected ancillary services, before providing the items or services to the patient. Uninsured patients will be able to utilize a patient-provider dispute resolution process to challenge the provider's charges if they receive a bill that is substantially higher than the good faith estimate that was provided by the healthcare provider. We cannot predict how the uninsured patient good faith estimate and dispute resolution provisions of the No Surprises Act will impact the amounts collected by the Company's facilities for self-pay patients.

Surprise Medical Billing

On December 21, 2020, Congress adopted legislation that is intended to limit the "surprise" medical bills that are often received by individuals receiving emergency and certain other services (such as anesthesia services) from out-of-network providers. Effective as of January 1, 2022, the No Surprises Act prohibits, among other things, out-of-network providers from balance billing patients for emergency care services that are provided by out-of-network facilities or at in-network facilities by out-of-network providers. The No Surprises Act also generally prohibits out-of-network providers from billing patients for non-emergency medical treatment unless the provider first notifies the patient of the provider's network status and estimated charges and the patient agrees to be financially liable for the additional amounts. Violations of the No Surprises Act are punishable by civil monetary penalties of up to $10,000, and the No Surprises Act may be enforced by both the state and federal governments.

When the prohibitions of the No Surprises Act apply, a patient's financial liability will generally be limited to his or her in-network amount. In addition, the patient's third-party payer must either pay the out-of-network provider an initial payment amount or issue a notice of denial to the provider for the services that were rendered within 30 days of the payer's receipt of the provider's claim. If the provider is not satisfied with the payer's initial payment amount, the provider and the payer will begin a 30-day negotiation period. If the provider and the payer cannot agree on a payment amount during the negotiation period, the parties may elect to initiate an independent dispute resolution ("***IDR***") process. The IDR process will be conducted by a neutral arbitrator that has been approved by the federal government. Under regulations that have been issued by HHS, the Department of Labor, and the Department of Treasury (collectively, the "***Departments***"), the arbitrator must begin with the presumption that the "qualifying payment amount," which will generally be the plan or the insurer's median contracted rate (the "***QPA***"), is the appropriate payment amount. A number of lawsuits have been filed against the Departments challenging the requirement that the arbitrator must begin with the presumption that the QPA is the appropriate payment amount, and at least one court has held that the presumption is inconsistent with the language of the No Surprises Act. The regulations that have been issued by the Departments in connection with the No Surprises Act also require certain healthcare providers and facilities to make publicly available, post on a public website and provide a one-page notice to individuals about the requirements and prohibitions applicable to the facility or provider under the No Surprises Act, any applicable state balance billing limitations or prohibitions, and how the individual can contact the appropriate state and federal agencies if he or she believes the provider or facility has violated the requirements set forth in the notice.

We cannot predict the outcome of the litigation that has been filed regarding the use of the QPA in the IDR process, how the No Surprises Act will be implemented by the Departments, or how it will ultimately be enforced by the federal and various state governments. We also cannot predict the amounts that will be received by our facilities and our employed providers for out-of-network services, whether the No Surprises Act will impact the in-network payment rates that are offered by third-party payers and the willingness of those payers to enter into participation agreements with us and our facilities in the future, or the costs we will incur in complying with the requirements of the No Surprises Act. In addition, a number of states are considering or have already adopted legislation to eliminate surprise medical billing. We cannot predict how state legislative actions to modify or pass these proposals may be implemented or adopted, or what impact, if any, those actions may have on our operations and revenues.

Price Transparency

Transparency in healthcare pricing has become a focal point for CMS, Congress, and many state legislatures. For example, effective as of January 1, 2021, hospitals generally are required to post their standard charges prominently on a publicly available website. Under CMS regulations, each hospital's standard charges must be posted in two ways: (1) a single machine-readable digital file containing the gross charges, discounted cash prices, payer-specific negotiated charges, and de-identified minimum and maximum negotiated charges for all items and services provided by the hospital and (2) a public display in a consumer-friendly manner of cash prices, payer-specific negotiated charges, and de-identified minimum and maximum negotiated charges for at least 300 "shoppable" services (70 CMS-specified and 230 hospital-selected). CMS is actively auditing and monitoring hospital compliance with its reporting requirements and has taken a number of steps to address hospital noncompliance, including issuing warning notices to and requesting corrective action plans from hospitals that are determined to be out of compliance with the price transparency requirements, implementing measures that are intended to increase the availability of the required machine-readable file, and increasing the civil monetary penalties that are applicable to violations of the price transparency requirements. In addition to the CMS hospital price transparency regulations, the Departments have issued regulations that require most private health plans, including group health plans and individual health insurance market plans, to disclose pricing and cost-sharing information to their beneficiaries. A number of states have also adopted their own healthcare price transparency and/or disclosure statutes.

In addition to addressing surprise billing, the No Surprises Act contains a number of provisions that are intended to promote provider and health plan price transparency. Among other things, under the No Surprises Act, healthcare providers will be required to provide "good faith estimates" of their total expected charges for scheduled items and services to the patient's health plan if the patient is insured prior to the item and/or service being provided. Health plans will be required to provide patients with an "advanced explanation of benefits" that includes: (1) information regarding the network status of the provider, (2) a copy of the provider's "good faith estimate," (3) an estimate of the amount that the patient will be expected to pay for the item or service, and (4) information on any applicable pre-authorization requirements.

Although we continue to evaluate, and are taking proactive steps in response to, the legislative and regulatory developments regarding price transparency, we cannot predict how existing regulations will be implemented or interpreted or whether any other requirements will be imposed on providers and health plans. We also cannot predict what affect the public disclosure of hospitals' or insurance providers' negotiated rates will have on our future negotiations with payers or the effect that the disclosure of pricing information by healthcare providers and health plans will have on our patient volumes and revenues.

Executive Order - Competition in the American Economy

On July 9, 2021, President Biden issued an executive order that is intended to promote competition in the American economy. Among other things, the executive order encourages the Federal Trade Commission (the "***FTC***") to ban or limit non-compete agreements, directs the Food and Drug Administration to work with states and tribes to import prescription drugs from Canada, directs HHS to increase its support for generic and biosimilar drugs, issue a comprehensive plan to combat high drug prices, and support existing price transparency rules, and encourages the Department of Justice ("***DOJ***") and the FTC to review and revise their merger guidelines to ensure that patients are not harmed by hospital mergers. We cannot predict how, if at all, the various initiatives set forth in the executive order will be implemented by the regulatory agencies involved or the impact that the executive order will have on our operations or future transactions.

Healthcare Reform

In recent years, Congress has passed a number of laws, including the Affordable Care Act, that are intended to effect major changes in the U.S. healthcare system. The Affordable Care Act, which became federal law in 2010, dramatically altered the U.S. healthcare system and was intended to decrease the number of uninsured Americans and reduce the overall cost of healthcare. The net effect of the Affordable Care Act, as currently adopted, on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. On June 17, 2021, the U.S. Supreme Court issued its decision in litigation that had been brought by a number of states against the federal government alleging that, in light of the repeal of the penalties associated with the individual mandate, the Affordable Care Act was unconstitutional. In its decision, the Court held that the states and other plaintiffs did not have standing to challenge the Affordable Care Act and ordered the case to be dismissed. While the U.S. Supreme Court rejected this most recent challenge to the Affordable Care Act, we cannot predict the outcome of other lawsuits that are still pending in lower courts regarding the implementation of various aspects of the Affordable Care Act or whether the U.S. Supreme Court will decide to hear future cases. Additionally, we cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

Expanded Coverage

Based on original Congressional Budget Office ("***CBO***") and CMS estimates, by 2020, the Affordable Care Act was originally expected to expand coverage for 32 to 34 million people, resulting in coverage of an estimated 95% of the legal U.S. population and an uninsured population of approximately 27 million individuals. This increased coverage was expected to occur through a combination of public program expansion and private sector health insurance and other reforms. In July 2021, the CBO estimated that, due to a number of factors, approximately 28 million people were uninsured in 2020 and that the number of uninsured individuals would remain relatively consistent through 2031.

Public program expansion has been driven primarily by expanding the categories of individuals who are eligible for Medicaid coverage and allowing individuals with relatively higher incomes to qualify for Medicaid coverage. When the Affordable Care Act was adopted, it essentially made the expansion of the Medicaid program mandatory. However, in 2012, the U.S. Supreme Court held that the provision of the Affordable Care Act that authorized the Secretary of HHS to penalize states that chose not to participate in the expansion of the Medicaid program by removing all of their existing Medicaid funding was unconstitutional. Based on the U.S. Supreme Court's ruling, a number of states, including several in which the Company has facilities, have opted not to expand their Medicaid programs. Additional public program expansion has occurred through provisions of the Affordable Care Act that authorize the federal government to subsidize states that create non-Medicaid plans for residents whose incomes are greater than 133% of the FPL but do not exceed 200% of the FPL and allow Medicaid participating hospitals to make presumptive determinations of Medicaid eligibility for certain categories of individuals, such as pregnant women, infants, children, and parents and other caretaker relatives and their spouses. If an individual is found to be presumptively eligible for Medicaid benefits, the hospital will get paid for the services it provides during the temporary presumptive eligibility period, just as though the patient were already enrolled in the Medicaid program.

The expansion of health coverage through the private sector as a result of the Affordable Care Act has occurred through new requirements on health insurers, employers and individuals. For example, commencing January 1, 2014, health insurance companies were prohibited from imposing annual coverage limits, excluding persons based upon pre-existing conditions or denying coverage for any individual who is willing to pay the premiums for such coverage. In addition, since January 1, 2011, each health plan has been required to keep its annual non-medical costs lower than 15% of premium revenue for the group market and lower than 20% in the small group and individual markets or rebate its enrollees the amount spent in excess of the percentage. Also, since September 23, 2010, health insurers have not been permitted to deny coverage to children based upon a pre-existing condition and must allow dependent care coverage for children up to 26 years old. Larger employers are subject to new requirements and incentives to provide health insurance benefits to their full-time employees, and, effective January 1, 2016, all employers subject to the requirement were required to offer health insurance coverage to 95% of their full-time employees and their dependents in order to avoid penalties.

To facilitate the purchase of health insurance by individuals and small employers, each state was required to establish an Exchange by January 1, 2014. For individuals and families below 400% of the FPL, the cost of obtaining health insurance through the Exchanges is subsidized by the federal government. Those with lower incomes will be eligible to receive greater subsidies. The ARP temporarily extends the availability of those subsidies to individuals and families with incomes over 400% of the FPL and increases the amount of the subsidies that are available for individuals and families who were already eligible for financial assistance under the Affordable Care Act. Health insurers participating in the Exchanges must offer a set of minimum benefits to be defined by HHS and may offer more benefits. Any benefits to us from the expansion of private sector coverage depend in large part on our success in contracting with payers whose policies are listed on the Exchanges. We currently have contracts with Exchange payers in every state in which we operate, and the reimbursement rates paid under those contracts generally are comparable to that paid to us by other private payers.

Public Program Spending

The Affordable Care Act provides for a number of Medicare, Medicaid and other federal healthcare program spending reductions. The CBO previously estimated that between 2013 and 2023, these program spending reductions would include $415 billion in Medicare fee-for-service market basket and productivity reimbursement reductions for all providers, the majority of which ($260 billion) would come from hospitals. The CBO's estimate also included an additional $56 billion in reductions of Medicare and Medicaid DSH funding. CMS had originally estimated that the Affordable Care Act would result in $64 billion in reductions of Medicare and Medicaid DSH funding, with $50 billion of the reductions coming from Medicare. Some of those reductions, most notably the Medicaid DSH funding reductions, have been delayed by subsequent legislation, and we cannot predict whether the public program spending reductions required by the Affordable Care Act will be further delayed or modified in the future.

Accountable Care Organizations

The Affordable Care Act required HHS to establish a Medicare Shared Savings Program that promotes accountability and coordination of care through the creation of accountable care organizations ("***ACOs***"). ACOs are groups of hospitals and/or physicians and other designated professionals and suppliers who come together voluntarily to invest in infrastructure and redesign delivery processes to achieve high quality and efficient delivery of services. The program is intended to produce savings as a result of improved quality and operational efficiency. ACOs that achieve quality performance standards established by HHS are eligible to share in a portion of the amounts saved by the Medicare program. There are several types of ACO programs, and as of January 1, 2022, 483 ACOs had been established to participate in the Medicare Shared Savings Program, and additional ACOs are being established by private payers. A few of our facilities currently participate in ACOs.

Bundled Payment Pilot Programs

The Affordable Care Act created the Center for Medicare & Medicaid Innovation ("***CMMI***") and made it responsible for establishing demonstration projects and other initiatives in order to identify, develop, test and encourage the adoption of new methods of delivering and paying for healthcare that create savings under the Medicare and Medicaid programs while improving quality of care. Under these projects and initiatives, participating providers agree to receive one payment for services provided to Medicare patients for certain medical conditions or episodes of care and accept accountability for costs and the quality of care that is provided. By financially rewarding providers for quality, cost-effective care and penalizing providers when costs exceed a certain amount, these models are intended to lead to higher quality, more coordinated care at a lower cost to the Medicare program. In connection with these programs, CMMI has developed a voluntary Bundled Payment for Care Improvement Advanced Model ("***BPCI Advanced***") to test innovative payment and service delivery models that have the potential to reduce Medicare and Medicaid expenditures while preserving or enhancing the quality of care for beneficiaries. Participation in bundled payments programs is generally voluntary, but CMS does currently require hospitals in certain geographic areas to participate in the Comprehensive Care for Joint Replacement model, which covers certain extremity joint replacement procedures and is scheduled to end in 2024. CMS has developed a radiation oncology bundled payment program that was expected to begin on January 1, 2022, but has been delayed until at least January 1, 2023, by the Sequester Cuts Act. CMS has indicated that it expects to develop additional voluntary and mandatory bundled payment models in the future. Several of our facilities currently participate in bundled payment programs.

Specialty Hospital Limitations

Over the last decade, we have faced competition from hospitals that have physician ownership. The Affordable Care Act prohibits newly created physician-owned hospitals from billing for Medicare patients referred by their physician owners. While the Affordable Care Act grandfathers existing physician-owned hospitals, it does not allow these hospitals to increase the percentage of physician ownership and significantly restricts their ability to expand. As of December 31, 2021, we operated two hospitals through joint ventures with physicians in which we own a controlling interest.

Competition for Patients

Our hospitals and other healthcare businesses operate in extremely competitive environments. Competition among healthcare providers occurs primarily at the local level. Accordingly, each facility develops its own strategies to address competition locally. A hospital's position within the geographic area in which it operates is affected by a number of competitive factors, including, but not limited to:

- the scope, breadth and quality of services a hospital offers to its patients and physicians;
- whether new, competitive services are subject to certificate of need or other restrictions;
- the number, quality and specialties of the physicians who admit and refer patients to the hospital;
- the nurses and other healthcare professionals employed by the hospital or on the hospital's staff;
- the hospital's reputation;
- its managed care contracting relationships;
- its location and the location and number of competitive facilities and other healthcare alternatives;
- the physical condition of its buildings and improvements;
- the quality, age and state-of-the-art of its medical equipment;
- its parking or proximity to public transportation;
- the length of time it has been a part of the community;
- the relative convenience of the manner in which care is provided (for example, whether services are available on an outpatient basis and whether services can be obtained quickly);
- the choices made by the physicians on the medical staff of the hospital; and
- the charges for its services.

In addition, tax-exempt competitors may have certain financial advantages not available to our facilities, such as endowments, charitable contributions, tax-exempt financing, exemptions from sales, property and income taxes, and participation in the 340B Program. In certain states, some not-for-profit hospitals are permitted by law to directly employ physicians while for-profit hospitals are prohibited from doing so.

We also face increasing competition from specialized care providers, including freestanding emergency departments and outpatient surgery, oncology, physical therapy, diagnostic and urgent care centers, as well as competing services rendered in physician offices. To the extent that other providers are successful in developing specialized outpatient facilities, our market share for those specialized services will likely decrease. Physician competition also has increased as physicians, in some cases, have become equity owners in surgery centers and outpatient diagnostic centers to which they refer patients. Some of our hospitals have developed specialized outpatient facilities where necessary to compete with these other providers.

Human Capital Resources

Our facilities must compete with other healthcare providers for professional talent. A significant factor in our future success will be the ability of our facilities to attract and retain physicians, as it is physicians who decide whether a patient is admitted to the hospital and the procedures to be performed.

We also compete with other healthcare providers in recruiting and retaining qualified management and other healthcare providers such as nurses, pharmacists, and lab technicians and other non-physician personnel responsible for day-to-day operations of each of our facilities. In some markets, the scarce availability of nurses and other medical support personnel presents a significant operating issue, which has been heightened by the COVID-19 pandemic. This shortage has required, and may continue to require us, to enhance wages and benefits to recruit and retain nurses and other medical support personnel, recruit personnel from foreign countries, and hire more expensive temporary personnel. We also depend on the available labor pool of semi-skilled and unskilled employees in each of the markets in which we operate.

Overview

At December 31, 2021, our subsidiaries collectively had approximately 50,000 employees, including approximately 12,000 part-time employees. The majority of these employees are hospital-based, including nursing staff, physical and occupational therapists, laboratory and radiology technicians, pharmacy staff, facility maintenance workers and the administrative staffs of our facilities. We understand that, to fulfill our mission of Making Communities Healthier®, we must create places where people choose to come for healthcare, physicians want to practice, and employees want to work. To support this mission, talent development has been a longstanding strategic pillar for the organization.

Diversity, Equity and Inclusion

We are committed to creating an inclusive, community-based healthcare delivery system that provides equitable opportunities for all people, starting with our employees. We appointed a Chief Diversity and Patient Experience officer in early 2021 who is leading an enterprise-wide strategy focused on training and education of our workforce, targeted efforts to address health equity in our communities, and the recruitment and development of diverse talent. This includes the creation of new formal partnerships to recruit more diverse talent and match new recruits with carefully selected mentors and sponsors within our organization.

Recruitment and Retention

We believe that healthcare is best delivered close to home, and our facilities strive to recruit and retain qualified management and staff personnel. Our frontline caregivers, including nurses, are the heartbeat of our organization, and we have a robust strategy to enhance the recruitment and retention of clinical staff into the future. This strategy includes meaningful education and career advancement opportunities, and competitive compensation. The scarce availability of nurses and other medical support personnel in some markets, which has been heightened by the COVID-19 pandemic, has required us to enhance wages and benefits and/or hire more expensive temporary personnel in certain situations.

Our facilities also employ and have affiliations with physicians. Many physicians today prefer to be employed, rather than operating their own practices or joining existing medical groups. When employing office-based physicians, we also often employ office employees and other personnel necessary to support these physicians and incur additional expenses as a result. We expect this trend to continue.

We seek to attract both employed and affiliated physicians by maintaining a sharp focus on quality, driven by our National Quality Program; employing high performing talent; equipping our facilities with technologically advanced equipment and an attractive, up-to-date physical plant; and otherwise creating an environment within which physicians choose to practice. While physicians may terminate their association with our facilities at any time, we believe that by striving to maintain and improve the quality of care at our facilities and by maintaining ethical and professional standards, our facilities will be better positioned to attract and retain qualified physicians with a variety of specialties.

When recruiting new physicians to our communities, the types, amount and duration of compensation and assistance we can provide to recruited physicians are limited by the federal physician self-referral law (commonly referred to as the "***Stark law***"), the federal Anti-kickback Statute (the "***Anti-kickback Statute***"), state anti-kickback and physician self-referral statutes, and related regulations. The Stark law requires, among other things, that recruitment assistance can only be provided to physicians who meet certain geographic and practice requirements, that the amount of assistance cannot be changed during the term of the recruitment agreement, and that the recruitment payments cannot generally benefit physicians currently in practice in the community beyond recruitment costs actually incurred. In addition to these legal requirements, there is competition from other communities and facilities for these physicians, and this competition continues after the physician begins practicing in one of our communities.

Labor Costs and Union Activity

Approximately 2,000 of our employees across certain of our facilities are unionized. While some of our non-unionized facilities experience union organizing activity from time to time, currently we do not expect these efforts to affect our future operations materially. Our facilities, like most facilities, have experienced rising labor costs and increases in the rate and utilization of contract labor. Our labor costs also may increase at higher rates among unionized employees. Unionized employees also may have rights under their collective bargaining agreements that restrict the ability of a facility to take certain actions with respect to these employees.

Government Regulation

Overview

All participants in the healthcare industry are required to comply with extensive government regulations at the federal, state and local levels. Under these laws and regulations, facilities must meet requirements for licensure and to qualify to participate in government healthcare programs, including the Medicare and Medicaid programs. These requirements relate to the adequacy of medical care, equipment, personnel, operating policies and procedures, maintenance of adequate records, rate-setting, use and storage of pharmaceuticals and controlled substances, compliance with building codes and environmental protection laws. If we fail to comply with applicable laws and regulations, we may be subject to criminal penalties, civil sanctions, and the imposition of corporate integrity and other similar agreements, and our facilities may lose their licenses and ability to participate in Medicare and Medicaid. In addition, government regulations frequently change. When regulations change, we may be required to make changes in our facilities, equipment, personnel and services so that our facilities remain licensed and qualified to participate in these programs. We believe that our facilities are in substantial compliance with current federal, state and local regulations and standards.

Legislative and Regulatory Developments in Response to COVID-19

Numerous recent legislative and regulatory actions have been taken in an attempt to provide businesses, including healthcare providers, with relief from the negative impacts of the COVID-19 pandemic. The legislative and regulatory responses to COVID-19 generally impact many of the statutes, regulations and policies summarized or discussed throughout this Report. Unless otherwise noted, such summaries or discussions have not been updated to reflect the impact of the COVID-19 legislative and regulatory developments.

CARES Act and Related Stimulus Legislation

The CARES Act was signed into law on March 27, 2020. Among other things, the CARES Act contains a number of provisions that are intended to assist healthcare providers as they combat the effects of the COVID-19 pandemic. Those provisions include, among others:

- the temporary suspension of Medicare sequestration from March 1, 2020, to December 31, 2020;
- the delay of the planned reductions to the Medicaid DSH payments program until October 1, 2023;
- an appropriation of $180 million to Health Resources and Services Administration's Federal Office of Rural Health Policy that will be awarded to small rural hospitals by the states through the Small Rural Hospital Improvement Program;
- an appropriation of $250 million to the Hospital Preparedness Program; and
- an appropriation of $100 billion to the Public Health and Social Services Emergency Fund (the "***Emergency Fund***") for a new program to reimburse, through grants or other mechanisms, hospitals, healthcare providers and other approved entities for COVID-19-related expenses or lost revenues.

The Paycheck Protection Program and Health Care Enhancement Act was enacted on April 24, 2020, and, among other things, provides an additional allocation of $75 billion to the Emergency Fund and an allocation of $25 billion for COVID-19 testing.

On December 21, 2020, Congress adopted the CAA, which provides an additional $900 billion in COVID-19 relief, including an additional allocation of $3 billion to the Emergency Fund. In addition, the CAA, among other things, delays the planned reductions to the Medicaid DSH payments program through FFY 2023, adds additional reductions to the Medicaid DSH payments program in FFYs 2026 and 2027, provided for a 3.75% increase in the Medicare PFS rates in CY 2021 and allocates $30 billion for the purchase and administration of COVID-19 vaccines and related therapeutics. In addition, the CAA extended the temporary suspension of Medicare sequestration through March 31, 2021. The temporary suspension was subsequently extended through December 31, 2021, by HR 1868, which, to offset the cost of the suspension, extended Medicare sequestration through 2030. The Sequester Cuts Act further extends the temporary suspension of Medicare sequestration through March 31, 2022, and reduces the sequestration cuts for the period of April 1, 2022, through June 30, 2022, to 1%. The Sequester Cuts Act also delays application of 4% cuts to Medicare and other federal programs resulting from the requirements of the Statutory Pay-As-You-Go-Act of 2010 that were scheduled to go into effect in CY 2022 until CY 2023.

On March 11, 2021, the ARP was signed into law. Among other things, the ARP allocates approximately $70 billion for COVID-19 testing and vaccine efforts; provides $8.5 billion to reimburse rural healthcare providers, such as sole community hospitals, rural referral centers, rural health clinics, and providers located outside metropolitan statistical areas, for expenses and lost revenues attributable to COVID-19; provides incentives, in the form of temporary increases to the FMAP, to encourage states that have not expanded their Medicaid programs as permitted by the Affordable Care Act to do so; permits states to expand the availability and duration of Medicaid postpartum coverage; and temporarily expands the subsidies that are available to individuals who purchase insurance through the Exchanges.

Stimulus Payments

The Emergency Fund distributed approximately $43 billion to hospitals based on their 2018 net patient revenue. Additionally, since that time, the Emergency Fund has distributed more than $90 billion to a number of different types of healthcare providers, including participants in state Medicaid/CHIP programs, providers in areas particularly impacted by the COVID-19 outbreak, rural providers (including hospitals and rural health clinics), skilled nursing facilities, dentists, providers of services with lower shares of Medicare reimbursement or who predominantly serve Medicaid beneficiaries, and providers requesting reimbursement for the treatment of uninsured patients.

Payments made by the Emergency Fund to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, filing attestations acknowledging receipt of payments, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients, not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse, and submitting such reports as may be required by HHS regarding the provider's compliance with the terms and conditions of the Emergency Fund. Healthcare providers that received more than $10,000 from the Emergency Fund between April 10, 2020 through June 30, 2020 (the "***First Payment Received Period***") were required to submit a report on their use of those funds no later than September 30, 2021. We successfully submitted the required reports for all of our providers that received and retained payments from the Emergency Fund during First Payment Received Period prior to the deadline. However, we will be required to submit additional reports in the future for payments that were received and retained by our providers from the Emergency Fund after the end of the First Payment Received Period. The reporting requirements and guidance from HHS related to the Emergency Fund have been subject to frequent clarifications and revision, and there can be no assurance that we will not be required to submit additional reports or provide additional information related to the payments we received from the Emergency Fund in the future. In addition, HHS has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the Office of Inspector General of HHS (the "***OIG***"), will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, HHS temporarily expanded the CMS Accelerated and Advance Payment Program to a broad group of Medicare Part A and Part B providers. Under the expanded Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period.

We received a total of $991 million of Medicare advance payments under the CMS Accelerated and Advance Payment Program during the year ended December 31, 2020. During the year ended December 31, 2021, we fully repaid all Medicare advance payments, and we do not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program.

COVID-19 Waivers and Temporary Suspension of Certain Regulatory Requirements

In addition to the financial relief that has been provided by the federal government under the CARES Act and other legislation that has been passed by Congress, CMS and many state governments have also issued a number of waivers or temporarily suspended a number of healthcare facility licensure and reimbursement requirements in order to provide hospitals, skilled nursing facilities, and other types of healthcare providers with increased flexibility to meet the challenges that are being presented by the COVID-19 pandemic. For example, CMS has temporarily waived the enforcement of certain requirements of the Medicare hospital conditions of participation and the Stark law to enable hospitals to treat patients in temporary locations and to obtain services from physicians in a more efficient and timely manner. Likewise, many states have also suspended the enforcement of certain certificate of need and licensure requirements to ensure that hospitals and other healthcare providers have sufficient capacity to treat COVID-19 patients. Our facilities have utilized the waivers and regulatory flexibility that is being provided to the extent necessary to appropriately respond to the COVID-19 pandemic.

CARES Act Tax Provisions

The CARES Act also provides for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, we deferred cash payments of approximately $84 million related to Social Security payroll tax payments. During the year ended December 31, 2021, we fully repaid all previously deferred Social Security payroll taxes.

The federal income tax changes brought about by the CARES Act are complex and further guidance is expected. We may change our provision for income taxes and our deferred income taxes as our understanding of the CARES Act tax provisions evolves due to additional U.S. Department of Treasury guidance. Any such adjustments could materially impact our provision for income taxes and, as a result, our financial results in the relevant periods.

Fraud and Abuse Laws

Participation in the Medicare and/or Medicaid programs is heavily regulated by federal statutes and regulations. If a facility fails to comply substantially with the numerous federal laws governing the facility's activities, the facility's participation in the Medicare and/or Medicaid programs may be terminated, and/or civil or criminal penalties may be imposed. For example, a facility may lose its ability to participate in the Medicare and/or Medicaid programs if it, among other things:

- submits claims to Medicare and/or Medicaid for services not provided or misrepresents actual services provided in order to obtain higher payments;
- pays money to induce the referral of patients or purchase of items or services where such items or services are reimbursable under a federal or state healthcare program; or
- is a hospital and fails to provide appropriate emergency medical screening services to any individual who comes to a hospital's campus or otherwise fails to properly treat and transfer emergency patients.

Anti-kickback Statute

The federal Anti-kickback Statute is a criminal statute that generally prohibits the payment, receipt, offer or solicitation of anything of value, whether in cash or in kind, with the intent of generating referrals or orders, or recommending or arranging for services or items covered by a federal or state healthcare program. Violations of the Anti-kickback Statute are punishable by, among other things, imprisonment, criminal fines, substantial civil monetary penalties that are subject to annual adjustments for inflation for each violation, damages equal to three times the total remuneration associated with the unlawful referrals or services, and/or possible exclusion from participating in Medicare, Medicaid or other governmental healthcare programs. Violations of the Anti-kickback Statute can also result in liability under the False Claims Act.

The OIG is the primary federal agency responsible for identifying fraud and abuse in government healthcare programs. In order to fulfill its duties, the OIG performs audits, investigations and inspections. In addition, it provides guidance to healthcare providers by identifying types of activities that could violate the Anti-kickback Statute. The OIG has identified the following hospital/physician incentive arrangements, among other things, as potential violations:

- payment of any incentive by a hospital based on physician referrals of patients to the hospital;
- use of free or significantly discounted office space or equipment;
- provision of free or significantly discounted billing, nursing or other staff services;
- free training (other than compliance training) for a physician's office staff, including management and laboratory technique training;
- guarantees which provide that if a physician's income fails to reach a predetermined level, the hospital will pay any portion of the remainder;
- low-interest or interest-free loans, or loans that may be forgiven if a physician refers patients to the hospital;
- payment of the costs for a physician's travel and expenses for conferences;
- payment of services which require few, if any, substantive duties by the physician or which are in excess of the fair market value of the services rendered; or
- purchasing goods or services from physicians at prices in excess of their fair market value.

In 1998, the OIG published the Provider Self-Disclosure Protocol (which was subsequently replaced in 2013 and further amended in 2021 and renamed the Health Care Fraud Self-Disclosure Protocol) to establish a process for persons to voluntarily identify, disclose, and resolve instances of potential fraud involving federal healthcare programs and provide guidance on how to investigate this conduct, quantify damages, and report the conduct to OIG to resolve liability under OIG's civil monetary penalty authorities. We have a variety of financial relationships with physicians who refer patients to our facilities, including employment contracts, independent contractor agreements, professional service agreements, leases and joint ventures. We provide financial incentives to recruit physicians to relocate to communities served by our facilities. These incentives for relocation include minimum revenue guarantees and, in some cases, loans. The OIG is authorized to publish regulations outlining activities and business relationships that would be deemed not to violate the Anti-kickback Statute. These regulations are known as "safe harbor" regulations. Failure to comply with the safe harbor regulations does not, by itself, make conduct illegal, but instead the safe harbors delineate standards that, if complied with, protect conduct that might otherwise be deemed in violation of the Anti-kickback Statute. We intend for all our business arrangements to be in full compliance with the Anti-kickback Statute and seek to structure each of our arrangements with physicians to fit as closely as possible within an applicable safe harbor. However, not all of our business arrangements fit wholly within safe harbors, so we cannot guarantee that these arrangements will not be scrutinized by government authorities or, if scrutinized, that they will be determined to be in compliance with the Anti-kickback Statute or other applicable laws.

Eliminating Kickbacks in Recovery Act

The Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (the "***SUPPORT Act***") contains a number of provisions aimed at identifying at-risk individuals, increasing access to opioid abuse treatment, reducing overprescribing and promoting data sharing with the primary goal of reducing the use and abuse of opioids. Additionally, the SUPPORT Act attempts to address the problem of "patient brokering" in the context of addiction treatment facilities and sober living homes.

One section of the SUPPORT Act, the Eliminating Kickbacks in Recovery Act ("***EKRA***"), makes it a federal crime to knowingly and willfully: (1) solicit or receive any remuneration in return for referring a patient to a recovery home, clinical treatment facility or laboratory; or (2) pay or offer any remuneration to induce such a referral or in exchange for an individual using the services of a recovery home, clinical treatment facility, or laboratory. Each conviction under the EKRA is punishable by up to $200,000 in monetary damages, imprisonment for up to ten years, or both. Unlike the Anti-kickback Statute, EKRA is not limited to services reimbursable under a government healthcare program. The EKRA also contains exceptions similar to the Anti-kickback Statute safe harbors, but those exceptions are narrower than the Anti-kickback Statute safe harbors, such that practices that would be permissible under the Anti-kickback Statute may violate EKRA.

Stark Law

The federal Stark law prohibits physicians from referring Medicare and Medicaid patients to entities with which they or any of their immediate family members have a financial relationship if those entities provide certain "designated health services" unless an exception applies. The Stark law also prohibits entities that provide designated health services reimbursable by Medicare and Medicaid from billing the Medicare and Medicaid programs for any items or services that result from a prohibited referral and requires entities to refund amounts received for items and services provided pursuant to a prohibited referral on a timely basis. "Designated health services" include, among other things, inpatient and outpatient hospital services, laboratory services and radiology services. A violation of the Stark law may result in (i) a denial of payment, (ii) substantial civil monetary penalties that are subject to annual adjustments for inflation for each violation or circumvention scheme and (iii) exclusion from participation in the Medicare and Medicaid programs and other governmental healthcare programs. In addition, violations of the Stark law could also result in penalties under the False Claims Act.

There are ownership and compensation arrangement exceptions to the self-referral prohibition. There are also exceptions for many of the customary financial arrangements between physicians and facilities, including employment contracts, leases and recruitment agreements, and there is a "whole hospital exception," which allows a physician to make a referral to a hospital if, among other things, the physician owns an interest in the entire hospital, as opposed to an ownership interest in a department of the hospital. The Affordable Care Act significantly modified the requirements of the whole hospital exception and placed a number of restrictions on the ownership structure, operations, and expansion of physician owned hospitals. Two of our facilities are subject to those requirements. We intend for our financial arrangements with physicians to comply with the exceptions included in the Stark law and regulations.

In recent years, CMS has issued a number of proposed and final rules modifying and/or clarifying the Stark law exceptions. For example, on November 20, 2020, HHS published two final rules related to the Anti-kickback Statute and the Stark law that are intended to reduce regulatory barriers to care coordination and ease unnecessary compliance burdens for physicians and other healthcare providers. Among other things, the rules create new Anti-kickback Statute safe harbors and Stark law exceptions for value-based and cyber-technology arrangements and provide new guidance and clarification as to how the Anti-kickback Statute and Stark law will be interpreted and enforced by the OIG and CMS, respectively. We cannot predict the impact that the final rules will have on our facilities and our operations or whether the recent trend toward reducing provider compliance burdens will continue in the future. We also anticipate that there will be further changes to the regulations that implement the Anti-kickback Statute and/or the Stark law, and those changes may require us to modify our activities.

In addition to issuing new regulations, or applying new interpretations to existing rules or regulations, the federal government has modified its approach for ensuring compliance with and enforcing penalties for violations of the Stark law. In 2010, CMS also issued a "self-referral disclosure protocol" for hospitals and other providers that wish to self-disclose potential violations of the Stark law and attempt to resolve those potential violations and any related overpayment liabilities at levels below the maximum penalties and amounts set forth in the statute.

False Claims Act

The federal False Claims Act prohibits providers from, among other things, knowingly submitting false or fraudulent claims for payment to the federal government and failing to refund identified overpayments received from the government. The False Claims Act defines the term "knowingly" broadly, and while simple negligence generally will not give rise to liability, submitting a claim with reckless disregard to its truth or falsity can constitute the "knowing" submission of a false or fraudulent claim for the purposes of the False Claims Act. The "qui tam" or "whistleblower" provisions of the False Claims Act allow private individuals to bring actions under the False Claims Act on behalf of the government. These private parties are generally entitled to share in any amounts recovered by the government, and, as a result, the number of "whistleblower" lawsuits that have been filed against providers has increased significantly in recent years. When a private party brings a qui tam action under the False Claims Act, because such cases are filed under seal, the defendant will generally not be aware of the lawsuit until the government makes a determination whether it will intervene and take a lead in the litigation. If found liable under the False Claims Act, a provider may be required to pay up to three times the actual damages sustained by the government plus substantial civil monetary penalties that are subject to annual adjustments for inflation for each separate false claim. The government and whistleblowers have used the False Claims Act to prosecute Medicare, Medicaid and other government healthcare program fraud such as coding errors, billing for services not provided, submitting false cost reports and providing care that is not medically necessary or that is substandard in quality. Violations of the Stark law can result in False Claims Act liability, as well.

Changes in the Regulatory Environment

The Fraud Enforcement and Recovery Act of 2009 ("***FERA***") expanded the scope of the False Claims Act by, among other things, creating liability for knowingly and improperly avoiding or decreasing an obligation to pay money to the federal government and broadening protections for whistleblowers. In addition, the Affordable Care Act made several significant changes to healthcare fraud and abuse laws, including providing additional enforcement tools to the government, increasing cooperation between agencies by establishing mechanisms for the sharing of information and enhancing criminal and administrative penalties for non-compliance. For example, the Affordable Care Act: (1) expanded the scope of the RAC program to include Medicaid, (2) authorized HHS, in consultation with the OIG, to suspend Medicare and Medicaid payments to a provider of services or a supplier "pending an investigation of a credible allegation of fraud," (3) provided Medicare contractors with additional flexibility to conduct random prepayment reviews, and (4) required providers to adopt compliance programs that meet certain specified requirements as a condition of their Medicare enrollment. The Affordable Care Act also expanded the scope of the False Claims Act to cover payments in connection with the Exchanges if those payments include any federal funds and provides that claims submitted in connection with patient referrals that result from violations of the Anti-kickback Statute constitute false claims for the purposes of the False Claims Act.

In addition to the changes mentioned above, the Affordable Care Act created False Claims Act liability for the knowing failure to report and return an overpayment within 60 days of the identification of the overpayment or the date by which a corresponding cost report is due, whichever is later. On February 11, 2016, CMS published a final rule that provides clarification around the meaning of overpayment identification and generally establishes a six-year lookback period for Medicare Part A and Part B providers and suppliers. To avoid liability, providers must, among other things, carefully and accurately code claims for reimbursement, promptly return overpayments, accurately prepare cost reports and timely resolve credit balances. In light of the provisions of FERA and the Affordable Care Act relating to reporting and refunding overpayments and the robust funding for enforcement activities and audits, an increasing number of healthcare providers have self-reported potential violations of law, including technical violations of certain fraud and abuse laws, and refunded overpayments to avoid incurring fines and penalties. It is likely such refunds and voluntary disclosures will continue in the future, and we will make such refunds and disclosures in accordance with the law.

State Laws

Many of the states in which we operate have adopted laws similar to the Anti-kickback Statute and the Stark law. These state laws are generally very broad in scope and typically apply to patients whose treatment is covered by the Medicaid program and, in some cases, to all patients regardless of payment source. In addition, many of the states in which we operate have false claims statutes that impose civil and/or criminal liability for the types of acts prohibited by the False Claims Act or that otherwise prohibit the submission of false or fraudulent claims to the state government or Medicaid program. Violations of these laws are punishable by substantial civil and/or criminal penalties and, in many cases, the loss of the facility's license. Although we believe that our operations and arrangements with physicians and other referral sources comply with the applicable state fraud and abuse laws, most of these laws have not been interpreted by any court or governmental agency, and there can be no assurance that the regulatory authorities responsible for enforcing these laws will determine that our arrangements comply with the applicable requirements.

Emergency Medical Treatment and Active Labor Act

Our acute care hospitals are all generally subject to EMTALA. This federal law requires any hospital that participates in the Medicare program and has an emergency department to conduct an appropriate medical screening examination of every person who presents to the hospital's emergency department for treatment and, if the patient is suffering from an emergency medical condition, to either stabilize that condition or make an appropriate transfer of the patient to a facility that can handle the condition. The obligation to screen and stabilize emergency medical conditions or transfer exists regardless of a patient's ability to pay for treatment. Off-campus facilities such as specialty clinics, surgery centers and other facilities that lack emergency departments or otherwise do not treat emergency medical conditions are not generally subject to EMTALA. They must, however, have policies in place that explain how the location should proceed in an emergency situation, such as transferring the patient to the closest hospital with an emergency department. There are severe penalties under EMTALA if a hospital fails to screen or appropriately stabilize or transfer a patient or if the hospital delays appropriate treatment in order to first inquire about the patient's ability to pay, including substantial civil monetary penalties and exclusion from participation in the Medicare program. In addition, an injured patient, the patient's family or a medical facility that suffers a financial loss as a direct result of another hospital's violation of the law can bring a civil suit against that other hospital. CMS has actively enforced EMTALA and has indicated that it will continue to do so in the future. Although we believe that our acute care hospitals comply with EMTALA, we cannot predict whether CMS will implement new requirements in the future and, if so, whether our hospitals will comply with any new requirements.

Administrative Simplification Provisions and Privacy and Security Requirements

We are subject to the administrative simplification provisions of the Health Insurance Portability and Accountability Act of 1996 ("***HIPAA***") which require the use of uniform electronic data transmission standards for healthcare claims and payment transactions submitted or received electronically. These provisions are intended to encourage electronic commerce in the healthcare industry. Additionally, we are subject to the privacy, security and breach notification regulations promulgated under HIPAA and the Health Information Technology for Economic and Clinical Health Act (the "***HITECH Act***"), which are designed to protect the confidentiality, availability and integrity of protected health information ("***PHI***") and establish an array of patient rights with respect to such information. The HIPAA privacy, security and breach notification regulations apply to covered entities, which include health plans, healthcare clearinghouses, and healthcare providers that conduct certain standard transactions (such as billing insurance) electronically. In addition, certain provisions of the privacy, security and breach notification regulations apply to business associates, which are entities that perform certain functions or activities on behalf of covered entities that require access to or the use or disclosure of protected health information. In certain circumstances, a covered entity may be held liable for the actions of its business associate if HHS determines an agency relationship exists between the covered entity and the business associate under federal agency law.

The HIPAA privacy regulations, which apply to individually identifiable health information held or disclosed by a covered entity in any form, whether communicated electronically, on paper or orally, impose extensive administrative requirements on us, which require that we adopt policies and procedures to comply with HIPAA, routinely train our workforce members on our HIPAA policies, provide patients with a copy of our notice of privacy practices, comply with rules governing the use and disclosure of PHI and impose these rules, by contract, on any business associate to whom we disclose such information in order to perform functions on our behalf. They also create rights for patients in their health information, such as the right to access and amend their health information and to request an accounting for certain disclosures of their health information. The HIPAA security regulations require us to establish and maintain reasonable and appropriate administrative, technical and physical safeguards to ensure the integrity, confidentiality and the availability of electronic health information and to perform ongoing assessments of the potential risks and vulnerabilities to the confidentiality, integrity and availability of such information. In addition, the HIPAA breach notification regulations require that we report breaches of unsecured (unencrypted) PHI to affected individuals without unreasonable delay, but in no case later than 60 calendar days of discovery of the breach. Notification must also be made to HHS and, in certain cases involving large breaches, to the local media. HHS is required to report on its website a list of all covered entities that report a breach involving more than 500 individuals. All non-permitted uses or disclosures are presumed to be breaches unless the covered entity or business associate can demonstrate that there is a low probability that the information has been compromised. We implement a comprehensive set of HIPAA policies and procedures, which we believe materially complies with the privacy, security and breach notification requirements of HIPAA.

HIPAA enforcement actions arise from audits, complaints, and breach notifications. Violations of the HIPAA regulations may result in criminal penalties and substantial civil monetary penalties subject to a limit for violations of the same requirement in a calendar year, based on the level of culpability associated with the violation. The civil monetary penalties are also subject to annual inflation adjustments. In addition, state attorneys general are authorized to bring civil actions seeking either injunction or damages up to $25,000 for violations of the same requirement in a calendar year in response to HIPAA violations that affect their state residents. HHS has the discretion in many cases to resolve HIPAA violations through informal means without the imposition of penalties. However, the HIPAA privacy, security and breach notification regulations have and will continue to impose significant costs on our facilities in order to comply with these standards. In recent years, enforcement of the HIPAA regulations has increased significantly, and we expect the increased level of enforcement to continue in the future.

Our facilities continue to remain subject to other applicable federal or state laws that are more restrictive than the HIPAA privacy and security regulations, which could impose additional penalties on us. For example, the FTC uses its consumer protection authority to initiate enforcement actions against companies whose inadequate data security programs may expose consumers to fraud, identity theft and privacy intrusions, including the security programs of entities subject to the HIPAA regulations. Other state data privacy and security laws also may be applicable to certain data held by our facilities of residents of such states, such as the California Consumer Privacy Act of 2018, as well as other similar laws that are selected to go into effect in the future (for example, the Virginia Consumer Data Protection Act and the Colorado Privacy Act).

Corporate Practice of Medicine and Fee-Splitting

Some states have laws that prohibit unlicensed persons or business entities, including corporations or business organizations that own hospitals, from employing physicians. Some states also have adopted laws that prohibit direct or indirect payments or fee-splitting arrangements between physicians and unlicensed persons or business entities. Possible sanctions for violations of these restrictions include loss of a physician's license, civil and criminal penalties and rescission of business arrangements. These laws vary from state to state, are often vague and have seldom been interpreted by the courts or regulatory agencies. We attempt to structure our arrangements with healthcare providers to comply with the relevant state laws and the few available judicial and regulatory interpretations.

Facility Licensure, Certification, and Accreditation

All of our facilities must comply with various federal, state and local licensing and certification regulations and undergo periodic inspection by licensing agencies to certify compliance with such regulations. The initial and continued licensure of our facilities and certification to participate in government healthcare programs depends upon many factors including various state licensure regulations relating to quality of care, environment of care, equipment, services, staff training, personnel and the existence of adequate policies, procedures and controls. Federal, state and local agencies survey our facilities on a regular basis to determine whether the facilities are in compliance with regulatory operating and health standards and conditions for participating in government healthcare programs.

Most of our general acute care hospitals and IRFs maintain accreditation from private entities, such as The Joint Commission or the Commission on Accreditation of Rehabilitation Facilities ("***CARF***"). The Joint Commission accredits a broad variety of healthcare organizations, including hospitals and behavioral health organizations. CARF accredits behavioral health organizations providing mental health and alcohol and drug use and addiction services, rehabilitation services, as well as opiate treatment programs, and other types of healthcare programs. These accreditation programs are intended generally to improve the quality, safety, outcomes and value of healthcare services provided by accredited facilities. Certain federal and state licensing agencies as well as many government and private healthcare payment programs require that providers be accredited as a condition of licensure, certification or participation. Accreditation is typically granted for a specified period, ranging from one to three years, and renewals of accreditation generally require completion of a renewal application and an on-site renewal survey.

The Controlled Substances Act and Drug Enforcement Administration ("***DEA***") regulations require every person who dispenses controlled substances to be registered with the DEA at each principal place of business or professional practice where the person dispenses controlled substances, subject to limited exceptions. Each hospital or clinic must hold a DEA registration at each location and may be subject to similar state registration requirements. In addition, our facilities are subject to a variety of federal and state statutes and regulations that govern operational issues related to pharmaceuticals and controlled substances, such as those related to packaging, storing, and dispensing of pharmaceutical drugs, inventory control and recordkeeping requirements for controlled substances, and other standards intended to prevent diversion of controlled substances. The DEA, the DOJ, HHS, and state boards of pharmacy have broad enforcement powers, may conduct audits and investigations and can impose substantial fines and other penalties, including revocation of registration.

Certificates of Need

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and expensive equipment at our facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of the new equipment or services and allow competing healthcare providers to challenge the need for the facility, service or equipment. We operate facilities in certain states that have adopted certificate of need laws. If we fail to obtain necessary state approval, we will not be able to expand our facilities, complete acquisitions or add new services at our facilities in these states. Violation of these state laws may result in the imposition of civil sanctions or the revocation of the applicable hospital or facility license. Some states in which we operate do not have certificate of need requirements. Additionally, from time to time, states with existing requirements may repeal or limit the scope of their certificate of need programs. Our facilities in states that do not have (or limit the scope of) certificate of need programs could be subject to increased competition from other providers who may choose to enter the market.

Not-for-Profit Hospital Conversion Legislation

Many states have adopted legislation regarding the sale or other disposition of hospitals operated by not-for-profit entities. In states that do not have such legislation, the attorneys general have demonstrated an interest in reviewing these transactions under their general obligations to protect charitable assets. These legislative and administrative efforts primarily focus on the appropriate valuation of the assets divested and the use of the proceeds of the sale by the not-for-profit seller. Reviews and, in some instances, approval processes adopted by state authorities can add additional time to the closing of a not-for-profit hospital acquisition, and can also impose on buyers ongoing requirements to provide certain levels of charity care, or limit buyers' ability to discontinue particular service lines or to sell or otherwise dispose of a converted hospital. Future actions by state legislators or attorneys general may seriously delay or even prevent our ability to acquire certain hospitals.

Environmental Regulation

Our healthcare operations generate medical waste that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Our operations, as well as our purchases and sales of healthcare facilities, are also subject to compliance with various other environmental laws, rules and regulations. Such compliance costs are not significant, and we do not anticipate that such compliance costs will be significant in the future.

Compliance Program

We maintain a company-wide ethics and compliance program designed to ensure that we maintain high standards of ethical conduct in the operation of our business and to meet or exceed applicable federal guidance and industry standards. We continually implement written policies and procedures for all of our employees to promote compliance with all applicable laws, regulations and Company policies and to encourage a "culture of compliance" within the Company and its facilities. The organizational structure of our ethics and compliance program includes oversight by our Board of Directors and compliance committees at the Company and facility levels. We have compliance officers and personnel at the Company level and at our facilities. Other features of our compliance program include initial and periodic ethics and compliance training, systems for identifying and tracking compliance issues (including databases and hotlines for employees to report, without fear of retaliation, any suspected legal or ethical violations), regular auditing and monitoring of compliance issues, including coding audits and reviews of our financial relationships with physicians, and prompt review and resolution of identified issues.

Our compliance program also oversees the implementation and monitoring of the standards set forth by HIPAA for privacy. Ongoing HIPAA compliance also includes self-monitoring of HIPAA policy and procedure implementation by each of our healthcare facilities and oversight at the Company level.

Risk Management and Insurance

Given the nature of our operating environment, we are subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, we maintain insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("***SIR***") and deductible levels. At December 31, 2021, our SIR for professional liability claims is $15 million per claim at the majority of our acute care hospitals. Additionally, we participate in state-specific professional liability programs in Colorado, Indiana, Kansas, New Mexico and Pennsylvania. We have a $25,000 deductible for professional liability at each of our IRFs. At December 31, 2021, our deductible for workers' compensation claims at each of our acute care hospitals was $1 million per claim in all states in which we operate except for Montana and Washington. We participate in state-specific programs for our workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at our IRFs. Our SIR and deductible levels are evaluated annually as a part of our insurance program's renewal process.

We also maintain directors' and officers', property, some professional liability and other types of insurance coverage with unrelated commercial carriers. Our directors' and officers' liability insurance coverage for current officers and directors is a program that protects us as well as the individual director or officer. We maintain property insurance through unrelated commercial insurance companies.

We operate a captive insurance company under the name Point of Life Indemnity, Ltd. This captive insurance company, which is licensed by the Cayman Islands Monetary Authority and is a wholly-owned subsidiary of LifePoint, issues malpractice indemnity policies to some subsidiaries employing physicians and advanced practice providers.

Item 1A. ***Risk Factors.***

Any of the following risks could materially and adversely affect our business, financial condition or results of operations. In addition, the risks described below are not the only risks that we face. The following information should be read in conjunction with "Part II, Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" included in this Report. Additional risks and uncertainties not currently known to us or those that we currently view to be immaterial could also materially and adversely affect our business, financial condition or results of operations.

Risk Factor Summary

The following is a summary of the principal risks that could adversely affect our business, operations and financial results.

COVID-19 and Other Potential Pandemic Risks

- The COVID-19 global pandemic continues to affect our operations, business and financial condition, and our liquidity could be negatively impacted, particularly if the U.S. economy remains unstable for a significant amount of time.
- There can be no assurance as to the total amount of financial assistance or types of assistance we seek or receive under existing or future stimulus legislations, or that the terms of provider relief funding or other programs will not change in ways that affect our funding or eligibility to participate.
- The emergence and effects related to a pandemic, epidemic or outbreak of an infectious disease could adversely affect our operations and financial condition.

Business and Operational Risks

- The implementation of the Kindred Transaction may have an adverse effect on our business, financial condition and results of operations, and we may not realize the anticipated benefits of the Kindred Transaction within the timeframe expected or at all.
- Our revenues will decline if federal or state programs reduce our Medicare or Medicaid payments.
- Uncertainty regarding the Affordable Care Act or future healthcare reform may adversely affect our business, financial condition and results of operations.
- Changes to Medicaid supplemental payment programs may materially and adversely affect our revenues and results of operations.
- Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may limit our revenues and profitability.
- We may encounter difficulty operating, integrating and improving financial performance at acquired facilities. Also, if we acquire facilities with unknown or contingent liabilities, we could become liable for material obligations, or it could diminish the anticipated value of the acquired facility.
- If our fair value declines or if our estimated future cash flows decrease, a material non-cash charge to earnings from impairment of our goodwill or our long-lived assets could result.
- We are subject to risks associated with outsourcing functions to third parties, including risks associated with the protection of patient data.
- We conduct a significant portion of our operations through joint ventures. We cannot provide assurances that relationships with our joint venture partners will remain strong, which could negatively affect our joint ventures, affiliations and other strategic alliances as well as our overall business.
- Deterioration in the collectability of "patient due" accounts could adversely affect our revenues and results of operations.
- Other hospitals and inpatient and outpatient facilities provide services similar to those which we offer. In addition, physicians and other healthcare practitioners provide services in their offices that could be provided in our facilities. These factors increase the level of competition we face and may therefore adversely affect our revenues and results of operations.
- We may have difficulty acquiring or divesting facilities on favorable terms. Furthermore, our business could be negatively affected if acquisitions or divestitures are not successfully completed or if contingent liabilities materialize in connection with such transactions.
- If we are unable to implement successfully standardized processes, policies and systems throughout our facilities, our operating results could be negatively impacted.
- Under the 2021 Master Lease (defined below), a default with respect to one facility could cause a default under all of the facilities subject to the 2021 Master Lease, which would have a material adverse effect on our business, results of operations and financial condition.
- Because many of the facilities we operate are subject to long-term leases, failure to comply with the terms of such leases or failure to renew such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises.
- Many of the non-urban communities in which we operate continue to face challenging economic conditions and demographic trends, which may materially and adversely impede our business strategies intended to generate organic growth and improve operating results at our facilities.

Credit and Liquidity Risks

- Our substantial indebtedness could materially and adversely affect our ability to raise additional capital to fund our operations, limit our ability to react to changes in the economy or our industry and prevent us from making debt service payments.
- Our debt agreements contain restrictions that will limit our flexibility in operating our business.
- Repayment of our debt is dependent on cash flow generated by our subsidiaries.
- Despite our substantial indebtedness, we may still be able to incur significantly more debt, which could intensify the risks described above.
- We may not be able to generate sufficient cash to service all of our indebtedness and may be forced to take other actions to satisfy our obligations under our indebtedness that may not be successful.
- Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.
- Discontinuation, reform or replacement of LIBOR may adversely affect our results of operations.
- We may not be able to generate sufficient cash flow through operations or successfully access other capital resources to fund all of our capital expenditure programs and commitments.
- Our ability to utilize our net operating loss carryforwards ("***NOLs***") may be limited, and we may not be able to utilize our NOLs as a result of recent U.S. federal tax reform legislation.

Human Capital Risks

- Factors related to our employment of physicians could affect our financial performance.
- Our operations and ability to deliver healthcare services efficiently may be adversely affected by competition for staffing, the shortage of experienced physicians, nurses and other healthcare professionals, and vaccine mandates.
- Labor union activity could raise costs and interfere with our operations. Certain of our employees are union members and subject to the terms of collective bargaining agreements.
- We are dependent on our executive management team and the loss of the services of one or more of our executive management team could have a material adverse effect on our business.

Regulatory and Legal Risks

- We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may reduce our revenues and profitability.
- We may be subjected to actions brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the False Claims Act's "qui tam" or "whistleblower" provisions.
- We will be subject to liabilities because of malpractice and related legal claims brought against our facilities or healthcare providers associated with, or employed by, our facilities or affiliated entities. If we become subject to these claims, we could be required to pay significant damages, which may not be covered by insurance.
- As a result of reviews of claims to Medicare and Medicaid for our services, we may experience delayed payments or incur additional costs and may be required to repay amounts already paid to us.
- Controls designed to reduce inpatient services may reduce our revenues.
- If we do not manage admissions in the IRFs that we operate or manage in compliance with a 60% threshold, reimbursement for services rendered by us in these facilities will be based upon less favorable rates.
- Certificate of need laws and regulations regarding licenses, ownership and operation may impair our future expansion in some states. In states without certificate of need laws, competing providers of healthcare services are able to expand and construct facilities without the need for significant regulatory approval.
- Failure to implement and use certified health information technology in an effective and timely manner could adversely affect our operations and result in reduced Medicare and Medicaid reimbursement and government enforcement actions.
- The industry emphasis on value-based purchasing and bundled payment arrangements may negatively affect our revenues.
- The implementation of participation and quality measurement requirements under the MACRA's Merit-Based Incentive Payment System may affect our revenues.
- If current or future laws or regulations force us or cause us to restructure our arrangements with physicians and other providers, we may incur additional costs, lose contracts and suffer a reduction in net revenue under existing contracts, and we may need to refinance our debt or obtain consent from our lenders.

Data Security and Privacy Risks

- A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business.
- If access to our information systems or those provided by our third-party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer.

COVID-19 and Other Potential Pandemic Risks

The COVID-19 global pandemic continues to affect our operations, business and financial condition, and our liquidity could be negatively impacted, particularly if the U.S. economy remains unstable for a significant amount of time.

The COVID-19 global pandemic continues to affect our facilities, employees, patients, communities, business operations and financial performance, as well as the U.S. economy and financial markets. Although vaccines have been developed and are being distributed in the U.S., the length and severity of the COVID-19 pandemic continues to evolve and much of its impact remains unknown and difficult to predict because many of the driving factors are beyond our control, including the vaccination rates in the communities we serve, the number and severity of the variants of the virus that emerge, and the effectiveness of the vaccines against the virus and those variants.

Although we continue to take precautions to ensure we can continue providing quality care and safeguard the health and well-being of patients, employees, providers, volunteers and visitors in each community we serve, exposure to COVID-19 and variants of the virus has increased the cost of operating our facilities, has increased the length of patient stays, and has led to increased risks to doctors and nurses, which has caused staffing shortages and required us to utilize temporary healthcare practitioners and may further reduce our operating capacity. Additionally, the reluctance of some employees and providers to comply with federal and state vaccine mandates has further contributed to staffing shortages at our facilities. If our facilities fail to comply with the federal vaccine mandate they could potentially be subject to the imposition of civil monetary penalties, reduced reimbursement, and termination from participation in the Medicare and Medicaid programs. Certain of our facilities have experienced staffing shortages, and, if our facilities continue to treat an increased number of COVID-19 patients, they could become overwhelmed by excessive demand, potentially preventing them from treating all patients who seek care. We also have experienced supply chain disruptions during the pandemic, including shortages and delays, as well as price increases in equipment, inventory, pharmaceuticals and medical supplies, particularly personal protective equipment (or PPE). Any staffing, equipment, inventory, pharmaceutical and medical supplies shortages may impact our ability to see, admit and treat patients.

The willingness and ability of patients to seek healthcare services also has been impacted by restrictive measures, like travel bans and restrictions, social distancing, vaccine mandates and quarantine guidelines, which have negatively impacted the volume of procedures performed at our facilities more generally, as well as the volume of emergency room and physician office visits unrelated to COVID-19. Furthermore, in response to the COVID-19 pandemic, regulatory barriers to telehealth services have been reduced to expand the availability of remote care. As patients become more comfortable with remote care, which generally receives a lower reimbursement for services, our revenues may be adversely impacted, particularly if CMS and other third-party payers make the increased availability of telehealth services and remote care permanent.

Broad economic factors resulting from the COVID-19 pandemic, including increased unemployment rates, increased inflation rates and reduced consumer spending, could also negatively affect our payer mix, increase the relative proportion of lower margin services we provide and reduce patient volumes, as well as diminish our ability to collect outstanding receivables. See "—Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may limit our revenues and profitability." Business closings and layoffs in the communities in which we operate may lead to increases in the uninsured, underinsured and Medicaid populations and adversely affect demand for our services, as well as the ability of patients and other payers to pay for services as rendered. Any increase in the amount or deterioration in the collectability of patient accounts receivable will adversely affect our cash flows and results of operations, requiring an increased level of working capital. If general economic conditions continue to deteriorate or remain uncertain for an extended period of time, our liquidity and ability to repay our outstanding debt may be harmed.

In addition, our results and financial condition may be further adversely affected by future federal or state laws, regulations, orders, or other governmental or regulatory actions addressing the COVID-19 pandemic or the U.S. healthcare system, which, if adopted, could result in direct or indirect restrictions to our business, financial condition, results of operations and cash flow. We may also be subject to lawsuits from patients, employees and others exposed to COVID-19 and variants of the virus at our facilities, or from other third-parties or family members who are exposed due to contact with patients, employees, or others exposed at our facilities. Such actions may involve large demands, as well as substantial defense costs. Our professional and general liability insurance may not cover all claims against us.

The foregoing and other continued disruptions to our business as a result of the COVID-19 pandemic have had and are likely to continue to have a material adverse effect on our business and could have a material adverse effect on our results of operations, financial condition, cash flows and our ability to service our debt. Furthermore, the COVID-19 pandemic (including governmental responses, broad economic impacts and market disruptions) has heightened the materiality of certain other risk factors described herein.

There can be no assurance as to the total amount of financial assistance or types of assistance we seek or receive under existing or future stimulus legislations, or that the terms of provider relief funding or other programs will not change in ways that affect our funding or eligibility to participate.

We received and may seek other funds that are made available to us and our facilities under the CARES Act and other existing or future stimulus legislation, if any. There can be no assurance that the terms of provider relief funding or other programs under the CARES Act and other existing stimulus legislation or future stimulus legislation, if any, will not change in ways that affect our funding or eligibility to participate, or that changes to the terms of such programs will not result in government recoupment of funds that were initially released to us as grants. Additionally, although the federal government may consider additional stimulus and relief efforts, such efforts may be drafted or implemented in ways that restrict, limit or otherwise negatively impact our ability to access these funds. As a result, we cannot predict the manner in which existing or future stimulus funds will be allocated or administered, and we cannot assure you that we will be able to access future stimulus funds in a timely manner or at all. For additional information regarding the CARES Act and related stimulus legislation, and our participation in programs under the CARES Act and related stimulus legislation, if any, see "Business—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19."

In addition, there have been frequent clarifications and revisions to the guidance available regarding the accounting treatment of funds that have been received by us and our facilities under the CARES Act and other COVID-19 stimulus legislation. These changes and lack of clarity require us to apply professional judgment and make certain estimates and assumptions with respect to the presentation, amount and timing of our recognition of stimulus received under the CARES Act. For additional information regarding the CARES Act and related financial impact, refer to Note 3 to the consolidated financial statements included elsewhere in this Report.

The emergence and effects related to a pandemic, epidemic or outbreak of an infectious disease could adversely affect our operations and financial condition.

As evidenced by the COVID-19 pandemic, the occurrence of a pandemic, epidemic, outbreak of an infectious disease or other public health crisis in an area in which we operate could adversely affect our operations and financial condition. In reaction to such a crisis or the fear of exposure to infection, patients might cancel elective procedures or fail to seek needed care at our facilities, which could result in reduced patient volumes and operating revenues, potentially over an extended period of time. Furthermore, a pandemic, epidemic or outbreak might adversely affect our operations by causing a temporary shutdown or diversion of patients, by disrupting or delaying production and delivery of materials and products in the supply chain or by causing staffing shortages in our facilities. Additionally, such a crisis could diminish the public trust in healthcare facilities, especially hospitals that fail to accurately or timely diagnose, or are treating (or have treated) patients affected by infectious diseases, and negatively affect the reputation at our facilities.

Although we have disaster plans in place and operate pursuant to infectious disease protocols, the extent to which the potential emergence of a pandemic, epidemic or outbreak would impact our business and operations is difficult to predict and would depend on many factors beyond our control, including the speed of the contagion, the development and implementation of effective preventative measures and possible treatments, the scope of governmental and other restrictions on travel and other activities, and public reactions to these factors.

Business and Operational Risks

The implementation of the Kindred Transaction may have an adverse effect on our business, financial condition and results of operations, and we may not realize the anticipated benefits of the Kindred Transaction within the timeframe expected or at all.

Uncertainty about the effect of the Kindred Transaction on our employees, patients, local communities, business partners and other parties may have an adverse effect on our business, financial condition and results of operation, and we may not realize the anticipated benefits of the Kindred Transaction within the timeframe expected or at all. These risks to our business include the following, all of which could be exacerbated by a delay in realizing the benefits of the Kindred Transaction:

- our ability to attract, retain, and motivate current and prospective employees may be adversely impacted;
- the attention of our management and employees may be diverted due to activities related to the Kindred Transaction;
- we may be subject to increased regulatory oversight as a result of the Kindred Transaction;
- we may be subject to legal proceedings relating to the Kindred Transaction; and
- we may experience delays, difficulties or complications with the integration of Kindred's rehabilitation and behavioral health businesses, including expanded joint venture relationships, into our healthcare network.

There can be no assurance that we will realize the anticipated benefits of the Kindred Transaction within the timeframe expected or at all. In addition, we have incurred, and will continue to incur, significant costs, expenses and fees for professional services and other transaction costs in connection with the Kindred Transaction. These fees and costs will generally be payable by us and may relate to activities that we would not have undertaken other than to complete the Kindred Transaction.

Our revenues will decline if federal or state programs reduce our Medicare or Medicaid payments.

For the years ended December 31, 2021, 2020 and 2019, approximately 56.1%, 55.7% and 55.2% of our revenues, respectively, related to patients participating in Medicare and Medicaid programs, collectively. Numerous factors could materially decrease, or delay timing of, Medicare and Medicaid payments to our facilities. These factors include statutory and regulatory changes, administrative rulings and determinations concerning patient and provider eligibility and requirements for utilization review. Furthermore, the Affordable Care Act and related federal laws provide for material scheduled reductions in the growth rate of Medicare and Medicaid program spending, including reductions in market basket updates and Medicare and Medicaid DSH funding. Additionally, a number of states have adopted or are considering legislation designed to reduce their Medicaid expenditures or reform their Medicaid programs, including enrolling Medicaid recipients in managed care programs or converting to modified block grant funded programs. States may also impose additional taxes on hospitals to help finance the state's Medicaid programs.

Uncertainty regarding the Affordable Care Act or future healthcare reform may adversely affect our business, financial condition and results of operations.

The Affordable Care Act dramatically altered the U.S. healthcare system, and we have expended substantial cost and effort to prepare for and comply with the Affordable Care Act. The net effect of the Affordable Care Act on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. Additionally, the Affordable Care Act has been the subject of numerous legal challenges and legislative efforts to delay, defund or repeal the implementation or amend significant provisions of the Affordable Care Act. Although the U.S. Supreme Court rejected the most recent challenge to the constitutionality of the Affordable Care Act, we cannot predict the outcome of other lawsuits that are still pending in lower courts regarding the implementation of various aspects of the Affordable Care Act and whether the U.S. Supreme Court will decide to hear additional cases related to the Affordable Care Act in the future. We also cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

Changes to Medicaid supplemental payment programs may materially and adversely affect our revenues and results of operations.

MSPs are payments made to providers separate from and in addition to those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid DSH and UPL payments. Medicaid DSH payments are federally required to be made by the states to hospitals that serve significant numbers of Medicaid and uninsured patients in recognition of the added costs incurred by hospitals in treating these patients. The total amount of Medicaid DSH payments a state may make and the total amount any one hospital may receive are both capped by federal law. Unlike Medicaid DSH payments, UPL payments are not required to be made by states under federal law. Rather, federal regulations establish an upper payment limit above which states may not receive federal matching dollars.

The Affordable Care Act called for significant reductions in Medicaid DSH funding to account for decreases in uncompensated care anticipated under the health insurance coverage expansion. Subsequent changes in the law have delayed the implementation of these reductions until FFY 2024. Reductions in Medicaid DSH payments may take place without increases in the Medicaid eligible population, thus increasing the net amount of uncompensated care we provide.

UPL programs have expanded in recent years and certain of our hospitals receive payments under such programs. Because services provided to Medicaid beneficiaries enrolled in managed care are not included in state UPL calculations, as states increase their use of managed care Medicaid programs, UPL MSPs could be reduced. UPL funding and matching federal funds may also be reduced or eliminated as a result of state or local governmental legislation, state changes to historical funding levels or related taxes, compliance reviews by CMS, or changes to federal Medicaid funding affecting such programs. We cannot predict whether MSP programs will continue (and, if continued, whether we will qualify for such programs) or guarantee that revenues recognized from these programs will not decrease.

Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may limit our revenues and profitability.

The amounts we receive for services provided to patients are determined by a number of factors, including the payer mix of our patients and the reimbursement methodologies and rates utilized by our payers. We have seen shifts of patients from commercial and private insurance to Medicare and Medicaid programs and from "traditional" fee-for-service Medicare and Medicaid programs to "managed" Medicare and Medicaid programs. Reimbursement rates generally are lower for (i) Medicare and Medicaid beneficiaries than they are for patients whose care is covered by commercial and private insurance and (ii) managed Medicare and Medicaid beneficiaries than they are for traditional Medicare and Medicaid beneficiaries. Broad economic factors resulting from the COVID-19 pandemic, including inflationary pressures, supply chain disruptions, labor shortages, increased unemployment and underemployment rates and reduced consumer spending and confidence, may impact our revenue mix. We also experience demographic pressures as aging populations in our non-urban communities shift from commercial insurance programs to Medicare or managed Medicare programs. Our revenues and results of operations may be adversely affected by these shifts.

In addition, our revenues from negotiated rates with HMOs, PPOs, insurance companies, employers and other private payers may decline based on renegotiations and the respective bargaining power of the parties. Also, consolidation among private payers may increase their bargaining power over fee structures. As a result, payers increasingly are demanding discounted fee structures or the assumption by healthcare providers of all or a portion of the financial risk related to paying for care provided. These changes include moving away from a percent of charge payment structure to a fixed payment for an episode of care, which typically reduces our payment rate and limits our ability to raise prices going forward. Furthermore, low-cost plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices, restrict or exclude our facilities or impose significantly higher cost sharing obligations for care provided by our facilities if they are classified in a disfavored tier. In addition, other healthcare providers, including some with greater financial resources, greater geographic coverage or a wider range of services, may negotiate exclusivity provisions with managed care plans or otherwise restrict the ability of managed care plans to contract with us. As payments are reduced, if we are excluded from more payer networks or if the scope of services covered by payers is limited, there could be a material adverse effect on our revenues and results of operations.

There are also an increasing number of patients enrolling in insurance plans with high deductibles or high co-payments, including those purchased on the Exchanges, which increase the amount due from the patient and may result in reimbursement for a lower portion of the total payment amount relative to traditional employer-sponsored health insurance plans for the healthcare services provided by our facilities and employed providers. Patients enrolled in higher deductible and co-payment plans tend to defer elective and non-emergency procedures or default on their portion of the payment. We may be adversely affected by the growth in patient responsibility accounts because of plan structures, including health savings accounts ("***HSAs***"), which shift greater responsibility for care to individuals through greater exclusions and higher deductible and co-payment amounts. If we experience shifts in our patient volumes to these types of plan structures, our revenue and results of operations may be adversely affected.

We may encounter difficulty operating, integrating and improving financial performance at acquired facilities. Also, if we acquire facilities with unknown or contingent liabilities, we could become liable for material obligations or it could diminish the anticipated value of the acquired facility.

We may be unable to timely and effectively integrate facilities that we acquire with our ongoing operations. Many of the facilities we have acquired had, or future acquisitions may have, significantly lower operating margins than we do and/or operating losses prior to the time we acquired or will acquire them. In the past, we have occasionally experienced delays in improving the operating margins or effectively integrating the operations of our acquired facilities, and we may experience such delays in implementing operating procedures and systems in newly or future acquired facilities. Integrating an acquired facility could be expensive and time consuming and could disrupt our ongoing business, negatively affect cash flow and distract management and other key personnel. Additionally, we may experience delays in reimbursement from governmental and third-party payers as a result of the change of ownership of our acquired facilities.

We must integrate complex information, accounting and operational systems, compliance programs and internal controls over financial reporting of acquired facilities into our existing systems and internal controls. While we devote a significant amount of employee and management resources on these integrations, we also rely heavily on third parties for systems integration. Our efforts to integrate new facilities, including causing those third parties to convert our newly acquired facilities' systems, may fail or be significantly delayed. Failure to timely and effectively integrate or convert any of these systems could cause business interruption, affect provider and staff morale and our ability to accurately manage accounting, clinical, compliance and operational functions. As future acquisitions may involve large operations, any such failure could cause a material adverse effect on our results of operations.

Facilities we have acquired or facilities we acquire in the future, may have unknown or contingent liabilities for historical activities or conditions, including liabilities for failure to comply with laws and regulations, retroactive payment adjustments or recoupments from payer audits, medical and general professional malpractice liabilities, unfunded pension liabilities, workers' compensation or other employee-related liabilities, previous tax or environmental liabilities, regulatory and compliance related liabilities, and unacceptable business or accounting practices. Although we endeavor to obtain contractual indemnification from sellers covering these matters in connection with some acquisitions, we have not obtained contractual indemnifications in connection with all of them, and any indemnification obtained from sellers may be insufficient to cover material claims or liabilities for past activities of acquired businesses and the sellers may have insufficient funds to satisfy any claims or liabilities for which we may otherwise be entitled to be reimbursed.

We typically retain and rely on existing local management teams at newly acquired facilities to implement changes to operating procedures and systems. Integrating local management teams can involve cultural and systems challenges that may demand a disproportionate share of our resources and senior management's attention, and we may experience turnover of providers and other key personnel. Our acquisitions have become, and may continue to become larger, and may occur in communities with competing facilities. As a result, the issues surrounding integration may become more complex, expensive and time-consuming and may have a greater impact on our financial performance when we experience delays or difficulties.

If our fair value declines or if our estimated future cash flows decrease, a material non-cash charge to earnings from impairment of our goodwill or our long-lived assets could result.

As of December 31, 2021, we had approximately $3.9 billion of goodwill and other intangible assets and approximately $3.3 billion of long-lived assets, net of accumulated depreciation. We expect to recover the carrying values of both our goodwill and long-lived assets through our future cash flows. We evaluate the carrying value of our goodwill at least annually, based on our fair value, to determine whether it is impaired. We evaluate our long-lived assets for possible impairment whenever circumstances indicate that the carrying amount of the asset, or related group of assets, may not be recoverable from estimated future cash flows. If the carrying value of our goodwill or our long-lived assets is impaired, we may incur a material non-cash charge to earnings.

We are subject to risks associated with outsourcing functions to third parties, including risks associated with the protection of patient data.

We outsource selected business functions to third parties, including electronic health record software and data hosting, revenue cycle management, patient access, billing, cash collections, payment compliance and support services, project implementation, supply chain management, payroll system services and parts of cybersecurity. We take steps to monitor and regulate the performance of the independent third parties to whom we delegate selected functions. Arrangements with third-party service providers may make our operations vulnerable if vendors fail to satisfy their obligations to us as a result of their performance, changes in their own operations, financial condition, or other matters outside of our control. We may also face legal, financial or reputational harm for the actions or omissions of such providers, including for violations of HIPAA and other privacy and security laws applicable to healthcare providers and the Cures Act information blocking regulations, and we may not have effective recourse against the providers for those harms. While we evaluate the information security programs and defenses of such third parties, we cannot be certain that our evaluations will identify all or any potential information security weaknesses, or that such third parties' information security protocols are or will be sufficient to withstand or adequately respond to a cyber-attack or other information security incident. The expanding role of third-party providers may also require changes to our existing operations and the adoption of new procedures and processes for retaining and managing these providers, as well as redistributing responsibilities as needed. Effective management, development and implementation of our outsourcing strategies are important to our business and strategy. If there are delays or difficulties in enhancing business processes or our third-party providers do not perform as anticipated, we may not fully realize on a timely basis the anticipated economic and other benefits of the outsourcing projects or other relationships we enter into with key vendors, which could result in substantial costs, divert management's attention from other strategic activities, negatively affect employee morale or create other operational or financial problems for us. Terminating, transitioning or renegotiating arrangements with key vendors or failure to renegotiate on favorable terms could result in additional costs and a risk of operational delays, potential errors and possible control issues as a result of the termination or during the transition or renegotiation phase.

We conduct a significant portion of our operations through joint ventures. We cannot provide assurances that relationships with our joint venture partners will remain strong, which could negatively affect our joint ventures, affiliations and other strategic alliances as well as our overall business.

We are a party to a number of joint ventures, affiliations and other strategic alliances as part of our business strategy, including joint venture relationships transferred to us in connection with the Kindred Transaction. We expect to enter into similar transactions in the future, including joint ventures where we may have a noncontrolling interest. Any changes in our relationships with our joint venture partners could disrupt ongoing business, negatively affect cash flow and distract management and other key personnel. In the event of a material disagreement with any of our joint venture partners or the breach of any of our joint venture agreements, a joint venture may be subject to dissolution, unwinding or purchase of either party's interest, which could have a material adverse effect on our revenues and results of operations or result in reputational harm.

As a general matter, our joint venture partners may have investment and operational goals that are not consistent with our company-wide objectives, including the timing, terms and strategies for future growth and development opportunities, and we could reach an impasse on certain decisions, which may hinder our ability to pursue preferred strategies for growth and development, could require significant resources and attention from management and key employees to resolve and could have an adverse effect on our operations, cash flow and revenue growth. In addition, our joint venture relationships with not-for-profit partners and the agreements that govern these relationships are structured based on current provisions of the Internal Revenue Code of 1986, as amended (the "***Code***") (and the Treasury Regulations thereunder), published rulings by the Internal Revenue Service ("***IRS***"), as well as case law relevant to joint ventures between for-profit and not-for-profit entities. Material changes in these legal authorities could adversely affect our relationships with not-for-profit partners and related joint venture arrangements.

Furthermore, joint ventures in which we have a noncontrolling equity interest and noncontrolling investments inherently involve a lesser degree of control over business operations, thereby potentially increasing the financial, legal, operational and compliance risks associated with the joint venture or minority investment. We may be dependent on joint venture partners or management who may have business interests, strategies or goals that are inconsistent with ours. Business decisions or other acts or omissions of the joint venture partner or management may adversely affect the value of our investment, result in litigation or regulatory action against us, result in reputational harm to us or adversely affect the value of our investment or partnership. To the extent another party makes decisions that negatively impact the joint venture or internal control issues arise within the joint venture, we may have to take responsive or other actions or we may be subject to penalties, fines or other related actions for these activities.

Deterioration in the collectability of "patient due" accounts could adversely affect our revenues and results of operations.

The primary collection risks associated with our accounts receivable relate to uninsured patient accounts and patient accounts for which the primary insurance carrier has paid the amounts covered by the applicable agreement, but patient responsibility amounts (exclusions, deductibles and co-payments) remain outstanding. The provision for doubtful accounts relates primarily to amounts due directly from patients. The amount of our provision for doubtful accounts is based on management's assessment of historical collection trends, business and economic conditions, trends in federal and state governmental and private employer health coverage, the rate of growth in uninsured patient admissions and other collection indicators.

If we experience growth in self-pay volume and revenue, including increased acuity levels for uninsured patients and increases in co-payments and deductibles for insured patients, our revenues and results of operations could be adversely affected. Although we have experienced a reduction in uninsured patients since 2014 as a result of the Affordable Care Act and the expansion of state Medicaid programs, we are unable to predict whether that trend will continue in light of the repeal of the penalties associated with the individual mandate, the cessation of the cost sharing reduction payments to insurers, the decision by some states not to expand their Medicaid programs, and the business closings and layoffs that have and may continue to occur as a result of the COVID-19 pandemic. In addition, the risk of collection from insured patients (and the amounts due) has increased, and will likely continue to increase, as a result of more individuals being enrolled in insurance plans with high deductibles and high co-payments, including those purchased on the Exchanges. Furthermore, our ability to improve co-insurance collections and collections from self-pay patients may be limited by legislative developments, such as federal and state legislation designed to reduce "surprise billing," or by other regulatory or investigatory initiatives, including private lawsuits directed at hospital charges and collection practices for uninsured and underinsured patients.

An increase in the proportion of our accounts receivable being comprised of uninsured accounts and a deterioration in the collectability of these both insured and uninsured accounts could adversely affect our results of operations and revenues. Even if the Affordable Care Act remains implemented in its current form, we may continue to experience bad debts and be required to provide uninsured discounts and charity care for patients who choose not to purchase coverage, are undocumented immigrants who are not permitted to enroll in the Exchanges or government healthcare programs or live in states that do not expand or maintain the expansion of their Medicaid programs.

Other hospitals and inpatient and outpatient facilities provide services similar to those which we offer. In addition, physicians and other healthcare practitioners provide services in their offices that could be provided in our facilities. These factors increase the level of competition we face and may therefore adversely affect our revenues and results of operations.

Competition among hospitals and other healthcare service providers, including inpatient and outpatient facilities, has intensified in recent years. We also have acquired, and may continue to acquire, larger facilities in more concentrated population centers, which experience greater competition for healthcare services. We compete with other facilities, including larger tertiary and quaternary care centers located in metropolitan areas. Although the facilities with which we compete may be a significant distance away from our facilities, patients in our markets may migrate on their own to, may be referred by local providers to, or may be required by their health plan to travel to these facilities. Furthermore, some of the facilities with which we compete may offer more or different services than those available at our facilities, may have more advanced equipment or technology or may have a medical staff that is perceived to be better qualified. We also compete with facilities and health systems that are implementing physician and other provider alignment strategies, such as employing providers, acquiring physician practice groups and participating in ACOs or other clinical integration models, which may impact our competitive position. Also, many of the facilities that compete with our facilities are owned by tax-supported governmental agencies or not-for-profit entities supported by endowments and charitable contributions and are eligible to participate in the 340B Program. These facilities, in most instances, are also exempt from paying sales, property and income taxes and have the ability to issue tax-exempt bonds for financing.

Quality of care, value-based purchasing, and price transparency have also become significant trends and competitive factors in the healthcare industry. CMS makes public the performance data relating to multiple quality measures that facilities submit in connection with their Medicare payment. CMS also requires every Medicare participating hospital to establish and update annually a public online listing of the hospital's standard charges for items and services and has issued regulations that significantly increase hospital charge reporting requirements. If the publicly-available performance and charge data become a primary factor in where patients choose to receive care, and if competing facilities have lower charges or better results than our facilities on those measures, our revenues and/or patient volumes could decline.

We also face significant and increasing competition from services offered by providers (including providers on our medical staffs) in their offices and from other specialized care providers, including freestanding emergency departments and outpatient surgery, oncology, physical therapy, diagnostic and urgent care centers (including many in which providers may have an ownership interest). We also compete with specialty facilities that focus on one or a small number of lucrative service lines, some of which are not required to operate emergency departments. Some of our facilities have and will seek to develop outpatient facilities where necessary to compete effectively. However, to the extent that other providers are successful in developing outpatient facilities or providers are able to offer additional, advanced services in their offices, our market share for these services will likely decrease in the future.

We may have difficulty acquiring or divesting facilities on favorable terms. Furthermore, our business could be negatively affected if acquisitions or divestitures are not successfully completed or if contingent liabilities materialize in connection with such transactions.

A significant element of our business strategy is expansion through the acquisition of acute care and post-care facilities along the continuum of care, especially those around which a system of facilities and other healthcare services can be created. We face significant competition to acquire attractive facilities, and we may not find suitable acquisitions on favorable terms. Our primary competitors for acquisitions have included for-profit and tax-exempt facilities and hospital systems and privately capitalized start-up companies. Buyers with a strategic desire for any particular facility—for example, a facility located near existing facilities or those who will realize economic synergies—have demonstrated an ability and willingness to pay premium prices for facilities. Strategic buyers, as a result, can present a competitive barrier to our acquisition efforts.

The cost of an acquisition could result in a dilutive effect on our results of operations, depending on various factors, including the amount paid for the acquisition, the acquired facility's results of operations, allocation of purchase price, effects of subsequent legislation and limitations on rate increases. As part of our acquisition strategy, we may commit to making significant capital improvements at acquired facilities. Such improvements may be difficult to achieve in the anticipated timeframe, if at all, due to a variety of factors beyond our control, such as zoning, environmental, licensing and certificate of need regulations and restrictions.

Our ability to engage in certain acquisitions in several states may be limited due to exclusivity, non-competition and non-solicitation provisions that we have agreed to in connection with our joint ventures and previous acquisitions and divestiture transactions. Additionally, certain acquisitions may require the consent of and collaboration with our joint venture partners based upon the applicable governing documents. If we cannot obtain the cooperation of our joint venture partners in certain instances, we may not be able to pursue these opportunities.

Even if we are able to identify an attractive target, we may need to obtain financing for acquisitions, joint ventures or required capital improvements. Such financing may not be available, or we may incur or assume additional indebtedness as a result. Any financing arrangements we enter into may not be on terms favorable to us, and this could have a material adverse effect on our results of operations.

In recent years, the legislatures and attorneys general of several states have sought to exercise more active oversight authority regarding sales of facilities by tax-exempt entities. For example, as a condition to approving an acquisition involving a non-profit hospital, the state attorney general of a state in which an acquisition takes place may require us to maintain specific service lines or provide charity care at certain minimum levels for set periods of time after closing of the acquisition, regardless of profitability. Additionally, the federal government and most states have enacted antitrust laws that prohibit certain types of conduct deemed to be anti-competitive, and antitrust enforcement in the healthcare industry is currently a priority of the FTC. This heightened scrutiny may increase the cost and difficulty, or prevent the completion, of transactions in the future. Our failure to acquire facilities consistent with our growth plans could prevent us from increasing our revenues.

We regularly evaluate the potential disposition of assets and facilities that may no longer help us attain our objectives. When we decide to sell assets or facilities, we may encounter difficulties in finding buyers or alternative exit strategies on acceptable terms or in a timely manner, which could delay the achievement of our strategic objectives. Additionally, the terms of our Master Lease Agreement, dated December 23, 2021, entered into with certain affiliates of Medical Properties Trust, Inc. (the "***2021 Master Lease***") pursuant to sale leaseback transactions may make it more difficult to dispose of certain facilities. We may also dispose of assets or a facility at a price, or on terms, less desirable than we anticipated. In addition, we may experience greater dis-synergies than expected. After reaching an agreement with a buyer for the disposition of assets or a facility, we will be subject to satisfaction of pre-closing conditions as well as to necessary regulatory and governmental approvals on acceptable terms, which, if not satisfied or obtained, may prevent us from completing the transaction. Dispositions may also involve continued financial involvement in the divested facilities, such as through continuing equity ownership, guarantees, indemnities, transition service agreements or other financial and commercial obligations, and inability to avoid retention of certain regulatory and compliance risks. There can be no assurance that the anticipated benefits of our future divestiture strategies will be realized. Furthermore, we may be exposed to contingent liabilities in connection with completed divestitures. Finally, certain acquisition agreements and joint venture arrangements contain covenants that restrict our ability to dispose of certain facilities without first seeking consent of a joint venture partner or other third parties, which may affect our ability to take advantage of business opportunities that may be in our interest. If we do not realize the anticipated benefits of such divestitures, if contingent liabilities related to such divestitures materialize or if we are unable to divest certain properties on favorable terms or at all, this could have a material adverse effect on our results of operations.

If we are unable to implement successfully standardized processes, policies and systems throughout our facilities, our operating results could be negatively impacted.

We have initiated a multi-year business initiative to standardize certain processes, policies and systems throughout our facilities, including migrating our multiple IT platforms to a smaller number of enterprise-wide systems solutions. If we do not allocate and effectively manage the resources necessary to build and sustain the proper IT infrastructure and implement standardized systems, or if we fail to achieve the expected benefits from this initiative, it may impact our ability to operate profitably and efficiently, as well as comply in a timely manner with changing regulatory requirements and with the requests of patients, payers and business partners. The failure to transition to these systems on time, or anticipate necessary readiness and training needs, could lead to business disruption and loss of revenue. In addition, the operating results of newly acquired facilities could be impacted if such facilities are not integrated on a timely basis into our new systems. The actions we take to resolve compliance or regulatory issues within acquired facilities may affect our revenue or results of operations.

In addition, as new information systems are developed in the future, we will need to integrate them into our existing systems. Evolving industry and regulatory standards may require changes to our systems in the future. System conversions are costly, time consuming and disruptive for providers, staff and, in some cases, patients. Some of our facilities have recently converted or are currently converting from their existing system to another third-party information system. If such conversions occurred on a large scale or if conversions at our larger facilities experience difficulties, the costs and disruptions could have a material adverse effect on our revenues or results of operations.

Under the 2021 Master Lease, a default with respect to one facility could cause a default under all of the facilities subject to the 2021 Master Lease, which could have a material adverse effect on our business, results of operations and financial condition.

Upon certain defaults under the 2021 Master Lease, even if such default relates to one facility, the lessor(s) may terminate the 2021 Master Lease in its entirety with respect to all of the facilities governed by the 2021 Master Lease. Under the 2021 Master Lease, we are subject to financial covenants based on certain fixed charges. The failure to meet or obtain a waiver of such covenants or otherwise cure such non-compliance with such financial covenants in the 2021 Master Lease in the future could result in an event of default.

Other events that could trigger a default under the 2021 Master Lease if not cured within the time periods required by the 2021 Master Lease include, without limitation, (i) failure to pay rent or other amounts due under the 2021 Master Lease, (ii) failure to comply with the non-financial covenants under the 2021 Master Lease, (iii) the bankruptcy of any facility lessee under the 2021 Master Lease or the guarantor of the facility lessees under the 2021 Master Lease, (iv) termination of any licenses necessary for operation of a facility or required for certification under Medicare or Medicaid, (v) a change of control (as defined in the 2021 Master Lease) in violation of the 2021 Master Lease and (vi) a default under any material documents between any lessee of the facilities and any lessor of any facility. A default under the 2021 Master Lease that results in a termination of the 2021 Master Lease would cause us to lose the ability to operate all of the facilities subject to the 2021 Master Lease and to incur substantial costs in restoring the premises, which could have a material adverse effect on our business, results of operations and financial condition.

If the 2021 Master Lease is terminated prior to its expiration because of a default and the lessor exercises its rights thereunder, in addition to losing the ability to operate our facilities, we may be liable for (i) damages and charges such as continued lease payments through the end of the lease term (or such shorter period as provided in the 2021 Master Lease or by law) and (ii) maintenance costs for the leased property. Upon termination of the 2021 Master Lease, we will be obligated to restore the applicable premises to its original condition and repair all damage caused by the installation or removal of our personal property, ordinary wear and tear excepted. We also have restoration obligations with respect to certain casualty and condemnation events. In addition, upon termination of the 2021 Master Lease, the lessor will have the option to purchase all of the applicable lessee's personal property at fair market value.

Because many of the facilities we operate are subject to long-term leases, failure to comply with the terms of such leases or failure to renew such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises.

The rights to use many of our facilities are based upon long-term leases, including the 2021 Master Lease. Pursuant to the terms of these leases, we are required to pay all rent due and comply with all other lessee obligations. As of December 31, 2021, the remaining term of these leases (including renewal options) generally ranged from less than one year up to 74 years. A pledge of our interest in some of these leases may also require the consent of the respective lessor and its lenders. As a result, we may not be able to sell, assign, transfer or convey our interest in certain facilities subject to such leases in the future absent consent of such third parties even if such transactions may be in our best interest. Most of the leases require that, upon the expiration or termination of the leases, we must surrender any improvements to the land to lessor. In addition, some of our leases include early termination provisions. We are typically responsible for all taxes, insurance, assessments and maintenance obligations under the leases. The leases also generally require the lessee to either reconstruct or restore the premises to its original condition following a casualty and to apply in a specified manner any proceeds received in connection therewith. In some leases the lessor has the option to purchase some or all of the assets owned by us and used in connection with the operation of the applicable facility. Accordingly, failure to comply with the terms of such leases, the invalidity of or default or termination under such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises, which could have a material adverse effect on our business, results of operations and financial condition.

Many of the non-urban communities in which we operate continue to face challenging economic conditions and demographic trends, which may materially and adversely impede our business strategies intended to generate organic growth and improve operating results at our facilities.

Many of the non-urban communities in which we operate continue to face challenging economic conditions, including high levels of unemployment and unfavorable demographic trends, which may impede our business strategies intended to generate organic growth and improve operating results at our facilities. These challenging economic conditions have been further exacerbated by the impact of the COVID-19 pandemic. The economies in the non-urban communities in which our facilities primarily operate are often dependent on a small number of large employers, especially manufacturing or similar facilities. These employers often provide income and health insurance for a disproportionately large number of community residents who may depend on our facilities for care. The failure of one or more large employers, or the closure or substantial reduction in the number of individuals employed at manufacturing or similar facilities located in or near many of the non-urban communities in which our facilities primarily operate, could cause affected employees to move elsewhere for employment or lose insurance coverage that was otherwise available to them.

When patients are experiencing personal financial difficulties or have concerns about general economic conditions, they may choose to (i) defer or forego elective surgeries and other non-emergent procedures, which are generally more profitable lines of business for facilities, or (ii) purchase a high-deductible insurance plan or no insurance at all, which increases a facility's dependence on self-pay revenue. Moreover, a greater number of uninsured patients may seek care in our emergency rooms.

Additionally, non-urban communities are experiencing a much slower rate of growth, if any, as compared to more concentrated population centers. As a result, we may experience payer mix pressures as aging populations in our non-urban communities shift from commercial insurance programs to Medicare or managed Medicare programs.

Credit and Liquidity Risks

Our substantial indebtedness could materially and adversely affect our ability to raise additional capital to fund our operations, limit our ability to react to changes in the economy or our industry and prevent us from making debt service payments.

We are a highly leveraged company. As of December 31, 2021, we had total outstanding debt of approximately $6.3 billion, excluding finance lease obligations and unamortized debt issuance costs and premiums. Our substantial indebtedness could have important consequences for the Lenders and Holders of our indebtedness. For example, it could:

- limit our ability to borrow money for our working capital, capital expenditures, debt service requirements, strategic initiatives or other purposes;
- make it more difficult for us to satisfy our obligations with respect to our indebtedness and any failure to comply with the obligations of any of our debt instruments, including restrictive covenants and borrowing conditions, could result in an event of default under the agreements governing our indebtedness;
- require us to dedicate a substantial portion of our cash flow from operations to the payment of interest and the repayment of our indebtedness, thereby reducing funds available to us for other purposes;
- limit our flexibility in planning for, or reacting to, changes in our operations or business;
- make us more highly leveraged than some of our competitors, which may place us at a competitive disadvantage;
- make us more vulnerable to downturns in our business, our industry or the economy;
- restrict us from making strategic acquisitions, engaging in development activities, introducing new technologies or exploiting business opportunities;
- cause us to make non-strategic divestitures;
- limit, along with the financial and other restrictive covenants in our indebtedness, among other things, our ability to borrow additional funds or dispose of assets;
- prevent us from raising the funds necessary to repurchase all notes tendered to us upon the occurrence of certain changes of control, which failure to repurchase would constitute an event of default under the Indentures governing the Notes; or
- expose us to the risk of increased interest rates, as certain of our borrowings, including borrowings under the ABL Facility and the Term Loan Facility, are at variable rates of interest.

In addition, the Indentures and the Credit Agreements contain restrictive covenants that limit or will limit our ability to engage in activities that may be in our long-term best interest. Our failure to comply with those covenants could result in an event of default which, if not cured or waived, could result in the acceleration of substantially all of our existing and future indebtedness.

Our debt agreements contain restrictions that will limit our flexibility in operating our business.

The Indentures and the Credit Agreements contain, and any other existing or future indebtedness of ours would likely contain, a number of covenants that will impose significant operating and financial restrictions on us, including restrictions on our and our subsidiaries ability to, among other things:

- incur additional debt, guarantee indebtedness or issue certain preferred shares;
- pay dividends on or make distributions in respect of, or repurchase or redeem, our capital stock or make other restricted payments;
- prepay, redeem or repurchase certain debt;
- make loans or certain investments;
- sell certain assets;
- create liens on certain assets;
- consolidate, merge, sell or otherwise dispose of all or substantially all of our assets;
- enter into certain transactions with our affiliates;
- alter the businesses we conduct;
- enter into agreements restricting our subsidiaries' ability to pay dividends; and
- designate our subsidiaries as unrestricted subsidiaries.

As a result of these covenants, we will be limited in the manner in which we conduct our business, and we may be unable to engage in favorable business activities or finance future operations or capital needs.

In addition, the ABL Facility requires us to maintain a minimum fixed charge coverage ratio at any time when the average availability is less than the greater of $65 million and 10% of the lesser of the aggregate amount of revolving facility commitments and the borrowing base at such time. In that event, we must satisfy a minimum fixed charge ratio of 1.0 to 1.0. At December 31, 2021, we were in compliance with this financial maintenance covenant.

A failure to comply with the covenants under the Indentures, the Credit Agreements or any of our other future indebtedness could result in an event of default, which, if not cured or waived, could have a material adverse effect on our business, financial condition and results of operations. In the event of any such default, the Lenders thereunder:

- will not be required to lend any additional amounts to us;
- could elect to declare all borrowings outstanding, together with accrued and unpaid interest and fees, to be due and payable and terminate all commitments to extend further credit;
- could require us to apply all of our available cash to repay these borrowings; or
- could effectively prevent us from making debt service payments on the Notes (due to a cash sweep feature under the ABL Facility).

Such actions by the Lenders could cause cross defaults under our other indebtedness. If we were unable to repay those amounts, the Lenders and Holders under the ABL Facility, the Term Loan Facility, the 6.75% Secured Notes and the 4.375% Secured Notes could proceed against the collateral granted to them to secure the ABL Facility, the Term Loan Facility or the 6.75% Secured Notes and the 4.375% Secured Notes, respectively. If any of our outstanding indebtedness under the ABL Facility, the Term Loan Facility, Notes or any of our other existing or future indebtedness were to be accelerated, there can be no assurance that our assets would be sufficient to repay such indebtedness in full.

Repayment of our debt is dependent on cash flow generated by our subsidiaries.

Repayment of our indebtedness, including the ABL Facility, the Term Loan Facility and the Notes, is dependent on the generation of cash flow by our subsidiaries and their ability to make such cash available to us, by dividend, debt repayment or otherwise. Unless they are guarantors of the indebtedness, our subsidiaries do not have any obligation to pay amounts due on such indebtedness or to make funds available for that purpose. Our subsidiaries may not be able to, or may not be permitted to, make distributions to enable us to make payments in respect of our indebtedness. Each subsidiary is a distinct legal entity and, under certain circumstances, legal and contractual restrictions may limit our ability to obtain cash from our subsidiaries. While our debt agreements will limit the ability of our restricted subsidiaries to incur consensual restrictions on their ability to pay dividends or make other intercompany payments to us, these limitations are subject to certain qualifications and exceptions. In the event that we do not receive distributions from our subsidiaries, we may be unable to make required principal and interest payments on our indebtedness. In the event we require restructuring or refinancing, we cannot assure you that we will be able to restructure or refinance any of our debt on commercially reasonable terms or at all.

Despite our substantial indebtedness, we may still be able to incur significantly more debt, which could intensify the risks described above.

We and our subsidiaries may be able to incur substantial indebtedness in the future. Although the terms of the Credit Agreements and the Indentures contain restrictions on our and our subsidiaries' ability to incur additional indebtedness, these restrictions are subject to a number of important qualifications and exceptions, and the indebtedness incurred in compliance with these restrictions could be substantial. These restrictions also will not prevent us from incurring obligations that do not constitute indebtedness. As of December 31, 2021, we had $598 million available for additional borrowing under the ABL Facility (after giving effect to any letters of credit issued thereunder (which were approximately $50 million as of December 31, 2021)), all of which would be secured. In addition to the Notes and our borrowings under the Credit Agreements, the covenants under any other existing or future debt instruments could allow us to incur a significant amount of additional indebtedness and, subject to certain limitations, such additional indebtedness could be secured. The more leveraged we become, the more we, and in turn our security holders, will be exposed to certain risks described above under "—Our debt agreements contain restrictions that will limit our flexibility in operating our business."

We may not be able to generate sufficient cash to service all of our indebtedness and may be forced to take other actions to satisfy our obligations under our indebtedness that may not be successful.

Our ability to pay principal and interest and to satisfy our other debt obligations will depend upon, among other things:

- our future financial and operating performance (including the realization of any cost savings described herein), which will be affected by prevailing economic, industry and competitive conditions and financial, business, legislative, regulatory and other factors, many of which are beyond our control; and
- our future ability to borrow under the ABL Facility, the availability of which depends on, among other things, our complying with the covenants in the credit agreement governing the ABL Facility.

We cannot assure you that our business will generate cash flow from operations, or that we will be able to draw under the ABL Facility or otherwise, in an amount sufficient to fund our liquidity needs, including the payment of principal and interest on the ABL Facility, the Term Loan Facility and the Notes.

If our cash flows and capital resources are insufficient to service our indebtedness, we may be forced to reduce or delay capital expenditures, sell assets, seek additional capital or restructure or refinance our indebtedness, including the Notes and any indebtedness under the Credit Agreements. These alternative measures may not be successful and may not permit us to meet our scheduled debt service obligations. Our ability to restructure or refinance our debt will depend on the condition of the capital markets and our financial condition at such time. Any refinancing of our debt could be at higher interest rates and may require us to comply with more onerous covenants, which could further restrict our business operations. In addition, the terms of existing or future debt agreements, including the ABL Facility, the Term Loan Facility, the Indentures, may restrict us from adopting some of these alternatives. In the absence of such operating results and resources, we could face substantial liquidity problems and might be required to dispose of material assets or operations to meet our debt service and other obligations. We may not be able to consummate those dispositions for fair market value or at all. Furthermore, any proceeds that we could realize from any such dispositions may not be adequate to meet our debt service obligations then due. The Sponsor and its affiliates have no continuing obligation to provide us with debt or equity financing. Our inability to generate sufficient cash flow to satisfy our debt obligations, or to refinance our indebtedness on commercially reasonable terms or at all, could result in a material adverse effect on our business, results of operations and financial condition and could negatively impact our ability to satisfy our obligations under our indebtedness.

If we cannot make scheduled payments on our indebtedness, we will be in default, and the Lenders under the Term Loan Facility and the Holders of the Notes could declare all outstanding principal and interest to be due and payable, the Lenders under the ABL Facility could terminate their commitments to loan money, our secured lenders (including the Lenders under the ABL Facility and the Holders of the Notes) could foreclose against the assets securing their loans and the Notes and we could be forced into bankruptcy or liquidation.

Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.

Borrowings under the ABL Facility and the Term Loan Facility are at variable rates of interest and expose us to interest rate risk. Assuming the revolving credit facility is fully drawn, each 1% change in assumed blended interest rates would result in an approximately $40 million change in aggregate annual interest expense on indebtedness under the ABL Facility and the Term Loan Facility. To manage this risk, we entered into an interest rate swap agreement on December 21, 2018 with Citibank, N.A. as counterparty (the "***Interest Rate Swap***"). The terms of the Interest Rate Swap required us to pay a fixed rate of 2.63% on a notional amount of $1.1 billion and, in exchange, we received one-month LIBOR. The Interest Rate Swap became effective on February 19, 2019 and terminated on February 19, 2022.

Discontinuation and replacement of LIBOR may adversely affect our results of operations.

The U.K. Financial Conduct Authority announced in 2017 that it intends to phase out LIBOR by the end of 2023. Changes to LIBOR or any other benchmark rate may impact credit markets. In accordance with recommendations from the Alternative Reference Rates Committee ("***ARRC***"), U.S.-dollar LIBOR is expected to be replaced with the Secured Overnight Financing Rate ("***SOFR***"), a new index calculated by reference to short-term repurchase agreements for U.S. Treasury securities. Although there have been a few issuances utilizing SOFR or the Sterling Over Night Index Average, an alternative reference rate that is based on transactions, it is unknown whether SOFR or any of the other alternative reference rates will attain market acceptance as replacements for LIBOR. There is currently no definitive successor reference rate to LIBOR and various industry organizations are still working to develop workable transition mechanisms.

Borrowings under our Term Loan Facility and ABL Facility bear interest at rates based on LIBOR. The administrative agent for those facilities may approve a comparable or successor rate with respect to LIBOR or, if not feasible, another accommodation as reasonably determined by the agent. The replacement of LIBOR with a comparable or successor rate could cause the amount of interest payable on our Term Loan Facility and ABL Facility to be different than expected.

Until a successor rate is more firmly determined, we cannot implement the transition away from LIBOR for our Term Loan Facility and ABL Facility. As such, we are unable to predict the effect of any changes to LIBOR, the establishment and success of any alternative reference rates, or any other reforms to LIBOR or any replacement of LIBOR that may be enacted in the U.S. or elsewhere.

We may not be able to generate sufficient cash flow through operations or successfully access other capital resources to fund all of our capital expenditure programs and commitments.

We require substantial capital resources to fund our growth strategy and ongoing capital expenditure programs, including capital expenditure programs for renovation, expansion and construction at our facilities and the addition of equipment and technology at our facilities. We often commit to significant capital expenditures well in advance of the time these expenditures will be made. Our cash flows and available capital resources may be insufficient to fund our capital expenditure programs and commitments, and we may be forced to reduce or delay planned and required capital expenditures. Additionally, we may experience delays or impediments in satisfying the schedule for capital expenditure commitments because of a variety of factors beyond our control, such as zoning, environmental, licensing and certificate of need regulations and restrictions, adverse weather conditions, shortages of labor or materials or other unforeseen problems or delays. The failure to satisfy our capital expenditure commitment obligations could also damage our reputation within our communities, expose us to potential claims from former owners of acquired facilities, lessors or other governing or regulatory agencies, and adversely impact our ability to negotiate and complete future acquisitions.

At December 31, 2021, we estimated our total remaining capital expenditure commitments to be approximately $738 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues. The failure to satisfy our capital expenditure commitment obligations could damage our reputation within our communities, expose us to potential claims from former owners of acquired facilities, lessors or other governing or regulatory agencies, and adversely impact our ability to negotiate and complete future acquisitions. As a result, if our cash flows and available capital resources are not sufficient to fund all of our anticipated capital expenditures, it may be necessary for us to give priority to contractual capital expenditure commitment obligations over other elective capital expenditure programs.

Our ability to utilize our NOLs may be limited, and we may not be able to utilize our NOLs as a result of recent U.S. federal tax reform legislation.

As of December 31, 2021, we had federal NOLs of approximately $31 million and state and local NOLs of approximately $3.2 billion that expire at various dates between 2022 and 2039 or have an indefinite carryforward period. To the extent available and not otherwise utilized, we intend to use any NOLs to reduce the applicable federal and state corporate income tax liability associated with our operations. However, our ability to utilize our NOLs is based on the extent to which we generate future taxable income and on prevailing corporate income tax rates, and we cannot provide any assurance as to when and to what extent we will generate sufficient future taxable income to realize our deferred tax assets, whether in whole or in part. Furthermore, the utilization of our NOLs may become subject to an annual limitation under Section 382 of the Code (and similar state provisions) in the event of certain cumulative changes in the ownership interest of significant shareholders in excess of 50 percent over a three-year period. This could limit the amount of NOLs that can be utilized annually to offset taxable income. The amount of the annual limitation is determined based on the value of a company immediately prior to the ownership change. Subsequent ownership changes may further affect the limitation in future years. For these reasons, our ability to utilize our NOLs may be limited.

Human Capital Risks

Factors related to our employment of physicians could affect our financial performance.

Our subsidiaries employ a large number of physicians. Physician employment by health systems and healthcare facilities, where permissible, is a trend in the industry and has become more common as a result of actual and potential reductions in payment amounts for physician services and increasing operating costs to physicians. Employed physicians generally present more direct risks to us than those presented by independent members of our hospitals' medical staffs, such as risks of unsuccessful physician integration, challenges associated with physician practice management and compliance risks arising from the increased billing and coding activities associated with the employment of physicians, the possibility of legal claims under federal and state employment law, and governmental scrutiny of physician employment arrangements. Employed physicians also require us to incur additional expenses, such as increased salary and benefit costs, medical malpractice expense and rent expense. Payments received by us for services provided by our employed physicians, the physicians to whom our facilities have provided recruitment assistance, and the physician members of our medical staffs could be adversely affected as physician payment methodologies move toward pay-for-performance as hospital payment models are doing. The combination of payment cuts, potential liabilities and increased expenses could have an adverse effect on our results of operations.

Our operations and ability to deliver healthcare services efficiently may be adversely affected by competition for staffing, the shortage of experienced physicians, nurses and other healthcare professionals, and vaccine mandates.

The success of our business operations and the efficiency with which we deliver healthcare services depends on the number and quality of our physicians and other healthcare providers such as nurses, pharmacists and lab technicians, and management and other non-physician personnel responsible for the day-to-day operations of each of our facilities. Our ability to recruit and retain quality providers and personnel in turn depends on several factors, including the actual and perceived quality of services furnished by our facilities, our ability to meet demands for new technology, our ability to identify and communicate with providers who want to practice in our communities and our ability to provide competitive financial compensation packages. In some markets, the availability of nurses and other medical support personnel has been a significant operating issue to healthcare providers, including at certain of our facilities. The COVID-19 pandemic has exacerbated workforce competition and shortages, both of which may continue beyond the duration of the pandemic. This may result in personnel turnover, require us to enhance wages and benefits to recruit and retain management, nurses and other medical support personnel, recruit personnel from foreign countries, and hire more expensive temporary or contract personnel. We also depend on the available labor pool of semi-skilled and unskilled employees in each of the markets in which we operate. Because a significant percentage of our revenue consists of fixed, prospective payments, our ability to pass along increased labor costs is constrained. Our failure to recruit and retain qualified physicians, nurses and other medical support staff, and management and non-physician personnel, or to control our labor costs could have a material adverse effect on our revenues or results of operations.

Federal and state laws and regulations may impact our ability to hire and retain and increase our costs of employing qualified physicians, nurses and other medical support personnel. For example, a significant portion of the providers serving our facilities are native to countries other than the U.S. Our ability to recruit such providers and their ability and willingness to remain and work in the U.S. are impacted by immigration laws and regulations. Changes in immigration or naturalization laws, regulations, or procedures may adversely affect our ability to hire or retain providers and may adversely affect our costs of doing business or our ability to deliver services in our communities. In addition, the states in which we operate have adopted or could adopt mandatory nurse staffing ratios, or could increase mandatory nurse staffing ratios. State-mandated nurse staffing ratios could significantly affect labor costs and have an adverse impact on revenues if we are required to limit admissions in order to meet the required ratios. Also, the types, amount and duration of compensation and assistance we can provide to recruited physicians are limited by the federal physician self-referral law (commonly referred to as the Stark law), the Anti-kickback Statute, state anti-kickback and self-referral statutes, and related regulations. The Stark law requires, among other things, that recruitment assistance can only be provided to physicians who meet certain geographic and practice requirements, that the amount of assistance cannot be changed during the term of the recruitment agreement, and that the recruitment payments cannot generally benefit physicians currently in practice in the community beyond recruitment costs actually incurred by them. All arrangements with physicians must also be fair market value and commercially reasonable.

Additionally, on November 5, 2021, CMS issued a health and safety regulation (the "***CMS Mandate***") requiring certain covered facilities (including hospitals, ambulatory surgery centers, and long-term care facilities that are Medicare and Medicaid certified providers) to ensure all staff who work in the covered facility and who provide care, treatment or other services for the facility and/or its patients are fully vaccinated against COVID-19. The application of the CMS Mandate could adversely impact the availability of staff to provide services at certain of our facilities. Additional vaccine and testing mandates may also be announced by state-run OSHA programs or state and local officials in jurisdictions in which we operate our business and which could adversely impact the availability of staff to provide services at certain of our facilities. The unavailability of such staff, or our inability to control labor costs, could have a material, adverse effect on our capacity, growth prospects and results of operations.

In addition to these legal requirements, there is competition from other communities and facilities for these providers, and this competition continues after the provider is practicing in one of our communities. For example, integrated ACOs and other kinds of "narrow" provider networks or organizations may exclude our providers from their plans' networks of healthcare providers. These contracting networks often organize hospitals, providers and ancillary healthcare providers into exclusive networks involving fewer healthcare providers. If our affiliated providers are excluded from such networks, we may have difficulty recruiting new providers or retaining existing providers.

Finally, a small number of attending physicians within each of our facilities represent a large share of our inpatient revenues and admissions. The loss of one or more of these physicians—even if temporary—could cause a material reduction in our revenues, which could take significant time to replace given the difficulty and cost associated with recruiting and retaining physicians.

Labor union activity could raise costs and interfere with our operations. Certain of our employees are union members and subject to the terms of collective bargaining agreements.

Increased or ongoing labor union activity could adversely affect our labor costs or otherwise adversely impact us. Several of our facilities, including those in which we have a non-controlling interest, have unionized employees. When a new collective bargaining agreement with a union must be negotiated, whether such agreements are renewals or first contracts, there is the possibility that strikes could occur, and our operations could be disrupted or our labor costs increased as a result of these disruptions. Our labor costs also could increase significantly if a substantial number of other employees at our facilities unionize. If our labor costs increase, we may not be able to raise rates to offset these increased costs. Because a significant percentage of our revenue consists of fixed, prospective payments, our ability to pass along increased labor costs is constrained.

The terms of the collective bargaining agreements also set forth certain requirements related to the respective facility's employment practices, seniority, hours of work, overtime, holidays, use and redemption of paid time off, extended illness bank, vacation scheduling, compensation, pay practice, health and non-health benefits, leaves of absence, grievance procedures, disability accommodations and the facility's drug and alcohol policies. If these facilities fail to fulfill any of these requirements, it could result in discussions with union representatives or the filing of a grievance that could be costly and time-consuming for those facilities. Furthermore, the terms of the collective bargaining agreements constrain our flexibility with respect to these and other employee issues. The inability to negotiate future collective bargaining agreements on favorable terms with these employees or with other unionized employees could have a material adverse effect on our business, results of operations and financial condition.

We are dependent on our executive management team and the loss of the services of one or more of our executive management team could have a material adverse effect on our business.

The success of our business is largely dependent upon the services and management experience of our executive management team. In addition, we depend on the ability of our executive officers and key employees to manage growth successfully and on our ability to attract and retain skilled employees. We do not maintain key man life insurance policies on any of our officers. If we were to lose any of our executive management team or members of our local management teams, or if we are unable to attract other necessary personnel in the future, it could have a material adverse effect on our business, financial and results of operations. If we were to lose the services of one or more members of our executive management team, we could experience a significant disruption in our operations and failure of the affected facilities to adhere to their respective business plans.

Regulatory and Legal Risks

We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may reduce our revenues and profitability.

All participants in the healthcare industry are required to comply with numerous overlapping laws and regulations at the federal, state and local government levels. These laws and regulations require that healthcare facilities and providers meet various requirements, including those relating to relationships with referral sources, the adequacy and quality of medical care, inpatient admission criteria, privacy and security of health information, standards for equipment, personnel, operating policies and procedures, billing and cost reports, payment for services and supplies, maintenance of adequate records, the use and storage of pharmaceuticals and controlled substances, compliance with building codes and *environmental* protection, among other matters. Many of the laws and regulations applicable to the healthcare industry are complex and may be violated inadvertently, and there are numerous enforcement authorities, including CMS, the OIG, the DOJ, state attorneys general, and contracted auditors, as well as private plaintiffs.

There are also heightened coordinated civil and criminal enforcement efforts by both federal and state government agencies relating to the healthcare industry, including the hospital segment, which has led to a number of investigations, prosecutions, convictions and settlements in the healthcare industry. Recent enforcement actions have focused on, among other things, financial arrangements between hospitals and providers, billing for services without adequately documenting the medical necessity for such services and billing for services outside the coverage guidelines for such services. Hospital services and certain other ancillary services that our facilities provide, such as physical therapy services, continue to be focal areas of the OIG and other governmental fraud and abuse programs, as described in the OIG Work Plan. Dealing with investigations can be time and resource consuming and can divert management's attention from the business. Any such investigation or settlement could increase our costs or otherwise have an adverse effect on our business. In addition, because of the potential for large monetary exposure under the False Claims Act, which provides for treble damages and substantial civil monetary penalties for each separate false claim or statement, healthcare providers often resolve allegations without admissions of liability for significant and material amounts to avoid the uncertainty of damages and penalties that may be awarded in litigation proceedings. Such settlements often contain additional compliance and reporting requirements as part of a consent decree, settlement agreement or corporate integrity agreement. These additional requirements can result in significant additional and ongoing expenditures. Given the significant size of actual and potential settlements, it is expected that the government will continue to devote substantial resources to investigating healthcare facility and provider compliance with the healthcare payment rules and fraud and abuse laws. Certain of our facilities have received inquiries and subpoenas from various governmental agencies regarding these matters, and we are also subject to various claims and lawsuits relating to these and other matters.

The laws and regulations with which we must comply continually change. In the future, different interpretations or enforcement of these laws and regulations could subject our business practices to allegations of impropriety or illegality or could require us to make changes in our facilities, equipment, personnel, services, capital expenditure programs and operating expenses. Although we intend and will endeavor to conduct our business in compliance with all applicable federal and state laws and regulations, many of these laws and regulations are broadly worded and may be interpreted or applied in ways that cannot be predicted. Therefore, we cannot assure you that our arrangements or business practices will be free from government scrutiny or be found to be in compliance with applicable laws and regulations. If we fail to comply with applicable laws and regulations, we could suffer substantial civil or criminal penalties, including the loss of our licenses to operate our facilities or loss of our ability to participate in the Medicare, Medicaid and other governmental programs.

Additionally, we are subject to a variety of different federal, state and local employment and wage and hour laws. While we strive to comply with those laws, if we fail to do so, we may be subject to lawsuits by governmental authorities or private plaintiffs. In addition, the IRS and/or state taxing authorities may successfully challenge positions taken on our tax returns.

We are also subject to various federal, state and local statutes and ordinances regulating the discharge of materials into the environment. For example, our healthcare operations generate medical waste, such as pharmaceuticals, biological materials and disposable medical instruments that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Environmental regulations also may apply when we build new facilities or renovate existing facilities, particularly older facilities. If we fail to comply with environmental regulations, we may be liable for substantial investigation and clean-up costs or we may be subject to lawsuits by governmental authorities or private plaintiffs.

Finally, we communicate with patients, with prior consent, through short message service ("***SMS***") text messages. While we obtain consent from these individuals to send text messages and limit the content of those messages, federal or state regulatory authorities or private litigants may claim that the notices and disclosures we provide, form of consents we obtain, or our SMS texting practices are not adequate or violate applicable law. In addition, we must ensure that our SMS texting practices comply with regulations and agency guidance under the Telephone Consumer Protection Act (the "***TCPA***"), a federal statute that protects consumers from unwanted telephone calls, faxes and text messages, HIPAA, and all applicable state data privacy and security laws and regulations. While we strive to adhere to strict policies and procedures that comply with the TCPA, the Federal Communications Commission, as the agency that implements and enforces the TCPA, may disagree with our interpretation of the TCPA and impose penalties and other consequences for noncompliance. Determination by a court or regulatory agency that our SMS texting practices violate the TCPA could subject us to civil penalties and could require us to change some portions of our business. Even an unsuccessful challenge by patients or regulatory authorities of our activities could result in adverse publicity and could require a costly response from and defense by us.

We may be subjected to actions brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the False Claims Act's "qui tam" or "whistleblower" provisions.

The False Claims Act prohibits healthcare facilities and providers, as well as other entities or individuals from, among other things, knowingly submitting false claims for payment to the federal government, or knowingly causing the submission of such claims. The "qui tam" or "whistleblower" provisions of the False Claims Act allow private individuals to bring actions under the False Claims Act on behalf of the government. These private parties are generally entitled to share in any amounts recovered by the government, and, as a result, the number of "whistleblower" lawsuits that have been filed against providers has increased significantly in recent years. We are required to provide information to our employees and certain contractors about state and federal false claims laws and whistleblower provisions and protections. Defendants found to be liable under the False Claims Act may be required to pay up to three times the actual damages sustained by the government, plus substantial civil monetary penalties, that are subject to annual inflation adjustments, for each separate false claim.

There are many potential bases for liability under the False Claims Act, including reckless or intentional acts or omissions. The government has used the False Claims Act to prosecute Medicare and other government healthcare program violations such as coding errors, billing for services not provided, submitting false cost reports, falsely certifying meaningful use of certified health information technology, and providing care that is not medically necessary or that is substandard in quality. The Affordable Care Act also (i) created potential False Claims Act liability for failing to report and repay identified overpayments within sixty (60) days of the identification of the overpayment or the date by which a corresponding cost report is due, whichever is later, and (ii) provided that claims submitted in connection with patient referrals that result from violations of the Anti-kickback Statute constitute false claims for the purposes of the False Claims Act. Violations of the Stark law can result in False Claims Act liability, as well. In addition, a number of states have adopted their own false claims and whistleblower provisions whereby a private party may file a civil lawsuit in state court.

Although we intend and will endeavor to conduct our business in compliance with all applicable federal and state laws, many of these laws are broadly worded and may be interpreted or applied in ways that cannot be predicted. Therefore, we cannot assure you that our arrangements or business practices will be free from government scrutiny or be found to be in compliance with applicable fraud and abuse laws.

We will be subject to liabilities because of malpractice and related legal claims brought against our facilities or healthcare providers associated with, or employed by, our facilities or affiliated entities. If we become subject to these claims, we could be required to pay significant damages, which may not be covered by insurance.

We will be subject to medical malpractice lawsuits and other legal actions arising out of the operations of our facilities and the activities of our employed or affiliated providers. As a matter of policy, we typically notify patients of any potential harms they may have suffered at our facilities, regardless of whether such notifications are required by law and notwithstanding our uncertainty as to the severity of such harms or whether they even took place. This may lead to class actions or other multi-plaintiff lawsuits or whistleblower reports. These actions may involve large claims and significant defense costs and, if we or our facilities are found liable, any judgments against us may be material. Furthermore, some states in which we operate do not impose caps on non-economic malpractice damages and, even in the states that have imposed caps on such damages, litigants may seek recoveries under alternative theories of liability that might not be subject to such caps. In an effort to resolve one or more of these matters, we may choose to negotiate a settlement whether or not we believe we are liable. Amounts we pay to settle any of these matters also may be material.

Although we maintain professional and general liability insurance with unrelated commercial insurance carriers, each individual plaintiff's claim is generally subject to a SIR insurance program administered in-house by our risk department with assistance from our insurance brokers. Any successful claim against us that is within our SIR amounts could have an adverse effect on our results of operations or liquidity. Some of these claims could exceed the scope of the excess coverage in effect, or coverage of particular claims could be denied, and any amounts not covered by insurance could be material.

Insurance coverage in the future may not continue to be available at a cost allowing us to maintain adequate levels of insurance with acceptable SIR attachments. One or more of our insurance carriers may become insolvent and unable to fulfill its obligation to pay or reimburse us when that obligation becomes due. In addition, providers using our facilities may be unable to obtain insurance on acceptable terms, which could result in these providers not being able to meet the minimum insurance requirements in the applicable facilities' medical staff bylaws or necessitate a reduction in the level of insurance required to be carried under such bylaws.

As a result of reviews of claims to Medicare and Medicaid for our services, we may experience delayed payments or incur additional costs and may be required to repay amounts already paid to us.

We are subject to regular post-payment inquiries, investigations and audits of the claims we submit to Medicare and Medicaid for payment for our services. These post-payment reviews may increase as a result of government cost-containment initiatives, including, without limitation, enhanced medical necessity reviews for patients admitted as inpatients to general acute care hospitals for certain procedures and audits of claims under the RAC programs to detect overpayments not identified through existing claims review mechanisms. RACs utilize a post-payment targeted review process employing data analysis techniques in order to identify those claims most likely to contain overpayments, such as incorrectly coded services, short stays, incorrect payment amounts, non-covered services and duplicate payments. The claims review strategies used by the RACs generally include a review of high dollar claims, including, for example, inpatient hospital claims. As a result, a large majority of the total amounts recovered by RACs has come from hospitals.

In addition, CMS and the states use UPICs to perform post-payment audits of claims and identify Medicare and Medicaid overpayments. Third party audits or investigations of Medicare or Medicaid claims could result in increases or decreases in operating revenues to be recognized in periods subsequent to when the related services were performed, which may have a material adverse effect on our results of operations.

Controls designed to reduce inpatient services may reduce our revenues.

Over the last several years, payers have instituted policies and procedures to reduce or limit the use of inpatient services. Controls imposed by Medicare, Medicaid, and commercial third-party payers designed to reduce admissions and lengths of stay, commonly referred to as "utilization review," have affected and are expected to continue to affect our facilities. Federal law contains numerous provisions designed to ensure that services rendered by hospitals to Medicare and Medicaid patients meet professionally recognized standards and are medically necessary and that claims for payment are properly filed. In the hospital context, these provisions include a requirement that a sampling of admissions of Medicare and Medicaid patients must be reviewed by QIOs, which review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of the MS-DRG classifications and the appropriateness of cases of extraordinary length of stay or cost on a post-discharge basis. QIOs may deny payment for services or assess fines and also have the authority to recommend to HHS that a provider that is in substantial noncompliance with quality standards be excluded from participation in the Medicare program.

Utilization review is also a requirement of most non-governmental managed care organizations and other third-party payers. Inpatient utilization, average lengths of stay and occupancy rates continue to be negatively affected by payer-required preadmission authorization and utilization review and by payer pressure to maximize outpatient and alternative healthcare delivery services for less acutely ill patients. Additionally, in some states in which we operate, commercial third-party payers and Medicaid managed care plans have instituted policies that retroactively limit or deny patient coverage for emergency department and certain other services provided at hospitals or services provided at other inpatient facilities if the payers believe the services could have been provided in less expensive settings. For example, such payers are increasingly seeking to pay relatively low "triage fees" for patients seen in emergency departments when the payers retrospectively determine the patients' treatment did not qualify as an emergency service. Significant limits on the scope of services reimbursed or on the amounts paid for such services could have a material adverse effect on our revenues and results of operations.

If we do not manage admissions in the IRFs that we operate or manage in compliance with a 60% threshold, reimbursement for services rendered by us in these facilities will be based upon less favorable rates.

IRFs and ARUs are subject to a Medicare requirement that 60% or more of the patients admitted to the facilities have one or more specific conditions in order to qualify for reimbursement under the IRF PPS. If that compliance threshold is not maintained, the IRFs and ARUs will be reimbursed by Medicare at IPPS rates applicable to acute care hospitals. That likely would lead to reduced revenue in the IRFs and ARUs that we operate or manage and also may lead customers of IRFs and ARUs to attempt to renegotiate the terms of their contracts or terminate their contracts. Our inability to appropriately manage admissions in our IRFs and ARUs in compliance with applicable thresholds could have a material adverse effect on our business, financial position, results of operations, and liquidity.

Certificate of need laws and regulations regarding licenses, ownership and operation may impair our future expansion in some states. In states without certificate of need laws, competing providers of healthcare services are able to expand and construct facilities without the need for significant regulatory approval.

Some states require prior approval for the purchase, construction and expansion of healthcare facilities, based on the state's determination of need for additional or expanded healthcare facilities or services. Certain states in which we operate facilities require a certificate of need for the purchase, construction or expansion of hospital facilities, capital expenditures exceeding a prescribed amount, changes in bed capacity or services, or for other hospital-related activities. We may not be able to obtain certificates of need required for expansion activities or to effectively compete with competing healthcare providers in the future. In addition, all of the states in which we operate facilities require hospitals, other healthcare facilities, and most healthcare providers to maintain one or more licenses. If we fail to obtain any required certificate of need or license, our ability to operate or expand operations in those states could be impaired.

In the states in which we operate that do not require certificates of need for the purchase, construction and expansion of hospital facilities, competing healthcare facilities face lower regulatory barriers to entry and expansion. If competing healthcare entities are able to purchase, construct or expand healthcare facilities without the need for regulatory approval, we may face decreased market share and revenues in those markets.

Failure to implement and use certified health information technology in an effective and timely manner could adversely affect our operations and result in reduced Medicare and Medicaid reimbursement and government enforcement actions.

The federal government has adopted laws and regulations intended to promote the adoption of health information technology, advance the interoperability of medical record systems, and support the access, exchange, and use of electronic health information. For example, under the Medicare Promoting Interoperability Programs (formerly the Medicare EHR Incentive Program), eligible hospitals, critical access hospitals and eligible professionals that do not successfully demonstrate meaningful use of certified electronic health record technologies every year (absent a hardship exception) may be subject to a downward payment adjustment under Medicare. In addition, health information technology that is certified by CMS is subject to an annual certification process. While we generally have no control over whether the health information technology we have implemented will continue to maintain CMS certification, we routinely monitor and evaluate our health information technology for compliance with the applicable CMS certification standards. Failure of our health information technology to maintain CMS certification could result in reduced Medicare and Medicaid reimbursement. Also, the Cures Act and its implementing regulations impose regulatory obligations, including new Medicare conditions of participation on hospitals and critical access hospitals, related to the access and exchange of electronic health information and prohibit information blocking, which includes any practice that is unreasonable and likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information, by healthcare providers and certain other entities, unless required by law or otherwise permitted by an exception in the applicable regulations. Failure to comply with these requirements could subject us to financial penalties or other disincentives or reputational damage. Complying with these and future initiatives related to healthcare technology and interoperability may also require us to change our operations or incur additional costs related to investments in information technology and EHR system software upgrades, and our payers may not adequately reimburse us for these costs and investments.

The industry emphasis on value-based purchasing and bundled payment arrangements may negatively affect our revenues.

There is a trend in the healthcare industry toward value-based purchasing of healthcare services and bundled payment arrangements. Value-based purchasing programs include both public reporting of quality data and payment limitations tied to the incidence of preventable adverse events or the quality and efficiency of care provided by facilities. For example, Medicare, Medicaid and many large commercial payers may require facilities to report certain quality data to receive full payment updates or avoid payment reductions. They may also impose payment reductions in connection with HACs and excessive readmissions for certain conditions designated by HHS. Our revenue may be negatively impacted by the application of one or more of these measures. Bundled payment arrangements generally set target payment amounts for all healthcare services provided to patients during particular episodes of care. They are intended to create incentives for physicians, hospitals and other providers to work together to provide higher quality and more coordinated care at a lower cost. We currently participate in a few ACOs as well as a number of bundled payment programs, and we expect value-based purchasing programs, including programs that condition payment on patient outcome measures, to become more common and to involve a higher percentage of payment amounts. We are unable at this time to predict how this trend will affect our results of operations, but it could negatively affect our revenues.

The implementation of participation and quality measurement requirements under the MACRA's Merit-Based Incentive Payment System may affect our revenues.

Under MACRA, CMS updates payment rates for physician and practitioner services on an annual basis, and implements the QPP that rewards value and outcomes through participation in MIPS or an APM program. MIPS measures provider performance under four categories: quality, improvement activities, promoting interoperability and cost, and annually establishes a point threshold for each category and overall performance. The results of the measurement are used to establish a positive, negative, or neutral payment adjustment for the physician or practitioner for claims that are submitted two years after the applicable MIPS measurement period. The MIPS adjustment has a more significant impact on payment for physician and practitioner services than the annual inflationary update to the Medicare PFS.

Physicians participate in MIPS unless they are participants of specific forms of APM, are newly enrolled in Medicare, or see a low volume of Medicare patients (i.e., no more than 200 Medicare Part B patients in a calendar year, 200 covered professional services to Medicare Part B patients, or $90,000 in charges for Medicare Part B professional services). Groups or eligible clinicians who choose not to participate and fall within specified circumstances may request an exception through a hardship application and incur no MIPS impact on Medicare payments. CMS permits hardship applications, including, in 2020 and 2021, hardships based on circumstances arising from COVID related operational issues, through which clinicians can request reweighing of any or all performance categories if they encounter an extreme and uncontrollable circumstance or a public health emergency. MIPS eligible clinicians or Group Practices were subject to a payment adjustment on a sliding scale of minus to plus 7% per claim in CY 2021 (based on CY 2019 performance) and are subject to a sliding scale payment adjustment of minus to plus 9% per claim in CY 2022 and beyond. In addition, MIPS eligible clinicians with exceptional performance may receive up to 10% bonus payment from $500 million specifically allocated for this purpose. MIPS is a budget neutral program, and, as a result, any upward payment adjustments that are made for highly performing clinicians are offset by downward payment adjustments for others. Providers participating in an APM may be eligible for more advantageous adjustments under MIPS (or avoid any negative adjustment) and receive a 5% bonus. At this time, we have limited participation in APMs.

If an eligible clinician has not been satisfactorily participating in MIPS (and is not qualified to participate in an APM), his or her claims for Medicare Part B services are likely to be subject to negative payment adjustments in CY 2021 (which was based on CY 2019 performance) and CY 2022 (which was based on CY 2020 performance). For participating eligible clinicians that meet or exceed the MIPS threshold or APM requirements, claims for payment are likely to be subject to positive adjustments as well as a share of an additional pool of bonus payments. At this time, and as CMS continues to modify MIPS payment policies, it is unclear how MIPS will impact our overall physician payments under the Medicare program. If we have not timely and effectively implemented policies and procedures, quality programs and appropriate clinician contracting to ensure compliance with MACRA and other QPP requirements, we would experience a negative effect on future revenues related to Medicare Part B claims.

MACRA requires that CMS publish each eligible clinician's MIPS score and performance category scores on its Physician Compare website. Publishing of MIPS scores could have an adverse reputational effect on us if our employed physicians have low scores or scores that are lower than those of the other clinicians in the relevant communities.

If current or future laws or regulations force us or cause us to restructure our arrangements with physicians and other providers, we may incur additional costs, lose contracts and suffer a reduction in net revenue under existing contracts, and we may need to refinance our debt or obtain consent from our lenders.

A number of laws bear on our relationships with our physicians and other providers. There is a risk that state authorities in some jurisdictions may find that our contractual relationships with our physicians violate laws prohibiting the corporate practice of medicine and fee-splitting. These laws generally prohibit the practice of medicine by lay entities or persons and are intended to prevent unlicensed persons or entities from interfering with or inappropriately influencing the physician's professional judgment. They may also prevent the sharing of professional services income with non-professional or business interests. In states that have enacted corporate practice of medicine and fee-splitting prohibitions, we believe that we have structured our physician contracts in an effort to remain compliant with such laws. A regulatory agency, however, could still make a determination that our arrangements constitute a corporate practice of medicine or fee splitting violation. A review or action by regulatory authorities or the courts could force us to terminate or modify our contractual relationships with physicians and affiliated medical groups or revise them in a manner that could be materially adverse to our business.

In addition, we have also entered into a number of joint venture arrangements with physicians and other potential sources of referrals (e.g., hospitals and hospital operators) that are subject to state and federal fraud and abuse laws, including the Anti-kickback Statute and False Claims Act. See "—We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may reduce our revenues and profitability." To the extent applicable, regulatory agencies may view these transactions as prohibited arrangements that must be restructured, or discontinued, or for which we could be subject to other significant penalties, including debarment, suspension or exclusion from state and federal government healthcare programs. Although compliance programs can mitigate the risk of investigation and prosecution for violations of these laws, the risks cannot be entirely eliminated. Any action against us for violation of these laws, even if we successfully defend against it, could cause us to incur significant legal expenses and loss of revenue from those joint ventures and divert our management's attention from the operation of our business.

Data Security and Privacy Risks

A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business.

We rely extensively on our information systems and certain systems operated by us and third-parties to manage clinical, financial and employee data, communicate with our patients, payers, vendors and other third parties and summarize and analyze operating results. These systems are at risk from cybersecurity attacks, ransomware attacks, denial-of-service attacks, and other intrusions, including attempts to gain unauthorized access to and theft of our confidential data, misuse, corruption or destruction of confidential data and damage, disruptions or shutdowns of these systems due to viruses, malware, ransomware, malicious code, employee error or malfeasance, and other electronic security breaches. Our systems, which transmit and store sensitive and confidential data, including personally identifiable information ("***PII***") and other PHI of our patients, employees and others, and our proprietary and confidential business performance and other data, will continue to be a target for attempts to gain unauthorized access and data theft due to the valuable nature of the information they contain, as well as at risk for accidental exposure. In addition, certain third-party medical devices and equipment are used at our facilities, and may be vulnerable to cybersecurity attacks or other breaches which could negatively impact our systems or our patients.

Cybersecurity breaches and other unauthorized access to our data can sometimes be difficult to discern, and any delays in detection may lead to increased harm. Such attacks or breaches are common in the healthcare sector and could result in the compromise of health information or other data subject to protection by HIPAA and other laws and regulations or disrupt our IT systems or business. There can be no assurance that we will not be subject to material cyber-attacks or security breaches in the future, or that the preventive actions we take to reduce the risk of such incidents and protect our IT and data will be sufficient. We continue to develop our cybersecurity practices and controls to protect our systems. However, regardless of the nature, extent and timing of our actions, these measures may not prevent security breaches. If our services are subject to cyber-attacks that impair or deny the ability of patients to access our services, current and potential patients may become unwilling to provide us the information necessary for them to become users of our services or may curtail or stop using our services. As cyber-threats continue to evolve, we may be required to expend significant additional resources to continue to modify or enhance our protective measures and to investigate and remediate any information security vulnerabilities. As we are subjected to cyber-attacks and possible security breaches in the future, this could have an adverse impact on our business, reputation, financial condition and results of operations, as well as expose us to class action lawsuits and regulatory investigation, action, and penalties. We also cannot be sure that our existing insurance coverage will continue to be available on acceptable terms or will be available in sufficient amounts to cover one or more large claims related to a security breach, or that the insurer will not deny coverage as to any future claim.

The secure processing, maintenance and transmission of this information is critical to our operations and business strategy. If, in spite of our security and compliance efforts we or any of our business associates were to experience a breach, loss, or other compromise of PHI or PII, such event could disrupt our operations, result in increased data protection costs, damage our reputation, or result in regulatory penalties, legal claims and civil or criminal liability under HIPAA and other state and federal laws, which could have a material adverse effect on our results of operations.

If access to our information systems or those provided by our third party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer.

Our business depends heavily on effective information systems to process clinical, operational and financial information. Information systems require an ongoing commitment of significant resources to maintain and enhance existing systems and to develop new systems in order to keep pace with continuing changes in information processing technology. In addition to our own systems, we rely on multiple third-party providers of financial, clinical, supply chain, patient accounting and network information services and, as a result, we face operational challenges in maintaining multiple provider platforms and facilitating the interface of such systems with one another. The third-party providers may not have appropriate controls to protect confidential information. We do not control the information systems of third-party providers, and in some cases we may have difficulty accessing information archived on third-party systems, which could subject us to liability for failure to respond to legal, regulatory or payer obligations or information requests. Our networks and technology systems are also subject to disruption due to events such as a major earthquake, fire, flood, hurricane, telecommunications failure, terrorist attack or other catastrophic event. If these systems fail or are interrupted, if our access to these systems is limited in the future or if providers develop systems more appropriate for more urban healthcare markets and not suited for our facilities, our operations could suffer.

We intend to expand our operations, including by acquiring more facilities, which will require us to integrate and transition certain existing information systems. In addition, as new information systems are developed in the future, we will need to integrate them into our existing systems. Evolving industry and regulatory standards, such as the HITECH Act, HIPAA and EHR meaningful use regulations, also may require changes to our information systems in the future. System conversions are costly, time consuming and disruptive for providers, staff and, in some cases, patients. If such conversions occurred on a large scale or if we are unable to properly integrate other information systems or expand or update our current information systems, the costs and disruptions could have a material adverse effect on our revenues or results of operations.

Item 2. ***Properties.***

The following tables and map present certain information with respect to our consolidated facilities as of December 31, 2021:

Service Line	Facilities	Licensed Beds	States
Acute Care	65	8,637	21
Inpatient Rehabilitation [(a)]	28	1,447	17
Behavioral Health	3	128	2
	96	10,212	

(a) Excludes one non-consolidated IRF.

We own or lease and operate medical office buildings, clinics and other ancillary properties in conjunction with many of our hospitals. These medical office buildings and clinics are primarily occupied by physicians who practice at our hospitals. Additionally, we lease office space in Brentwood, Tennessee and Louisville, Kentucky for our HSC. All of our facilities are suitable for their respective uses and are generally adequate for our present needs.

Item 3. ***Legal Proceedings.***

Healthcare facilities are, from time to time, subject to claims and suits arising in the ordinary course of business, including claims for damages for personal injuries, medical malpractice, breach of contracts, wrongful restriction of or interference with physicians' staff privileges and employment related claims. In certain of these actions, plaintiffs request payment for damages, including punitive damages, that may not be covered by insurance.

Except as discussed under "Legal Proceedings and General Liability Claims" in Note 14 to our accompanying consolidated financial statements included elsewhere in this Report, we are currently not a party to any pending proceedings, which, in management's opinion would have a material adverse effect on our business, financial condition or results of operations.

Item 4. ***Mine Safety Disclosures*****.**

Not applicable.

PART II

Item 5. ***Market for Company's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.***

All of our equity securities are held by Holdings, an indirect subsidiary of the Parent. As of December 31, 2021, our Sponsor and certain co-investors beneficially owned approximately 97.0% of the capital units of the Parent with the remaining approximate 3.0% owned by our current or former directors, members of management and employees, and/or our affiliates. Because our equity securities are privately held, there is no established public trading market for our equity securities.

Equity Compensation Plan Information

Refer to Note 13 to our accompanying consolidated financial statements included elsewhere in this Report for a discussion of profits units issued by the Parent to our employees and directors.

Recent Sales of Unregistered Securities

There have been no recent sales of unregistered equity securities of the Company within the period covered by this Report.

Item 6. [Reserved.]

Item 7. ***Management's Discussion and Analysis of Financial Condition and Results of Operations.***

The following is management's discussion and analysis of our financial condition and results of operations for the years ended December 31, 2021 and December 31, 2020. We recommend that you read this discussion together with our accompanying consolidated financial statements and related notes included elsewhere in this Report.

Management's discussion and analysis of our financial condition and results of operations as of and for the year ended December 31, 2019 has been omitted as permitted by Instruction 1 to Item 303(a) of Regulation S-K. Refer to "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Results of Operations for the Years Ended December 31, 2020 and 2019" in our Annual Report for the year ended December 31, 2020 for management's discussion and analysis of changes in financial condition and results of operations as of and for the year ended December 31, 2019.

Overview

We are a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. We generate revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network comprised of 65 community hospital campuses, 28 IRFs, three behavioral health facilities, and additional sites of care that include ARUs, outpatient centers and post-acute care facilities. As of December 31, 2021, we operated 96 healthcare facilities in 29 states throughout the U.S. with approximately 10,000 licensed beds and approximately 50,000 dedicated employees.

We seek to fulfill our mission of Making Communities Healthier® by (1) delivering high quality patient care, (2) supporting our physicians, (3) creating excellent workplaces for our employees, (4) taking a leadership role in our communities and (5) ensuring fiscal responsibility. We strive to create places where people choose to come for healthcare, physicians want to practice and employees want to work.

We generated revenues of $8,937 million and $8,122 million for the years ended December 31, 2021 and 2020, respectively. For the years ended December 31, 2021 and 2020, approximately 56.1% and 55.7% of our revenues, respectively, related to patients participating in Medicare and Medicaid programs, collectively. Payments made to our facilities pursuant to the Medicare and Medicaid programs for services rendered rarely exceed our costs for such services. As a result, we rely largely on payments made by private or commercial payers, together with certain limited services provided to Medicare recipients, to generate an operating profit. The healthcare industry continues to endure a period where the costs of providing care are rising faster than reimbursement rates from government or private commercial payers. This places a premium on efficient operation, the ability to reduce or control costs and the need to leverage the benefits of our organization across all of our facilities.

Developments, Trends and Operating Environment

Kindred Transaction

On June 18, 2021, we entered into a definitive agreement (the "***Kindred Purchase Agreement***") for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred Healthcare, a leading specialty hospital company that operates facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. On November 30, 2021, our affiliate Knight Health assumed from us and we assigned to Knight Health our rights and obligations under the Kindred Purchase Agreement in respect of the purchase of all of the issued and outstanding equity interests of the Knight and the Blocker Sellers and the payment of the purchase price for such equity interests. The Kindred Transaction closed on December 23, 2021. Upon the closing of the Kindred Transaction, a new healthcare company was established operating under the name ScionHealth, which is separate from LifePoint. For additional information regarding the Kindred Transaction, see "Item 1. Business—Our Background— Kindred Transaction" included elsewhere in this report.

Divestitures

Entry into Agreement to Sell Colorado Plains Medical Center and Western Plains Medical Complex

On January 31, 2022, we entered into a definitive agreement with an unrelated third-party to sell Colorado Plains Medical Center, located in Fort Morgan, Colorado, and Western Plains Medical Complex, located in Dodge City, Kansas. We expect the transaction to close in the second quarter of 2022. The results of operations of Colorado Plains Medical Center and Western Plains Medical Complex remain included in the classification of "same-facility" in the forthcoming discussion and analysis of our results of operations for the years ended December 31, 2021 and 2020.

Providence Health and KershawHealth

Effective August 1, 2021, we sold Providence Health, comprised of two hospital campuses located in Columbia, South Carolina, and KershawHealth, located in Camden, South Carolina, to an unrelated third-party. We excluded Providence Health and KershawHealth from the classification of "same-facility" in the forthcoming discussion and analysis of our results of operations for the years ended December 31, 2021 and 2020.

Capital Medical Center

Effective April 1, 2021, we sold our majority ownership interest in Capital Medical Center. We excluded Capital Medical Center from the classification of "same-facility" in the forthcoming discussion and analysis of our results of operations for the years ended December 31, 2021 and 2020.

For additional information regarding our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Impact of COVID-19

Our internal COVID-19 taskforce, which was established during the early stages of the pandemic, continues to meet regularly. Additionally, in November 2020, we established a COVID-19 vaccine team to help facilitate the successful distribution and administration of vaccines across our markets. This team continues to meet regularly to discuss the latest vaccine developments and keep a pulse on potential barriers our facilities may encounter as they work to increase vaccination rates locally.

The number and severity of COVID-19 variants, including the Delta and Omicron variants, continue as a concerning threat for the national healthcare system, including our hospitals and the communities we serve. The rapid spread of the Delta and Omicron variants through largely unvaccinated populations has resulted in a sharp rise in COVID-19 cases across the country. This activity and the threat of other COVID-19 variants has further emphasized the need for our hospitals and providers to continue endorsing COVID-19 vaccination as the primary means for protection.

Our top priorities continue to be protecting our patients, supporting our people, being leaders in our communities, and managing our financial health. We have put in place a number of protocols to protect our patients, providers, employees, volunteers and visitors.

Our evaluation of the measures taken across our health system in response to COVID-19 is ongoing and additional updates to our policies, procedures and operations could occur as best practices continue to evolve. Furthermore, our facilities are located across a wide geographic range of communities, which may require us to modify measures we take at specific facilities based on local conditions, including the severity of COVID-19 and any variants of the virus in the community served by a facility and changes in state and local executive orders that may restrict certain services or activities.

Additionally, although we recently have repaid or declined funds that are available to us and our facilities under the CARES Act and related stimulus legislation, we cannot predict if we will need to seek such funds in the future, and we cannot assure you that we will be able to access such funds in a timely manner or at all.

For additional information about the risks presented by the COVID-19 pandemic, our responses to the pandemic and the resources available to healthcare providers, refer to "Part I, Item 1A. Risk Factors" included in this Report.

Legislative and Regulatory Developments in Response to COVID-19

CARES Act, Other Stimulus Legislation and Regulatory Developments

Numerous recent legislative and regulatory actions have been taken in an attempt to provide businesses, including healthcare providers, with relief from the negative impacts of the COVID-19 pandemic. For additional information about the CARES Act and other stimulus legislation and regulatory developments related to the COVID-19 pandemic, refer to "Part I, Item 1. Business—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" and to Note 3 to our consolidated financial statements included elsewhere in this Report.

Stimulus Payments

With respect to payments being made to providers from the Emergency Fund, beginning April 10, 2020, the Public Health and Social Services Emergency Fund distributed approximately $50 billion to hospitals based on their 2018 net patient revenue. Additionally, since that time, the Emergency Fund has distributed more than $80 billion to a number of different types of healthcare providers, including participants in state Medicaid/CHIP programs, providers in areas particularly impacted by the COVID-19 outbreak, rural providers (including hospitals and rural health clinics), skilled nursing facilities, dentists, providers of services with lower shares of Medicare reimbursement or who predominantly serve Medicaid beneficiaries, and providers requesting reimbursement for the treatment of uninsured patients.

For the years ended December 31, 2021 and 2020, we recognized $17 million and $646 million, respectively, of stimulus payments as other income under the caption "Government stimulus income" in our accompanying consolidated statements of operations included elsewhere in this Report.

For additional information about stimulus payments, refer to "Part I, Item 1. Business—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" included in this Report.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, HHS had also expanded the CMS Accelerated and Advance Payment Program to a broader group of Medicare Part A and Part B providers. Under the expanded Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period.

Through December 31, 2020, we received a total of $991 million of Medicare advance payments under the Accelerated and Advance Payment Program, of which $370 million and $621 million are included under the captions "Current portion of Medicare advance payments" and "Long-term portion of Medicare advance payments", respectively, in our accompanying consolidated balance sheet at December 31, 2020 included elsewhere in this Report. During the year end December 31, 2021, we fully repaid all Medicare advance payments, and we do not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program.

For additional information about the repayment of these accelerated/advance payments refer to "Part I, Item 1. Business—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" included in this Report.

CARES Act Tax Provisions

The CARES Act also provides for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, we deferred cash payments of approximately $84 million related to Social Security payroll tax payments. During the year ended December 31, 2021, we fully repaid all previously deferred Social Security payroll taxes.

The federal income tax changes brought about by the CARES Act are complex and further guidance is expected. We may change our provision for income taxes and our deferred income taxes as our understanding of the CARES Act tax provisions evolves due to additional U.S. Department of Treasury guidance. Any such adjustments could materially impact our provision for income taxes and, as a result, our financial results in the relevant periods.

Healthcare Reform Efforts

The Affordable Care Act, which became federal law in 2010, dramatically altered the U.S. healthcare system and was intended to decrease the number of uninsured Americans and reduce the overall cost of healthcare. The net effect of the Affordable Care Act, as currently adopted, on our business continues to be subject to a number of variables, including the law's complexity, lack of complete implementing regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. On June 17, 2021, the U.S. Supreme Court issued its decision in litigation that had been brought by a number of states against the federal government alleging that, in light of the repeal of the penalties associated with the individual mandate, the Affordable Care Act was unconstitutional. In its decision, the Court held that the states and other plaintiffs did not have standing to challenge the Affordable Care Act and ordered the case to be dismissed. While the U.S. Supreme Court rejected this most recent challenge to the Affordable Care Act, we cannot predict the outcome of other lawsuits that are still pending in lower courts regarding the implementation of various aspects of the Affordable Care Act and whether the U.S. Supreme Court will decide to hear future cases. Additionally, we cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

Refer to "Part I, Item 1. Business—Healthcare Reform" included in this Report for more information about the Affordable Care Act.

Competitive and Structural Environment

The environment in which our facilities operate is extremely competitive. We face competition from other healthcare providers and facilities, including larger tertiary hospitals located in larger markets and/or affiliated with universities; specialty hospitals that focus on one or a small number of very lucrative service lines but that are not required to operate emergency departments; freestanding emergency departments and outpatient surgery, diagnostic, cancer care and urgent care centers; and physicians on the medical staffs of our hospitals. In many cases, our competitors focus on the service lines that offer the highest margins. By doing so, our competitors can potentially draw the best-paying business out of our hospitals. This, in turn, can reduce the overall operating profit of our hospitals, which are often obligated to offer service lines that operate at a loss or that have much lower profit margins. We continue to see the shift of increasingly complex procedures from the inpatient to the outpatient setting and have also seen growth in the general shift of lower acuity procedures to physician offices and other non-hospital outpatient settings. These trends have contributed to decreases in admissions and surgical volumes and have, to some extent, offset our efforts to improve equivalent admission rates at many of our hospitals.

Our facilities also face extreme competition in their efforts to recruit and retain physicians on their medical staffs. It is widely recognized that the U.S. has a shortage of physicians in certain practice areas, including primary care physicians and specialists such as cardiologists, oncologists, urologists and orthopedists, in various areas of the country. This fact, and our ability to overcome these shortages, is directly relevant to our growth strategies because cardiologists, oncologists, urologists and orthopedists are often the physicians in highest demand in communities where our facilities are located. Larger tertiary medical centers are acquiring physician practices and employing physicians in some of our communities. While physicians in these practices may continue to be members of the medical staffs of our facilities, they may be less likely to refer patients to our facilities over time.

We believe other key factors in our competition for patients is the quality of our patient care and the perception of that quality in the communities where our facilities are located, which may be influenced by, among other things, the technology, service lines and capital improvements made at our facilities and by the skills and experience of our non-physician employees involved in patient care.

In addition to competitive concerns, many of our communities are experiencing slow growth, and in some cases, population losses. We believe this trend has occurred mainly as a result of challenging economic conditions in the non-urban communities where our facilities primarily operate, which are often dependent on a small number of larger employers, especially manufacturing or other facilities. This causes the economies of our communities to be more sensitive to economic downturns and slower to rebound when the overall U.S. economy improves. In addition, other economic factors, including, the recent economic downturn resulting from the COVID-19 pandemic and, potentially, self-rationing of healthcare services, have made it more difficult to increase the number of patients who seek care at many of our facilities.

Regulatory Environment

Our business and our facilities are highly regulated, and the penalties for noncompliance can be severe. We are required to comply with extensive, complicated and overlapping government laws and regulations at the federal, state and local levels. These laws and regulations govern every aspect of how our hospitals conduct their operations, from what service lines must be offered in order to be licensed as an acute care hospital, to whether our hospitals may employ physicians, and to how (and whether) our hospitals may receive payments pursuant to the Medicare and Medicaid programs. The failure to comply with these laws and regulations can result in severe penalties including criminal penalties, civil sanctions, the imposition of corporate integrity and other similar agreements, and the loss of our ability to receive reimbursements through the Medicare and Medicaid programs or the refund of such payments we previously received.

Not only are our facilities heavily regulated, but the rules, regulations and laws to which they are subject often change, with little or no notice, and are often interpreted and applied differently by various regulatory agencies with authority to enforce such requirements. Each change or conflicting interpretation may require our facilities to make changes in space usage, equipment, personnel or services, and may also require that standard operating policies and procedures be re-written and re-implemented. The cost of complying with such laws and regulations is a significant component of our overall expenses. Further, this expense has grown in recent periods because of new regulatory requirements and the severity of the penalties associated with non-compliance. Management anticipates that compliance expenses will continue to grow in the foreseeable future. The healthcare industry has seen a number of ongoing investigations related to patient referrals, physician recruiting and employment practices, cost reporting and billing practices, medical necessity of inpatient admissions, physician office leasing, laboratory and home healthcare services, physician ownership of hospitals and other healthcare providers, and joint ventures involving hospitals and physicians. Hospitals continue to be one of the primary focal areas of the OIG, the DOJ and other governmental fraud and abuse programs.

The Affordable Care Act imposed an affirmative obligation on healthcare providers to report and refund any overpayments received. “Overpayments” in this context include any amount received from a government program by a provider to which it is not entitled, regardless of the cause. Such overpayments are deemed to be fraudulent and become violations of the False Claims Act if not reported and refunded within the later of 60 days of identification or the date any corresponding cost report is due (if applicable). Hospitals and other healthcare providers can meet the obligation to report and refund in three ways: (1) refunding overpayments directly to the program; (2) self-disclosing the overpayment to the OIG via its voluntary self-disclosure protocol (with respect to False Claims Act and other violations not related to the Stark law); and (3) self-disclosing to CMS via the self-referral disclosure protocol (with respect to overpayments caused by potential violations of the Stark law only) for which CMS has the authority to reduce the amounts otherwise owed.

In light of the provisions of the Affordable Care Act relating to reporting and refunding overpayments and the robust funding for enforcement activities and audits, an increasing number of healthcare providers have self-reported potential violations of law and refunded overpayments to avoid incurring fines and penalties. It is likely such refunds and voluntary disclosures will continue in the future, and we will make such refunds and disclosures in accordance with the law.

Revenue Sources

Our facilities generate revenues by providing healthcare services to our patients. Depending upon the patient’s medical insurance coverage, we are paid for these services by governmental Medicare and Medicaid programs, commercial insurance, including managed care organizations, and directly by the patient. The amounts we are paid for providing healthcare services to our patients vary depending upon the payer. Governmental payers generally pay significantly less than a hospital’s customary charges for the services provided. Insured patients are generally not responsible for any difference between customary hospital charges and the amounts received from commercial insurance payers. However, insured patients are responsible for payments not covered by insurance, such as exclusions, deductibles and co-payments.

Medicare and Medicaid Reimbursement

Revenues from governmental payers, such as Medicare and Medicaid, are controlled by complex rules and regulations that stipulate the amount a healthcare provider is paid for providing healthcare services. We must comply with these rules and regulations to continue to be eligible to participate in the Medicare and Medicaid programs. These rules and regulations are subject to frequent changes as a result of legislative and administrative action and annual payment adjustments on both the federal and the state levels. In addition, Medicare payment methodologies have been, and are expected to continue to be, revised significantly based on cost containment and policy considerations.

For more information about Medicare and Medicaid reimbursement matters, refer to “Part I, Item 1. Business—Sources of Revenue” included in this Report.

Physician & Non-Physician Practitioner Services

We employ an increasing number of physicians and non-physician practitioners, such as physician assistants and nurse practitioners, in our hospital markets. Medicare pays us for services provided by our employed physicians and non-physician practitioners under the PFS system. MACRA, which was adopted in 2015, significantly changed how CMS determines the annual updates to the PFS. Under MACRA, the PFS payment rates that were in effect when MACRA was enacted were extended through June 30, 2015, and then increased by 0.5% for the remainder of CY 2015. PFS payment rates were increased annually by an additional 0.5% for CYs 2016, 2017 and 2018 and, after the adoption of the Bipartisan Budget Act of 2018, were increased by 0.25% for CY 2019. PFS payment rates are scheduled to remain at their CY 2019 levels through CY 2025. In addition, MACRA also established the QPP for incentivizing physician and practitioner care that meets certain value, quality, cost, and performance criteria, and, beginning in CY 2019, amounts paid to physicians and practitioners under the PFS are subject to adjustment through the QPP and participation in either MIPS or an APM. For more information, refer to "Part I, Item 1. Business—Sources of Revenue—Medicare Physician Fee Schedule" included in this Report.

HMOs, PPOs and Other Private Insurers

In addition to government programs, our facilities are reimbursed by differing types of private payers, including HMOs, PPOs and other private insurers. Revenues from HMOs, PPOs and other private insurers are subject to contracts and other arrangements that require us to discount the amounts we customarily charge for healthcare services or accept fixed, pre-determined fees for our services. These contractual discounted arrangements often limit our ability to increase charges or revenues in response to increasing costs. We actively negotiate with these payers in an effort to maintain or increase the pricing of our healthcare services; however, we have no control over patients switching their healthcare coverage to a payer with which we have negotiated less favorable reimbursement rates. In recent years, an increasing number of our patients have moved to lower-cost healthcare coverage plans, and such plans generally provide lower reimbursement rates and require patients to pay an increased portion of the costs of care through deductibles, co-payments or exclusions. Additionally, plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices. If we provide services when we are not a participating provider in the network, it can result in higher patient responsibility amounts that a patient may not have the ability to pay or may choose not to pay. We expect these trends to continue in the coming years.

Self-pay Patients

Self-pay revenues are primarily generated through the treatment of uninsured patients. Beginning in 2014, our self-pay revenues began to decrease as a percentage of overall revenues due largely to a shift from self-pay to Medicaid and HMOs, PPOs and other private insurers for a portion of our patient population, which primarily has been a result of the Affordable Care Act and the expansion of Medicaid coverage in certain of the states in which we operate. These reductions partially offset trends our facilities have experienced in prior years, which included increases in self-pay revenues due to a combination of broad economic factors, including high levels of unemployment in many of our markets and increasing numbers of individuals and employers who purchase insurance plans with high deductibles and high co-payments. We cannot predict how administrative or judicial interpretations, legislative actions or any other modifications to the Affordable Care Act that may be implemented or adopted, such as the cessation of cost sharing reduction payments or the repeal of the individual mandate, may impact our self-pay revenues.

Surprise Billing Regulations

On December 21, 2020, Congress adopted legislation that is intended to limit the "surprise" medical bills that are often received by individuals receiving emergency and certain other services (such as anesthesia services) from out-of-network providers. Effective as of January 1, 2022, the No Surprises Act prohibits, among other things, out-of-network providers from balance billing patients for emergency care services that are provided by out-of-network facilities or at in-network facilities by out-of-network providers. The No Surprises Act also generally prohibits out-of-network providers from billing patients for non-emergency medical treatment unless the provider first notifies the patient of the provider's network status and estimated charges and the patient agrees to be financially liable for the additional amounts. Violations of the No Surprises Act are punishable by civil monetary penalties of up to $10,000, and the No Surprises Act may be enforced by both the state and federal governments. We cannot predict how the No Surprises Act will be implemented or enforced. We also cannot predict the amounts that will be received by our facilities and our employed providers for out-of-network services, whether the No Surprises Act will impact the in-network payment rates that are offered by third-party payers and the willingness of those payers to enter into participation agreements with us and our facilities in the future, or the costs we will incur in complying with the requirements of the No Surprises Act. For more information, see "Business—Sources of Revenues—Surprise Medical Billing" included elsewhere in this Report —Item 1.

Price Transparency

Transparency in healthcare pricing has become a focal point for CMS, Congress, and many state legislatures. For example, effective as of January 1, 2021, hospitals generally are required to post their standard charges prominently on a publicly available website. Although we continue to evaluate, and are taking proactive steps in response to, the legislative and regulatory developments regarding price transparency, we cannot predict how existing regulations will be implemented or interpreted or whether any other requirements will be imposed on providers and health plans. We also cannot predict what affect the public disclosure of hospitals' or insurance providers' negotiated rates will have on our future negotiations with payers or the effect that the disclosure of pricing information by healthcare providers and health plans will have on our patient volumes and revenues. For more information, see "Business—Sources of Revenues—Price Transparency" included elsewhere in this Report—Item 1.

Results of Operations

Certain Definitions

The following definitions apply throughout the remaining portion of Management's Discussion and Analysis of Financial Condition and Results of Operations:

Adjusted EBITDA. EBITDA adjusted to exclude unusual items and other adjustments required or permitted in calculating debt covenant compliance under the Indentures governing the Notes and/or the Credit Agreements. We believe that this inclusion of supplementary adjustments to EBITDA applied in presenting Adjusted EBITDA are appropriate to provide additional information to investors about the impact of certain non-cash items, unusual items that we do not expect to continue or at the same level in the future and other items.

Admissions. The total number of patients admitted to our facilities for inpatient treatment.

Case mix index. Refers to the acuity or severity of illness of an average patient at our acute care facilities.

Consolidated. Consolidated information includes the results of all facility operations and corporate overhead costs, including the results of our recent acquisitions and divestitures during the applicable periods.

EBITDA. Earnings before interest, taxes, depreciation and amortization.

Equivalent admissions. Management and investors use equivalent admissions as a general measure of combined inpatient and outpatient volume. We compute equivalent admissions by multiplying admissions (inpatient volume) by the Outpatient factor. The equivalent admissions computation "equates" outpatient revenue to the volume measure (admissions) used to measure inpatient volume resulting in a general measure of combined inpatient and outpatient volume.

Outpatient factor. The sum of gross inpatient revenue and gross outpatient revenue divided by gross inpatient revenue.

Patient days. The total number of days of care provided to patients admitted to our facilities for inpatient treatment.

Pro forma same-facility. Pro forma same-facility information includes the results of the same facilities operated during the entire years ended December 31, 2021 and 2020, as if the Kindred Transaction had occurred on January 1 for each of the years then ended. Pro forma same-facility information excludes the results of the Artemis Business, as well as new facilities opened and divestitures completed during 2021 and 2020.

Summary

The following table summarizes our consolidated results of operations for the years ended December 31, 2021 and 2020 (dollars in millions):

	Years Ended December 31,			
	2021		2020	
	Amount	% of Revenues	Amount	% of Revenues
Revenues	$ 8,937	100.0 %	$ 8,122	100.0 %
Salaries and benefits	4,176	46.7	3,877	47.7
Supplies	1,505	16.8	1,418	17.5
Other operating expenses, net	2,245	25.1	2,190	27.0
Government stimulus income	(17)	(0.2)	(646)	(8.0)
Depreciation and amortization	345	3.9	378	4.7
Interest expense, net	466	5.2	528	6.5
Transaction-related costs	86	1.0	132	1.6
Other non-operating losses, net	19	0.2	4	-
	8,825	98.7	7,881	97.0
Income before income taxes	112	1.3	241	3.0
Benefit from income taxes	(27)	(0.3)	(64)	(0.8)
Net income	139	1.6	305	3.8
Less: Net income attributable to noncontrolling interests and redeemable noncontrolling interests	(9)	(0.1)	(22)	(0.3)
Net income attributable to LifePoint Health, Inc.	$ 130	1.5 %	$ 283	3.5 %

Revenues

The following table summarizes our key revenue metrics on a consolidated basis for the years ended December 31, 2021 and 2020:

	Years Ended December 31,		Increase	% Increase
	2021	2020	(Decrease)	(Decrease)
Number of facilities (at end of period) (a)	96	88		
Revenues (in millions)	$ 8,937	$ 8,122	$ 815	10.0 %
Patient days	1,524,403	1,504,852	19,551	1.3 %
Admissions	284,918	299,254	(14,336)	(4.8)%
Equivalent admissions	734,730	744,917	(10,187)	(1.4)%
Revenues per equivalent admission	$ 12,164	$ 10,903	$ 1,261	11.6 %
Case mix index (b)	1.49	1.45	0.04	2.8 %
Total surgeries (b)	380,293	357,389	22,904	6.4 %
Emergency department visits (b)	1,606,668	1,570,558	36,110	2.3 %

(a) Excludes one non-consolidated IRF.
(b) Metric attributable to acute care facility operations only.

For the year ended December 31, 2021, our consolidated revenues increased $815 million, or 10.0%, to $8,937 million compared to $8,122 million for the prior year. The increase in our revenues was primarily attributable to improvements in both commercial and government pricing, most notably the modification of the Commonwealth of Kentucky implemented Medicaid Hospital Rate Improvement Program, which is discussed further in Note 1 to our accompanying consolidated financial statements included elsewhere in this Report, as well as overall improvements in surgical volumes during the year ended December 31, 2021 compared to the prior year. Our revenues and patient volumes for the year ended December 30, 2020 were lower as a result of the deferral of certain non-urgent and elective procedures, as well as nationwide shelter-in-place and safer-at-home orders issued in response to the COVID-19 pandemic. The increase in our consolidated revenues was partially offset by hospital divestitures completed during the second and third quarters of 2021.

Our revenues by payer and approximate percentages of revenues on a consolidated basis were as follows for the years ended December 31, 2021 and 2020 (dollars in millions):

	Years Ended December 31,			
	2021		2020	
	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,368	37.7 %	$ 3,134	38.6 %
Medicaid	1,645	18.4	1,392	17.1
HMOs, PPOs and other private insurers	3,691	41.3	3,382	41.6
Self-pay	55	0.6	55	0.7
Other	156	1.8	137	1.7
Revenue from contracts with customers	8,915	99.8	8,100	99.7
Rental income	22	0.2	22	0.3
Revenues	$ 8,937	100.0 %	$ 8,122	100.0 %

Salaries and Benefits

For the year ended December 31, 2021, our consolidated salaries and benefits expense was $4,176 million, or 46.7% of revenues, compared to $3,877 million, or 47.7% of revenues, for the prior year. The increase in our salaries and benefits expense was partially attributable to the increase in revenues during the year ended December 31, 2021 compared to the prior year, in addition to $112 million of accelerated stock-based compensation expense recognized in connection with the sale of the Parent, including the Company and its subsidiaries, by certain affiliates of the Parent in the second quarter of 2021. For additional information regarding our accounting for stock-based compensation, refer to Note 13 to our accompanying consolidated financial statements included elsewhere in this Report. Our salaries and benefits expenses were higher as a percentage of revenues during the year ended December 31, 2020 as a result of the decrease in revenues associated with the COVID-19 pandemic.

Supplies

For the year ended December 31, 2021, our consolidated supplies expense was $1,505 million, or 16.8% of revenues, compared to $1,418 million, or 17.5% of revenues, for the prior year. The increase in our supplies expense was primarily attributable to the increase in revenues during the year ended December 31, 2021 compared to the same period last year, as well as an increase in the overall level of acuity of services provided during the year ended December 31, 2021 compared to the same period last year.

Other Operating Expenses, Net

Other operating expenses include, among other things, contract services, professional fees, rents and leases, repairs and maintenance, utilities, insurance, non-income taxes, other income and other expenses. For the year ended December 31, 2021, our consolidated other operating expenses were $2,245 million, or 25.1% of revenues, compared to $2,190 million, or 27.0% of revenues, for the prior year. The increase in our other operating expenses was primarily attributable to the increase in revenues during the year ended December 31, 2021 compared to the same period last year, in addition to increased provider taxes associated with certain of our Medicaid reimbursement programs, and the transition of certain personnel-related costs, previously included in salaries and benefits, to a third-party contracted services model for certain revenue cycle and environmental service functions. Our other operating expenses were higher as a percentage of revenues during the year ended December 31, 2020 as a result of the decrease in revenues associated with the COVID-19 pandemic.

Government Stimulus Income

As a result of the adverse impact of the COVID-19 pandemic on our business, we received stimulus payments from the Emergency Fund established under the CARES Act. For the years ended December 31, 2021 and 2020, we recognized $17 million and $646 million, respectively, of stimulus payments as other income. For additional information regarding the CARES Act and related financial impact, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Depreciation and Amortization

For the year ended December 31, 2021, our consolidated depreciation and amortization expense was $345 million, or 3.9% of revenues, compared to $378 million, or 4.7% of revenues, for the prior year. The decrease in our depreciation expense was primarily attributable to the discontinuation of depreciation expense related to the property and equipment of our recently divested hospitals.

Interest Expense, Net

For the year ended December 31, 2021, our consolidated interest expense was $466 million, or 5.2% of revenues, compared to $528 million, or 6.5% of revenues, for the prior year. The decrease in our interest expense was primarily attributable to the non-cash changes in the estimated fair value of our Interest Rate Swap recognized through interest expense during the years ended December 31, 2021 and 2020. Additionally, we completed various debt refinancing activities during 2020, which resulted in a lower weighted average borrowing rate for the year ended December 31, 2021 compared to the same period last year. For a further discussion of our debt and corresponding interest expense, refer to Notes 4 and 11 to our accompanying consolidated financial statements included elsewhere in this Report.

Transaction-Related Costs

For the year ended December 31, 2021, we recognized $86 million of transaction and advisory related expenses, primarily in connection with the Kindred Transaction and other business development activities. For the year ended December 31, 2020, we recognized $115 million of debt transaction costs associated with the various debt financing activities completed during 2020, as well as $17 million of transaction and advisory related expenses associated with our business development activities. For additional information regarding our business development activities and debt transactions, refer to Notes 2 and 4, respectively, to our accompanying consolidated financial statements included elsewhere in this Report.

Other Non-Operating Losses, Net

For the year ended December 31, 2021, we recognized a net other non-operating loss of $19 million, primarily comprised of net gains and losses recognized in connection with our recent hospital divestitures, as well as other miscellaneous disposals of property and equipment. For the year ended December 31, 2020, we recognized a net other non-operating loss $4 million, primarily related to non-cash changes in the estimated fair value of certain contingent liabilities and miscellaneous disposals of property and equipment.

Income Taxes

For the years ended December 31, 2021 and 2020, we recognized a benefit from income taxes of $27 million and $64 million, respectively. For a further discussion of our income taxes, refer to Note 6 to our accompanying consolidated financial statements included elsewhere in this Report.

Non-GAAP Measures

Supplemental Results of Operations on a Pro Forma Same-Facility Basis

The following table summarizes our key supplemental results of operations for the years ended December 31, 2021 and 2020 on a pro forma same-facility basis as if the Kindred Transaction had occurred on January 1 for each of the years then ended. GAAP does not allow for such a combination of results of operations; however, we believe this information is useful in evaluating our financial performance.

	Years Ended December 31,		Increase	% Increase
	2021	2020	(Decrease)	(Decrease)
Number of facilities (at end of period) (a)	86	86		
Revenues (in millions)	$ 8,191	$ 7,297	$ 894	12.3 %
Patient days	1,538,547	1,493,717	44,830	3.0 %
Admissions	253,776	257,346	(3,570)	(1.4)%
Equivalent admissions	627,571	614,841	12,730	2.1 %
Revenues per equivalent admission	$ 13,052	$ 11,868	$ 1,184	10.0 %
Case mix index (b)	1.49	1.45	0.04	2.8 %
Total surgeries (b)	310,099	283,556	26,543	9.4 %
Emergency department visits (b)	1,258,218	1,187,884	70,334	5.9 %

(a) Excludes one non-consolidated IRF.
(b) Metric attributable to acute care facility operations only.

For the year ended December 31, 2021, our pro forma same-facility revenues increased $894 million, or 12.3%, compared to the prior year. The increase in our pro forma same-facility revenues was primarily attributable to improvements in both commercial and government pricing, most notably the modification of the Commonwealth of Kentucky implemented Medicaid Hospital Rate Improvement Program, as well as overall improvements in patient volumes during the year ended December 31, 2021 compared to the prior year. Our revenues and patient volumes for the year ended December 30, 2020 were lower as a result of the deferral of certain non-urgent and elective procedures, as well as nationwide shelter-in-place and safer-at-home orders issued in response to the COVID-19 pandemic.

EBITDA and Adjusted EBITDA

The following table presents a reconciliation of net income to EBITDA and Adjusted EBITDA prepared in accordance with the calculations set forth in the Indentures and the Credit Agreements for the years ended December 31, 2021 and December 31, 2020 (in millions):

	Years Ended December 31,	
	2021	**2020**
Net income (a)	$ 139	$ 305
Interest expense, net	466	528
Income taxes	(27)	(64)
Depreciation and amortization	345	378
EBITDA	923	1,147
Transaction-related costs (b)	86	132
Stock-based compensation (c)	117	5
Facility lease expense (d)	(74)	(80)
One-time costs, non-cash and non-recurring items (e)	75	53
Subtotal	1,127	1,257
Pro forma run rate adjustments (f)	206	127
Adjusted EBITDA	$ 1,333	$ 1,384

(a) Included in net income for the years ended December 31, 2021 and 2020 is $17 million and $646 million, respectively, of stimulus payments recognized as other income. For additional information regarding the CARES Act and related stimulus programs, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

(b) Represents the exclusion of certain transaction-related expenses, including costs associated with the Kindred Transaction and other business development activities occurring during 2021 and 2020, as well as costs associated with our various debt financing activities completed during 2020. For additional information regarding our business development activities and debt transactions, refer to Notes 2 and 4, respectively, to our accompanying consolidated financial statements included elsewhere in this Report.

(c) Represents the exclusion of stock-based compensation expense, including expense associated with the accelerated vesting of profits units recognized in connection with a 2021 transaction involving the Parent. For additional information regarding our accounting for stock-based compensation, refer to Note 13 to our accompanying consolidated financial statements included elsewhere in this Report.

(d) Represents cash interest expense in connection with certain finance leases. Pursuant to the terms of our financial covenants contained in our debt agreements, we are required to consider cash interest expense on facility-related finance leases within the definition of Adjusted EBITDA.

(e) Represents the exclusion of certain one-time costs, non-cash and non-recurring items, including non-recurring incremental operating expenses associated with the COVID-19 pandemic, the elimination of EBITDA associated with facilities that have been divested, differences between cash payments and reported rent expense for facility operating leases, gains and losses related to hospital divestitures and other disposals of property and equipment, and other non-operational items.

(f) Represents the estimated pro forma EBITDA impact attributable to various strategic initiatives in accordance with our debt agreements. Such items primarily consist of (i) the net estimated pro forma EBITDA impact attributable to the businesses transferred in connection with the Kindred Transaction, including incremental corporate overhead costs, which has also been included for the year ended December 31, 2020 for comparative purposes; (ii) unrealized cost savings related to conversions of the revenue cycle management function in certain of our facilities and other initiatives; (iii) new or expanded service lines, newly constructed facilities and other strategic investments; and (iv) the pro forma impact of our recent divestitures.

Leverage

The following table illustrates our indebtedness and certain leverage ratios prepared in accordance with the calculations set forth in the Indentures and the Credit Agreements as of and for the year ended December 31, 2021 (dollars in millions):

	December 31, 2021
Cash and cash equivalents	$ 853
ABL Facility	$ -
Term Loan Facility	3,215
6.75% Secured Notes	600
4.375% Secured Notes	600
Total Secured Debt (a)	$ 4,415
Net Secured Debt (a)	$ 3,562
9.75% Unsecured Notes	$ 1,425
5.375% Unsecured Notes	500
Total Debt (a)	$ 6,340
Net Debt (a)	$ 5,487
Adjusted EBITDA	$ 1,333
Total Secured Debt (a) / Adjusted EBITDA	3.31x
Net Secured Debt (a) / Adjusted EBITDA	2.67x
Total Debt (a) / Adjusted EBITDA	4.76x
Net Debt (a) / Adjusted EBITDA	4.12x

(a) Excludes finance lease obligations, which are not considered indebtedness for purposes of calculating the ratios set forth in the Indentures and the Credit Agreements, as well as unamortized debt issuance costs and premium.

Liquidity and Capital Resources

Liquidity

Our primary sources of liquidity are cash generated by operations and borrowings under the ABL Facility. Our primary uses of cash are working capital requirements, debt service requirements and capital expenditures. Based on our current level of operations and available cash, we believe our cash flows from operations, combined with availability under the ABL Facility, will provide sufficient liquidity to fund our current obligations, projected working capital requirements, debt service requirements and capital spending requirements over the next twelve months. We cannot assure you, however, that our business will generate sufficient cash flows from operations or that future borrowings will be available to us under the ABL Facility, which is subject to a borrowing base, in an amount sufficient to enable us to pay principal and interest on the ABL Facility, the Term Loan Facility and the Notes, or to fund other liquidity needs. Our ability to do so depends on prevailing economic conditions, many of which are beyond our control. In addition, upon the occurrence of certain events, such as a change of control, we could be required to repay or refinance our indebtedness. We cannot assure you that we will be able to refinance any of our indebtedness on commercially reasonable terms or at all. Any future acquisitions, joint ventures or other similar transactions will likely require additional capital, and there can be no assurance that any such capital will be available to us on acceptable terms or at all. Any refinancing of our indebtedness could be at higher interest rates and may require us to comply with more onerous covenants that could further restrict our business operations. See "Item 1A, Risk Factors—Credit and Liquidity Risks" included elsewhere in this Report.

The following table presents summarized cash flow information for the years ended December 31, 2021 and 2020 (in millions):

	2021	2020
Net cash (used in) provided by operating activities	$ (590)	$ 1,920
Net cash used in investing activities	(1,034)	(120)
Net cash (used in) provided by financing activities	(176)	105
Change in cash and cash equivalents	$ (1,800)	$ 1,905

Operating Activities

When adjusted to exclude the impact of Medicare advance payments and deferred payroll taxes in connection with the CARES Act, our net cash provided by operating activities for the years ended December 31, 2021 and 2020 was $485 million and $845 million, respectively. The decrease in our net cash provided by operating activities was primarily attributable to changes in net working capital, partially offset by lower cash payments for interest during the year ended December 31, 2021 compared to the prior year. Additionally, our net cash provided by operating activities for the year ended December 31, 2020 included $646 million of stimulus payments recognized as other income compared with only $17 million for the year ended December 31, 2021.

Investing Activities

We invested $274 million and $170 million in purchases of property and equipment for the years ended December 31, 2021 and 2020, respectively. Refer to "—Capital Expenditures" below for further information.

In connection with the Kindred Transaction, we transferred cash of $946 million to ScionHealth and received cash of $71 million associated with the Knight Transferred Business, resulting in a net cash outflow of $875 million for the year ended December 31, 2021. Additionally, during the year ended December 31, 2021, we received cash proceeds of $119 million in connection with our recent divestitures. For a further discussion of the Kindred Transaction and our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

During the year ended December 31, 2020, we sold a portion of our ownership interest in In-Home Healthcare Partnership to a wholly-owned subsidiary of LHC Group, Inc. for cash proceeds of approximately $24 million, in addition to proceeds from various other investing activities.

Financing Activities

Our net cash used in financing activities for the year ended December 31, 2021 includes a $93 million cash distribution to the Parent to partially fund the repurchase of certain previously issued Units and capital units, primarily held by certain of our former employees, as well as certain of our current employees, executives, and directors, in addition to distributions to certain joint venture partners, and payments made under finance lease arrangements.

Our net cash provided by financing activities for the year ended December 31, 2020 consisted of proceeds from the offering of our 6.75% Secured Notes, 4.375% Secured Notes, and 5.375% Unsecured Notes, in addition to the issuances of the Incremental Term Loan, partially offset by payments made in connection with the redemption and discharge of our 8.25% Secured Notes and 11.5% Unsecured Notes, and prepayments of our Term Loan Facility. For a further discussion of our recent debt transactions, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

Capital Expenditures

We continue to make significant, targeted investments at our facilities to add new technologies, modernize facilities and expand the services available. These investments should assist in our efforts to attract and retain physicians, to offset outmigration of patients and to make our facilities more desirable to our employees and potential patients.

The following table summarizes our capital expenditures as a percentage of revenues and as a percentage of depreciation expense for the years ended December 31, 2021 and 2020 (dollars in millions):

	2021		2020	
	Amount	% of Revenues	Amount	% of Revenues
Capital expenditures	$ 274	3.1 %	$ 170	2.1 %
Depreciation expense	$ 344		$ 376	
Ratio of capital expenditures to depreciation expense	79.7 %		45.2 %	

We have a formal and intensive review procedure for the authorization of capital expenditures that exceed an established threshold. One of the most important financial measures of acceptability for a discretionary capital project is whether its projected discounted cash flow return on investment exceeds our projected cost of capital for that project. We expect to continue to invest in information systems, modern technologies, emergency room and operating room expansions, the construction of medical office buildings for physician expansion and the reconfiguration of the flow of patient care. Additionally, we may from time to time replace existing hospital buildings with new buildings as we evaluate ongoing repair and maintenance costs and other factors that impact the future operations of the existing buildings. Refer to "—Liquidity and Capital Resources Outlook" below for further information regarding our long-term capital expenditure commitments.

Capital Resources

ABL Facility

Effective November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, we entered into the ABL Facility in an aggregate principal amount of up to $800 million with a maturity of five years. For further information regarding the ABL Facility, including certain restrictive covenants, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

Term Loan Facility

Effective November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, we entered into the Term Loan Facility with an original aggregate principal amount of $3,550 million with a maturity of seven years and we repaid in full our Prior Term Facility. The Term Loan Facility was amended in connection with a refinancing transaction during the first quarter of 2020. For further information regarding the Term Loan Facility, including certain restrictive covenants and the refinancing transactions, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

6.75% Secured Notes

On April 13, 2020, we issued the 6.75% Secured Notes in an aggregate principal amount of $600 million with a maturity of five years. For further information regarding the 6.75% Secured Notes, including certain restrictive covenants, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

4.375% Secured Notes

On February 13, 2020, we issued the 4.375% Secured Notes in an aggregate principal amount of $600 million with a maturity of seven years. For further information regarding the 4.375% Secured Notes, including certain restrictive covenants, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

9.75% Unsecured Notes

On November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, we issued the 9.75% Unsecured Notes in an aggregate principal amount of $1,425 million with a maturity of eight years. For further information regarding the 9.75% Unsecured Notes, including certain restrictive covenants, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

5.375% Unsecured Notes

On December 4, 2020, we issued the 5.375% Unsecured Notes in an aggregate principal amount of $500 million with a maturity of eight years. For further information regarding the 5.375% Unsecured Notes, including certain restrictive covenants, refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report.

We monitor the capital markets and our capital structure and make changes from time to time, with the goal of maintaining financial flexibility, preserving or improving liquidity and/or achieving cost efficiency. From time to time, we may elect to repurchase amounts of our outstanding debt for cash through open market repurchases or privately negotiated transactions with certain of our debt holders, although there is no assurance we will do so.

Liquidity and Capital Resources Outlook

We continue to have ongoing capital commitments in connection with several of our facilities. At December 31, 2021, we estimated our total remaining capital expenditure commitments to be approximately $738 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues. We anticipate funding these expenditures through cash provided by operating activities, available cash and borrowings available under the ABL Facility.

Our business strategy contemplates the selective acquisition of additional hospitals and other healthcare service providers, and we regularly review potential acquisitions. These acquisitions may, however, require additional financing. Our primary sources of liquidity are cash flows provided by our operations and our borrowings available under the ABL Facility. We believe that our internally generated cash flows and borrowing availability under the ABL Facility will be adequate to service existing debt, finance internal growth and fund capital expenditures and small to mid-size hospital acquisitions over the next twelve months and into the foreseeable future prior to maturity dates of our outstanding debt. Certain larger hospital acquisitions may, however, require additional financing.

Inflation

The healthcare industry is labor-intensive. Wages and other expenses increase during periods of inflation and when labor shortages in marketplaces occur. In addition, suppliers pass along rising costs to us in the form of higher prices. Private insurers pass along their rising costs in the form of lower reimbursement to us. Our ability to pass on these increased costs in increased rates is limited because of increasing regulatory and competitive pressures and the fact that the majority of our revenues are fee-based. Accordingly, inflationary pressures could have a material adverse effect on our results of operations.

Contractual Obligations and Material Cash Requirements

We have certain material contractual obligations which are recorded as liabilities in our consolidated financial statements, primarily including:

- long-term debt obligations (refer to "—Capital Resources" above and to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report); and
- finance and operating lease obligations (refer to Note 8 to our accompanying consolidated financial statements included elsewhere in this Report).

Additionally, we have certain other material cash requirements related to items that are not recognized as liabilities in our consolidated financial statements, primarily including:

- capital expenditure commitments (refer to "—Capital Expenditures" above and to Note 14 to our accompanying consolidated financial statements included elsewhere in this Report);
- shared centralized resource model arrangements with various third-parties to provide certain nonclinical business functions to us, including payroll, supply chain management and revenue cycle management;
- information technology services, including, but not limited to, financial, clinical, patient accounting and other information services;
- diagnostic imaging equipment maintenance and bio-medical services; and
- other minimum commitments to purchase miscellaneous goods or services under non-cancelable contracts.

Off-Balance Sheet Arrangements

We had letters of credit outstanding of approximately $50 million as of December 31, 2021, primarily related to the self-insured retention level of our general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements.

Adoption of Recently Issued Accounting Standards

None.

Critical Accounting Estimates

The preparation of financial statements in accordance with GAAP requires us to make estimates and assumptions that affect the reported amounts and related disclosures. We consider an accounting estimate to be critical if:

- it requires assumptions to be made that were uncertain at the time the estimate was made; and
- changes in the estimate or different estimates that could have been made could have a material impact on our consolidated results of operations or financial condition.

Our critical accounting estimates include the following areas:

- Accounting for CARES Act stimulus payments;
- Revenue recognition and accounts receivable;
- Goodwill impairment analysis;
- Accounting for income taxes; and
- Reserves for self-insurance claims.

The following discussion of critical accounting estimates is not intended to be a comprehensive list of all of our accounting policies that require estimates, but the estimates discussed below involve a higher degree of judgment and complexity. We believe the current assumptions and other considerations used to estimate amounts reflected in our consolidated financial statements are appropriate. However, if actual experience differs from the assumptions and other considerations used in estimating amounts reflected in our consolidated financial statements, the resulting changes could have a material adverse effect on our consolidated results of operations and our financial condition. The discussion that follows presents information about our critical accounting estimates, as well as the effects of hypothetical changes in the material assumptions used to develop each estimate.

Accounting for CARES Act Stimulus Payments

For the years ended December 31, 2021 and 2020, we recognized $17 million and $646 million, respectively, of stimulus payments as other income under the caption "Government stimulus income" in our accompanying consolidated statements of operations included elsewhere in this Report. Payments made by the Emergency Fund and the ARP rural program to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, filing attestations acknowledging receipt of payments, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients, not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse, and submitting such reports as may be required by HHS regarding the provider's compliance with the terms and conditions of the Emergency Fund. Healthcare providers that received more than $10,000 from the Emergency Fund between April 10, 2020 through June 30, 2020, also referred to as the First Payment Received Period, were required to submit a report on their use of those funds no later than September 30, 2021. We successfully submitted the required reports for all of our providers that received and retained payments from the Emergency Fund during First Payment Received Period prior to the deadline. However, we will be required to submit additional reports in the future for payments that were received and retained by our providers from the Emergency Fund after the end of the First Payment Received Period. The reporting requirements and guidance from HHS related to the Emergency Fund have been subject to frequent clarifications and revision, and there can be no assurance that we will not be required to submit additional reports or provide additional information related to the payments we receive from the Emergency Fund in the future. In addition, HHS has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the OIG of HHS, will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

We have accounted for the stimulus payments received as a government grant related to income in a manner consistent with International Accounting Standards 20, "Accounting for Government Grants and Disclosure of Government Assistance" ("***IAS 20***"). In accordance with IAS 20, government grants are recognized either as other income or a reduction to a related expense when there is reasonable assurance that the grant will be received, and the entity will comply with any conditions attached to the grant. There is currently limited, and sometimes changing, guidance available regarding the accounting treatment of funds that have been received by us and our facilities under the CARES Act and the related stimulus legislation. This lack of guidance requires us to apply professional judgement and make certain estimates and assumptions with respect to the presentation, amount and timing of our recognition of stimulus received under the CARES Act. For additional information regarding the CARES Act and related financial impact, refer to "Part I, Item 1. Business—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" and Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Revenue Recognition and Accounts Receivable

We recognize revenues in the period in which performance obligations are satisfied. Generally, we bill patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. Our ability to collect outstanding receivables is critical to our results of operations and cash flows. Amounts we receive for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, HMOs, PPOs and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in our financial statements are recorded at the net consideration to which we expect to be entitled to receive in exchange for providing patient care.

Approximately 98.0%, 98.0% and 98.2% of our patient revenues recognized during the years ended December 31, 2021, 2020 and 2019, respectively, related to discounted charges, which were comprised of the following sources (as a percentage of our revenues):

	2021	2020	2019
Medicare	37.7 %	38.6 %	38.1 %
Medicaid	18.4 %	17.1 %	17.1 %
HMOs, PPOs and other private insurers	41.3 %	41.6 %	42.3 %
Self-pay	0.6 %	0.7 %	0.7 %

Revenues are recorded at estimated net amounts due from patients, third-party payers and others for healthcare services provided. For certain payers, such as Medicare, Medicaid, as well as some managed care payers with which we have contractual arrangements, the contractual allowances are calculated by computerized logging systems based on defined payment terms. For other payers, the contractual allowances are determined based on historical data by insurance plan. All contractual adjustments, regardless of payer type or method of calculation, are reviewed and compared to actual experience.

We monitor our processes for calculating contractual allowances through:

- review of payment discrepancy reports for logged payers;
- analysis of historical contractual allowance trends based on actual claims paid by HMOs, PPOs and other private insurers;
- review of contractual allowance information reflecting current contract terms;
- consideration and analysis of changes in charge rates and payer mix reimbursement levels; and
- other issues that may impact contractual allowances.

Medicare and Medicaid

The majority of services performed on Medicare and Medicaid patients are reimbursed at predetermined reimbursement rates. The differences between the established billing rates (i.e. gross charges) and the predetermined reimbursement rates are recorded as contractual discounts and deducted from gross charges. Under the Medicaid program's prospective reimbursement systems, there is no adjustment or settlement of the difference between the actual cost to provide the service and the predetermined reimbursement rates.

Discounts for retrospectively cost-based revenues are estimated based on historical and current factors and are adjusted in future periods when settlements of filed cost reports are received. Final settlements under these programs are subject to adjustment based on administrative review and audit by third-party intermediaries, which can take several years to resolve completely.

Because the laws and regulations governing the Medicare and Medicaid programs are complex and subject to change, the estimates of contractual discounts we record could change by material amounts. A significant increase in our estimate of contractual discounts for Medicare and Medicaid would lower our earnings. This would adversely affect our results of operations, financial condition, liquidity and future access to capital.

HMOs, PPOs and Other Private Insurers

Amounts we receive for the treatment of patients covered by HMOs, PPOs and other private insurers (collectively "***managed care plans***") are generally less than our established billing rates. We include contractual allowances as a reduction to revenues in our consolidated financial statements based on payer specific identification and payer specific factors for rate increases and denials. For most managed care plans, estimated contractual allowances are adjusted to actual contractual allowances as cash is received and claims are reconciled.

The process of determining the allowance requires us to estimate the amount expected to be received based on payer contract provisions, historical collection data as well as other factors and requires a high degree of judgment. It is impacted by changes in managed care contracts and other related factors. A significant increase in our estimate of contractual discounts for managed care plans would lower our earnings. This would adversely affect our results of operations, financial condition, liquidity and future access to capital.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. We evaluate these patients, after the patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. We estimate the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that we utilize include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that we expect to collect. Because we provide care to patients regardless of their ability to pay, we have determined that the differences between the amounts we bill based on gross or discounted charges and the amounts we expect to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and we account for this variable consideration in accordance with the provisions of ASC 606. Self-pay accounts receivable are written off after collection efforts have been followed in accordance with our policies.

Goodwill Impairment Analysis

Goodwill represents the excess of the purchase price over the fair value of the net assets of acquired businesses. Our goodwill included in our consolidated balance sheet as of December 31, 2021 was $3.9 billion. Refer to Note 5 to our accompanying consolidated financial statements included elsewhere in this Report for a detailed roll forward of changes in our goodwill during the years ended December 31, 2021 and 2020.

In accordance with ASC 350, "Intangibles — Goodwill and Other" ("***ASC 350***") goodwill and intangible assets with indefinite lives are reviewed by us at least annually for impairment. Prior to the LifePoint/RCCH Merger, we historically determined that each of our hospitals represented a reporting unit in accordance with ASC 280, "Segment Reporting" ("***ASC 280***") and ASC 350. Due to the significance of the LifePoint/RCCH Merger and its impact on our management team and business operations, we re-evaluated our reporting units in accordance with ASC 280 and ASC 350 during 2019 and determined that our consolidated business comprises a single reporting unit for goodwill impairment testing purposes. There were no changes in our determination of reporting units for the years ended December 31, 2021 and 2020. For the annual impairment evaluation, we determine fair value using a discounted cash flow ("***DCF***") analysis and consideration of certain market inputs including those of guideline public companies. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing our assumptions. The cash flows employed in the DCF analysis are based on our most recent financial budgets and business plans and, when applicable, various growth rates for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the respective reporting unit.

If we determine the carrying value of goodwill is impaired, or if the carrying value of a business that is to be sold or otherwise disposed of exceeds its fair value, then we reduce the carrying value, including any allocated goodwill, to fair value. Refer to Note 5 to our accompanying consolidated financial statements included elsewhere in this Report for further discussion of the results of our annual goodwill impairment evaluation procedures.

Accounting for Income Taxes

Deferred tax assets generally represent items that will result in a tax deduction in future years for which we have already recorded the tax benefit in our income statement. We assess the likelihood that deferred tax assets will be recovered from future taxable income. To the extent we believe that recovery is not probable, a valuation allowance is established. To the extent we establish a valuation allowance or subsequently increase or decrease this allowance, we must include an adjustment as part of the income tax provision in our results of operations. Our deferred tax asset balances in our consolidated balance sheets were $504 million and $537 million as of December 31, 2021 and 2020, respectively. Our valuation allowances for deferred tax assets in our consolidated balance sheets were $197 million and $360 million as of December 31, 2021 and 2020, respectively.

In addition, significant judgment is required in determining and assessing the impact of certain tax-related contingencies. We establish accruals when, despite our belief that our tax return positions are fully supportable, it is probable that we have incurred a loss related to tax contingencies and the loss or range of losses can be reasonably estimated. We adjust the accruals related to tax contingencies as part of our provision for income taxes in our results of operations based upon changing facts and circumstances, such as progress of a tax audit, development of industry related examination issues, as well as legislative, regulatory, or judicial developments. A number of years may elapse before a particular matter, for which we have established an accrual, is audited and resolved.

The first step in determining the deferred tax asset valuation allowance is identifying reporting jurisdictions where we have a history of tax and operating losses or are projected to have losses in future periods as a result of changes in operational performance. We then determine if a valuation allowance should be established against the deferred tax assets for that reporting jurisdiction. The second step is to determine the amount of the valuation allowance. We will generally establish a valuation allowance equal to the net deferred tax asset (deferred tax assets less deferred tax liabilities) related to the jurisdiction identified in step one of the analysis. In certain cases, we may not reduce the valuation allowance by the amount of the deferred tax liabilities depending on the nature and timing of future taxable income attributable to deferred tax liabilities.

In assessing tax contingencies, we apply the provisions of ASC 740, “Income Taxes”. We apply the recognition threshold and measurement of a tax position taken or expected to be taken in a tax return and follow the guidance on various matters such as derecognition, interest, penalties and disclosure. We classify interest and penalties as a component of income tax expense. During each reporting period, we assess the facts and circumstances related to recorded tax contingencies. If tax contingencies are no longer deemed probable based upon new facts and circumstances, the contingency is reflected as a reduction of the provision for income taxes in the current period.

Our deferred tax assets exceeded our deferred tax labilities by $158 million as of December 31, 2021, excluding the impact of valuation allowances. Historically, we have not produced federal taxable income, and in connection with the LifePoint/RCCH Merger, we became highly leveraged. As such, we believe it is likely that a significant component of our deferred tax assets will not be realized and thus have established a valuation allowance against these deferred tax assets as of December 31, 2021. In addition, we have subsidiaries with a history of tax losses in certain state jurisdictions, and, based upon those historical tax losses, we have assumed that the subsidiaries would not be profitable in the future for those states’ tax purposes. If our assertion regarding the future profitability of those subsidiaries would have been different, then our deferred tax assets would be understated by the amount of the state valuation allowance of $146 million at December 31, 2021. During the year ended December 31, 2021, we reduced our valuation allowance by $163 million as a result of the transfers and utilization of certain net deferred tax assets and liabilities between us and ScionHealth.

Reserves for Self-Insurance Claims

Given the nature of our operating environment, we are subject to potential professional liability claims, employee workers’ compensation claims and other claims. To mitigate a portion of this risk, we maintain insurance for individual professional liability claims and employee workers’ compensation claims exceeding SIR and deductible levels. At December 31, 2021, our SIR for professional liability claims is $15 million per claim at the majority of our acute care hospitals. Additionally, we participate in state-specific professional liability programs in Colorado, Indiana, Kansas, New Mexico and Pennsylvania. We have a $25,000 deductible for professional liability at each of our IRFs. At December 31, 2021, our deductible for workers’ compensation claims at each of our acute care hospitals was $1 million per claim in all states in which we operate except for Montana and Washington. We participate in state-specific programs for our workers’ compensation claims arising in these states. There is no deductible for workers’ compensation claims at our IRFs. Our SIR and deductible levels are evaluated annually as a part of our insurance program’s renewal process.

Each year, we obtain quotes from various insurers with respect to the cost of obtaining insurance coverage. We compare these quotes to our most recent actuarially determined estimates of losses at various self-insured retention and deductible levels. Accordingly, changes in insurance costs affect the self-insured retention and deductible levels we choose each year.

Our reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. Our expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of our self-insured retention and deductible levels; the administrative costs of the insurance program; and interest expense related to the discounted portion of the liability.

Our reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. Our reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. We have discounted our reserves for self-insured claims to their present value using a discount rate of 1.6% at December 31, 2021, 1.7% at December 31, 2020, and 1.9% at December 31, 2019. We select a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

The following table provides information regarding our reserves for self-insured claims at December 31, 2021 and 2020 (in millions):

	2021	2020
Undiscounted	$ 308	$ 301
Discounted (as reported)	$ 295	$ 287

As of December 31, 2021 and 2020, we estimated less than 1% of our reserves for self-insured claims represent reserves for settled and unpaid claims. Our average lag time between the settlement and payment of a self-insured claim ranges from 1 to 2 weeks.

Our estimated reserves for self-insured claims will be significantly affected if current and future claims differ from historical trends. While we monitor reported claims closely and consider potential outcomes when determining our reserves for self-insured claims, the complexity of the claims, the extended period of time to settle the claims and the wide range of potential outcomes complicate the estimation process. In addition, certain states have passed varying forms of tort reform which attempt to limit the amount of awards. If such laws are passed in the states where our hospitals are located, our loss estimates could decrease.

Our estimate of reserves for self-insured and deductible claims are based upon actuarial calculations and are significantly influenced by key assumptions and other factors. These factors include, but are not limited to: historical paid claims; trending of loss development factors; trends in the frequency and severity of claims, which can differ significantly by jurisdiction as a result of the legislative and judicial climate in such jurisdictions; coverage limits of third-party insurance and actuarial determined statistical confidence levels. Given the number of assumptions and characteristics of each assumption considered in establishing the reserves for self-insured claims, it is difficult to compute the individual financial impact of each assumption or groups of assumptions. Some of the assumptions are dependent upon the quantitative measurement of other assumptions, and therefore are not accurately evaluated in isolation. For example, a change in the frequency of claims assumption is also affected by the estimated severity of these claims resulting in an inability to properly isolate and quantify the impact of a change in this assumption.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Our reserves for self-insured claims are comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period. We have the ability to reliably determine the amount and timing of payments based on sufficient history of our claims development, the use of external actuarial expertise and our rigorous review process. Actuarial payment patterns are based on our individual hospital historical data both prior to and after our inception. The processes, performed by both external actuaries and our management, enable us to reliably determine the amount of our ultimate losses as well as the timing of the loss settlements such that discounting of the reserves for self-insured claims is appropriate. Given the number of factors considered in establishing the reserves for self-insured claims, it is neither practical nor meaningful to isolate a particular assumption or parameter of the process and calculate the impact of changing that single item.

Ultimately, from an actuarial standpoint, the sensitivity in the estimates of reserves for self-insured claims is reflected in the various actuarial confidence levels. Our best estimate of our reserves for self-insured claims utilizes an actuarial central estimate, which employs a statistical confidence level that approximates 50%. Higher statistical confidence levels, while not representative of our best estimate, reflect reasonably likely outcomes upon the ultimate resolution of related claims. Using a higher statistical confidence level would increase the estimated reserves for self-insured claims. At a 75% statistical confidence level, our estimated reserve would increase by $27 million. Changes in our estimates of reserves for self-insured claims are non-cash charges and accordingly, do not impact our liquidity or capital resources.

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of our quarterly and semi-annual actuarial calculations resulted in changes to our reserves for self-insured claims for prior years. For the years ended December 31, 2021 and 2019 our related self-insured claims expense increased by $13 million and $7 million, respectively, compared to the prior year and for the year ended December 31, 2020 it decreased by $4 million compared to the prior year.

Item 7A. ***Quantitative and Qualitative Disclosures About Market Risk.***

Market Risk

Market risk is defined as the risk of loss resulting from changes in market prices as a result of changes in interest rates, credit and liquidity or general economic conditions. Our principal market risks in the ordinary course of business are credit risk, liquidity risk and interest rate risk. We currently do not have direct exposure to either market risk from trading activities or foreign currency exchange rate risk.

Credit Risk

We define credit risk as the risk that amounts payable by uninsured patients and remaining patient responsibility amounts (deductibles and co-payments) for patient accounts where the primary insurance carrier has paid the amounts covered by the applicable agreements will not be paid. The provision for doubtful accounts relates primarily to amounts due directly from patients. While we have experienced a reduction in uninsured patients, the risk of collection from insured patients and the amounts due, may increase as more individuals are enrolled in insurance plans with larger deductibles and/or co-payments, including those purchased on insurance exchanges.

Liquidity Risk

We define liquidity risk as the risk that we will not meet our payment obligations in a timely manner or the risk that market conditions or institution-specific events may reduce our ability to raise funds from market counterparties. An adverse institution-specific event such as a major loss that causes a perceived or actual deterioration in our financial condition or an adverse systemic event could affect our funding liquidity.

Interest Rate Risk

Borrowings under the ABL Facility and the Term Loan Facility are at variable rates of interest and expose us to interest rate risk. To manage this risk, we entered into an Interest Rate Swap. The terms of the Interest Rate Swap require us to pay a fixed rate of 2.63% on a notional amount of $1.1 billion and, in exchange, we receive one-month LIBOR. The Interest Rate Swap became effective on February 19, 2019 and terminated on February 19, 2022.

As of December 31, 2021, we had total outstanding debt of approximately $6.3 billion, excluding finance lease obligations and unamortized debt issuance costs and premium, of which approximately $2.1 billion, or 33.3%, was subject to variable rates of interest after giving effect to our Interest Rate Swap, and approximately $3.2 billion, or 50.7%, was subject to variable rates of interest prior to giving effect to our Interest Rate Swap. If the interest rate on our variable rate long-term debt outstanding as of December 31, 2021, prior to giving effect to our Interest Rate Swap, were to increase by 100 basis points during any annual period, our cash flows would be negatively impacted by approximately $32 million.

Item 8. ***Financial Statements and Supplementary Data.***

Information with respect to this Item is contained in our accompanying consolidated financial statements beginning on page F-1 of this Report.

Item 9. ***Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.***

None.

Item 9A. ***Controls and Procedures.***

The information that would be required to be disclosed under Part II, Item 9A of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a**)** of each of the Indentures.

Item 9B. ***Other Information.***

None.

Item 9C. ***Disclosure Regarding Foreign Jurisdictions that Prevent Inspections.***

None.

PART III

Item 10. ***Directors, Executive Officers and Corporate Governance*.**

The following table provides information regarding our executive officers and the members of our Board of Directors (ages as of April 5, 2022):

Name	Age	Position(s)
David M. Dill	53	President, Chief Executive Officer, Director and Chairman
Michael S. Coggin	52	Executive Vice President and Chief Financial Officer
Victor E. Giovanetti	58	Executive Vice President, Hospital Operations
Jennifer C. Peters	51	Executive Vice President, General Counsel
Terry W. Terrill, Jr.	55	Executive Vice President, Administration
Jason Zachariah	44	President, Integrated Operations
Matthew H. Nord	42	Director
Norman Brownstein	78	Director
Nell Buhlman	55	Director
Christine Cahill	27	Director
Christopher J. Christie	59	Director
Maxwell David	31	Director
Michael P. Haley	71	Director
Holly McMullan	45	Director
Daniel Morissette	56	Director
Eric L. Press	56	Director
G. Rodney Wolford	75	Director

David M. Dill became our Chief Executive Officer upon consummation of the LifePoint/RCCH Merger. Prior to the consummation of the LifePoint/RCCH Merger, Mr. Dill served in various roles at Legacy LifePoint as President since January 2011 and as Chief Operating Officer since April 2009. Mr. Dill served as Executive Vice President from February 2008 to January 2011. Mr. Dill joined Legacy LifePoint in July 2007 as Chief Financial Officer and continued to serve in that role until April 2009. From March 2006 until Mr. Dill joined Legacy LifePoint, he served as executive vice president of Fresenius Medical Care North America and as chief executive officer of one of two U.S. divisions of Fresenius Medical Care Services, a wholly owned subsidiary of Fresenius Medical Care AG & Co. KGaA. Mr. Dill previously served as executive vice president, chief financial officer and treasurer of Renal Care Group, Inc., a publicly-traded dialysis services company, from November 2003 until Renal Care Group was acquired by Fresenius Medical Care in March 2006. From 1996 to November 2003, Mr. Dill served in various finance and accounting roles with Renal Care Group, Inc. Mr. Dill served as a member of the board of directors of Psychiatric Solutions, Inc., a behavioral health services company, from 2005 until 2010.

Michael S. Coggin became our Executive Vice President and Chief Financial Officer upon consummation of the LifePoint/RCCH Merger. Prior to the consummation of the LifePoint/RCCH Merger, Mr. Coggin served in various roles at Legacy LifePoint as Executive Vice President, Chief Financial Officer and Chief Accounting Officer, since September 2016. From December 2008 until September 2016, Mr. Coggin served as Senior Vice President and Chief Accounting Officer of Legacy LifePoint. From September 2007 until December 2008, Mr. Coggin served as chief financial officer of Specialty Care Services Group, a multi-service line healthcare provider primarily focused on providing perfusion and auto-transfusion services to hospitals. Mr. Coggin was a senior vice president in the finance, accounting and internal audit groups of Renal Care Group, Inc. from April 2004 until its acquisition by Fresenius Medical Care AG & Co. KGaA in March 2006. Following the acquisition, Mr. Coggin provided finance and accounting oversight for business units within the East Division of Fresenius. Prior to that time, Mr. Coggin was an audit manager at KPMG Peat Marwick in Nashville, Tennessee.

Victor E. Giovanetti became our Executive Vice President, Hospital Operations upon consummation of the LifePoint/RCCH Merger. Prior to the consummation of the LifePoint/RCCH Merger, Mr. Giovanetti served as President of Legacy LifePoint's Eastern Group since January 2017. From July 2015 to January 2017, Mr. Giovanetti served as President of Legacy LifePoint's Western Group. Mr. Giovanetti joined Legacy LifePoint in July 2013 as Chief Operating Officer of Legacy LifePoint's Eastern Group. Mr. Giovanetti has more than 25 years of management experience in operations, financial, clinical and strategic aspects of healthcare administration. Prior to joining the Company, his positions included president of HCA Lewis-Gale Regional Health System in Roanoke, Virginia, chief executive officer and chief operating officer of Southern Hills Medical Center in Nashville, Tennessee, and various management roles with HCA, Symbion and other healthcare organizations in Georgia.

Jennifer C. Peters became our Executive Vice President and General Counsel upon consummation of the LifePoint/RCCH Merger. Prior to the consummation of the LifePoint/RCCH Merger, Ms. Peters served as Legacy LifePoint's General Counsel since April 2017 and Corporate Secretary since June 2017. Prior to that, Ms. Peters served as senior vice president and chief operations counsel of Legacy LifePoint, where she was responsible for overseeing the Company's operations lawyers and contract management team to ensure consistent legal guidance across all operational units. Prior to joining Legacy LifePoint in November 2013, Ms. Peters served as general counsel, secretary and chief compliance officer for Simplex Healthcare from October 2010 through November 2013. Ms. Peters has also served as vice president and associate general counsel at Community Health Systems. In addition, Ms. Peters has experience as a hospital administrator.

Terry W. "Sonny" Terrill, Jr. joined the Company in April 2019 as Executive Vice President, Human Resources. Mr. Terrill is responsible for providing leadership in developing and executing human resources strategies in support of the overall business plan and strategic direction of the organization. Mr. Terrill has three decades of HR experience, including executive coaching, full-cycle talent management and management of large-scale system and organizational integration. Before joining the Company, he served in a number of leadership roles, most recently as executive vice president, chief human resources officer for BrightSpring Health from August 2017 to March 2019 and human resources officer for CIGNA- HealthSpring from May 2005 to August 2017. He is also a Six Sigma Black Belt.

Jason Zachariah became our President, Integrated Services upon consummation of the Kindred Transaction in December 2021. Prior to the consummation of the Kindred Transaction, Mr. Zachariah served as President and Chief Operating Officer of Kindred Healthcare since December 2020, and as Chief Operating Officer of Kindred Healthcare since January 2020. Mr. Zachariah also served at Kindred Rehabilitation Services as President from August 2016 to January 2020, and as Chief Operating Officer, Kindred Hospital Rehabilitation Services, from July 2013 to August 2016. From May 2006 to July 2013, he served in various roles in Kindred's Hospital Division, including Chief Operating Officer/Executive Director of the California/Arizona district. From 2003 until Mr. Zachariah joined Kindred Healthcare, he served as a Senior Sales Representative at GlaxoSmithKline Pharma GmbH.

Matthew H. Nord is Partner and Co-Head of Private Equity at Apollo Global Management, where he oversees the firm's private equity strategy and has led numerous investments across technology, healthcare and business services. Mr. Nord currently serves on the board of directors of TD Synnex, ADT, Intrado Corporation, LifePoint Health, ScionHealth, and the Rock and Roll Hall of Fame Foundation. Prior to joining Apollo in 2003, Mr. Nord was a member of the Investment Banking division of Salomon Smith Barney Inc. Mr. Nord graduated summa cum laude from the University of Pennsylvania's Wharton School of Business with a B.S. in Economics. Mr. Nord also serves on the Montefiore Health System Board of Trustees and on the Board of Advisors of the University of Pennsylvania's Stuart Weitzman School of Design.

Norman Brownstein became our Director in April 2016. Mr. Brownstein is the founding member and chairman of the board of the law firm of Brownstein Hyatt Farber Schreck, LLP. Mr. Brownstein is nationally recognized for his extensive experience in real estate law, commercial transactions and public policy advocacy, which spans the economic spectrum, extending to telecommunications, financial services, agriculture, tax and healthcare interests. Mr. Brownstein's firm is one of the leading lobbying firms in the U.S. Mr. Brownstein serves on the board of directors of National Jewish Health and the Simon Wiesenthal Center, and during the past five years has also served as a director of Ardent Healthcare Services. Mr. Brownstein received a B.S. from the University of Colorado and a J.D. from the University of Colorado Law School.

Nell Buhlman became our Director in March 2022**.** Ms. Buhlman is the President and Chief Operating Officer of Press Ganey, overseeing enterprise growth strategy, client management, marketing, health policy, and educational, advisory & consulting services. Since joining Press Ganey in 2010, Ms. Buhlman has also served as the company's Chief Strategy Officer, Senior Vice President for Clinical and Analytic Solutions, and Vice President for Product Strategy. Ms. Buhlman is a Board Member for the Hospital for Consumptives of Maryland (Eudowood Foundation), serves on the Parent Advisory Council for the Greater Baltimore Medical Center, and is an Executive in Residence for the Johns Hopkins Carey Business School. She also serves as a trustee for the WPW Foundation, a charitable organization that provides grants to nonprofits serving vulnerable women and children. Ms. Buhlman holds a Bachelor of Arts degree from Connecticut College and an MBA from Johns Hopkins Carey Business School.

Christine Cahill became our Director in March 2022. Ms. Cahill is an Associate in Apollo Global Management's Private Equity business, having joined in 2018. Prior to that time, Ms. Cahill was a member of the Investment Banking Division of Goldman Sachs. Ms. Cahill serves on the board of directors of Lune Holdings (parent of Kem One). Ms. Cahill graduated from Harvard University with a B.A. in Economics.

Christopher J. Christie became our Director in December 2018. Mr. Christie served two terms as Governor of New Jersey from 2010 to 2018. Prior to that, Mr. Christie served as U.S. Attorney for the District of New Jersey from 2002 to 2008. During his governorship, Mr. Christie chaired the President's Commission on Combating Drug Addiction and the Opioid Crisis in 2017. He currently serves as a legal and political commentator for ABC News. Mr. Christie is a graduate of the University of Delaware and Seton Hall University School of Law.

Maxwell David became our Director in December 2018. Mr. David is a Principal in Apollo Global Management's Private Equity business, having joined in 2014. Prior to that time, Mr. David was a member of the Investment Banking division of Bank of America Merrill Lynch. Mr. David serves on the board of directors of ScionHealth, 25m Health and Camaro Parent, LLC (parent of CareerBuilder). Mr. David graduated cum laude from Dartmouth College.

Michael P. Haley became our Director in December 2018. Prior to that time, Mr. Haley served as a director of Legacy LifePoint since 2005 and as chair of its Audit Committee since 2016. Mr. Haley is also a member of the board of directors of American National Bankshares, Inc., a bank holding company. From 2005 until April 2018, Mr. Haley served as a director of Ply Gem Holdings, Inc., a producer of window, door and siding products for the residential construction industry. Mr. Haley served as an advisor to Fenway Partners, LLC, a private equity investment firm, from April 2006 to June 2015, and was a managing director of its affiliate, Fenway Resources, from 2008 to June 2015. Mr. Haley's previous executive leadership experience includes service as executive chairman of Coach America, a transportation services operator, and as chairman, president and chief executive officer of MW Manufacturers, Inc., a subsidiary of Ply Gem Industries, Inc. In addition, Mr. Haley has served on the Board of Trustees of Roanoke College (Virginia) since 2010 and previously served on the board of the Martinsville-Henry County United Way and as chairman of the board of trustees of Memorial Hospital of Martinsville and of the Martinsville-Henry County Economic Development Corporation.

Holly McMullan became our Director in December 2018. Ms. McMullan is a Partner in Apollo Global Management's Client and Product Solutions group, where she is responsible for fundraising efforts for Apollo's private equity and capital markets businesses, having joined in 2008. Prior to that time, Ms. McMullan was a Senior Vice President at Pequot Capital Management and was previously a member of Guggenheim Advisors, Bear Stearns, and Robertson Opportunity Capital. She currently serves on the following advisory boards: 30 % Coalition, McCombs Advisory Council, New York for McCombs (Chair) and the Hicks Muse Private Equity Research Center at the University of Texas at Austin. Ms. McMullan holds an M.B.A. with a concentration in Finance from the McCombs School of Business at the University of Texas at Austin and a B.A. (honors) in International Business from Sheffield Hallam University, Sheffield, UK.

Daniel Morissette became our Director in April 2016. Mr. Morissette serves as Senior Executive Vice President and Chief Financial Officer for Common Spirit Health and served as Senior Executive Vice President/Chief Financial Officer for Dignity Health since February 2016. Previously, Mr. Morissette served as the Chief Financial Officer for Stanford Health Care. Mr. Morissette has over 25 years of experience in healthcare, consulting and international business development. During the past five years, Mr. Morissette served as a director for Optum360. Mr. Morissette received a B.S. from DePaul University and an M.B.A. from The University of Chicago, Booth School of Business.

Eric L. Press has been our Director since December 2015. Mr. Press is a Partner in Apollo Global Management's Private Equity business, having joined in 1998. In his time with Apollo, he has been involved in many of the firm's investments in basic industrials, metals, lodging/gaming/leisure and financial services. Prior to joining Apollo, Mr. Press worked at the law firm of Wachtell, Lipton, Rosen & Katz, specializing in mergers, acquisitions, restructurings and related financing transactions. Prior thereto, Mr. Press was a consultant with The Boston Consulting Group, a management consulting firm focused on corporate strategy. Mr. Press serves on the boards of directors of ScionHealth, ADT Inc, Lottomatica S.p.A. (f/k/a Gamenet Group S.p.A.) and Apollo Commercial Real Estate Finance, Inc. He previously served on the boards of directors of Eagle LM5 Holdings Inc., Caesars Entertainment Corporation, Princimar Chemical Holdings, LLC, and PlayAGS, Inc. He graduated magna cum laude from Harvard College, with an A.B. in economics, and Yale Law School, where he was a Senior Editor of the Yale Law Journal.

G. Rodney Wolford became our Director in April 2016. Mr. Wolford has over 40 years of wide-ranging experience in the healthcare industry, having served in leadership roles with healthcare providers, suppliers, consulting firms, associations and insurers. Redirecting his professional time from active executive leadership, he now focuses his professional time on multiple boards of directors and rural community economic development. Among his many executive positions, Mr. Wolford served as chief executive officer of Alliant Healthcare (now Norton Healthcare) in Louisville, KY, Sterling Diagnostic, a worldwide manufacturer of x-ray film, Forhealth Technologies, the inventor of the first robot dedicated to hospital IV production, and a senior executive of Blue Cross Tennessee. Mr. Wolford currently serves on the boards of Atlanta based D4C Brands, a pediatric dentistry company, and Liberate Medical, which develops electronic stimulation for ventilator patients, and as a fund manager of Bluegrass Angel Funds III and IV. During the past five years, Mr. Wolford has also served as a director of Haven Behavioral, Laboratory Supply Company and VetCor.

Code of Ethics

Our Board expects its members, as well as our officers and employees, to act ethically at all times and to acknowledge in writing their adherence to the policies comprising our Code of Conduct, which is known as "Common Ground," and, as applicable, our Code of Ethics for Senior Financial Officers and Chief Executive Officer.

Board Structure

The Board consists of 13 directors (with one current vacancy). The Board has the following standing committees: audit; compensation; nominating and governance; compliance; quality; and executive. In addition, the board of directors of the Parent company also has a compensation committee that administers equity-based compensation plans in which our managers, officers, employees, consultants and directors participate. Apollo has the power to control us and our affairs and policies, including the designation of a majority of the members of our Board and the appointment of management.

Committees of our Board of Directors

The Board has adopted written charters for each of the following standing committees:

Audit Committee

The current members of our audit committee are Messrs. Morissette, Haley and Wolford. Mr. Morissette is the chairman of our audit committee. The principal duties and responsibilities of our audit committee are to assist the Board in overseeing:

- the integrity of our financial statements;
- the independent auditor's qualifications, independence and performance;
- the performance of our internal audit function; and
- our compliance with certain legal, ethical and regulatory requirements.

The audit committee has the authority to conduct or authorize investigations into or studies of matters within its scope of responsibilities. It also has the authority to retain and determine funding for independent legal, accounting or other advisors (without seeking Board approval) as it determines necessary or appropriate to carry out its duties and responsibilities.

Our Board has determined that each of Messrs. Morissette and Wolford is an "audit committee financial expert" within the meaning of applicable SEC regulations.

Compensation Committee

The current members of our compensation committee are Messrs. Nord and Press. Mr. Press is the chair of our compensation committee. The principal duties and responsibilities of our compensation committee are as follows:

- approving the non-equity-based compensation of our officers, directors and key employees;
- administering our non-equity-based compensation plans; and
- making recommendations to the Parent for the equity-based compensation of the Parent and its subsidiaries' officers, directors and employees.

Nominating and Governance Committee

The current members of our nominating and governance committee are Messrs. Christie and Press. Mr. Press is the chair of our nominating and governance committee. The principal duties and responsibilities of our nominating and governance committee are as follows:

- to assist the Board in identifying individuals qualified to serve as members of the Board and/or its committees; and
- other duties and responsibilities that our Board may delegate to the nominating and governance committee.

Compliance Committee

The current members of our compliance committee are Messrs. Morissette and Wolford. Mr. Wolford is the chair of our compliance committee. The compliance committee is responsible for overseeing our legal and regulatory compliance program, including certain healthcare and regulatory compliance matters that affect us and our business operations.

Quality Committee

The current members of our quality committee are Messrs. Brownstein, David, Dill, Haley and Ms. McMullan. Mr. Dill is the chair of our quality committee. The quality committee is responsible for monitoring and evaluating the adequacy and effectiveness of our quality of care and patient safety programs and initiatives.

Executive Committee

The current members of our executive committee are Messrs. David, Nord and Press. Mr. Nord is the chair of our executive committee. The principal duties and responsibilities of our executive committee are as follows:

- to advise and counsel the Chief Executive Officer regarding company matters; and
- to take such actions as are necessary due to their urgent or highly confidential nature, or where convening the Board is impracticable, subject to certain limitations.

Item 11. ***Executive Compensation.***

The information that would be required to be disclosed under Part III, Item 11 of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 12. ***Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.***

The information that would be required to be disclosed under Part III, Item 12 of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 13. ***Certain Relationships and Related Transactions, and Director Independence*.**

Executive Compensation

Employment Agreements

In connection with the consummation of the LifePoint/RCCH Merger, we entered into an employment agreement with each of Messrs. Dill, Coggin and Giovanetti and Ms. Peters. We also entered into an employment agreement with Mr. Terrill effective April 8, 2019. Following the consummation of the Kindred Transaction, we assumed an employment agreement with Jason Zachariah.

Each applicable executive's employment agreement contains an indefinite term of employment, other than Mr. Zachariah's, which contains a rolling one-year employment term. Each employment agreement established the applicable executive's annual base salary at the time (the annual base salary in the employment agreements for each of Messrs. Dill, Coggin, Giovanetti, Terrill and Zachariah and Ms. Peters is currently set at $1,500,000, $700,000, $750,000, $525,000, $750,000 and $600,000, respectively), and his or her eligibility to receive an annual bonus with the target bonus for each fiscal year determined annually by our board of directors or our compensation committee. Pursuant to his or her respective employment agreement, Mr. Dill's target bonus is at least 150% of base salary, and each of Messrs. Coggin's, Giovanetti's, Zachariah's and Terrill's and Ms. Peters' target bonus is at least 100% of base salary with a maximum of 200% of base salary except that the agreement for Mr. Zachariah does not specify a maximum bonus percentage. The actual bonus payable to each applicable executive is based upon the level of achievement of annual Company and individual performance objectives, as determined by the board of directors or our compensation committee. In connection with the COVID-19 pandemic, the Company reduced each of Messrs. Dill's, Coggin's, Giovanetti's, Jay's and Terrill's and Ms. Peters' annual base salaries by 30%, effective April 11, 2020 through May 31, 2020.

In the event of the executive's termination without cause (other than due to death or disability) or resignation for good reason, the executive shall be entitled to receive: (i) unpaid prior year's bonus; (ii) if the termination occurs after the second quarter of a fiscal year (or at any time for Mr. Zachariah), a pro rata bonus for the year of termination based upon achievement of performance criteria; (iii) a severance payment equal to 1.5x (or, for Mr. Dill, 2x) the sum of the executive's annual base salary and target bonus, payable in substantially equal installments for 18 months (or, for Mr. Dill, 24 months) following termination (or payable in a lump sum for Mr. Zachariah); provided, that, for all the executives other than Mr. Zachariah or Mr. Terrill, in the event that the Company terminates the executive's employment without cause (other than due to death or disability) or resignation for good reason following a change in control, then the severance payment shall equal 3x the sum of the executive's annual base salary and target bonus, to be paid as a lump sum following termination and (iv) up to 12 months of health benefits continuation (or, for Mr. Zachariah, 18 months).

Each applicable executive is subject to a (i) 12-month post-termination non-competition covenant relating to competitors of the Company, (ii) 12-month post-termination non-solicitation covenant in respect of our employees, consultants, clients, customers and similar business relationships of the Company and (iii) perpetual confidentiality and non-disparagement covenants.

Retention Bonus and Severance Payments

In connection with the consummation of the LifePoint/RCCH Merger, we paid retention bonuses and severance payments to certain former Legacy LifePoint or RCCH executives and other employees. The aggregate amount for such payments made during the year ended December 31, 2019 are included within merger and acquisition costs on our consolidated statement of operations and are discussed in Note 2, "Business Development Update" to our accompanying consolidated financial statements included elsewhere in this Report.

Nonqualified Deferred Compensation

After freezing the LifePoint Hospitals Deferred Compensation Plan and RCCH HealthCare Partners Deferred Compensation Plan at the end of 2020, the Company established a new nonqualified deferred compensation plan effective January 1, 2021 in which certain Company executives and employees participate. Also, certain former Kindred executives and employees, including Mr. Zachariah, who are now Company executives and employees, participate in a separate nonqualified deferred compensation plan that replicates the former Kindred Deferred Compensation Plan. Plan participants may defer a portion of their salary and bonuses. Currently, the Company does not make any matching or other contributions to the nonqualified deferred compensation plans. The timing and form of payments are based on the terms of the applicable plan and deferral elections made by participants.

Parent Capital Units and Profits Units

Certain of certain of our and our affiliates' executives, employees, consultants and directors have been granted profits units and/or purchased or otherwise acquired capital units in the Parent.

The profits units provide the recipients with the opportunity to share in our future appreciation, subject to vesting. In general, 40% of the profits units vest in substantially equal installments on the last day of each of the first twenty (20) calendar quarters commencing on or after the applicable grant date and the remaining 60% of the profits units vest based on the achievement of certain investment returns to our Sponsor. The profits units we typically grant to directors on an annual basis generally vest on a time basis, on the date that is six months and one day from the date of grant. In addition, the time-vested profits units and the director profits units will vest in full on a sale of the Company.

The capital units and profits units are generally subject to the terms and condition set forth in the applicable award agreements or subscription agreements, as the case may be, and in the partnership agreement of the Parent, including, but not limited to, customary transfer restrictions, redemption rights and obligations, drag-along rights, tag-along rights, and preemptive rights

Equity Repurchases

From time to time, the Parent repurchases previously issued profits units and capital units held by certain of our former and current employees, including executive officers and directors. Additionally, transactions involving the Parent may impact the units held by such former and current employees. Refer to Note 13 to our accompanying consolidated financial statements included elsewhere in this Report for a discussion of profits units issued by the Parent to our employees and directors and additional information regarding our accounting for stock-based compensation.

Director Retainers and Fees

Certain members of our Board of Directors are entitled to receive annual retainers and fees in accordance with our director compensation policy in connection with their service on our Board.

Management Agreement

In connection with the LifePoint/RCCH Merger, we entered into a Management Consulting Agreement (as amended, the "***Management Agreement***") with an affiliate of our Sponsor relating to the provision of certain management consulting and advisory services. In exchange for the provision of such services, we currently pay a non-refundable quarterly management fee of approximately $2 million. The Management Agreement will terminate on the earlier of (i) the eighth anniversary of July 25, 2021, (ii) the consummation of any transaction or series of transactions, whether or not related, as a result of which New Holders (as defined in the Management Agreement) become the beneficial owner, directly or indirectly, of more than 90% of our equity and voting securities and (iii) such earlier date as is mutually agreed upon. Our payment obligations under the Management Agreement may be subject to deferral to the extent such obligations would otherwise violate any prohibitions or limitations under our then existing indebtedness. Furthermore, we may be required to reimburse such affiliate of our Sponsor for all out-of-pocket expenses, including legal fees and expenses, incurred by such affiliate and its affiliates and each of their representatives in the connection with the performance of its obligations under the Management Agreement or the Transaction Fee Agreement (as defined below), including expenses incurred in connection with the transactions contemplated by the agreement governing the LifePoint/RCCH Merger (the "***Merger Agreement***") and any Underwritten Offering or Change of Control (as defined in the Merger Agreement).

Transaction Fee Agreement

In connection with the LifePoint/RCCH Merger, we entered into a transaction fee agreement (as amended, the "***Transaction Fee Agreement***") with an affiliate of our Sponsor relating to the provision of certain preparation services in support of the LifePoint/RCCH Merger. The Transaction Fee Agreement will terminate automatically upon the termination of the Management Agreement. As consideration for these transaction preparation services, we paid a nonrefundable fee of $55 million in full to an affiliate of our Sponsor upon the closing of the LifePoint/RCCH Merger. In addition, if we, or certain of our parent entities or controlled affiliates, consummate an acquisition (including of assets or equity interests) of any business or entity, we are also required to pay to an affiliate of our Sponsor a success fee equal to 1% of the aggregate enterprise value (i) paid or provided by or to the Company Group (as defined in the Transaction Fee Agreement) or us or (ii) otherwise indicated by such acquisition. Furthermore, we may be required to reimburse such affiliate of our Sponsor for all out-of-pocket expenses, including legal fees and expenses, incurred by such affiliate and its affiliates and each of their representatives in the connection with the performance of its obligations under the Transaction Fee Agreement, including expenses incurred in connection with the transactions contemplated by the Merger Agreement.

Participation of Apollo Global Securities, LLC

Apollo Global Securities, LLC is an affiliate of our Sponsor and received a portion of the gross spread as an initial purchaser in the sale of the Existing Unsecured Notes and the sale of the Existing Secured Notes. Apollo Global Securities, LLC or one of its affiliates also participated as an arranger in respect of the Term Loan Facility and the ABL Facility, for which it received customary fees.

Transition Services Agreements and Other Agreements with ScionHealth

In connection with the Kindred Transaction, we have entered into a number of transition services agreements and other ancillary agreements with ScionHealth and its subsidiaries with estimated proceeds of $61 million per year to LifePoint and an estimated cost of $3 million per year to LifePoint. In addition, we and ScionHealth are party to a number of commercial services agreements, pursuant to which the Knight Transferred Business provides ScionHealth with therapy services and rehabilitation unit management and development services, among other commercial services.

Item 14. *Principal Accounting Fees and Services*.

The Audit Committee has appointed Ernst & Young LLP as our independent registered public accounting firm. Services provided to us by Ernst & Young LLP in fiscal 2021 are described below.

Audit Fees. The aggregate audit fees billed by Ernst & Young LLP for professional services rendered for the audit of our annual consolidated financial statements and services that are normally provided by the independent registered public accounting firm in connection with statutory and regulatory filings totaled approximately $4 million for 2021 and 2020.

Audit-Related Fees. The aggregate fees billed by Ernst & Young LLP for assurance and related services other than those described under “Audit Fees” were approximately $2 million for 2021 and $1 million for 2020.

Tax Fees. The aggregate fees billed by Ernst & Young LLP for professional services rendered for tax compliance, tax advice and tax planning were approximately $1 million for 2021 and nominal for 2020.

All Other Fees. There were no fees billed by Ernst & Young LLP for products or services other than those described above in 2021 or 2020.

PART IV

Item 15. ***Exhibits, Financial Statement Schedules*.**

(a) The following documents are filed as part of this Report:

1. *Consolidated Financial Statements*:

2. *Financial Statement Schedule*: All schedules for which provision is made in the applicable accounting regulations of the SEC are omitted because they either are not required under the related instructions, are inapplicable, or the required information is shown in the consolidated financial statements or notes thereto.

3. *Exhibits*: The exhibits required by Item 601 of Regulation S-K that would be disclosed under Part IV, Item 15 of an annual report on Form 10-K filed with the SEC have been omitted as permitted pursuant to Section 4.02(a) of the Indentures.

Report of Independent Auditors

Board of Directors and Shareholders of
LifePoint Health, Inc.

Opinion

We have audited the consolidated financial statements of LifePoint Health, Inc., which comprise the consolidated balance sheets as of December 31, 2021 and 2020, and the related consolidated statements of operations, comprehensive income (loss), equity and cash flows for each of the three years in the period ended December 31, 2021, and the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company at December 31, 2021 and 2020, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2021 in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error. In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements. In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Other Information

Management is responsible for the other information. The other information comprises the financial and nonfinancial information included in the annual report but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

Note 1. Organization and Summary of Significant Accounting Policies

Organization

LifePoint Health, Inc. ("LifePoint" or the "Company"), a Delaware corporation, acting through its subsidiaries, is a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. The Company generates revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network comprised of 65 community hospital campuses, 28 inpatient rehabilitation facilities ("IRFs"), three behavioral health facilities and additional sites of care that include acute rehabilitation units, outpatient centers and post-acute care facilities. At December 31, 2021, on a consolidated basis, the Company operated 96 healthcare facilities in 29 states throughout the United States ("U.S.") with approximately 10,000 licensed beds and approximately 50,000 dedicated employees.

Unless otherwise indicated or the context otherwise requires, references throughout these notes to the consolidated financial statements to the "Company" or "LifePoint" refer to LifePoint Health, Inc., and each of its consolidated subsidiaries after giving effect to the LifePoint/RCCH Merger (defined below) and (ii) "RCCH" refer to RegionalCare Hospital Partners Holdings, Inc. and each of its consolidated subsidiaries before giving effect to the LifePoint/RCCH Merger. References in this Report to the "Sponsor" refer to certain funds that are affiliates of the Company (the "Apollo Funds") that are ultimately controlled and/or managed by certain affiliates of Apollo Management Holdings, L.P. ("Apollo Management" and, when acting on behalf of the Apollo Funds, "Apollo"), which is an affiliate of Apollo Global Management, Inc.

Additionally, references throughout these notes to the consolidated financial statements to the "LifePoint/RCCH Merger" refer to the merger, which was effective on November 16, 2018, of Legend Merger Sub, Inc., a Delaware corporation and wholly owned subsidiary of RCCH ("Legend Merger Sub"), with and into LifePoint Health, Inc., a Delaware corporation ("Legacy LifePoint"), with Legacy LifePoint surviving the LifePoint/RCCH Merger as a subsidiary of RCCH. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint changed its name from "LifePoint Health, Inc." to "Legacy LifePoint Health, Inc." and, immediately following the effective time of the LifePoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners, Inc." to "LifePoint Health, Inc."

Principles of Consolidation

The accompanying consolidated financial statements include the accounts of the Company and all subsidiaries and entities controlled by the Company through majority voting control and variable interest entities which the Company controls. All significant intercompany accounts and transactions within the Company have been eliminated in consolidation. Noncontrolling interests in non-wholly-owned consolidated subsidiaries of the Company are presented as noncontrolling interests and redeemable noncontrolling interests and distinguish between the interests of the Company and the interests of the noncontrolling owners. Net income attributable to noncontrolling interests and redeemable noncontrolling interests represents the amounts attributable to the noncontrolling interests for each of the applicable periods presented. Investments in entities the Company does not control but does have a substantial ownership interest and can exercise significant influence are accounted for using the equity method.

The Company's financial statements have been presented on the basis of push down accounting in accordance with Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") No. 805-50-S99. Under the push down basis of accounting, certain transactions incurred by the parent company which would otherwise be accounted for in the accounts of the parent are "pushed down" and recorded on the financial statements of the subsidiary. Accordingly, certain items resulting from the acquisition by Apollo have been recorded on the financial statements of the Company.

Use of Estimates

The preparation of financial statements in conformity with U.S. generally accepted accounting principles ("GAAP") requires management to make estimates and assumptions that affect the amounts reported in the Company's accompanying consolidated financial statements and notes to the consolidated financial statements. Actual results could differ from those estimates.

Revenue Recognition and Accounts Receivable

Overview

The Company recognizes revenues in the period in which performance obligations are satisfied. Generally, the Company bills patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. The Company's ability to collect outstanding receivables is critical to its results of operations and cash flows. Amounts the Company receives for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, health maintenance organizations ("HMOs"), preferred provider organizations ("PPOs") and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in the Company's financial statements are recorded at the net consideration to which the Company expects to be entitled to receive in exchange for providing patient care.

The majority of the Company's performance obligations are satisfied over time for the delivery of patient care in both outpatient and inpatient settings. Revenue for performance obligations satisfied over time is recognized based on actual charges incurred in relation to total expected charges for services anticipated to be provided. The Company believes that this method provides a faithful depiction of the transfer of services over the term of the performance obligation based on the remaining services needed to satisfy the obligation. Generally, unsatisfied or partially unsatisfied performance obligations at the end of the reporting period are related to patients admitted to the Company's hospitals that have not yet been discharged. The performance obligations for these patients are typically satisfied when the patients are discharged, which generally occurs within a matter of days of admission. Patients are generally billed when discharged, though they may be billed on an interim basis for longer stays. Accordingly, because all of the Company's performance obligations are part of a contract that is expected to have a duration of one year or less, the Company has elected to apply the exemption provided by ASC 606, "Revenue from Contracts with Customers" ("ASC 606") to not disclose the aggregate amount of the transaction price allocated to performance obligations that are unsatisfied or partially unsatisfied as of period end.

Subsequent adjustments that are determined to be the result of an adverse change in the patient's or the payer's ability to pay are recognized as bad debt expense. With the adoption of ASC 606, bad debt expense is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations, instead of separately as a deduction to arrive at revenue. Bad debt expense for the years ended December 31, 2021, 2020 and 2019 was not material for the Company.

Contractual Discounts

The Company derives a significant portion of its revenues from Medicare, Medicaid and other payers that receive discounts from the Company's established billing rates. The Company must estimate the total amount of these discounts to prepare its financial statements. The Medicare and Medicaid regulations and various managed care contracts under which these discounts must be calculated are complex and are subject to interpretation and adjustment. The Company estimates contractual discounts on a payer-specific basis given its interpretation of the applicable regulations or contract terms. These interpretations sometimes result in payments that differ from the Company's estimates. Additionally, updated regulations and contract renegotiations occur frequently, necessitating regular review and assessment of the estimation process by management. Subsequent changes in estimates for contractual discounts are reflected as an adjustment to revenues in the period of the change. Medicare, Medicaid and other discounted payer accounts receivables are written off after they have been final settled with the payer.

Kentucky Hospital Rate Improvement Program

The Commonwealth of Kentucky has implemented a Medicaid Hospital Rate Improvement Program ("KY HRIP"), which provides supplemental Medicaid payments to all Kentucky hospitals, other than university hospitals and state mental hospitals, and is intended to reduce the gap between the Kentucky Medicaid program's regular inpatient Medicaid payments and each hospital's Medicare allowable costs. During the first quarter of 2021, CMS and the Commonwealth of Kentucky approved a modification to the KY HRIP, which increased the inpatient hospital reimbursement rate from a contracted managed care rate up to a percentage of the average commercial rate. This modification was applied retrospectively to the beginning of the KY HRIP fiscal year, which commenced on July 1, 2020. As a result of this modification, the Company recognized additional revenues of $113 million in its consolidated statement of operations for the year ended December 31, 2021, of which $33 million is related to the period from July 1, 2020 to December 31, 2020. Additionally, the Company recognized additional provider taxes of $15 million for the year ended December 31, 2021, included under the caption "Other operating expenses, net" in the accompanying consolidated statement of operations, of which $5 million is related to the period from July 1, 2020 to December 31, 2020.

Cost Report Settlements

Cost report settlements under reimbursement agreements with Medicare, Medicaid and certain other payers for retroactive adjustments due to audits, reviews or investigations are considered variable consideration and are included in the determination of the estimated transaction price for providing patient care. These settlements are estimated based on the payment terms of the reimbursement agreement with the payer, correspondence from the payer, and the Company's historical experience. Estimated settlements are adjusted in future periods as final settlements are determined. There is a reasonable possibility that recorded estimates will change by a material amount in the near term. For the years ended December 31, 2021, 2020 and 2019, the net adjustments to estimated cost report settlements and other reimbursement adjustments resulted in an increase to revenues of $62 million, $34 million and $17 million, respectively.

The net cost report settlements due from the Company were nominal at December 31, 2021 and $2 million at December 31, 2020 and are included under the caption "Other current liabilities" on the accompanying consolidated balance sheets. The Company's management believes that adequate provisions have been made for adjustments that may result from final determination of amounts earned under these programs consistent with the constraints that are required by ASC 606.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. The Company evaluates these patients, after the patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. The Company estimates the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that the Company utilizes include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that the Company expects to collect. Because the Company provides care to patients regardless of their ability to pay, the Company has determined that the differences between the amounts it bills based on gross or discounted charges and the amounts the Company expects to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and the Company accounts for this variable consideration in accordance with the provisions of ASC 606. Self-pay accounts receivable are written off after collection efforts have been followed in accordance with the Company's policies.

Charity Care

The Company provides care without charge to certain patients that qualify under the local charity care policy of each of its hospitals. For the years ended December 31, 2021, 2020 and 2019, the Company estimates that its costs of care provided under its charity care programs approximated $23 million, $27 million and $34 million, respectively. The Company does not report a charity care patient's charges in revenues or in the provision for doubtful accounts as it is the Company's policy not to pursue collection of amounts related to these patients, and therefore contracts with these patients do not exist.

The Company's management estimates its costs of care provided under its charity care programs utilizing a calculated ratio of costs to gross charges multiplied by the Company's gross charity care charges provided. The Company's gross charity care charges include only services provided to patients who are unable to pay and qualify under the Company's local charity care policies. To the extent the Company receives reimbursement through the various governmental assistance programs in which it participates to subsidize its care of indigent patients, the Company does not include these patients' charges in its cost of care provided under its charity care program.

Financing Component

The Company has elected to apply the practical expedient permitted under ASC 606 and does not adjust the estimated amount of consideration from patients and third-party payers for the effects of a significant financing component due to the Company's expectation that the period between the time the service is provided to a patient and the time that the patient or a third-party payer pays for that service will be one year or less.

Rental Income

The Company leases certain real estate assets it owns to unrelated third parties, primarily medical office buildings to non-employed physicians. The Company recognizes rental income for these operating lease arrangements in which the Company is the lessor on a straight-line basis over the lease term in accordance with ASC 842, "Leases" ("ASC 842").

Concentration of Revenues

The Company's revenues by payer and approximate percentages of revenues were as follows for the years ended December 31, 2021, 2020 and 2019 (dollars in millions):

	2021		2020		2019	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,368	37.7 %	$ 3,134	38.6 %	$ 3,338	38.1 %
Medicaid	1,645	18.4	1,392	17.1	1,495	17.1
HMOs, PPOs and other private insurers	3,691	41.3	3,382	41.6	3,699	42.3
Self-pay	55	0.6	55	0.7	59	0.7
Other	156	1.8	137	1.7	144	1.6
Revenue from contracts with customers	8,915	99.8	8,100	99.7	8,735	99.8
Rental income	22	0.2	22	0.3	18	0.2
Revenues	$ 8,937	100.0 %	$ 8,122	100.0 %	$ 8,753	100.0 %

During the years ended December 31, 2021, 2020 and 2019, approximately 56.1%, 55.7% and 55.2%, respectively, of the Company's revenues related to patients participating in the Medicare and Medicaid programs, collectively. The Company's management recognizes that revenues and receivables from government agencies are significant to the Company's operations, but it does not believe that there are significant credit risks associated with these government agencies.

Any changes in the current demographic, economic, competitive or regulatory conditions, or to Medicaid programs could have an adverse effect on the Company's revenues or results of operations. The Company's management does not believe that there are any other significant concentrations of revenues from any particular payer or geographic area that would subject the Company to any significant credit risks in the collection of its accounts receivable.

The Company's revenues by primary service type and approximate percentages of revenues were as follows for the years ended December 31, 2021, 2020 and 2019 (dollars in millions):

	2021		2020		2019	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Inpatient services	$ 3,525	39.4 %	$ 3,379	41.6 %	$ 3,524	40.3 %
Outpatient services	5,234	58.6	4,584	56.4	5,067	57.9
Non-patient (a)	178	2.0	159	2.0	162	1.8
Revenues	$ 8,937	100.0 %	$ 8,122	100.0 %	$ 8,753	100.0 %

(a) Primarily represents revenues from ancillary goods, services and rental income.

General and Administrative Costs

The majority of the Company's operating expenses are "cost of revenue" items. Operating costs that could be classified as "general and administrative" by the Company would include its corporate overhead costs, which were $156 million, $158 million and $159 million for the years ended December 31, 2021, 2020 and 2019, respectively, excluding depreciation and amortization, debt transaction costs, merger and integration costs, certain transaction and advisory costs recognized in connection with the Company's business development activities, and accelerated stock-based compensation expense recognized in connection with a transaction involving the Company's indirect parent, DSB Parent, L.P., a Delaware limited partnership (the "Parent").

Cash and Cash Equivalents

Cash and cash equivalents consist of cash on hand and short-term investments with original maturities of three months or less. The Company places its cash in financial institutions that are federally insured in limited amounts.

Inventories

Inventories of supplies are stated at the lower of cost (first-in, first-out) or market and consist of purchased items. Inventories acquired in connection with business combinations are recorded at fair value which approximates replacement cost. Inventory items are primarily operating supplies used in the direct or indirect treatment of patients.

Investments

The Company accounts for its investments in entities in which the Company does not control under the equity method of accounting in accordance with ASC 321 "Investments – Equity Securities" ("ASC 321") and/or ASC 323, "Investments – Equity Method and Joint Ventures" ("ASC 323"). The Company does not consolidate its equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses or evaluates them for impairment and observable price changes. Refer to Note 9 for further discussion of the Company's investments.

Property and Equipment

Purchases of property and equipment are recorded at cost. Property and equipment acquired in connection with business combinations are recorded at estimated fair value in accordance with the acquisition method of accounting as prescribed in ASC 805, "Business Combinations" ("ASC 805"). Routine maintenance and repairs are charged to expense as incurred. Expenditures that increase capacities or extend useful lives are capitalized. Fully depreciated assets are retained in property and equipment accounts until they are disposed. The Company capitalizes interest on funds used to pay for the construction of major capital additions and such interest is included in the cost of each capital addition.

The following table provides information regarding the Company's property and equipment included in the accompanying consolidated balance sheets as of December 31, 2021 and 2020 (in millions):

	2021	2020
Land	$ 179	$ 227
Buildings and improvements	2,357	2,612
Equipment	1,617	1,552
Construction in progress	162	85
Property and equipment, at cost	4,315	4,476
Accumulated depreciation	(1,051)	(953)
Property and equipment, net of accumulated depreciation	$ 3,264	$ 3,523

Depreciation is computed by applying the straight-line method over the estimated useful lives of buildings, improvements and equipment. Assets under capital and finance leases are generally amortized using the straight-line method over the shorter of the estimated useful life of the assets or life of the lease term, excluding any lease renewals, unless the lease renewals are reasonably assured. Capitalized internal-use software costs are amortized over their expected useful life, which is generally four years. Useful lives are as follows:

	Years		
Buildings and improvements (including those under finance leases)	3	-	40
Equipment	2	-	15
Equipment under finance leases	3	-	6

Depreciation expense (including amortization of finance lease obligations) totaled $344 million, $376 million and $375 million for the years ended December 31, 2021, 2020 and 2019, respectively.

Whenever events or changes in circumstances indicate that the carrying values of certain long-lived assets may be impaired, the Company projects the undiscounted cash flows expected to be generated by these assets. If the projections indicate that the reported amounts are not expected to be recovered, such amounts are reduced to their estimated fair value based on a quoted market price, if available, or an estimate based on valuation techniques available in the circumstances. There were no long-lived asset impairments recorded for the years ended December 31, 2021, 2020 and 2019.

Goodwill and Intangible Assets

The Company accounts for its acquisitions in accordance with ASC 805 using the acquisition method of accounting. Goodwill represents the excess of the cost of an acquired entity over the net amounts assigned to assets acquired and liabilities assumed. In accordance with ASC 350, Intangibles – Goodwill and Other ("ASC 350"), goodwill and intangible assets with indefinite lives are reviewed by the Company annually for impairment on October 1. Prior to the LifePoint/RCCH Merger, the Company historically determined that each of its hospitals represented a reporting unit in accordance with ASC 280, "Segment Reporting" ("ASC 280") and ASC 350. Due to the significance of the LifePoint/RCCH Merger and its impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280 and ASC 350 during 2019 and determined that the consolidated business comprises a single reporting unit for goodwill impairment testing purposes. There were no changes in the Company's determination of reporting units for the years ended December 31, 2021 and 2020. For the annual impairment evaluation, the Company determines fair value using a discounted cash flow ("DCF") analysis and consideration of certain market inputs including those of guideline public companies. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates, profitability and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing the Company's assumptions. The cash flows employed in the DCF analysis are based on the Company's most recent financial budgets and business plans and, when applicable, various growth rates and profitability for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the reporting unit.

The Company's intangible assets primarily relate to contract-based physician minimum revenue guarantees; certificates of need and certificates of need exemptions; and licenses, provider numbers, accreditations and other. Contract-based physician minimum revenue guarantees are amortized over the terms of the agreements. The certificates of need, certificates of need exemptions, licenses, provider numbers, accreditations and other have been determined to have indefinite lives and, accordingly, are not amortized. Refer to Note 5 for further discussion of the Company's goodwill and intangible assets.

Income Taxes

The Company accounts for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in the income tax provision in the period that includes the enactment date. The Company assesses the likelihood that deferred tax assets will be recovered from future taxable income. To the extent the Company believes that recovery is not likely, a valuation allowance is established. The establishment or increase in a valuation allowance is included as an expense within the provision for income taxes in the consolidated statements of operations. The Company classifies interest and penalties related to its tax positions as a component of income tax expense. Refer to Note 6 for further discussion of the Company's accounting for income taxes.

Reserves for Self-Insurance Claims

Given the nature of the Company's operating environment, the Company is subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, the Company maintains insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("SIR") and deductible levels. At December 31, 2021, the Company's SIR for professional liability claims is $15 million per claim at the majority of its acute care hospitals. Additionally, the Company participates in state-specific professional liability programs in Colorado, Indiana, Kansas, New Mexico and Pennsylvania. The Company has a $25,000 deductible for professional liability at each of its IRFs. At December 31, 2021, the Company's deductible for workers' compensation claims at each of its acute care hospitals was $1 million per claim in all states in which it operates except for Montana and Washington. The Company participates in state-specific programs for its workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at IRFs. The Company's SIR and deductible levels are evaluated annually as a part of the Company's insurance program's renewal process.

The Company's reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. The Company's expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of the Company's self-insured retention and deductible levels; and interest expense related to the discounted portion of the liability. The Company's expense for self-insurance and deductible claims was approximately $86 million, $85 million and $76 million for the years ended December 31, 2021, 2020 and 2019, respectively.

The Company's reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. These reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. The Company's reserves for self-insured claims have been discounted to their present value using a discount rate of 1.6% at December 31, 2021, 1.7% at December 31, 2020, and 1.9% at December 31, 2019. The Company's management selects a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Accordingly, the Company's reserves for self-insured claims, comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period, include both a current and long-term component. The current portion of the Company's reserves for self-insured claims is included under the caption "Other current liabilities" and the long-term portion is included under the caption "Other long-term liabilities" in the accompanying consolidated balance sheets.

The following table provides information regarding the classification of the Company's reserves for self-insured claims at December 31, 2021 and 2020 (in millions):

	2021	2020
Current portion	$ 79	$ 82
Long-term portion	216	205
	$ 295	$ 287

The following table presents the changes in our reserves for self-insured claims for the years ended December 31, 2021 and 2020 (in millions):

	2021	2020
Reserve at the beginning of the period	$ 287	$ 261
Increase for the provision of current year claims	72	88
Increase (decrease) for the provision of prior year claims	13	(4)
Payments related to current year claims	(5)	(6)
Payments related to prior year claims	(72)	(49)
Provision for the change in discount rate	1	1
Non-cash change in reserve for claims in excess of SIR levels	(5)	(4)
Liabilities received in connection with the Kindred Transaction	4	-
Reserve at the end of the period	$ 295	$ 287

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of the Company's quarterly and semi-annual actuarial calculations resulted in changes to its reserves for self-insured claims for prior years. As a result, the Company's related self-insured claims expense increased by $13 million and $7 million for the years ended December 31, 2021 and 2019, respectively, and decreased by $4 million for the year ended December 31, 2020.

Point of Life Indemnity, Ltd.

The Company operates, with approval from the Cayman Islands Monetary Authority, a captive insurance company under the name Point of Life Indemnity, Ltd. Through this wholly-owned subsidiary of the Company, the captive insurance company issues malpractice indemnity policies to certain subsidiaries employing physicians and advanced practice providers and contracting with physicians. Fees charged to these subsidiaries are eliminated in consolidation. Reserves for the Company's estimate of the related outstanding claims, including incurred but not reported losses, are actuarially determined and are included as a component of the Company's reserves for professional liability self-insurance claims.

Self-Insured Medical Benefits

The Company is self-insured for substantially all of the medical expenses and benefits of its employees. The reserve for medical benefits primarily reflects the current estimate of incurred but not reported losses based upon an annual actuarial calculation as of the balance sheet date. The undiscounted reserve for self-insured medical benefits was $46 million and $38 million at December 31, 2021 and 2020, respectively, and is included in the Company's accompanying consolidated balance sheets under the caption "Other current liabilities".

Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to the Company. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues, and expenses at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes as a separate component of earnings that portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company. Refer to Note 10 for further discussion of the Company's noncontrolling interests and redeemable noncontrolling interests.

Variable Interest Entities

The Company follows the provisions of ASC 810, "Consolidation" for determining whether an entity is a variable interest entity ("VIE"). In order to determine if the Company is a primary beneficiary of a VIE for financial reporting purposes, it must consider whether it has the power to direct activities of the VIE that most significantly impact the performance of the VIE and whether the Company has the obligation to absorb losses or the right to receive returns that are significant to the VIE. The Company consolidates a VIE when it is the primary beneficiary.

As of December 31, 2021, the Company consolidated 23 acute care hospitals and 28 IRFs which were partnerships subject to joint venture agreements. Under GAAP, the Company determined that six of its acute care hospital partnerships and 26 of its IRF partnerships qualify as VIEs, and furthermore, the Company concluded that it is the primary beneficiary in all of the VIE partnerships. The Company holds an ownership interest and acts as manager in each of the partnerships. Through the management services agreement, the Company is delegated necessary responsibilities to provide management services, administrative services and direction of the day-to-day operations. Based upon the Company's assessment of the most significant activities of the hospitals and IRFs, the Company, as manager, has the ability to direct the majority of those activities in all 32 partnerships which qualify as VIEs.

The analysis upon which the consolidation determination rests can be complex, can involve uncertainties, and requires judgment on various matters, some of which could be subject to different interpretations.

The Company's consolidated VIEs comprised approximately $1,268 million, or 11.4%, of the Company's total assets and $525 million, or 5.7%, of the Company's total liabilities as of December 31, 2021.

Stock-Based Compensation

The Company's Parent has issued profits units (the "Units") to certain employees, directors and consultants under the terms and conditions of the Second Amended and Restated Limited Partnership Agreement of the Parent dated June 25, 2021 (as amended, the "Parent Partnership Agreement") and forms of award agreements. The Company accounted for these stock-based awards in accordance with the provisions of ASC 718, "Compensation – Stock Compensation" ("ASC 718"). In accordance with ASC 718, the Company recognized compensation expense based on the estimated grant date fair value of each stock-based award. The Company recognizes forfeitures of Units as they occur. Refer to Note 13 for further discussion of the Company's accounting for the Units.

Defined Benefit Pension Plans

In connection with the LifePoint/RCCH Merger, the Company acquired certain assets and assumed certain liabilities associated with two separate defined benefit pension plans covering certain employees at two of Legacy LifePoint's facilities. The Company accounts for its defined benefit pension plans in accordance with ASC 715, "Compensation – Defined Benefit Plans", ("ASC 715"). In accordance with ASC 715, the Company recognizes the unfunded liability of its defined benefit pension plans in the Company's consolidated balance sheets and unrecognized gains (losses) and prior service credits (costs) as changes in other comprehensive income (loss). The measurement date of the defined benefit pension plans' assets and liabilities coincides with the Company's year-end. The Company's pension benefit obligations are measured using actuarial calculations that incorporate discount rates, rate of compensation increases, when applicable, expected long-term returns on plan assets and consider expected age of retirement and mortality. Refer to Note 12 for further discussion of the Company's defined benefit pension plans.

Defined Contribution Plans

During 2021, the Company maintained a defined contribution retirement plan covering a majority of its employees and a separate defined contribution retirement plan covering the employees at Community Medical Center. These defined contribution retirement plans contain discretionary matching contribution formulas, as well as definite contribution formulas for employees at certain facilities. Refer to Note 12 for further discussion of the Company's defined contribution plans. Effective as of the end of the day on December 31, 2021, the plan covering Community Medical Center employees was merged into the plan covering LifePoint employees.

Reclassifications

Certain reclassifications have been made to the prior years to conform to current year presentation. These reclassifications had no effect on results of operations, financial position or cash flows as previously reported.

Note 2. Business Development Update

Kindred Transaction

On June 18, 2021, the Company entered into a Securities Purchase Agreement (the "SPA") with TPG Kentucky Co-Invest, LP ("TPG Co-Invest Seller"), TPG VII Kentucky Holdings I, LP ("TPG VII Seller"), Kentucky Hospital Management, LLC ("Management Seller"), Kentucky Hospital GP, Inc. ("Partnership GP Seller" and each of TPG Co-Invest Seller, TPG VII Seller, Management Seller and Partnership GP Seller, a "Direct Seller"), TPG VII Kentucky AIV I, LP ("TPG Blocker Seller"), Welsh, Carson, Anderson & Stowe XII, L.P. ("WCAS XII"), Welsh, Carson, Anderson & Stowe XII Delaware, L.P. ("WCAS XII Delaware"), Welsh, Carson, Anderson & Stowe XII Delaware II, L.P. ("WCAS XII Delaware II"), Welsh, Carson, Anderson & Stowe XII Cayman, L.P. ("WCAS XII Cayman"), WCAS Management Corporation ("WCAS Management"), WCAS XII Co-Investors LLC ("WCAS XII Co-Investors," and collectively with WCAS XII, WCAS XII Delaware, WCAS XII Delaware II, WCAS XII Cayman and WCAS Management, the "WCAS Blocker Sellers"), Port-aux-Choix Private Investments Inc. ("PSP Blocker Seller" and each of TPG Blocker Seller, WCAS Blocker Sellers and PSP Blocker Seller, a "Blocker Seller" and, each of the Direct Sellers and each of the Blocker Sellers, a "Seller" and collectively, the "Sellers"), Kentucky Hospital Holdings JV, LP (the "Knight"), the indirect parent of Kindred Healthcare, LLC ("Kindred"), and solely in its capacity as the initial seller representative hereunder, Partnership GP Seller ("Seller Representative"), pursuant to which, upon the terms and subject to the conditions set forth therein and in accordance with applicable law, the Sellers, which directly and indirectly owned all of the issued and outstanding equity interests in the Knight and the Blockers (as defined in the SPA), agreed to sell such equity interests to LifePoint and/or affiliates of LifePoint. Upon the closing of the Kindred Transaction, as described below, the Company and Kindred established a new healthcare company operating under the name ScionHealth.

On November 30, 2021, Knight Health LLC, a Delaware limited liability company formed at the direction of certain affiliates of the Company ("Knight Health"), assumed from the Company and the Company assigned to Knight Health the rights and obligations of the Company under the SPA in respect of the purchase of all of the issued and outstanding equity interests of the Knight and the Blockers and the payment of the purchase price for such equity interests.

On December 23, 2021, the Company, Knight, Knight Health Holdings LLC (d/b/a ScionHealth), a Delaware limited liability company and direct parent of Knight ("ScionHealth"), and certain of their respective affiliates entered into reorganization agreements (the "Reorganization Agreements") that, among other things, provided for (i) the separation of the inpatient rehabilitation facility, behavioral health, contract rehabilitation service and certain support center businesses (collectively, the "Knight Transferred Business") from the businesses of Knight and its subsidiaries, (ii) the separation of the equity and assets comprising 18 select acute care hospitals of the Company (the "Artemis Business") from the business of the Company and its subsidiaries, (iii) the transfer of the Knight Transferred Business to the Company, (iv) the transfer of the Artemis Business to Knight (v) the acquisition by the Company of Class B Units of ScionHealth, with an aggregate value of $350 million, and (vi) reciprocal indemnification obligations with respect to the businesses transferred, in each case of clauses (i) through (vi), pursuant to the reorganization, separation and distribution steps described therein, including the assignment by Knight Health of certain rights and obligations under the SPA, including any post-closing purchase price adjustments (the "Reorganization"). The Class B Units of ScionHealth acquired by the Company are perpetual non-convertible non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price plus accrued, unpaid dividends.

On December 23, 2021, concurrently with the consummation of the Reorganization, the Sellers, the Seller Representative, Knight and the assignees of the rights and obligations of the Company as initial buyer under the SPA, including Knight Health, consummated the Kindred Transaction. Pursuant to the consummation of the Kindred Transaction and the Reorganization, (i) ScionHealth indirectly holds all of the transferred interests in the Artemis Business, (ii) ScionHealth directly holds all of the issued and outstanding limited partnership interests in Knight, (iii) Kentucky Hospital Holdings JV GP LLC, a Delaware limited liability company and direct subsidiary of ScionHealth ("Knight GP"), holds all of the issued and outstanding general partnership interests in Knight, and (iv) the Company holds all of the transferred interests in the Knight Transferred Business and the Class B Units of ScionHealth described above. The Company refers to the foregoing transactions as the "Kindred Transaction".

In connection with the Kindred Transaction, the Company entered into a number of transition services agreements and other ancillary agreements with ScionHealth and its subsidiaries with estimated proceeds of $61 million per year to the Company and an estimated cost of $3 million per year to the Company. In addition, the Company and ScionHealth are party to a number of commercial services agreements, pursuant to which the Knight Transferred Business provides ScionHealth with therapy services and rehabilitation unit management and development services, among other commercial services.

The Company accounted for the Kindred Transaction in accordance with ASC Subtopic 805-50 "Related Issues" ("ASC 805-50") as a transaction between entities under common control. In accordance with ASC 805-50, the Company recognized the assets and liabilities transferred in connection with the Kindred Transaction at the common parent's historical cost basis as of December 23, 2021. In accordance with ASC 805-50, combinations of entities under common control requires retrospective adjustment of comparative period financial information for the periods in which the entities were under common control. The Company and the Knight Transferred Business were under common control beginning December 23, 2021, and therefore, the Company has not retrospectively adjusted its previously issued financial statements. The Kindred Transaction did not have a material impact to the Company's consolidated revenues or income before income taxes for the year ended December 31, 2021.

The following tables summarize the impact of the net asset transfers in connection with the Kindred Transaction (in millions):

Net assets transferred from ScionHealth to LifePoint	$ 1,048
Net assets transferred from LifePoint to ScionHealth	(404)
Cash transferred to ScionHealth from LifePoint	(946)
Class B Units of ScionHealth transferred to LifePoint	350
Net equity adjustments related to common control transactions	$ 48

	From ScionHealth To LifePoint	From LifePoint To ScionHealth
Current assets	$ 200	$ (271)
Property and equipment, net	172	(501)
Other long-term assets	473	(30)
Goodwill and intangible assets	1,169	(121)
Current liabilities	(119)	118
Long-term liabilities	(530)	378
Noncontrolling interests and redeemable noncontrolling interests	(317)	23
Net assets transferred to (from) LifePoint	$ 1,048	$ (404)

Additionally, for the year ended December 31, 2021, the Company recognized transaction-related costs of $86 million, primarily in connection with the Kindred Transaction and other business development activities.

Divestitures

Providence Health and KershawHealth

Effective August 1, 2021, the Company sold Providence Health, comprised of two hospital campuses located in Columbia, South Carolina, and KershawHealth, located in Camden, South Carolina, to an unrelated third-party. The Company received cash proceeds from the transaction of $86 million, including net working capital, a portion of which was utilized to settle a $28 million finance lease obligation related to KershawHealth. Refer to Note 8 for additional information regarding the Company's accounting for leases.

In connection with the divestiture of Providence Health and KershawHealth, the Company recognized a net impairment loss of $42 million during the year ended December 31, 2021, which is included under the caption "Other non-operating losses, net" in the accompanying consolidated statement of operations for the year ended December 31, 2021. The net impairment loss is primarily attributable to the write-down of property and equipment and allocated goodwill to their estimated fair values, as well as the termination of a finance lease obligation related to KershawHealth.

Capital Medical Center

On December 23, 2020, the Company entered into a definitive agreement with an unrelated third-party to sell its majority ownership interest in Capital Medical Center, located in Olympia, Washington. Upon entry into the definitive agreement, the Company received a deposit of $5 million from the purchaser, which is included under the caption "Other current liabilities" in the Company's accompanying consolidated balance sheet at December 31, 2020. Effective April 1, 2021, the Company sold its ownership interest in Capital Medical Center for additional cash proceeds of $33 million, including net working capital, in addition to the purchaser's assumption of certain finance lease obligations.

In connection with the Company's divestiture of Capital Medical Center, the Company recognized a net gain on sale of $24 million during the year ended December 31, 2021, which is included under the caption "Other non-operating losses, net" in the accompanying consolidated statement of operations for the year ended December 31, 2021. The net gain on sale is primarily attributable to the purchaser's assumption of certain finance lease obligations and liabilities, partially offset by the write-off of property and equipment, allocated goodwill, and certain other assets.

Teche Regional Medical Center

Effective October 1, 2019, the Company terminated its lease of Teche Regional Medical Center, located in Morgan City, Louisiana, and transferred the owned assets and operations of Teche Regional Medical Center to a new operator.

Joint Ventures

Emory Healthcare

Effective January 1, 2020, the Company formed a new joint venture with Emory Healthcare, Inc. ("Emory") to operate St. Francis Hospital ("St. Francis") located in Columbus, Georgia. Upon formation of the joint venture, the Company reclassified $26 million of its equity in St. Francis to redeemable noncontrolling interests representing the estimated fair value of Emory's ownership interest in St. Francis. The Company maintained a controlling interest in St. Francis such that it continued to be included in the Company's consolidated financial statements through December 23, 2021, at which time St. Francis was transferred to ScionHealth.

In-Home Healthcare Partnership

The Company maintains a joint venture with a wholly-owned subsidiary of LHC Group, Inc. ("LHC"), In-Home Healthcare Partnership ("IHHP"), the purpose of which is to own and operate the Company's home health agencies and hospices and certain of LHC's home health agencies and hospices. The Company accounts for its ownership interest in IHHP as an equity method investment in accordance with ASC 323, "Investments." Effective January 1, 2020, the Company sold a portion of its ownership interest in IHHP to LHC for cash proceeds of $24 million.

LifePoint/RCCH Merger

On July 22, 2018, RCCH, Legend Merger Sub and Legacy LifePoint entered into an agreement and plan of merger, pursuant to which, effective November 16, 2018, Legend Merger Sub merged with and into Legacy LifePoint, with Legacy LifePoint surviving the merger as a wholly-owned subsidiary of RCCH. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint changed its name from "LifePoint Health, Inc." to "Legacy LifePoint Health, Inc." and, immediately following the effective time of the LifePoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners Holdings, Inc." to "LifePoint Health, Inc."

For the year ended December 31, 2019, the Company recognized merger and integration-related costs of $47 million, primarily related to legal and transaction advisory services as well as employee severance and retention and other integration-related expenses in connection with the LifePoint/RCCH Merger, which are included under the caption "Transaction-related costs" in the accompanying consolidated statement of operations for the year ended December 31, 2019.

Note 3. Impact of COVID-19 and the CARES Act

Impact of COVID-19

During March 2020, the global COVID-19 pandemic began to significantly affect the Company's facilities, employees, patients, communities, business operations and financial performance, as well as the U.S. economy and financial markets, as a whole. More than two years into the pandemic, the Company continues to be deeply committed to protecting the health of its communities and continues to respond to the evolving COVID-19 situation across the country. Importantly, the Company is taking every precaution to ensure it can continue providing quality care and safeguard the health and well-being of patients, employees, providers, volunteers and visitors in each community it serves. The national footprint of the Company's health system, along with its Health Support Center, has enabled the Company to support its communities during this challenging time.

CARES Act Overview

The Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act") was signed into law on March 27, 2020. Among other things, the CARES Act contains a number of provisions that are intended to assist healthcare providers as they combat the effects of the COVID-19 pandemic. Those provisions include, among others:

- the temporary suspension of Medicare sequestration from March 1, 2020, to December 31, 2020;
- the delay of the planned reductions to the Medicaid disproportionate share hospital ("DSH") payments program until October 1, 2023;
- an appropriation of $180 million to Health Resources and Services Administration's Federal Office of Rural Health Policy that will be awarded to small rural hospitals by the states through the Small Rural Hospital Improvement Program;
- an appropriation of $250 million to the Hospital Preparedness Program; and
- an appropriation of $100 billion to the Public Health and Social Services Emergency Fund (the "Emergency Fund") for a new program to reimburse, through grants or other mechanisms, hospitals, healthcare providers and other approved entities for COVID-19-related expenses or lost revenues.

The Paycheck Protection Program and Health Care Enhancement Act was enacted on April 24, 2020, which, among other things, provides an additional allocation of $75 billion to the Emergency Fund and an allocation of $25 billion for COVID-19 testing.

On December 21, 2020, Congress adopted the Consolidated Appropriations Act, 2021 (the "CAA"), which provides an additional $900 billion in COVID-19 relief, including an additional allocation of $3 billion to the Emergency Fund. In addition, the CAA, among other things, delays the planned reductions to the Medicaid DSH payments program through federal fiscal year ("FFY") 2023, adds additional reductions to the Medicaid DSH payments program in FFYs 2026 and 2027, provided for a 3.75% increase in the Medicare Physician Fee Schedule ("PFS") rates in calendar year ("CY") 2021 and allocates $30 billion for the purchase and administration of COVID-19 vaccines and related therapeutics. In addition, the CAA extended the temporary suspension of Medicare sequestration through March 31, 2021. The temporary suspension was subsequently extended through December 31, 2021, by HR 1868, which, to offset the cost of the suspension, extended Medicare sequestration through 2030. The Protecting Medicare and American Farmers from Sequester Cuts Act (the "Sequester Cuts Act") further extends the temporary suspension of Medicare sequestration through March 31, 2022, and reduces the sequestration cuts for the period of April 1, 2022, through June 30, 2022, to 1%. The Sequester Cuts Act also delays application of 4% cuts to Medicare and other federal programs resulting from the requirements of the Statutory Pay-As-You-Go-Act of 2010 that were scheduled to go into effect in CY 2022 until CY 2023.

Stimulus Payments

The Emergency Fund distributed $50 billion to hospitals based on their 2018 net patient revenue. Additionally, since that time, the Emergency Fund has distributed more than $80 billion to a number of different types of healthcare providers, including participants in state Medicaid/CHIP programs, providers in areas particularly impacted by the COVID-19 outbreak, rural providers (including hospitals and rural health clinics), skilled nursing facilities, dentists, providers of services with lower shares of Medicare reimbursement or who predominantly serve Medicaid beneficiaries, and providers requesting reimbursement for the treatment of uninsured patients.

Payments made by the Emergency Fund to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, filing attestations acknowledging receipt of payments, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients, not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse, and submitting such reports as may be required by HHS regarding the provider's compliance with the terms and conditions of the Emergency Fund. Healthcare providers that received more than $10,000 from the Emergency Fund between April 10, 2020 through June 30, 2020 (the "First Payment Received Period") were required to submit a report on their use of those funds no later than September 30, 2021. The Company successfully submitted the required reports for all of its providers that received and retained payments from the Emergency Fund during First Payment Received Period prior to the deadline. However, the Company will be required to submit additional reports in the future for payments that were received and retained by the Company's providers from the Emergency Fund after the end of the First Payment Received Period. The reporting requirements and guidance from HHS related to the Emergency Fund have been subject to frequent clarifications and revision, and there can be no assurance that the Company will not be required to submit additional reports or provide additional information related to the payments it has received from the Emergency Fund in the future. In addition, HHS has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the Office of Inspector General of HHS (the "OIG"), will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

The Company has accounted for the stimulus payments received as a government grant related to income in a manner consistent with International Accounting Standards 20, "Accounting for Government Grants and Disclosure of Government Assistance" ("IAS 20"). In accordance with IAS 20, government grants are recognized either as other income or a reduction to a related expense when there is reasonable assurance that the grant will be received, and the entity will comply with any conditions attached to the grant.

For the years ended December 31, 2021 and 2020, the Company recognized $17 million and $646 million, respectively, of stimulus payments as other income under the caption "Government stimulus income" in the accompanying consolidated statements of operations.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, HHS temporarily expanded the Centers for Medicare and Medicaid Services ("CMS") Accelerated and Advance Payment Program to a broad group of Medicare Part A and Part B providers. Under the expanded CMS Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period. The repayment of these accelerated/advance payments did not begin until one year after the date of the provider's or supplier's receipt of the payment, which means repayment of these amounts did not commence until the second quarter of 2021. Under the applicable repayment terms, the amounts previously advanced to the provider or supplier are automatically recouped from the provider's or supplier's new Medicare claims at a rate of 25% for a period of 11 months. After the end of that 11-month period, the amounts previously advanced to the provider or supplier will be automatically recouped from the provider's or supplier's new Medicare claims at a rate of 50% for a period of six months. At the end of the 17-month recoupment period, a letter requesting repayment of any remaining balance will be issued, and the provider or supplier will have 30 days from the date of the letter to repay the balance in full. If the remaining balance is not repaid after 30 days, the unpaid balance will accrue interest at a rate of 4% from the date of the demand letter until the balance has been repaid in full.

The Company received a total of $991 million of Medicare advance payments under the CMS Accelerated and Advance Payment Program during the year ended December 31, 2020, of which $370 million and $621 million are included under the captions "Current portion of Medicare advance payments" and "Long-term portion of Medicare advance payments", respectively, in the accompanying consolidated balance sheet at December 31, 2020. During the year ended December 31, 2021, the Company fully repaid all Medicare advance payments and the Company does not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program.

CARES Act Tax Provisions

The CARES Act also provided for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, the Company deferred cash payments of approximately $84 million related to Social Security payroll tax payments. During the year ended December 31, 2021, the Company fully repaid all previously deferred Social Security payroll taxes.

The federal income tax changes brought about by the CARES Act are complex and further guidance is expected. The Company may change its provision for income taxes and its deferred income taxes as its understanding of the CARES Act tax provisions evolves due to additional U.S. Department of Treasury guidance. Any such adjustments could materially impact the Company's provision for income taxes and, as a result, its financial results in the relevant periods.

Note 4. Long-Term Debt

The Company's long-term debt, including current portions and finance lease obligations, consisted of the following at December 31, 2021 and 2020 (in millions):

	2021	2020
ABL Facility	$ -	$ -
Term Loan Facility	3,215	3,215
6.75% Secured Notes	600	600
4.375% Secured Notes	600	600
9.75% Unsecured Notes	1,425	1,425
5.375% Unsecured Notes	500	500
Unamortized debt issuance costs and premium	(128)	(152)
Finance lease obligations	911	1,048
Total debt	$ 7,123	$ 7,236

Maturities of the Company's long-term debt outstanding at December 31, 2021, excluding finance lease obligations and unamortized debt issuance costs and premium, are as follows for the years indicated (in millions):

2022	$ -
2023	-
2024	-
2025	3,815
2026	1,425
Thereafter	1,100
	$ 6,340

ABL Facility

General

Effective November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, the Company and Legend Merger Sub (together, prior to the effective time of the LifePoint/RCCH Merger, the "Co-Borrowers") entered into a new senior secured asset-based revolving credit facility (the "ABL Facility") in an aggregate principal amount of $800 million with a maturity of five years. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint assumed all of the rights and obligations of Legend Merger Sub under the ABL Facility. The ABL Facility also includes both a letter of credit sub-facility and a swingline loan sub-facility (including in its capacity as co-borrower under a senior secured term loan credit facility; the "Term Loan Facility") entered into between the Co-Borrowers on November 16, 2018. In addition, the Company may request one or more incremental revolving commitments in an aggregate principal amount up to the greater of (x) the greater of (i) $255 million and (ii) 0.23 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, and (y) the amount by which the borrowing base exceeds the aggregate commitments under the ABL Facility, subject to certain conditions and receipt of commitments by existing or additional lenders.

As of December 31, 2021, the Company had no borrowings outstanding under the ABL Facility and approximately $50 million in letters of credit outstanding primarily related to the self-insured retention level of its general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements. Amounts available for borrowing under the ABL Facility were approximately $598 million as of December 31, 2021.

Collateral and Guarantors

All obligations under the ABL Facility are unconditionally guaranteed by DSB Acquisition, LLC, a Delaware limited liability company ("Holdings"), on a limited recourse basis and each of the existing and future direct and indirect material, wholly-owned domestic subsidiaries of the Co-Borrowers, subject to certain exceptions.

The obligations under the ABL Facility are secured by a pledge of the capital stock of the Co-Borrowers and substantially all of their assets and those of each subsidiary guarantor, including a pledge of the capital stock of all entities directly held by the Company (including Legacy LifePoint) and each subsidiary guarantor (which pledge is limited to 65% of the voting capital stock of first-tier foreign subsidiaries), in each case subject to certain exceptions. Such security interests consist of a first-priority lien with respect to the "ABL Priority Collateral" (which generally includes most accounts receivable and certain related assets of the Co-Borrowers and the subsidiary guarantors) and a second-priority lien with respect to the "Non-ABL Priority Collateral" (which generally includes most inventory and fixed assets, equity interests and intellectual property of the Co-Borrowers and the subsidiary guarantors). Additionally, certain of the Company's restricted subsidiaries that are not guarantors will pledge certain of their assets (the "Credit Support Party Collateral") on a first-priority basis, as further security of the obligations under the ABL Facility. The Credit Support Party Collateral will secure only the obligations under the ABL Facility.

All borrowings under the ABL Facility are subject to the satisfaction of customary conditions, including the absence of a default and the accuracy of representations and warranties.

Interest Rates and Fees

Borrowings under the ABL Facility bear interest at a rate equal to, at the Company's option, either (a) a London Interbank Offered Rate ("LIBOR") rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an initial applicable margin of 1.75% for LIBOR loans and 0.75% for base rate loans. The applicable margin for borrowings is subject to step-downs based on average availability thresholds.

In addition to paying interest on outstanding principal under the ABL Facility, the Co-Borrowers are required to pay a commitment fee under the ABL Facility in respect of the unutilized commitments under the ABL Facility at an initial rate equal to 0.375% per annum. The commitment fee may be subject to one step-down based on the average daily utilization under the ABL Facility. The Co-Borrowers will also be required to pay customary agency fees as well as letter of credit participation fees.

Restrictive Covenants and Other Matters

The ABL Facility contains certain customary affirmative covenants and events of default. The negative covenants in the ABL Facility include, among other things, limitations (none of which are absolute) on the Co-Borrowers and their subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates, enter into sale-leaseback transactions, change their lines of business, restrict dividends from their subsidiaries or restrict liens, change their fiscal year, and modify the terms of certain debt.

The ABL Facility requires that the Co-Borrowers and its restricted subsidiaries maintain a minimum fixed charge coverage ratio of not less than 1.00 to 1.00 at any time when availability is less than an agreed amount.

The ABL Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the ABL Facility are entitled to take various actions, including the acceleration of amounts due under the ABL Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the ABL Facility.

ABL FILO Term Loan

On April 13, 2020, the Company executed the ABL Facility Amendment that provided for an $80 million last-out term loan (the "ABL FILO Term Loan") with a maturity of 364 days, which was incremental to the existing $800 million of revolving commitments under the ABL Facility. The ABL FILO Term Loan was fully drawn at closing of the ABL Facility Amendment and then subsequently repaid in full on December 14, 2020, which effectively terminated the ABL FILO Term Loan.

Term Loan Facility

General

Effective November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, the Co-Borrowers entered into the Term Loan Facility, which is a senior secured term loan credit facility in an aggregate principal amount of $3,550 million with a maturity of seven years. At the effective time of the LifePoint/RCCH Merger, Legacy LifePoint assumed all of the rights and obligations of Legend Merger Sub under the Term Loan Facility (including in its capacity as a Co-Borrower under the Term Loan Facility). In addition, the Company may request one or more incremental commitments in an aggregate principal amount up to the sum of (x) the greater of (i) $800 million and (ii) 0.75 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, plus additional amounts subject to certain agreed leverage requirements, certain other conditions and receipt of commitments by existing or additional lenders.

On January 21, 2020, the Company amended its Term Loan Facility to, among other things, reduce the applicable interest rate margin for the term loans by 0.75% to 3.75% with respect to LIBOR-based loans and 2.75% with respect to base rate loans.

On January 23, 2020, the Company made a prepayment of $400 million of term loans outstanding under the Term Loan Facility with a portion of the net proceeds from the sale-leaseback transaction with Medical Properties Trust completed effective December 17, 2019 (the "2019 Sale Leaseback Transaction"), which is discussed further in Note 8. After giving effect to the prepayment, the Company had prepaid all remaining quarterly amortization payments in respect of the Term Loan Facility.

On February 24, 2020, the Company closed the issuance of $600 million of incremental term loans (the "Incremental Term Loan") under the Term Loan Facility. The Incremental Term Loan bears interest at a rate equal to, at its option, (a) a LIBOR rate plus an applicable margin of 3.75% or (b) a base rate plus an applicable margin of 2.75%. There are no scheduled amortization payments required on the Incremental Term Loan prior to maturity. The net proceeds from the Incremental Term Loan, together with the net proceeds from the 4.375% Secured Notes and cash on hand, was used to fund the settlement of the tender offer, the redemption of the Company's 8.25% Senior Secured Notes due 2023 (the "8.25% Secured Notes") and the redemption of the Company's 11.5% Senior Notes due 2024 (the "11.5% Unsecured Notes") and to pay certain fees in connection with the refinancing transactions described herein.

On December 4, 2020, the Company made an optional prepayment of $500 million of term loans outstanding under the Term Loan Facility with the net proceeds from the offering of $500 million in aggregate principal amount of 5.375% Senior Notes due 2029 (the "5.375% Unsecured Notes"), together with cash on hand.

Collateral and Guarantors

All obligations under the Term Loan Facility are unconditionally guaranteed by Holdings on a limited recourse basis and each of the existing and future direct and indirect material, wholly-owned domestic subsidiaries of the Co-Borrowers, subject to certain exceptions. The obligations under the Term Loan Facility are secured by a pledge of the capital stock of the Company and substantially all of its assets and those of each subsidiary guarantor, including a pledge of the capital stock of all entities directly held by the Company (including Legacy LifePoint) and each subsidiary guarantor (which pledge is limited to 65% of the voting capital stock of first-tier foreign subsidiaries), in each case subject to certain exceptions. Such security interests consist of a first-priority lien with respect to the Non-ABL Priority Collateral and a second-priority lien with respect to the ABL Priority Collateral.

Interest Rates

Borrowings under the Term Loan Facility bear interest at a rate equal to, at the Company's option, either (a) a LIBOR rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an applicable margin of 3.75% for LIBOR loans and 2.75% for base rate loans.

Restrictive Covenants and Other Matters

The Term Loan Facility contains certain customary affirmative covenants and events of default. The negative covenants in the Term Loan Facility include, among other things, limitations (none of which are absolute) on the Co-Borrowers and their subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates enter into sale-leaseback transactions, change their lines of business, restrict dividends from subsidiaries or restrict liens, change their fiscal year and modify the terms of certain debt or organizational agreements.

The Term Loan Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the Term Loan Facility are entitled to take various actions, including the acceleration of amounts due under the Term Loan Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the Term Loan Facility.

6.75% Secured Notes

On April 13, 2020, the Company completed the offering of $600 million in aggregate principal amount 6.750% Senior Secured Notes due 2025 (the "6.75% Secured Notes"). The 6.75% Secured Notes will mature on April 15, 2025. Interest on the 6.75% Secured Notes will accrue at 6.75% per annum and will be paid semi-annually, in arrears, on April 15 and October 15 of each year, beginning October 15, 2020. The net proceeds from the offering were used for general corporate purposes.

The Company's obligations under the 6.75% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility and the 4.375% Senior Secured Notes due 2027 (the "4.375% Secured Notes"). The 6.75% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 6.75% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to April 15, 2022, the Company may redeem the 6.75% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 6.75% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to April 15, 2022, the Company may also redeem up to 40% of the original aggregate principal amount of the 6.75% Secured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 106.750%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 6.75% Secured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after April 15, 2022, the Company may redeem the 6.75% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of April 13, 2020 (as amended or supplemented from time to time, the "6.75% Secured Notes Indenture").

The 6.75% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 6.75% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 6.75% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 6.75% Secured Notes Indenture also provides for customary events of default.

4.375% Secured Notes

On February 13, 2020, the Company completed the offering of $600 million in aggregate principal amount of its 4.375% Secured Notes. The 4.375% Secured Notes will mature on February 15, 2027. Interest on the 4.375% Secured Notes will accrue at 4.375% per annum and will be paid semi-annually, in arrears, on February 15 and August 15 of each year, beginning August 15, 2020. The net proceeds from the offering, together with the net proceeds from the Incremental Term Loan and cash on hand, were used to fund the settlement of the tender offer, the 8.25% Notes Redemption (as defined herein) and the 11.5% Notes Redemption (as defined herein) and to pay certain fees in connection with the refinancing transactions described herein.

The Company's obligations under the 4.375% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility. The 4.375% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 4.375% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to February 15, 2022, the Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 4.375% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to February 15, 2022, the Company may also redeem up to 40% of the original aggregate principal amount of the 4.375% Secured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 104.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 4.375% Secured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after February 15, 2022, the Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of February 13, 2020 (as amended or supplemented from time to time, the "4.375% Secured Notes Indenture").

The 4.375% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 4.375% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 4.375% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 4.375% Secured Notes Indenture also provides for customary events of default.

9.75% Unsecured Notes

On November 16, 2018, concurrently with the closing of the LifePoint/RCCH Merger, the Company issued $1,425 million aggregate principal amount of 9.75% Unsecured Notes. The 9.75% Unsecured Notes will mature on December 1, 2026. Interest on the 9.75% Unsecured Notes accrues at 9.750% per annum and will be paid semi-annually, in arrears, on June 1 and December 1 of each year, beginning June 1, 2019.

The Company's obligations under the 9.75% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 9.75% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

After December 1, 2021, the Company may redeem the 9.75% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of November 16, 2018 (as amended or supplemented from time to time, the "9.75% Unsecured Notes Indenture").

The 9.75% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 9.75% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 9.75% Unsecured Notes Indenture also provides for customary events of default.

5.375% Unsecured Notes

On December 4, 2020, the Company completed the offering of $500 million in aggregate principal amount of its 5.375% Unsecured Notes. The 5.375% Unsecured Notes will mature on January 15, 2029. Interest on the 5.375% Unsecured Notes will accrue at 5.375% per annum and will be paid semi-annually, in arrears, on January 15 and July 15 of each year, beginning July 15, 2021. The net proceeds of the offering, together with cash on hand, were used to prepay $500 million of the total aggregate principal amount outstanding under the Term Loan Facility and to pay related fees and expenses in connection with the offering.

The Company's obligations under the 5.375% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 5.375% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

Prior to January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 5.375% Unsecured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to December 4, 2023, the Company may also redeem up to 40% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 105.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of December 4, 2020 (the "5.375% Unsecured Notes Indenture").

The 5.375% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 5.375% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 5.375% Unsecured Notes Indenture also provides for customary events of default.

Tender Offer, Redemption and Discharge of 8.25% Secured Notes and 11.5% Unsecured Notes

On February 7, 2020, the Company commenced a tender offer and consent solicitation (the "tender offer") to purchase any and all of its outstanding (i) 8.25% Secured Notes issued pursuant to the indenture, dated as of April 29, 2016, among the Company, the guarantors party thereto and Wilmington Trust, National Association, as trustee (as amended, supplemented or otherwise modified, the "8.25% Secured Notes Indenture") and (ii) 11.5% Unsecured Notes issued pursuant to the indenture, dated as of April 29, 2016, among the Company, the guarantors party thereto and Wilmington Trust, National Association, as trustee (as amended, supplemented or otherwise modified, the "11.5% Unsecured Notes Indenture"). The early tender deadline for the tender offer was February 21, 2020, and the expiration date for the tender offer was March 6, 2020.

Upon expiration of the early tender deadline, on February 24, 2020, the Company accepted and purchased (i) $623 million of the aggregate principal amount of the 8.25% Secured Notes that were validly tendered for total consideration of $1,052.50 per $1,000 principal amount, plus accrued and unpaid interest thereon, and (ii) $84 million of the aggregate principal amount of the 11.5% Unsecured Notes that were validly tendered for a total consideration of $1,072.50 per $1,000 principal amount, plus accrued and unpaid interest thereon. Following the expiration of the tender offer, on March 9, 2020, the Company accepted and purchased an additional $0.2 million of the aggregate principal amount of the 8.25% Secured Notes that were validly tendered after the early tender deadline for a tender consideration of $1,022.50 per $1,000 principal amount, plus accrued and unpaid interest thereon. No additional 11.5% Unsecured Notes were tendered after the early tender deadline.

On March 9, 2020, (i) pursuant to the 8.25% Secured Notes Indenture, the Company provided notice to the holders that it had elected to redeem any and all of the 8.25% Secured Notes that remain outstanding after giving effect to the tender offer at a redemption price of 104.125%, plus accrued and unpaid interest thereon, on May 1, 2020 (the "8.25% Notes Redemption") and (ii) pursuant to the 11.5% Unsecured Notes Indenture, the Company provided notice to the holders that it had elected to redeem any and all of the 11.5% Unsecured Notes that remain outstanding after giving effect to the tender offer at a redemption price of 105.750%, plus accrued and unpaid interest thereon, on May 1, 2020 (the "11.5% Notes Redemption"). Concurrently with the delivery of the notices of redemption, on March 9, 2020, the Company (i) irrevocably deposited with the trustee for the 8.25% Secured Notes approximately $192 million, which was the amount sufficient to fund the 8.25% Notes Redemption and to satisfy and discharge the Company's obligations under the 8.25% Secured Notes and the 8.25% Secured Notes Indenture, and (ii) irrevocably deposited with the trustee for the 11.5% Unsecured Notes approximately $297 million, which was the amount sufficient to fund the 11.5% Notes Redemption and to satisfy and discharge the Company's obligations under the 11.5% Unsecured Notes and the 11.5% Unsecured Notes Indenture.

Debt Transaction Costs

The Company recognized $115 million of debt transaction costs associated with the various debt financing activities completed during 2020, which are included under the caption "Transaction-related costs" in the Company's accompanying consolidated statement of operations for the year ended December 31, 2020. These debt transaction costs were comprised of $61 million of early termination premiums associated with the tender offer, 8.25% Notes Redemption and 11.5% Notes Redemption, the write-off of $47 million of previously capitalized debt issuance costs associated with the Term Loan Facility, the 8.25% Secured Notes and the 11.5% Unsecured Notes and $7 million of other miscellaneous legal and financing costs.

Additionally, in connection with the offering of the 5.375% Unsecured Notes, the 6.75% Secured Notes, the 4.375% Secured Notes, the issuance of the Incremental Term Loan and the ABL FILO Term Loan, the Company capitalized $35 million of new debt issuance costs during the year ended December 31, 2020, which are included as a reduction to "Long-term debt, net" on the Company's accompanying consolidated balance sheet.

Finance Lease Obligations

Refer to Note 8 for discussion of the Company's finance lease obligations.

Interest Rate Swap Agreement

On December 21, 2018, the Company entered into an interest rate swap agreement with Citibank, N.A. as counterparty (the "Interest Rate Swap") whereby the Company paid a fixed rate of 2.63% on a notional amount of $1,100 million and received one-month LIBOR. The Interest Rate Swap became effective on February 19, 2019 and terminated on February 19, 2022. Refer to Note 11 for additional information regarding the Company's accounting for its Interest Rate Swap.

Note 5. Goodwill and Intangible Assets

Goodwill

The following table presents the changes in the carrying amount of goodwill for the years ended December 31, 2021 and 2020 (in millions):

Balance at January 1, 2020	$	2,961
Write-off allocation related to 2020 divestiture		(41)
Other		(1)
Balance at December 31, 2020		2,919
Net goodwill impact related to the Kindred Transaction		1,013
Write-off allocation related to 2021 divestitures		(18)
Balance at December 31, 2021	$	3,914

Prior to the LifePoint/RCCH Merger, the Company historically determined that each of its hospitals represented a reporting unit in accordance with ASC 280 and ASC 350. Due to the significance of the LifePoint/RCCH Merger and its impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280 and ASC 350 during 2019 and determined that the consolidated business comprises a single reporting unit for goodwill impairment testing purposes. There were no changes in the Company's determination of reporting units for the years ended December 31, 2021 and 2020.

Under the current methodology, for which the consolidated Company comprises a single reporting unit, the Company performed goodwill impairment tests as of October 1, 2021 and 2020 and did not incur any impairment charges. Under the prior reporting unit methodology, for which each of the Company's hospitals represented a reporting unit, the Company performed a goodwill impairment test as of October 1, 2019 and recorded a non-cash impairment charge of $3 million related to one of its facilities, which is included under the caption "Other non-operating losses, net" in the Company's accompanying consolidated statement of operations for the year ended December 31, 2019.

Intangible Assets

The following table provides information regarding the Company's intangible assets included in the accompanying consolidated balance sheets as of December 31, 2021 and 2020 (in millions):

	2021	2020
Amortizable intangible assets:		
Physician minimum revenue guarantees and other		
Gross carrying amount	$ 24	$ 32
Accumulated amortization	(13)	(15)
Net total	11	17
Indefinite-lived intangible assets:		
Certificates of need and certificates of need exemptions	28	29
Licenses, provider numbers, accreditations and other	46	12
Net total	74	41
Total intangible assets:		
Gross carrying amount	98	73
Accumulated amortization	(13)	(15)
Net total	$ 85	$ 58

Physician Minimum Revenue Guarantees

The Company has committed to provide certain financial assistance pursuant to recruiting agreements, or "physician minimum revenue guarantees," with various physicians practicing in the communities it serves. In consideration for a physician relocating to one of its communities and agreeing to engage in private practice for the benefit of the respective community, the Company may advance certain amounts of money to a physician to assist in establishing his or her practice.

The Company accounts for its physician minimum revenue guarantees in accordance with the provisions of ASC 460, "Guarantees" ("ASC 460"). In accordance with ASC 460, the Company records a contract-based intangible asset and a related guarantee liability for new physician minimum revenue guarantees. The contract-based intangible asset is amortized as a component of other operating expenses, in the accompanying consolidated statements of operations, over the period of the physician contract, which typically ranges from four to five years.

Certificates of Need and Certificates of Need Exemptions

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and certain equipment at the Company's facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of new services. The Company has acquired facilities in certain states that have adopted certificate of need laws. The Company has determined that these intangible assets have an indefinite useful life.

Licenses, Provider Numbers, Accreditations and Other

To operate hospitals, the Company must obtain certain licenses, provider numbers and accreditations from federal, state and other accrediting agencies. The Company has acquired facilities in certain jurisdictions that require licenses, provider numbers and accreditations.

Kindred Transaction

In connection with the Kindred Transaction, indefinite-lived intangible assets comprised of certificates of need and licenses totaling $41 million were transferred from ScionHealth to the Company, and indefinite-lived intangible assets comprised of certificates of need and provider numbers totaling $6 million were transferred from the Company to ScionHealth.

Amortization Expense

Amortization expense for the Company's intangible assets during the years ended December 31, 2021, 2020 and 2019 was $8 million, $9 million and $14 million, respectively.

Total estimated amortization expense for the Company's intangible assets during the next five years are as follows (in millions):

2022	$ 5
2023	3
2024	2
2025	1
	$ 11

Note 6. Income Taxes

For the years ended December 31, 2021 and 2020, the Company recognized a benefit from income taxes of $27 million and $64 million, respectively, compared to a provision for income taxes of $78 million for the year ended December 31, 2019. The benefit from income taxes recognized for the year ended December 31, 2021 is primarily a result of a reduction in the valuation allowance for certain deferred tax assets, partially offset by limitations on the tax deductibility of interest expense (back to its previous limitation of 30% of adjusted taxable income), stock-based compensation expense, write-offs of goodwill associated with divestitures and certain transaction and advisory costs recognized during the year ended December 31, 2021.

The (benefit from) provision for income taxes for the years ended December 31, 2021, 2020 and 2019 consisted of the following (in millions):

	2021	2020	2019
Current:			
Federal	$ 46	$ (73)	$ 68
State	5	8	8
	51	(65)	76
Deferred:			
Federal	23	99	(81)
State	(7)	38	(20)
	16	137	(101)
Change in valuation allowance	(94)	(136)	103
Total	$ (27)	$ (64)	$ 78

The following table reconciles the differences between the statutory federal income tax rate to the Company's effective tax rate on net income before income taxes and including net income attributable to noncontrolling interests and redeemable noncontrolling interests for the years ended December 31, 2021, 2020 and 2019:

	2021	2020	2019
Federal statutory rate	21.0 %	21.0 %	21.0 %
State income taxes, net of federal income tax benefits	(2.6)	3.8	(26.3)
Change in valuation allowance	(83.3)	(56.5)	171.0
Tax effect of goodwill write-offs and impairments	9.9	0.2	1.8
Noncontrolling interests and redeemable noncontrolling interests	-	(1.9)	(7.4)
State net operating loss carryforward expirations, refunds and rate change	-	10.4	-
Rate benefit from federal net operating loss carryback to 35% year	-	(3.8)	-
Nondeductible acquisition and merger-related costs	30.2	-	(24.2)
Other nondeductible expenses and other items	1.1	0.4	7.1
Effective income tax rate	(23.7) %	(26.4) %	143.0 %

Deferred income taxes result from temporary differences in the recognition of assets, liabilities, revenues and expenses for financial accounting and tax purposes. Sources of these differences and the related tax effects were as follows as of December 31, 2021 and 2020 (in millions):

	2021	2020
Deferred income tax liabilities:		
Depreciation and amortization	$ (130)	$ (61)
Right-of-use operating lease assets	(61)	(99)
Tax deductible goodwill	(26)	(29)
Investments in partnerships	(123)	-
Other	(6)	(6)
Total deferred income tax liabilities	(346)	(195)
Deferred income tax assets:		
Provision for doubtful accounts	34	64
Employee compensation	51	64
Net operating loss carryforwards	109	99
Insurance reserves	76	72
Section 163(j) interest expense carryforward	47	14
Investments in partnerships	36	60
Right-of-use operating lease obligations	62	100
Deferred loss on sale of facilities	37	-
Other	52	64
Total deferred income tax assets	504	537
Valuation allowance	(197)	(360)
Net deferred income tax assets	307	177
Deferred income taxes	$ (39)	$ (18)

Noncurrent deferred income tax liabilities totaled $39 million and $18 million at December 31, 2021 and 2020, respectively, and are included under the caption “Other long-term liabilities” on the accompanying consolidated balance sheets. As of December 31, 2021, the Company had federal net operating loss carryforwards (“NOLs”) of approximately $31 million and state and local NOLs of approximately $3.2 billion that expire at various dates between 2022 and 2039 or have an indefinite carryforward period. The Company has established a valuation allowance for deferred tax assets at December 31, 2021 and 2020, due to the uncertainty of realizing these assets in the future. During the year ended December 31, 2021, we reduced our valuation allowance by $163 million as a result of the transfers and utilization of certain net deferred tax assets and liabilities between us and ScionHealth.

The Company made federal income tax payments of $50 million and $33 million for the years ended December 31, 2021 and 2020, respectively. No federal income tax payments were made during the year ended December 31, 2019. A net refund of federal income taxes previously paid by Legacy LifePoint for the tax year ended December 31, 2013, in the amount of $23 million was received during the year ended December 31, 2021 related to the carryback of the final Legacy LifePoint federal NOL generated for the year ended November 16, 2018, to the tax year ended December 31, 2013. In addition, the Company received a net refund of federal income taxes previously paid by Legacy LifePoint for the tax year ended December 31, 2017, in the amount of $59 million during the year ended December 31, 2019. The 2017 tax year refund resulted from an automatic accounting method change, for tax purposes, related to income recognition made by Legacy LifePoint. The Company made net state and local income tax payments in the amount of $17 million, $5 million, and $1 million for the years ended December 31, 2021, 2020 and 2019, respectively.

The Company’s policy is to accrue interest and penalties related to potential underpayment of income taxes within the provision for income taxes. Interest is computed on the difference between the Company’s uncertain tax benefit positions and the amount deducted or expected to be deducted in our income tax returns.

The Company files a consolidated U.S. federal income tax return, as well as income tax returns in various state jurisdictions. All of the Company’s tax years are subject to examination by the Internal Revenue Service and various state taxing authorities.

Note 7. Other Current Liabilities

The following table provides information regarding the Company's other current liabilities, which are included in the accompanying consolidated balance sheets at December 31, 2021 and 2020 (in millions):

	2021	2020
Accrued interest	$ 44	$ 33
Current portion of self-insurance reserves	79	82
Self-insured medical benefits liabilities	46	38
Current portion of right-of-use operating lease obligations	61	44
Accrued property taxes	23	20
Medicaid supplemental payment program provider taxes	23	24
Liabilities held for sale	-	129
Accrued expenses and other	245	221
	$ 521	$ 591

Note 8. Leases

Summary

The Company leases real property and equipment under finance and operating leases. The leases expire at various times and have various renewal options. For leases with terms greater than 12 months, the Company records the related assets and obligations at the present value of lease payments over the term. Interest rates used in computing the present value of the lease payments are based on the Company's incremental borrowing rate at the inception of the lease. The Company's lease agreements generally require the Company to pay maintenance, repairs, taxes and insurance costs.

The following table presents certain information related to the Company's lease assets and liabilities at December 31, 2021 and 2020 (dollars in millions):

	Balance Sheet Classification	2021	2020
Assets:			
Finance leases	Property and equipment, net	$ 635	$ 678
Operating leases	Other long-term assets	609	368
Total lease assets		$ 1,244	$ 1,046
Liabilities:			
Current:			
Finance leases	Current maturities of long-term debt	$ 106	$ 30
Operating leases	Other current liabilities	61	44
Long-term:			
Finance leases	Long-term debt, net	805	1,018
Operating leases	Other long-term liabilities	546	335
Total lease liabilities		$ 1,518	$ 1,427
Weighted-average remaining term (in years):			
Finance leases		13.2	22.6
Operating leases		10.1	12.9
Weighted-average discount rate:			
Finance leases		6.4 %	7.9 %
Operating leases		7.3 %	8.9 %

The following table presents certain information related to finance and operating lease expense for the years ended December 31, 2021, 2020 and 2019 (in millions):

	Statement of Operations Classification	2021	2020	2019
Finance lease expense:				
Amortization related to lease assets	Depreciation and amortization	$ 44	$ 47	$ 28
Interest related to lease liabilities	Interest expense, net	82	91	36
Operating lease expense	Other operating expenses, net	76	86	80
Short-term, variable and other lease expense	Other operating expenses, net	45	47	48
Total lease expense		$ 247	$ 271	$ 192

The following table presents supplemental cash flow information related to finance and operating leases for the years ended December 31, 2021, 2020 and 2019 (in millions):

	2021	2020	2019
Operating cash flows related to operating leases	$ 118	$ 128	$ 123
Operating cash flows related to finance leases	$ 79	$ 82	$ 33
Financing cash flows related to finance leases	$ 29	$ 20	$ 19

The following table reconciles the undiscounted cash flows to the finance and operating lease obligations included in the consolidated balance sheet at December 31, 2021 (in millions):

	Finance Leases	Operating Leases
2022	$ 147	$ 105
2023	75	101
2024	75	88
2025	83	83
2026	76	76
Thereafter	707	406
Total minimum lease payments	1,163	859
Less: Amounts attributable to interest	(575)	(252)
Present value of minimum lease payments	588	607
Non-cash portions of finance lease obligations	323	-
Less: Current portions of lease obligations	(106)	(61)
Long-term portion of lease obligations	$ 805	$ 546

Kindred Transaction

In connection with the Kindred Transaction, right-of-use operating lease assets and liabilities of $439 million and $435 million, respectively, were transferred from ScionHealth to the Company, and right-of-use operating lease assets and liabilities of $21 million and $22 million, respectively, were transferred from the Company to ScionHealth. Additionally, the Company transferred finance lease obligations with a carrying value of $332 million to ScionHealth.

2021 Lease Modifications

On August 1, 2021, the Company sold KershawHealth, which was subject to the Amended and Restated Master Lease Agreement with certain affiliates of Medical Properties Trust, Inc. (“MPT”), dated March 21, 2016 (the “A&R Capella Master Lease”) and paid $28 million to MPT to terminate its lease obligation associated with KershawHealth. The removal of KershawHealth from the A&R Capella Master Lease triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the reclassification of right-of-use operating lease assets and obligations of $98 million and $106 million, respectively, related to certain other properties subject to the A&R Capella Master Lease, to property and equipment and finance lease obligations of $129 million and $137 million, respectively.

Effective December 23, 2021, the Company terminated the A&R Capella Master Lease, the Amended and Restated Hot Springs Master Lease Agreement with certain affiliates of MPT, dated March 21, 2016 (the "Hot Springs Lease") and the 2019 Master Lease (defined below), and certain subsidiaries of the Company entered into a new master lease agreement with certain affiliates of MPT, dated December 23, 2021, with respect to ten of the Company's facilities (the "2021 Master Lease"). The 2021 Master Lease has a term of 15 years. The entry into the 2021 Master Lease triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the reclassification of right-of-use operating lease assets and obligations of $61 million and $66 million, respectively, related to the Hot Springs Lease, to property and equipment and finance lease obligations of $41 million and $46 million, respectively. All of the facilities subject to the 2021 Master Lease are accounted for as finance leases as of December 31, 2021. Additionally, as a result of decreases in the lease term and discount rates associated with the 2021 Master Lease, the Company's finance lease obligations include a non-cash end-of-term deferred gain of $316 million.

2019 Sale Leaseback Transaction

Effective December 17, 2019, certain subsidiaries of the Company (collectively, the "2019 LifePoint Entities") entered into a Real Property Asset Purchase Agreement (the "Real Property APA") with certain affiliates of MPT (the "2019 Sale Leaseback Transaction"). Pursuant to the Real Property APA, the 2019 LifePoint Entities sold the real estate of eleven facilities to certain affiliates of MPT, and immediately thereafter the 2019 LifePoint Entities and certain affiliates of MPT entered into an agreed upon master lease agreement dated December 17, 2019 (the "2019 Master Lease").

In connection with the 2019 Sale Leaseback Transaction, the Company received an aggregate amount of sale proceeds of $700 million and incurred $18 million of transaction-related expenses, which is included under the caption "Transaction-related costs" in the accompanying consolidated statement of operations for the year ended December 31, 2019.

Lease Covenants

Certain of the Company's lease agreements contain financial covenants based on certain fixed charges. The failure to meet or obtain a waiver of such covenants or otherwise cure such non-compliance could result in an event of default under the applicable lease.

Note 9. Investments

Investments

The Company accounts for its investments in entities in which the Company does not control under either the cost method or the equity method of accounting in accordance with ASC 321 or ASC 323, respectively. The Company does not consolidate its cost and equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses during the period or evaluates them for impairment and observable price changes. Investment income is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations.

The following table presents the changes in the Company's investments during the years ended December 31, 2021 and 2020 (in millions):

Balance at January 1, 2020	$	274
Income		44
Contributions		4
Distributions and other		(42)
Sale of equity method investment		(24)
Balance at December 31, 2020		256
Income		83
Contributions		7
Distributions and other		(61)
ScionHealth Class B Units		350
Other investments recognized in connection with the Kindred Transaction		20
Balance at December 31, 2021	$	655

ScionHealth Class B Units

In connection with the Kindred Transaction, LifePoint acquired Class B Units in ScionHealth (the "Class B Units") with an aggregate value of $350 million. The Class B Units in ScionHealth, a privately held company, do not have a readily determinable fair value, and therefore, the Company has accounted for the Class B Units using the measurement alternative in accordance with ASC 321. The Company's investment in the Class B Units was recorded at $350 million and there were no observable price changes or transactions between the date of acquisition and December 31, 2021. The Class B Units are perpetual non-convertible non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price plus accrued, unpaid dividends.

Note 10. Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to a parent. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues and expenses at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes as a separate component of equity and earnings on the portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company.

The following table presents the changes in the Company's noncontrolling interests during the years ended December 31, 2021 and 2020 (in millions):

Balance at January 1, 2020	$	26
Net income attributable to noncontrolling interests		8
Distributions		(2)
Balance at December 31, 2020		32
Net income attributable to noncontrolling interests		5
Distributions		(3)
Noncontrolling interests recognized in connection with the Kindred Transaction		317
Balance at December 31, 2021	$	351

Redeemable Noncontrolling Interests

Certain of the Company's noncontrolling interests include redemption features that cause these interests not to meet the requirements for classification as equity in accordance with ASC 480-10-S99-3, "Distinguishing Liabilities from Equity." Redemption features related to these interests could require the Company to deliver cash, if exercised. Accordingly, these redeemable noncontrolling interests are classified in the mezzanine section of the Company's accompanying consolidated balance sheets under the caption "Redeemable noncontrolling interests." Changes in the fair value of the Company's redeemable noncontrolling interests are recognized as adjustments to consolidated stockholders' equity.

The following table presents the changes in the Company's redeemable noncontrolling interests during the years ended December 31, 2021 and 2020 (in millions):

Balance at January 1, 2020	$	148
Reclassification of equity to redeemable noncontrolling interests related to Emory joint venture		26
Net income attributable to redeemable noncontrolling interests		14
Fair value adjustments		5
Distributions and repurchases		(12)
Balance at December 31, 2020		181
Net income attributable to redeemable noncontrolling interests		4
Distributions and repurchases		(23)
Redeemable noncontrolling interests transferred in connection with the Kindred Transaction		(23)
Balance at December 31, 2021	$	139

Note 11. Fair Value of Financial Instruments

Fair Value Hierarchy

Fair value is a market-based measurement, not an entity-specific measurement. Therefore, a fair value measurement should be determined based on the assumptions that market participants would use in pricing the asset or liability. As a basis for considering market participant assumptions in fair value measurements, the Company utilizes the fair value hierarchy pursuant to ASC 820, "Fair Value Measurements and Disclosures" ("ASC 820") that distinguishes between market participant assumptions based on market data obtained from sources independent of the reporting entity (observable inputs that are classified within Levels 1 and 2 of the hierarchy) and the reporting entity's own assumption about market participant assumptions (unobservable inputs classified within Level 3 of the hierarchy).

The inputs used to measure fair value are classified into the following fair value hierarchy:

Level 1: Quoted market prices in active markets for identical assets or liabilities.
Level 2: Observable market-based inputs or unobservable inputs that are corroborated by market data.
Level 3: Unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Level 3 includes values determined using pricing models, discounted cash flow methodologies, or similar techniques reflecting the Company's own assumptions.

In instances where the determination of the fair value hierarchy measurement is based on inputs from different levels of the fair value hierarchy, the level in the fair value hierarchy within which the entire fair value measurement falls is based on the lowest level input that is significant to the fair value measurement in its entirety. The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment of factors specific to the asset or liability.

Cash and Cash Equivalents, Accounts Receivable, Accounts Payable and Other Current Liabilities

The carrying amounts reported in the accompanying consolidated balance sheets for cash and cash equivalents, accounts receivable, accounts payable and other current liabilities approximate fair value because of the short-term nature of these instruments.

Long-Term Debt

The carrying amounts and fair values of the Company's ABL Facility, Term Loan Facility, 6.75% Secured Notes, 4.375% Secured Notes, 9.75% Unsecured Notes and 5.375% Unsecured Notes, excluding unamortized debt issuance costs and premium, as of December 31, 2021 and December 31, 2020 were as follows (in millions):

	Carrying Amount		Fair Value	
	December 31, 2021	December 31, 2020	December 31, 2021	December 31, 2020
ABL Facility	$ -	$ -	$ -	$ -
Term Loan Facility	$ 3,215	$ 3,215	$ 3,211	$ 3,211
6.75% Secured Notes	$ 600	$ 600	$ 626	$ 641
4.375% Secured Notes	$ 600	$ 600	$ 603	$ 600
9.75% Unsecured Notes	$ 1,425	$ 1,425	$ 1,500	$ 1,557
5.375% Unsecured Notes	$ 500	$ 500	$ 493	$ 496

The fair values of the Company's long-term debt instruments were estimated based on the average bid and ask price as determined using published rates and categorized as Level 2 within the fair value hierarchy in accordance with ASC 820.

Interest Rate Swap

The Company measures its Interest Rate Swap at fair value on a recurring basis. The fair value of the Company's Interest Rate Swap is based on quotes from its counterparty. The Company considers those inputs to be Level 2 in the fair value hierarchy. At December 31, 2021 and 2020, the fair value of the Company's Interest Rate Swap was a total liability of $4 million and $31 million, respectively. At December 31, 2021, the total liability is included under the caption "Other current liabilities" in the Company's accompanying consolidated balance sheet. Of the total liability at December 31, 2020, $26 million is included under the caption "Other current liabilities" and $5 million is included under the caption "Other long-term liabilities" in the Company's accompanying consolidated balance sheet.

The Company has not designated its Interest Rate Swap as a cash flow hedge in accordance with ASC 815, "Derivatives and Hedging." Accordingly, all changes in the fair value of the Company's Interest Rate Swap are recognized through interest expense in its statements of operations. The Company recognized non-cash interest income of $27 million during the year ended December 31, 2021, compared to non-cash interest expense of $7 million and $19 million during the years ended December 31, 2020 and 2019, respectively, related to changes in the fair value of its Interest Rate Swap. The Interest Rate Swap terminated on February 19, 2022.

Financial Liabilities

The Company has a contingent consideration liability payable to the former owners of Canyon Vista Medical Center ("Canyon Vista") that represents the Level 3 estimated fair value of the contingent consideration using unobservable inputs and assumptions available to the Company. The key assumptions used in estimating the fair value of the Canyon Vista contingent consideration liability are the range of probabilities that the payments will be earned by the seller and a discount rate adjusted for the Company's credit risk.

At December 31, 2021 and 2020, the Canyon Vista contingent consideration liability was recorded at an estimated fair value of $19 million, of which $2 million is included under the caption "Other current liabilities" at December 31, 2021 and 2020, and $17 million is included under the caption "Other long-term liabilities" in the Company's accompanying consolidated balance sheets. For the year ended December 31, 2020, the Company recognized a non-cash charge of $5 million related to the change in the estimated fair value of the Canyon Vista contingent consideration liability, which is included under the caption "Other non-operating losses, net" on the accompanying consolidated statement of operations.

Note 12. Employee Benefit Plans

Defined Benefit Pension Plans

In connection with the LifePoint/RCCH Merger, the Company acquired certain assets and assumed certain liabilities associated with two separate defined benefit pension plans (i) associated with certain employees of Marquette General Hospital covered by a collective bargaining agreement (the "Marquette Pension Plan") and (ii) associated with certain non-union employees of Bell Hospital (the "Bell Pension Plan" and, collectively with the Marquette Pension Plan, the "Pension Plans"). Both Pension Plans are closed to new participants. Participants in the Marquette Pension Plan are required to make annual contributions totaling 6% of annual compensation to the Marquette Pension Plan to continue accruing benefits. Participants in the Bell Pension Plan no longer accrue benefits. The Company makes contributions to the Pension Plans sufficient to meet its minimum funding requirements as prescribed by the Employee Retirement Income Security Act of 1974, as amended.

Status and Expense

The following table presents the changes in the benefit obligations and plan assets of the Pension Plans during the years ended December 31, 2021 and 2020 and the unfunded liability of the Pension Plans at December 31, 2021 and 2020 (in millions):

	2021	2020
Change in benefit obligations:		
Benefit obligations at beginning of year	$ 77	$ 70
Service costs	1	1
Interest costs	2	2
Actuarial (gain) loss	(4)	6
Benefits paid	(3)	(2)
Benefit obligations at end of year	73	77
Change in plan assets:		
Fair value of plan assets at beginning of year	54	47
Actual return on plan assets	5	7
Employer contributions	2	2
Benefits and expenses paid	(2)	(2)
Fair value of plan assets at end of year	59	54
Unfunded pension benefit obligations	$ 14	$ 23

The Company recognizes changes in the funded status of the Pension Plans as a direct increase or decrease to stockholders' equity through accumulated other comprehensive income (loss). For the year ended December 31, 2021, the Company recognized a comprehensive gain of $6 million as an increase in equity. For the years ended December 31, 2020 and 2019, the Company recognized a comprehensive loss of $1 million and $5 million, respectively, as a decrease in equity. These adjustments were primarily related to changes in the Company's unfunded pension liability due to changes in the discount rates and mortality assumptions used to measure the projected benefit obligation.

The following table summarizes the projected benefit obligation, accumulated benefit obligation and fair value of plan assets related to the Pension Plans as of December 31, 2021 and 2020 (in millions):

	2021	2020
Projected benefit obligation	$ 74	$ 77
Accumulated benefit obligation	$ 70	$ 72
Fair value of plan assets	$ 59	$ 54

The following table summarizes the weighted-average assumptions used by the Company to determine its benefit obligation as of December 31, 2021 and 2020 (in millions):

	2021	2020
Discount rate	2.8 %	2.5 %
Rate of compensation increases, when applicable	3.0 %	3.0 %

Plan Assets

The investment policy for the Pension Plans has been formulated to achieve a risk adjusted return that balances the need for asset growth against the risk of significant fluctuations in asset prices and the need for significant contributions from the Company. On a quarterly basis, or more frequently as necessary, the current risk levels, asset performance and expected return on assets are reviewed and evaluated against goals and targets by a committee appointed to oversee investment of the Pension Plans' assets (the "Investment Committee"). The Investment Committee strives to maintain a balance between risk and return through the use of modern portfolio theory methods, in conjunction with Monte Carlo modeling to evaluate the behavior of the portfolio under different scenarios. At December 31, 2021, the Pension Plans' investments include a balance of mutual funds and money market funds in order to achieve an overall rate of return that minimizes the need for additional employer contributions. The Company measures the fair value of its Pension Plans' assets in accordance with ASC 820.

The Pension Plans' investments in mutual funds are valued at the net asset value ("NAV") of shares reported in the active market in which the funds are traded. Because quoted prices are available for mutual funds and the markets in which they are traded are generally considered active, the Company has classified each of them as a Level 1 investment. The Pension Plans' investments in money market funds are valued at quoted prices in markets that are not active by a combination of inputs, including but not limited to dealer quotes who are market makers in the underlying funds and other directly and indirectly observable inputs. Because the inputs used to value money market funds are either directly or indirectly observable, but are not quoted prices in active markets, the Company has classified these assets as Level 2 investments. The Pension Plans' investments in pooled, common and collective funds are valued at the NAV of shares owned based on the readily determinable quoted market price that each fund publishes at the end of each day. While the underlying assets are actively traded on an exchange, the pooled, common and collective funds are not and, therefore, the Company has classified these assets as Level 2 investments.

The following table summarizes the assets of the Pension Plans, measured at fair value as of December 31, 2021 and 2020, by major asset category and aggregated by level within the fair value hierarchy (in millions):

	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
December 31, 2021:				
Mutual funds	$ 2	$ -	2	-
Money market funds	39	39	-	-
Pooled, Common and Collective Funds	18	-	18	-
Total	$ 59	$ 39	$ 20	$ -
December 31, 2020:				
Mutual funds	$ 52	$ 52	$ -	$ -
Money market funds	2	-	2	-
Total	$ 54	$ 52	$ 2	$ -

The Company expects to contribute approximately $2 million to the Pension Plans during the year ended December 31, 2022. Additionally, the Company expects to make future benefit payments from the Pension Plans as follows for the years indicated (in millions):

2022	$ 3
2023	3
2024	3
2025	3
2026	4
Five years thereafter	18
	$ 34

Multiemployer Pension Plan

In connection with the LifePoint/RCCH Merger, the Company assumed the obligation to contribute to a multiemployer pension plan on behalf of certain employees covered by collective bargaining agreements, in accordance with the terms of such collective bargaining agreements. The Company's contributions to the multiemployer pension plan are determined based on the terms of the applicable collective bargaining agreements. Multiemployer plans are different from single-employer plans because assets contributed to the multiemployer plan by one employer may be used to provide benefits to employees of other participating employers. Also, if a participating employer stops contributing to the plan, the unfunded obligations of the plan may be borne by the remaining participating employers. If the Company stops participating in the multiemployer plan, the Company may be required to pay a withdrawal liability based on its portion of the unfunded status of the plan. Currently, the Company does not anticipate ending its participation in this plan.

Defined Contribution Plans

During 2021, the Company maintained a defined contribution retirement plan covering a majority of its employees and a separate defined contribution retirement plan covering the employees at Community Medical Center. These defined contribution plans contain discretionary matching contribution formulas and definite non-elective contribution formulas for employees at certain facilities. The Company's expense related to its defined contribution plans was $30 million for the year ended December 31, 2021 and $31 million for each of the years ended December 31, 2020 and 2019, respectively. Effective as of the end of the day on December 31, 2021, the plan covering Community Medical Center employees was merged into the plan covering LifePoint Employees.

Deferred Compensation Plans

The Company maintains supplemental deferred compensation plans with respect to certain of its employees and affiliated physicians. As of December 31, 2021 and 2020, the assets associated with these deferred compensation plans were $64 million and $56 million, respectively, and the liabilities were $68 million and $60 million, respectively. These amounts are included under the captions "Other long-term assets" and "Other long-term liabilities", respectively, on the accompanying consolidated balance sheets at December 31, 2021 and 2020.

Note 13. Stock-Based Compensation

The Parent is authorized to issue profits units (the "Units") to employees, executives, and directors of the Company, under the terms and conditions of the Parent Partnership Agreement. The Company has determined that the Units are a substantive class of members' equity for accounting purposes because the Units are legal equity of the Parent, they have participation features, including distribution and liquidation rights, which allow them to participate in the residual returns of the Parent and vested interests are retained upon termination. As a result, these awards are accounted for under ASC 718, "Compensation – Stock Compensation" ("ASC 718").

In June 2021, certain affiliates of the Parent completed the sale of the Parent, including the Company and its subsidiaries, to other affiliates of the Parent (the "Parent Transaction"). Following the Parent Transaction, the Company continues to be owned by affiliates of the Parent and the transaction had no business or operational impact on the Company. However, in connection with the Parent Transaction, all unvested and outstanding Units held by certain current employees, executives, and directors of the Company became vested. The Company has accounted for this event as a modification in accordance with ASC 718 and recognized additional stock-based compensation expense of $112 million during the nine months ended September 30, 2021 related to the modification and accelerated vesting of such Units. Additionally, for the nine months ended September 30, 2021, the Company made cash distributions to the Parent of $93 million to partially fund the Parent's repurchase of certain previously issued Units and capital units, primarily held by certain former employees, as well as certain current employees, executives, and directors of the Company.

Following the Parent Transaction, on June 25, 2021, an aggregate of 20,775,000 Units were granted to certain executives and employees of the Company under the Parent Partnership Agreement and a newly adopted equity incentive plan and an additional 1,000,000 Units were granted on September 28, 2021.

Service Units

Service Units have been granted to certain members of the board of directors, but there are none currently outstanding, and Tranche A Units to certain of our and our affiliates' employees, executives and consultants. Units that have been granted to members of the board of directors vest on a time-basis only, on the date that is the earliest of (i) six months and one day following grant date or (ii) the date of the applicable director's termination of service due to death, disability or as a result of the director's removal from the board of directors other than for cause. Tranche A Units granted to certain employees, executives and consultants vest in equal installments on the last day of each of the first twenty calendar quarters that commence on or after the grant date. Service Units will automatically vest upon the sale of the Company. In the event of an initial public offering, all unvested Service Units will remain outstanding and continue to vest based on the stated vesting pattern. Unvested Service Units are forfeited upon a holder's termination of service.

Service Units are accounted for as equity awards and related compensation expense is recognized ratably over the vesting period. As of December 31, 2021, Service Units had unrecognized compensation expense of $23 million. The expense is expected to be recognized over a weighted-average period of 2.4 years from December 31, 2021.

Performance Units

Performance Units, which have been granted as Tranche B Units and Tranche C Units, will vest based upon equity holders of the Parent realizing certain targeted multiples of invested capital ("MOIC thresholds"). Performance Units are accounted for as equity awards with expense recognition occurring upon the realization of the stated MOIC thresholds due to a liquidity event. Unvested Units that do not vest on termination are forfeited upon such termination, subject to certain conditions.

The following table summarizes the Company's total stock-based compensation expense for the years ended December 31, 2021, 2020 and 2019 (in millions):

	2021	2020	2019
Service Units	$ 30	$ 2	$ 4
Performance Units	87	-	1
	117	2	5
Modification expense for awards classified as a liability	-	3	3
Total stock-based compensation expense	$ 117	$ 5	$ 8

Valuation Assumptions

The fair value of all Units was determined using a Monte Carlo simulation framework. The following table shows the weighted average assumptions used by the Company to develop the fair value estimates and the resulting estimates of weighted-average fair value per Unit granted during the years ended December 31, 2021, 2020 and 2019:

	2021	2020	2019
Common equity value of the Company (in millions)	$ 3,600	$ 1,999	$ 1,672
Expected volatility	63.1 %	48.0 %	38.0 %
Risk-free interest rate	0.92 %	0.60 %	2.90 %
Expected dividends	-	-	-
Average expected term (years)	5.0	3.7	5.0

Units Activity

The following represents the activity of the Units for the years ended December 31, 2021, 2020 and 2019:

	Service Units		Performance Units			
	Tranche A and Units to the Board	Weighted Average Grant Date Fair Value per Unit	Tranche B	Weighted Average Grant Date Fair Value per Unit	Tranche C	Weighted Average Grant Date Fair Value per Unit
Unvested at January 1, 2019	2,709,758	$ 0.97	4,475,010	$ 0.47	2,237,505	$ 0.31
Granted	6,996,576	1.23	6,868,920	0.80	3,884,460	0.63
Vested	(2,893,910)	1.07	(891,400)	0.54	-	-
Forfeited	(85,044)	1.18	(136,640)	0.60	(514,020)	0.38

Note 14. Commitments and Contingencies

Capital Expenditure Commitments

The Company is reconfiguring some of its facilities to more effectively accommodate patient services and to provide for a greater variety of services. The Company has incurred approximately $162 million in costs related to uncompleted projects as of December 31, 2021, which is included under the caption "Property and equipment, at cost" in the Company's accompanying consolidated balance sheet. At December 31, 2021, these uncompleted projects had an estimated cost to complete of approximately $179 million. The estimated timeframe for completion of these projects generally ranges from less than one year up to two years. Additionally, the Company is subject to annual capital expenditure commitments in connection with several of its facilities. At December 31, 2021, the Company estimated its total remaining capital expenditure commitments to be approximately $738 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues.

Legal Proceedings and General Liability Claims

Healthcare facilities, including the Company and its facilities, are, from time to time, subject to claims and suits arising in the ordinary course of business, including claims for damages for personal injuries, medical malpractice, breach of contracts, wrongful restriction of or interference with physicians' staff privileges and employment related claims. In certain of these actions, plaintiffs request payment for damages, including punitive damages that may not be covered by insurance.

In addition, the Company is subject to the regulation and oversight of various state and federal governmental agencies. Further, under the False Claims Act, private parties have the right to bring qui tam, or "whistleblower," suits against healthcare facilities that submit false claims for payments to, or improperly retain identified overpayments from, governmental payers. Some states have adopted similar state whistleblower and false claims provisions. These qui tam or "whistleblower" actions initiated under the civil False Claims Act may be pending but placed under seal by the court to comply with the False Claims Act's requirements for filing such suits. As a result, they could be proceeding without the Company's knowledge. If a provider is found to be liable under the False Claims Act, the provider may be required to pay up to three times the actual damages sustained by the government plus substantial civil monetary penalties that are subject to annual adjustment for inflation for each separate false claim.

Although the healthcare industry has seen numerous ongoing investigations related to compliance and billing practices, hospitals, in particular, continue to be a primary enforcement target for the OIG, the Department of Justice ("DOJ") and other governmental agencies and fraud and abuse programs. Certain of the Company's individual facilities have received, and from time to time, other facilities may receive, inquiries or subpoenas from Medicare Administrative Contractors, and federal and state agencies. Any proceedings against the Company may involve potentially substantial amounts as well as the possibility of civil, criminal, or administrative fines, penalties, or other sanctions, which could be material. Settlements of suits involving Medicare and Medicaid issues routinely require both monetary payments as well as corporate integrity agreements. Depending on whether the underlying conduct in these or future inquiries or investigations could be considered systemic, their resolution could have a material adverse effect on the Company's financial position, results of operations and liquidity.

The Company does not control and cannot predict with certainty the progress or final outcome of discussions with government agencies, investigations and legal proceedings against the Company. Therefore, the final amounts paid to resolve such matters, claims and obligations could be material and could materially differ from amounts currently recorded, if any. Any such changes in the Company's estimates or any adverse judgments could materially adversely impact the Company's future results of operations and cash flows.

The Company accrues an estimate for a contingent liability when losses are both probable and reasonably estimable. The Company reviews its accruals each quarter and adjusts them to reflect the impact of developments, advice of legal counsel and other information pertaining to a particular matter.

Note 15. Subsequent Events

In accordance with the provisions of ASC 855, "Subsequent Events," the Company evaluated all material events subsequent to the balance sheet date through April 5, 2022, the date of issuance, for events requiring disclosure or recognition in the Company's consolidated financial statements. There were no subsequent events requiring disclosure or recognition in the Company's consolidated financial statements other than those noted below or included elsewhere in this Report.

Entry into Agreement to Sell Colorado Plains Medical Center and Western Plains Medical Complex

On January 31, 2022, the Company entered into a definitive agreement with an unrelated third-party to sell Colorado Plains Medical Center, located in Fort Morgan, Colorado, and Western Plains Medical Complex, located in Dodge City, Kansas. The Company expects the transaction to close in the second quarter of 2022.

Investment in ScionHealth Term Loan Facility

On March 10, 2022, certain of the Company's subsidiaries invested approximately $47 million for an aggregate $50 million face amount of ScionHealth's senior secured term loan principal.

TABLE OF CONTENTS

DISCLOSURE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report for the fiscal year ended December 31, 2022 (this "***Report***") contains forward-looking statements that involve risks and uncertainties. Forward-looking statements include any statements that address future results or occurrences. In some cases, you can identify forward-looking statements by terminology such as: "may," "might," "will," "would," "should," "could" or the negatives thereof. Generally, the words "anticipate," "believe," "continue," "expect," "intend," "estimate," "project," "plan" and similar expressions identify forward-looking statements. In particular, statements about our expectations, beliefs, plans, objectives, assumptions or future events or performance contained elsewhere in this Report are forward-looking statements. These forward-looking statements include statements that are not historical facts, including statements concerning our possible or assumed future actions and business strategies. We have based these forward-looking statements on our current expectations, assumptions, estimates and projections. While we believe these expectations, assumptions, estimates and projections are reasonable, such forward-looking statements are only predictions and involve known and unknown risks, uncertainties and other factors, many of which are outside of our control, which could cause our actual results, performance or achievements to differ materially from any results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following:

- uncertainty about the effect that pending acquisitions may have on our business, financial condition, results of operations, employees, patients local communities, business relationships and other parties, and the possibility that the anticipated benefits from pending acquisitions will not be realized within the timeframe expected or at all;
- uncertainty about the effect that integrating acquired facilities, including our expansion and diversification into new services and segments may continue to have on our employees, patients, local communities, business relationships and other parties, and the possibility that the anticipated benefits from the acquired facilities will not be realized within the timeframe expected or at all;
- the length and severity of the evolving and ongoing novel coronavirus ("***COVID-19***") pandemic, the measures we are taking to respond to the pandemic, the vaccination rates in the communities we serve, the number and severity of variants of the virus, and the effectiveness of vaccines against the virus (and any variants) on a widespread basis, and the potential impact of sudden increases and fluctuations in the volume of COVID-19 patients cared for across our facilities;
- the uncertainty of future patient volumes and related revenues, including shifts from in-person patient services to telehealth services;
- supply shortages, workforce disruptions or shortages and increased costs of providing care to our patients, including increased equipment, staffing and supply expenses;
- the emergence of and effects related to other pandemics, epidemics and highly contagious infectious diseases;
- payment changes, including policy considerations and changes resulting from federal and state budgetary restrictions;
- impact from or likelihood of the repeal of, or material modification to, the Patient Protection and Affordable Care Act, as amended by the Health Care and Education Reconciliation Act of 2010 (collectively, the "***Affordable Care Act***"), as a result of court or legislative action;
- potential impact from the repeal of the penalties associated with the "***individual mandate***" to purchase health insurance under the Affordable Care Act, included in the Tax Cuts and Jobs Act of 2017;
- impact from changes to or limitations on Medicaid supplemental payment programs;
- our compliance with new and existing laws and regulations, as well as costs and benefits associated with compliance;
- any potential action brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the "qui tam" or "whistleblower" provisions of the federal False Claims Act (the "***False Claims Act***");
- impact from the changes in payer mix marked by a shift of patients from private insurance to Medicare and Medicaid programs;
- our acquisition strategy, including healthcare delivery network diversification and integration risks relating to future acquisitions such as our most recently acquired IRFs (as defined in this Report);
- the potential for material obligations if we acquire facilities with unknown or contingent liabilities;
- claims and legal actions relating to professional liabilities and other litigation risks;
- delayed payments and repayments resulting from reviews of claims to Medicare and Medicaid for our services;
- impact of controls imposed by payers designed to reduce inpatient services;
- risks associated with outsourcing functions to third parties;
- our relationships with our joint venture partners;
- changes in physician employment regulations;
- increases in the amount and risk of collectability of patient accounts receivable, particularly in connection with the increase in the unemployment rate and number of underinsured and uninsured patients as a result of the continuing COVID-19 pandemic or other factors;
- our need to make investments continually in our processes and information systems to protect the privacy of patients, employees and other persons and reduce the risk of successful cybersecurity attacks;
- damage to our reputation, regulatory penalties, legal claims and liability under state and federal laws that we could suffer upon any cybersecurity or privacy breaches;
- anticipated capital expenditures, including routine projects, investments in information systems and capital projects related to acquisitions, construction of new facilities and construction projects and the expectation that capital commitments could be a component of future acquisitions;

- effects of competition in a facility's market;
- changes in industry and general economic trends, including macroeconomic conditions negatively impacted by the COVID-19 pandemic, general inflationary pressures, significant disruptions to global supply networks, and an extremely competitive labor market;
- recruitment and retention of senior executives, qualified management, experienced physicians and nurses, and other healthcare professionals;
- our ability to acquire facilities on favorable terms and successfully complete asset sales and divestitures;
- effects of union organizing activities;
- potential recoupment of previously recognized income from electronic health record ("***EHR***") incentive programs;
- timeframes for completion of capital projects;
- changes in depreciation and amortization expenses;
- accounting estimates and the impact of accounting methodologies and new accounting pronouncements;
- consolidation of commercial insurance companies and patient shifts to lower cost healthcare plans, including association health plans and short-term limited duration health insurance plans, which generally provide lower payment for services rendered;
- participation in the healthcare insurance exchanges (the "***Exchanges***") and the impact of increasing enrollment by patients in insurance plans with narrow networks, tiered networks, high deductibles or high co-payments;
- governmental or third-party investigations, legal actions and voluntary self-disclosures relating to overpayments or other regulatory compliance matters;
- the ability of our local management teams to identify and meet the needs of our patients, medical staffs and their communities;
- the efforts of insurers, healthcare providers and others to contain healthcare costs;
- our ability to obtain adequate levels of general and professional liability insurance;
- our ability to implement initiatives promoting cost reductions and operational efficiencies;
- possible future indebtedness that may be incurred; and
- other factors referenced under the caption "Risk Factors" in this Report.

Given these uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements. We disclaim any obligation to update any such factors or to announce the result of any revisions to any of the forward-looking statements contained herein to reflect future results, events or developments.

Statements in this Report are made as of the date hereof unless stated otherwise. New factors emerge from time to time, and it is not possible to predict all such factors.

EXPLANATORY INFORMATION REGARDING THIS REPORT

This Report has been prepared in accordance with the obligations of the Company under (i) Section 4.02 of the Indenture, dated as of December 4, 2020 (the "***5.375% Unsecured Notes Indenture***"), among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, National Association, as trustee ("***Wilmington Trust***"), relating to the Company's 5.375% Senior Notes due 2029 (the "***5.375% Unsecured Notes***"), (ii) Section 4.02 of the Indenture, dated as of April 13, 2020 (as amended or supplemented from time to time, the "***6.75% Secured Notes Indenture***"), among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, as trustee and notes collateral agent, relating to the Company's 6.750% Senior Secured Notes due 2025 (the "***6.75% Secured Notes***"), (iii) Section 4.02 of the Indenture, dated as of February 13, 2020 (as amended or supplemented from time to time, the "***4.375% Secured Notes Indenture***") among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, as trustee and notes collateral agent, relating to the Company's 4.375% Senior Secured Notes due 2027 (the "***4.375% Secured Notes***"), (iv) Section 4.02 of the Indenture, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***9.75% Unsecured Notes Indenture***" and, together with the 5.375% Unsecured Notes Indenture, the 6.75% Secured Notes Indenture and the 4.375% Secured Notes Indenture , the "***Indentures***"), among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, as trustee, relating to the Company's 9.750% Senior Notes due 2026 (the "***9.75% Unsecured Notes***" and, together with the 5.375% Unsecured Notes, 6.75% Secured Notes and the 4.375% Secured Notes, the "***Notes***"), (v) Section 5.04 of the Asset-Based Revolving Credit Agreement, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***ABL Agreement***" and the revolving facility provided thereunder, the "***ABL Facility***"), among the Company, as Lead Borrower, DSB Acquisition LLC, a Delaware limited liability company ("***Holdings***"), the lenders party thereto from time to time and Citibank, N.A., as administrative agent and collateral agent, and (vi) Section 5.04 of the First Lien Credit Agreement, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***Term Loan Agreement***", the term loan facility provided thereunder, the "***Term Loan Facility***," and the Term Loan Agreement together with the ABL Agreement, the "***Credit Agreements***"), among the Company, as Lead Borrower, Holdings, the lenders party thereto and Citibank, N.A., as administrative agent and collateral agent. This Report has been prepared in all material respects in accordance with the rules and regulations of the Securities and Exchange Commission (the "***SEC***") applicable to an Annual Report on Form 10-K for the fiscal year ended December 31, 2022, except to the extent exceptions, exclusions and other differences in presentation are permitted to be excluded by the Indentures and the Credit Agreements.

USE OF NON-GAAP FINANCIAL INFORMATION

In this Report, we have provided same-facility information for the three months and years ended December 31, 2022 and 2021, as if the Kindred Transaction (as defined in this Report) had occurred on January 1 for each of the years then ended, EBITDA and Adjusted EBITDA (collectively, the "***Non-GAAP Measures***") because we believe they provide the holders of our Notes (the "***Holders***") and the lenders under our Credit Agreements ("***Lenders***") with additional information to measure our performance and evaluate our ability to service our indebtedness. We believe that the presentation of Non-GAAP Measures is appropriate to provide additional information to the Holders and Lenders about certain material non-cash items and about unusual items that we do not expect to continue or to continue at the same level in the future as well as other items. Further, we believe the Non-GAAP Measures provide a meaningful measure of operating profitability because we use them for evaluating our business performance and understanding certain significant items.

The Non-GAAP Measures are not presentations made in accordance with United States ("***U.S.***") generally accepted accounting principles ("***GAAP***"), and our Non-GAAP Measures may not be comparable to similarly titled measures of other companies because such measures may include or exclude other specified items. The Non-GAAP Measures should not be considered as alternatives to operating income or any other performance measures derived in accordance with GAAP as measures of operating performance or cash flows as measures of liquidity. The Non-GAAP Measures have important limitations as analytical tools, and you should not consider them in isolation or as substitutes for analysis of our results as reported under GAAP. Because of these limitations, we rely primarily on our GAAP results and use the Non-GAAP Measures only as a supplement. Refer to "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" for a description of the calculation and limitations of these measures.

DOCUMENT SUMMARIES AND REQUESTS

This Report contains summaries believed to be accurate with respect to certain documents, but reference is made to the actual documents for complete information. All such summaries, which do not purport to be complete, are qualified in their entirety by such reference. Copies of the documents referred to herein will be made available without cost to Holders and Lenders by making a written or oral request to us. Any such request may be made to us at the following address and telephone number:

Lifepoint Health

FISCAL YEAR

All references to "fiscal year" are to the twelve months ended December 31 of the year referenced.

OTHER ITEMS

Lifepoint Health, Inc. (formerly known as RegionalCare Hospital Partners Holdings, Inc.), a Delaware corporation, along with each of its consolidated subsidiaries, is referred to herein as the "***Company***," "***Lifepoint***," "***we***," "***our***," "***us***," and, before giving effect to the Lifepoint/RCCH Merger (as defined below), "***RCCH***," in each case, unless the context otherwise requires.

References in this Report to the "***Lifepoint/RCCH Merger***" refer to the merger, which was effective on November 16, 2018, of Legend Merger Sub, Inc., a Delaware corporation and wholly-owned subsidiary of RCCH ("***Legend Merger Sub***"), with and into Lifepoint Health, Inc., a Delaware corporation ("***Legacy Lifepoint***"), with Legacy Lifepoint surviving the Lifepoint/RCCH Merger as a subsidiary of RCCH. At the effective time of the Lifepoint/RCCH Merger, Legacy Lifepoint changed its name from "Lifepoint Health, Inc." to "Legacy Lifepoint Health, Inc." and, immediately following the effective time of the Lifepoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners Holdings, Inc." to "Lifepoint Health, Inc." Subsequently, Legacy Lifepoint converted from a corporation to a limited liability company.

References in this Report to the "***Sponsor***" refer to certain funds that are affiliates of the Company (the "***Apollo Funds***") that are ultimately controlled and/or managed by certain affiliates of Apollo Management Holdings, L.P. ("***Apollo Management***" and, when acting on behalf of the Apollo Funds, "***Apollo***"), which is an affiliate of Apollo Global Management, Inc.

PART I

Item 1. *Business.*

Our Company

We are a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. We generate revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network, which at December 31, 2022 was comprised of 62 community hospital campuses, 31 inpatient rehabilitation facilities ("***IRFs***"), three behavioral health facilities, and additional sites of care that include acute rehabilitation units ("***ARUs***"), outpatient centers and post-acute care facilities. As of December 31, 2022, we operated 96 healthcare facilities in 28 states throughout the U.S. with approximately 10,000 licensed beds and approximately 50,000 dedicated employees.

We seek to fulfill our mission of *making communities healthier*® and strive to create places where people choose to come for healthcare, physicians and providers want to practice and employees want to work. Additionally, we are committed to upholding our core values, which are champion patient care; do the right thing; embrace individuality; act with kindness; and make a difference together. Together, our shared mission, vision and values guide our work and unite our employees across our organization.

Our Business Strategy

The key elements of our business strategy include:

- *Commitment to the Delivery of Exceptional Quality Patient Care*. Providing high quality patient care is essential to our mission and will always be our top priority across all business units. We believe our quality efforts are central to creating places where people choose to come for healthcare, physicians and providers want to practice and employees want to work. Our National Quality Program provides a structured, evidence-based approach to enhancing quality and patient safety and is nationally renowned. Several factors contribute to providing high quality patient care, including leadership and accountability at all levels of our organization, aligning ourselves with talented physicians and medical staff who share our commitment to quality, and providing a clinical environment that is satisfactory to our patients, physicians and employees. We continually strive to improve physician and employee satisfaction, which we believe is critical to delivering quality patient care. We also partner with academic medical centers, regional health systems and specialty providers to better serve the needs of our communities. In addition, demonstrating our results in delivering high quality patient care is increasingly vital to achieving our operating and financial success, including with governmental and commercial payers.

- *Continue to Grow in Existing Markets by Expanding Services and Access Points to Care*. We regularly conduct in-depth strategic reviews of the major service lines offered at each of our facilities and evaluate additional services through which we could better serve our communities and grow in our markets. We leverage our market-specific knowledge together with input and guidance from our local physician and community leaders to prioritize the healthcare services our communities are seeking. Focus areas include: expansion of specialty service lines to meet unserved or underserved patient needs; expansion of access points to care, including outpatient, ancillary, retail and virtual health services; and investment in technology and equipment. We invest strategically in our markets in order to increase the quality and scope of services we provide, meet the needs of our communities and maintain our strong reputation as the healthcare provider of choice. This, in turn, helps us to continue recruiting physicians and growing the revenue of our facilities.

- *Leverage Lifepoint Forward Innovation Strategy to Develop Solutions that Transform and Improve Community-based Healthcare Delivery*. Through our innovation strategy, Lifepoint Forward, we are developing meaningful solutions to enhance quality, increase access to care, and improve value across the Lifepoint footprint and communities across the country. This includes a significant focus on digital health capabilities that span the healthcare continuum. For example, we have already invested in, either directly or indirectly through unconsolidated affiliates, or implemented new technologies for on-demand telehealth services, artificial intelligence functionality, online scheduling for in-person and telehealth visits, virtual check-in and waiting room options, remote patient monitoring, data interoperability and advanced analytics of medical records, and computational linguistics designed to identify at-risk patients.

- *Continue to Recruit and Retain Leading Physicians*. Our physician engagement strategies drive our ability to enhance and expand our services to meet the healthcare needs of our communities. We have a comprehensive recruiting program that is directed by an experienced department at our Health Support Center ("***HSC***") and is supported at the local level by our hospital system chief executive officers ("***CEOs***") and Boards of Trustees. We supplement our local teams with experienced specialists at our HSC and several third-party recruiting firms to assist us in identifying candidates that match the profile of our physician needs. We maintain a flexible approach to aligning our goals with our physician partners, including our willingness to recruit physicians through multi-year employment and/or income guarantee arrangements. In addition, we believe our physicians are attracted to our facilities because of several factors, including our commitment to quality care, our focus on employing and developing high quality nurses and support staff and our integration into, and support of, the communities we serve.

- *Routinely Optimize Our Portfolio to Strengthen Our Position in Existing Markets and Expand into New Markets*. We evaluate and selectively pursue acquisitions of hospitals, outpatient and ancillary clinics and other healthcare facilities in new and existing markets, with the goal of improving our operating performance and better meeting the healthcare needs of our communities. We also continue to expand the footprint of our rehabilitation and behavioral health division. We employ a rigorous and disciplined approach to new market acquisitions and focus on a range of criteria, including expected financial returns and strategic benefits, to evaluate a target's suitability and fit within our portfolio. We seek to operate health systems that are, or have the potential to become, market leaders in communities with favorable demographic trends. Furthermore, we routinely evaluate our existing portfolio to assess whether we are meeting our strategic and financial objectives in our markets. We evaluate and may seek to opportunistically divest assets that do not meet our strategic and/or financial objectives and which may deliver more value to our stakeholders and the respective communities through a sale.

- *Continue to Engage in Strategic Relationships with Local Partners*. We partner with like-minded providers to strengthen the care continuum, bring more services to our communities, better support hospitals and providers, and improve the overall health of patients across the nation. For example, we have an established national partnership with Duke University Health System, in addition to several other provider organizations. We also pursue collaborations and flexible partnership models, including wholly-owned, joint venture and managed services relationships, to advance the delivery of rehabilitation and behavioral health services.

- *Continue to Focus on Operational Efficiency*. We strive to improve our operating performance by making our revenue cycle processes more efficient, making an even higher level of purchases through our group purchasing organization, operating more efficiently and effectively, and working to appropriately standardize our policies, procedures and practices across all of our affiliated facilities. As part of our ongoing efforts to further manage costs and improve the results of our revenue cycle, we have partnered with various third parties to provide certain nonclinical business functions, including payroll processing, supply chain management and revenue cycle functions. We believe this model is the most cost effective and efficient approach to managing these nonclinical business functions across multi-facility enterprises. Additionally, in connection with our efforts to responsibly manage purchasing costs, we participate along with other healthcare companies in a group purchasing organization, HealthTrust Purchasing Group, which makes certain national supply and equipment contracts available to our facilities. We also implement this operating discipline when we enter a new market through acquisitions, where we focus on optimizing staffing levels to reduce labor costs, leveraging our national scale and group purchasing organizations to reduce supply costs and standardizing revenue cycle and information technology ("***IT***") systems. We have made substantial progress implementing these initiatives consistently across our network, and we believe that opportunity exists for continued improvement in the near term, particularly among our recently acquired facilities.

- *Attracting and Retaining Experienced Executive Management and Leadership Teams.* Our executive management team has an average of more than 20 years of healthcare industry experience with a proven record of achieving strong operating and quality results. The executive management team is highly respected in the healthcare industry and has significant experience in managing and acquiring hospitals. Our executive management team is led by David Dill, who serves as our Chairman and Chief Executive Officer. Mr. Dill has more than 20 years of operational and financial leadership experience in the healthcare industry.

Our Background

Lifepoint/RCCH Merger

Summary

At the effective time of the Lifepoint/RCCH Merger, November 16, 2018, Legacy Lifepoint changed its name from "Lifepoint Health, Inc." to "Legacy Lifepoint Health, Inc." and, immediately following the effective time of the Lifepoint/RCCH Merger, RCCH changed its name from "RegionalCare Hospital Partners Holdings, Inc." to "Lifepoint Health, Inc." Subsequently, Legacy Lifepoint converted from a corporation to a limited liability company.

Kindred Transaction

On June 18, 2021, we entered into a securities purchase agreement (the "***Kindred Purchase Agreement***") for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred Healthcare, LLC ("***Kindred***"), a leading specialty hospital company that operates facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. Upon the closing of the Kindred Transaction, as described below, the Company and Kindred established a new healthcare company operating under the name ScionHealth, which is separate from Lifepoint.

On December 23, 2021, the Company, Kentucky Hospital Holdings JV, LP ("***Knight***"), the indirect parent of Kindred, Knight Health Holdings LLC (d/b/a ScionHealth), a Delaware limited liability company and direct parent of Knight ("***ScionHealth***"), and certain of their respective affiliates entered into reorganization agreements (the "***Reorganization Agreements***") that, among other things, provided for (i) the separation of the IRF, behavioral health, contract rehabilitation service and certain support center businesses (collectively, the "***Knight Transferred Business***") from the businesses of Knight and its subsidiaries, (ii) the separation of the equity and assets comprising 18 select acute care hospitals of the Company (the "***Artemis Business***") from the business of the Company and its subsidiaries, (iii) the transfer of the Knight Transferred Business to the Company, (iv) the transfer of the Artemis Business to Knight, (v) the acquisition by the Company of Class B Units of ScionHealth, with an aggregate value of $350 million, and (vi) reciprocal indemnification obligations with respect to the businesses transferred, in each case of clauses (i) through (vi), pursuant to the reorganization, separation and distribution steps described therein, including the assignment by Knight Health, LLC, a Delaware limited liability company formed at the direction of certain affiliates of the Company, of certain rights and obligations under the Kindred Purchase Agreement, including any post-closing purchase price adjustments (the "***Reorganization***"). The Class B Units of ScionHealth acquired by the Company are perpetual non-convertible non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends.

On December 23, 2021, concurrently with the consummation of the Reorganization, the Kindred Transaction was consummated. Pursuant to the consummation of the Kindred Transaction and the Reorganization, (i) ScionHealth indirectly holds all of the transferred interests in the Artemis Business, (ii) ScionHealth directly holds all of the issued and outstanding limited partnership interests in Knight, (iii) Kentucky Hospital Holdings JV GP LLC, a Delaware limited liability company and direct subsidiary of ScionHealth, holds all of the issued and outstanding general partnership interests in Knight, and (iv) the Company holds all of the transferred interests in the Knight Transferred Business and the Class B Units of ScionHealth described above. We refer to the foregoing transactions as the "***Kindred Transaction***".

In connection with the Kindred Transaction, we have entered into a number of transition services agreements ("***TSAs***") and other ancillary agreements with ScionHealth and its subsidiaries. For the year ended December 31, 2022, in connection with the TSAs, we were reimbursed by ScionHealth for certain costs incurred on their behalf of $61 million, and paid ScionHealth $3 million for certain costs incurred on our behalf. In addition, we and ScionHealth are party to a number of commercial services agreements, pursuant to which we provide ScionHealth with therapy services, rehabilitation unit and behavioral health unit management, consulting and development services, among other commercial services. For the year ended December 31, 2022, the Company recorded revenues related to these commercial services agreements of $55 million.

Lastly, given the recency of the Kindred Transaction and our ongoing integration efforts with ScionHealth, we may, from time to time, have a net receivable/payable recorded from/to ScionHealth with respect to net working capital and TSAs. We had a net receivable of $84 million recorded under the caption "Other current assets" in our accompanying consolidated balance sheet at December 31, 2022.

Our Operations

Services

We operate health systems that provide a broad range of general and specialized healthcare services across inpatient and outpatient settings, including general surgery, internal medicine, cardiology, radiology, oncology, orthopedics, women's services, neurology, rehabilitation services, behavioral services, pediatric services, emergency services and, primarily through our joint venture with LHC Group Inc. ("***LHC***"), home health and hospice services. In some of our health systems, we offer specialized services such as open heart surgery, skilled nursing, psychiatric care and neurosurgery. In many markets, we also provide outpatient services such as same day surgery, clinical laboratory services, diagnostic imaging services, respiratory therapy services, sports medicine services, urgent care services and lithotripsy. The services provided in any specific health system depend on many factors, including the community need for the service, whether physicians necessary to safely operate the service line are members of the medical staff of that hospital and the existence of any contractual or certificate of need restrictions.

Ongoing Impact of COVID-19

While we continue to diagnose and treat COVID-19 patients in our facilities, the prevalence and widespread impact of the virus has decreased both across our organization and the country at large. Our focus continues to be on protecting our patients, our people and our communities by managing this infectious disease according to standard infection prevention and control protocols and guidance from the Centers for Disease Control and Prevention (the "***CDC***"). Our internal COVID-19 taskforce, which was established during the early stages of the pandemic, continues to carefully monitor any trends that may impact the organization and meets on an ad hoc basis to address the specific needs of our facilities.

We initially implemented during the early stages of the COVID-19 pandemic and have continued to retain a number of health and safety measures to protect our patients, providers, employees, volunteers and visitors. These include monitoring local COVID-19 infection and hospitalization trends, adhering to stringent infection control protocols, maintaining rigorous cleaning and disinfection practices, and regularly assessing crucial supplies, among others.

Our evaluation of the measures taken across our health system in response to COVID-19 is ongoing and additional updates to our policies, procedures and operations could occur as best practices continue to evolve. Furthermore, our facilities are located across a wide geographic range of communities, which may require us to modify measures we take at specific facilities based on local conditions, including the severity of COVID-19 and any variants of the virus in the community served by a facility and changes in state and local executive orders that may restrict certain services or activities.

Taking into account the COVID-19 pandemic and other factors, the U.S. economy has recently experienced general inflationary pressures, significant disruptions to global supply networks, and an extremely competitive labor market, including staffing shortages and increases to expenses related to staffing. We have incurred, and may continue to incur, certain increased expenses arising from the pandemic and these economic conditions, including additional labor, supply chain, capital and other expenditures. While we have implemented cost containment and other measures to try to counteract these developments, we may be unable to fully offset these increases in our costs and otherwise effectively respond to supply disruptions.

For additional information about the risks presented by the COVID-19 pandemic, our responses to the pandemic, and the resources available to healthcare providers, refer to "—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" below and "Part I, Item 1A. Risk Factors" and "Part II, Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Developments, Trends and Operating Environment—Ongoing Impact of COVID-19" included in this Report.

Management and Oversight

Our executive management team has extensive experience in operating a broad range of general as well as specialized healthcare services across a diversified healthcare delivery network and plays a vital role in the strategic planning for our facilities. Our local acute care hospital management teams are typically comprised of a CEO, chief operating officer, chief financial officer and a chief nursing officer, and our local IRF management teams are typically comprised of a CEO, controller, and chief nursing officer. Local management teams work with an acute care hospital's Board of Trustees or the governing board of our IRF joint ventures, and our HSC management teams, to develop annual operating plans setting forth growth strategies through the expansion of current services, implementation of new services and the recruitment and retention of physicians in each community, as well as plans to improve operating efficiencies and reduce costs. We believe that the ability of each of these local management teams to identify and meet the needs of patients, medical staffs and the community as a whole is critical to the success of these facilities. We base the compensation for each local management team in part on its ability to achieve the goals set forth in the annual operating plan, including quality of care, patient satisfaction and financial measures.

The Board of Trustees at each acute care hospital, consisting of local community leaders, members of the medical staff and the facility CEO, advises the local management teams and helps develop the strategic operating plan for their facility. In addition, it plays a key role in providing the patient care excellence that we demand. Members of each Board of Trustees are identified and recommended by our local management teams. The Boards of Trustees oversee policies concerning medical, professional and ethical practices, monitor these practices and ensure that they conform to our high standards. We maintain company-wide compliance and quality assurance programs and use patient care evaluations and other assessment methods to support and monitor quality of care standards and to meet accreditation and regulatory requirements.

The majority of our acute care hospitals have a physician engagement group (PEG) or a physician leadership group (PLG) comprised of key physicians and members of the facility's administrative team, and the majority of our IRFs have a similar medical executive committee. The mission of such groups is to provide ongoing dialogue between facility administration and members of the medical staff and community physicians primarily in the areas of operations, quality patient care, employee satisfaction and/or community relations.

We also provide support to the local management teams through our HSC resources in areas such as revenue cycle, business office, legal, managed care, clinical efficiency, physician services and other administrative functions. These resources allow for sharing best practices and standardization of policies and processes among all of our facilities.

Cost Management

We strive to improve our operating performance by making our revenue cycle processes more efficient, making an even higher level of purchases through our group purchasing organization, operating more efficiently and effectively, and working to appropriately standardize our policies, procedures and practices across all of our affiliated facilities.

As part of our ongoing efforts to further manage costs and improve the results of our revenue cycle, we have partnered with various third parties to provide certain nonclinical business functions, including payroll processing, supply chain management and

revenue cycle functions. We believe this model is the most cost effective and efficient approach to managing these nonclinical business functions across multi-facility enterprises.

Attracting Patients

We believe that the most important factors influencing a patient's choice in where to receive healthcare services are the quality of care delivered by the facility, the overall reputation of the facility, the availability and expertise of physicians and nurses, and the location and convenience of the facility. Other factors that affect utilization include local demographics and population growth, local economic conditions and the facility's success in contracting with a wide range of local payers.

Outpatient Services

The healthcare industry continues to experience a shift from inpatient services to outpatient services as Medicare, Medicaid and managed care payers have sought to reduce costs by shifting lower-acuity cases to an outpatient setting. Advances in medical equipment technology and pharmacology also have supported the shift to outpatient utilization. However, we expect the decline in inpatient admission use rates to moderate over the long term as the baby boomer population reaches ages where inpatient admissions become more prevalent. We have responded to the shift to outpatient services through expanding service offerings and increasing the throughput and convenience of our emergency departments, outpatient surgery facilities and other ancillary units in our facilities.

Sources of Revenues

General

Our facilities generate revenues by providing healthcare services to our patients. Depending upon the patient's medical insurance coverage, we are paid for these services by governmental Medicare and Medicaid programs, commercial insurance, including health maintenance organizations ("***HMOs***"), preferred provider organizations ("***PPOs***") and plans offered through the Exchanges, private insurers, and directly by the patient. The amounts we are paid for providing healthcare services to our patients vary depending upon the payer. Governmental payers generally pay significantly less than the hospital's customary charges for the services provided. Insured patients are generally not responsible for any difference between customary hospital charges and the amounts received from commercial insurance payers. However, insured patients are responsible for payments not covered by insurance, such as exclusions, deductibles and co-payments.

Our revenues by payer and approximate percentages of revenues on a consolidated basis were as follows for the years ended December 31, 2022, 2021 and 2020 (dollars in millions):

	2022		2021		2020	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,227	40.2 %	$ 3,368	37.7 %	$ 3,134	38.6 %
Medicaid	1,353	16.9	1,645	18.4	1,392	17.1
HMOs, PPOs and other private insurers	3,030	37.8	3,691	41.3	3,382	41.6
Self-pay	57	0.7	55	0.6	55	0.7
Other (a)	338	4.2	156	1.8	137	1.7
Revenue from contracts with customers	8,005	99.8	8,915	99.8	8,100	99.7
Rental income	15	0.2	22	0.2	22	0.3
Revenues	$ 8,020	100.0 %	$ 8,937	100.0 %	$ 8,122	100.0 %

(a) Includes revenues from managed ARUs and ancillary goods and services.

Medicare

For the year ended December 31, 2022, approximately 40.2% of our revenues related to patients participating in the Medicare program. Medicare provides hospital and medical insurance benefits, regardless of income, to persons aged 65 and over, some disabled persons and persons with end-stage renal or Lou Gehrig's disease. All of our hospitals are currently certified as providers of Medicare services.

Over the years, Congress and the Centers for Medicare and Medicaid Services ("***CMS***") have made several sweeping changes to the Medicare program and its reimbursement methodologies, including the numerous changes contained in the Affordable Care Act. Many of these changes have resulted in decreased reimbursement to healthcare providers. In addition, the Budget Control Act of 2011, which is intended to reduce the federal deficit, imposed a 2% reduction in Medicare spending which began on April 1, 2013. Congress has extended the 2% reduction in Medicare spending on numerous occasions. The Families First Coronavirus Response Act, the Coronavirus Aid, Relief, and Economic Security Act (the "***CARES Act***") and the Consolidated Appropriations Act, 2021 (the "***CAA***") temporarily suspended Medicare sequestration from May 1, 2020 until March 31, 2021. The temporary suspension was subsequently extended through December 31, 2021, by HR 1868, which, to offset the cost of the suspension, extended Medicare sequestration through 2030. The Protecting Medicare and American Farmers from Sequester Cuts Act (the "***Sequester Cuts Act***"), which was adopted December 10, 2021, further extended the temporary suspension of Medicare sequestration through March 31, 2022, and reduced the sequestration cuts for the period of April 1, 2022 through June 30, 2022, to 1%. The Consolidated Appropriations Act, 2023 (the "***CAA23***"), which was adopted December 23, 2022, reduces the Medicare sequestration cuts through CY 2024, and extends Medicare sequestration through 2032. In addition, the American Rescue Plan Act of 2021 ("***ARP***") increased the federal budget deficit in a manner that triggers an additional sequestration mandated under the Pay As You Go Act of 2010 (the "***PAYGO Act***"); however, Congress has delayed implementation of this payment reduction until 2025. Additional reductions in Medicare reimbursement could result from changes to the Affordable Care Act, or as a result of the enactment of Medicare reform, deficit reduction or other legislation.

Medicare Inpatient Prospective Payment System

Under the Medicare program, hospitals are reimbursed for the costs of acute care inpatient stays under an inpatient prospective payment system (the "***IPPS***"). Under the IPPS, our hospitals are paid a prospectively determined amount for each hospital discharge that is based on the patient's diagnosis. Specifically, each discharge is assigned to a Medicare severity diagnosis related group ("***MS-DRG***"), which groups patients that have similar clinical conditions and that are expected to require a similar amount of hospital resources. Each MS-DRG is, in turn, assigned a relative weight that is prospectively set and that reflects the average amount of resources, as determined on a national basis, that are needed to treat a patient with that particular diagnosis, compared to the amount of hospital resources that are needed to treat the average Medicare inpatient stay. The IPPS payment for each discharge is based on two national base payment rates or standardized amounts, one that covers hospital operating expenses and another that covers hospital capital expenses. The base MS-DRG payment rate for operating expenses has two components, a labor share and a non-labor share. Although the labor share is adjusted by a wage index to reflect geographical differences in the cost of labor, the base MS-DRG payment rate does not consider the actual costs incurred by an individual hospital in providing a particular inpatient service. In addition to IPPS reimbursement, Medicare also makes supplemental payments known as outlier payments to compensate hospitals for cases involving extraordinarily high costs.

The base MS-DRG operating expense payment rate that is used by the Medicare program in the IPPS is adjusted by an update factor each federal fiscal year ("***FFY***"), which begins on October 1 (for example, FFY 2023 began on October 1, 2022). The index used to adjust the base MS-DRG payment rate, which is known as the "hospital market basket index," gives consideration to the inflation experienced by hospitals in purchasing goods and services. For FFYs 2023, 2022, and 2021, the hospital market basket index increased 4.1%, 2.7%, and 2.4%, respectively. Generally, however, the percentage increase in the MS-DRG payment rate has been lower than the projected increase in the cost of goods and services purchased by hospitals. In addition, as mandated by the Affordable Care Act, the market basket increase is reduced by a productivity adjustment equal to the Bureau of Labor Statistics' 10-year moving average of changes in annual economy-wide productivity. For FFYs 2023, 2022, and 2021, the productivity adjustment equated to a 0.3%, 0.7%, and 0.0% reduction in the market basket increase, respectively. As a result of these reductions and other changes implemented by CMS, the MS-DRG-rate increased by 4.3% for FFY 2023.

CMS has implemented a number of programs and requirements that are intended to promote value-based purchasing and to link payments to quality and efficiency. For example, all acute care hospitals are required to participate in CMS' Hospital Inpatient Quality Reporting Program (the "***IQR Program***") in order to receive the full hospital market basket update. Hospitals that do not participate in the IQR Program receive a 25% reduction in their IPPS annual payment update for the applicable FFY. Our acute care hospitals reported all quality measures required by CMS related to the IQR Program and nearly all will receive the full market basket update through FFY 2023. In addition, hospitals that are not meaningful EHR users are also subject to an additional 75% reduction of the hospital market basket increase.

In addition, the Affordable Care Act requires U.S. Department of Health and Human Services ("***HHS***") to implement a value-based purchasing program for inpatient hospital services. This program rewards hospitals based either on how well the hospitals perform on certain quality measures or how much the hospitals' performance improves on certain quality measures from their performance during a baseline period. As part of the program, the Affordable Care Act requires HHS to reduce inpatient hospital payments for all discharges by 2.0% each FFY. HHS pools the amount collected from these reductions to fund payments to reward hospitals that meet and exceed certain quality performance standards established by HHS. Under the program, each hospital's performance is evaluated during a specified performance period, and hospitals receive points on each of a number of pre-determined measures based on the higher of (i) their level of achievement relative to an established standard or (ii) their improvement in performance from their performance during a prior baseline period. Each hospital's combined scores on all the measures are translated into value-based incentive payments. Hospitals that receive higher total performance scores receive higher incentive payments than those that receive lower total performance scores. Because the Affordable Care Act provides that the funds pooled and otherwise set aside for the value-based purchasing program will be fully distributed, hospitals with high scores may receive greater reimbursement under the value-based purchasing program than they would have otherwise, and hospitals with low scores may receive reduced Medicare inpatient hospital payments.

Medicare also does not allow an inpatient hospital discharge to be assigned to a higher paying MS-DRG if certain designated hospital acquired conditions ("***HACs***") were not present on admission and the identified HAC is the only condition resulting in the assignment of the higher paying MS-DRG. In those situations, the case is paid as though the secondary diagnosis was not present. In addition, hospitals that fall into the top 25.0% of national risk-adjusted HAC rates for all hospitals in the previous year receive a 1.0% reduction in their total Medicare payments.

Furthermore, inpatient payments are reduced pursuant to the Affordable Care Act if a hospital experiences "excessive readmissions" within a 30-day period of discharge for certain conditions designated by CMS including heart attack, chronic obstructive pulmonary disease, heart failure, pneumonia, coronary artery bypass, and total hip arthroplasty. Hospitals with what HHS defines as "excessive readmissions" for these conditions will receive reduced payments for all inpatient discharges, not just discharges relating to the conditions subject to the excessive readmission standard. Each hospital's performance is publicly reported by HHS. HHS has the discretion to determine what "excessive readmissions" means, the amount of the payment reduction and other terms and conditions of this program. The basic maximum payment reduction amount is 3.0%. The 21st Century Cures Act (the "***Cures Act***") does, however, allow for an adjustment factor that would reduce the penalties imposed on hospitals, based on the portion of beneficiaries the hospitals serve that are eligible for both Medicare and Medicaid.

In response to the COVID-19 public health emergency, CMS has announced that it will temporarily suppress, or not use, certain hospital performance data that has been affected by COVID-19 in any of its hospital quality measurement and payment programs. In addition, CMS has also announced that for FFY 2023, all hospitals will receive a neutral adjustment under the Medicare value-based purchasing program that is equal to the 2.0% that is withheld under the program.

Medicare Hospital Outpatient Prospective Payment System and Other Outpatient Services

CMS reimburses hospital outpatient services under the Medicare hospital outpatient prospective payment system ("***OPPS***"), and generally uses fee schedules to pay for durable medical equipment and physical, occupational and speech therapy, clinical diagnostic laboratory and independent diagnostic testing facility services. Under the OPPS, hospital outpatient services are classified into groups called ambulatory payment classifications ("***APCs***"). Services in each APC are clinically similar and are similar in terms of the resources they require. Depending on the services provided, a hospital may be paid for more than one APC for an encounter. CMS establishes a payment rate for each APC by multiplying the scaled relative weight for the APC by a conversion factor. The payment rate is further adjusted to reflect geographic wage differences. The APC conversion factor for calendar year ("***CY***") 2023 is $85.585 and the APC conversion factors for CYs 2022 and 2021 were $84.177 and $82.797, respectively, after the inclusion of the productivity adjustments and other reductions that were required by the Affordable Care Act. APC classifications and payment rates are reviewed and adjusted on an annual basis, and, historically, the rate of increase in payments for hospital outpatient services has been higher than the rate of increase in payments for inpatient services. To receive the full increase, acute care hospitals must satisfy the reporting requirements of the Hospital Outpatient Quality Reporting Program (the "***OQR Program***"). Hospitals that do not satisfy the reporting requirements of the OQR Program are subject to a reduction of 2.0% in their annual payment update under the OPPS. Our acute care hospitals reported all quality measures required by CMS related to the OQR Program and will receive the full market basket update through CY 2023.

Section 603 of the Bipartisan Budget Act of 2015 limits reimbursement for items and services that are furnished by certain off-campus outpatient provider-based departments ("***off-campus PBDs***") of hospitals. CMS included several provisions implementing Section 603 in the OPPS final rule for CY 2017. Under the final rule, CMS continues to make OPPS payments to off-campus PBDs that were billing Medicare as hospital departments under the OPPS prior to November 2, 2015 ("***grandfathered PBDs***"). However, grandfathered PBDs generally are not able to relocate, and CMS has indicated that it may adopt limitations on the expansion of the service lines provided at grandfathered PBDs in the future. In addition to grandfathered PBDs, CMS continues to reimburse all items and services that are furnished in a "dedicated emergency department" of a hospital, as such term is defined for the purposes of the Emergency Medical Treatment and Active Labor Act ("***EMTALA***"), regardless of whether the items and services are emergency items and services, and all items and services that are furnished in off-campus PBDs that are located within 250 yards of a remote location of a hospital, which is a facility that is either created or acquired by a hospital for the purpose of furnishing inpatient hospital services under the name, ownership, and financial and administrative control of the hospital, under the OPPS. All items and services not provided at a grandfathered or otherwise excepted off-campus PBD are generally paid by CMS under Medicare physician fee schedule ("***PFS***") rates that are approximately 40% of the applicable OPPS rate (the "***PFS Adjusted Rate***"). In addition, in 2018, CMS issued a final rule that generally reimburses clinic visit services provided at all off-campus PBDs, including grandfathered PBDs, at a reduced Medicare PFS-equivalent payment rate. The payment reduction for clinic visit services provided at off-campus PBDs was to be phased in over a two year period beginning in FFY 2019.

In December 2018, a lawsuit was filed challenging the portion of CMS' final rule that reduced reimbursement for clinic visit services provided at grandfathered PBDs to the lower Medicare PFS-equivalent payment rate. On September 17, 2019, the U.S. District Court for the District of Columbia ruled that the reduction in reimbursement for clinic services provided at grandfathered PBDs exceeded CMS' statutory authority. As a result of the ruling, CMS paid claims for clinic visit services provided at grandfathered PBDs in CY 2019 at the full OPPS payment rate. However, in the OPPS final rule for CY 2020, CMS noted that the court's ruling only applied to clinic visit services provided in CY 2019, and, as a result, CMS moved forward with the planned phase-in of the second year of the clinic visit service payment reduction in CY 2020 while it appealed the court's decision. A new lawsuit was filed on January 13, 2020, challenging the continued phase-in of the reduction for CY 2020. On July 17, 2020, the U.S. Court of Appeals for the District of Columbia reversed the lower court's ruling regarding the CY 2019 reductions and upheld CMS' reimbursement reductions for clinic visit services provided at grandfathered PBDs. The ruling of the U.S. Court of Appeals for the District of Columbia was appealed to the U.S. Supreme Court, but the Supreme Court declined to hear the appeal. CMS has since reprocessed claims for clinic services provided at grandfathered PBDs in CY 2019 at the reduced payment rate. However, in an effort to maintain access to care in rural areas, CMS finalized a policy in its CY 2023 PFS final rule that exempts rural Sole Community Hospitals from its site-neutral payment policy for clinic visit services provided in excepted off-campus PBDs of these hospitals and pays for such clinic visits at the full OPPS payment rate.

In addition to those reimbursement reductions and in furtherance of its efforts to increase site neutrality in Medicare payments, CMS announced in the OPPS final rule for CY 2021 that it would eliminate the Medicare program's inpatient only procedure list over a three-year period, beginning with the removal of approximately 300 primarily musculoskeletal-related procedures, with the list being completely phased out by CY 2024. The elimination of the inpatient only procedure list would have made those procedures eligible to be paid by Medicare in the hospital outpatient setting when outpatient care was appropriate. However, in the OPPS final rule for CY 2022, CMS reversed course and reinstated the Medicare program's inpatient only procedure list. As a result, almost all of the procedures that had been removed from the Medicare inpatient only procedure list for CY 2021 have been added back to the list for CY 2022.

As part of the OPPS final rule for CY 2018, CMS also finalized a change to the payment rate for certain Medicare Part B drugs purchased by hospitals through the 340B Drug Pricing Program (the "***340B Program***"). The 340B Program allows certain non-profit and governmental hospitals and other healthcare providers to obtain substantial discounts on covered outpatient drugs (prescription drugs and biologics other than vaccines) from drug manufacturers. Under the final rule, CMS pays for separately reimbursable, non-pass through drugs and biologicals (other than vaccines) purchased through the 340B Program at the average sales price ("***ASP***") minus 22.5% rather than ASP plus 6%. CMS estimated that this change reduced Medicare payments for drugs and biologicals by $1.6 billion in CY 2018. To maintain budget neutrality, CMS implemented an offsetting increase in the conversion factor. As a result, OPPS reimbursement rates for non-drug items and services provided by all hospitals, including those not eligible to participate in the 340B Program, were increased in connection with the reduction to 340B Program payments. In the OPPS final rule for CY 2019, CMS expanded the 340B Program payment reductions to drugs that are obtained through the 340B Program and furnished by non-excepted, off-campus PBDs.

In September 2018, a lawsuit was filed challenging the authority of CMS to make the 340B Program payment reductions set forth in the OPPS final rule for CY 2018. On December 27, 2018, the U.S. District Court for the District of Columbia held that the payment reductions exceeded CMS' statutory authority and entered a permanent injunction against the reductions. However, because the 340B Program payment reductions were made in a budget-neutral manner and the savings derived from the reductions were used to increase reimbursement for all of the other items and services provided under the OPPS, the court ordered the parties to submit briefs as to how the issue should be remedied. The lawsuit was subsequently expanded to include the 340B Program payment reductions that were made in CY 2019, and an additional lawsuit has been filed against the 340B Program payment reductions being made by CMS in CY 2020. CMS appealed the District Court's rulings, and, on July 31, 2020, the U.S. Court of Appeals for the District of Columbia reversed the lower court's ruling and upheld CMS' 340B Program payment reductions. The ruling of the U.S. Court of Appeals for the District of Columbia was appealed to the U.S. Supreme Court, and on June 15, 2022, the U.S. Supreme Court unanimously rejected the decision of the U.S. Court of Appeals and held that CMS' 340B Program payment reductions exceeded HHS's statutory authority.

In light of the U.S. Supreme Court's decision, in its CY 2023 OPPS final rule, CMS agreed to increase the payment rate for 340B Program-acquired drugs and biologicals from the ASP minus 22.5% to ASP plus 6%, beginning after September 28, 2022, consistent with its policy for drugs not acquired through the 340B Program. CMS stated that it would implement a -3.09% reduction to the payment rates for non-drug services to achieve budget neutrality for the 340B drug payment rate change for CY 2023. CMS further noted in the CY 2023 OPPS final rule that it would address the remedy for 340B drug payments from 2018 through 2022 in future rulemaking prior to the CY 2024 OPPS proposed rule. It is currently unknown what remedies HHS will propose to repay 340B Program hospitals for past underpayments and whether, due to budget neutrality requirements, OPPS payments to hospitals may be reduced (either retroactively or prospectively) in connection with such remedies. If OPPS payments to hospitals are reduced (either retroactively or prospectively) in connection with the 340B Program, we would be materially adversely affected.

Medicare Disproportionate Share Hospital Payments

Hospitals may also qualify for Medicare disproportionate share hospital ("***DSH***") payments, if they treat a high percentage of low-income patients (as determined by a ratio involving Medicare and Medicaid patients eligible to receive Supplemental Security Income). DSH payments are determined annually based on certain statistical information specified by HHS and are paid as an addition to MS-DRG payments. The Affordable Care Act requires Medicare DSH payments to providers to be reduced by 75% beginning in FFY 2014, subject to adjustment if the Affordable Care Act does not decrease uncompensated care to the extent anticipated. The amount that is withheld is reduced by the percentage change in uninsured individuals under the age of 65, and then paid as additional payments to DSH hospitals based on the amount of uncompensated care provided by each hospital relative to the amount of uncompensated care provided by all hospitals receiving DSH payments during the applicable time period. The IPPS final rule for FFY 2023 established the uncompensated care amount which will be distributed to qualifying hospitals in FFY 2023 at approximately $6.8 billion, a decrease of approximately $300 million from FFY 2022.

Medicare Dependent and Low Volume Hospital Programs

On April 16, 2015, the Medicare Access and CHIP Reauthorization Act of 2015 ("***MACRA***") was enacted. Among other things, MACRA extended the Medicare dependent hospital program, which provides enhanced payment support for rural hospitals that have no more than 100 beds and at least 60% of their inpatient days or discharges covered by Medicare, and the Medicare low volume hospital program, which provides additional Medicare reimbursement for general acute care hospitals that are located a certain distance from another general acute care hospital and have less than a certain number of Medicare discharges each fiscal year, through September 30, 2017. The Bipartisan Budget Act of 2018 extended both of these programs through FFY 2022. The CAA23 further extended both of these programs through FFY 2024.

Rural Emergency Hospitals

Pursuant to the CAA, Congress established Rural Emergency Hospitals ("***REHs***") as a new provider type to address the growing concern over closures of rural hospitals. REHs provide emergency department services and observation care and, at the election of the REH, other services furnished on an outpatient basis, but do not provide acute care inpatient services (other than post-hospital extended care services furnished in a distinct part unit licensed as a skilled nursing facility). To qualify as an REH, a facility must, as of December 27, 2020 (the enactment date of the CAA), have been a critical access hospital or a rural hospital with not more than 50 beds. Effective January 1, 2023, REHs that participate in Medicare will be paid for all "covered outpatient services" at a rate that is equal to the OPPS payment rate for the equivalent covered outpatient department service, increased by 5% to reflect the higher costs incurred by such hospitals. REHs will also receive a monthly facility payment, equal to $272,866 for CY 2023, which amount will increase in subsequent years by the hospital market basket percentage increase. In the CY 2023 OPPS final rule, CMS finalized its policies relating to payment, provider enrollment and quality reporting for REHs, in addition to the conditions of participation that REHs must meet in order to participate in the Medicare and Medicaid programs.

Medicare Inpatient Rehabilitation Facility Prospective Payment System

Under the Medicare program, IRFs and ARUs in acute care hospitals meeting certain criteria established by CMS are reimbursed under the Medicare inpatient rehabilitation facility prospective payment system ("***IRF-PPS***"). Payments under the IRF-PPS are made on a per-discharge basis and cover the inpatient operating and capital costs of furnishing covered rehabilitation services (that is, routine, ancillary, and capital costs) and, for teaching institutions, are adjusted to include reimbursement for graduate medical education costs. Under the IRF-PPS, patients are classified into case mix groups that reflect the relative resource intensity typically associated with the patient's clinical condition. IRFs and ARUs reimbursed under the IRF-PPS are paid a predetermined amount per discharge that reflects the patient's case mix group that is adjusted for facility-specific factors, such as area wage levels, proportion of low-income patients, and location in a rural area. Each FFY, payment rates under the IRF-PPS are updated using a market basket index, which is reduced by a productivity adjustment. For FFY 2023, CMS increased IRF-PPS payment rates by 3.9% based on a IRF market basket update of 4.2% minus a productivity adjustment of 0.3%. To receive the full increase, IRFs and ARUs must satisfy the reporting requirements of the Inpatient Rehabilitation Facility Quality Reporting Program (the "***IRF QRP***"). IRFs and ARUs that do not satisfy the reporting requirements of the IRF QRP are subject to a reduction of 2.0% in their annual payment update under the IRF-PPS. Our IRFs and ARUs reported all quality measures required by CMS related to the IRF QRP and will receive the full market basket update for FFY 2023.

In order to qualify for reimbursement under the IRF-PPS, at least 60% of an IRF's or ARU's inpatients during the most recent 12-month CMS-defined review period must have required intensive rehabilitation services for one or more of 13 specified conditions. IRFs and ARUs must also meet additional coverage criteria, including patient selection and care requirements relating to pre-admission screenings, ongoing coordination of care and involvement of rehabilitation physicians. An IRF or ARU that fails to meet the 60% threshold, or other criteria to be reimbursed under the IRF-PPS, will be paid under either the Medicare IPPS or OPPS, which generally provide for lower payment amounts.

Medicare Inpatient Psychiatric Facility Prospective Payment System

Under the Medicare program, inpatient psychiatric facilities ("***IPFs***"), which include freestanding psychiatric hospitals and inpatient psychiatric units in acute care hospitals that meet certain criteria established by CMS are reimbursed under the Medicare inpatient psychiatric facility prospective payment system ("***IPF-PPS***"). Under the IPF-PPS, IPFs receive predetermined per diem rates based primarily on the patient's condition (age, diagnosis, comorbidities), length of stay, and the location of the IPF. Payment rates are intended to cover all routine, ancillary, and capital costs of furnishing covered inpatient psychiatric services, including adjustments for teaching hospitals and IPFs with qualifying emergency departments. The IPF PPS has additional payment policies for outlier cases, interrupted stays, and a per treatment payment for patients who undergo electroconvulsive therapy. Each FFY, payment rates under the IPF-PPS are updated using a market basket index, which is reduced by a productivity adjustment. For FFY 2023, CMS increased the IPF-PPS base payment rate by 3.8% (to $865.63 per day) based on a IPF market basket update of 4.1% minus a productivity adjustment of 0.3%. To receive the full increase, IPFs must satisfy the reporting requirements of the Inpatient Psychiatric Facility Quality Reporting Program (the "***IPF QRP***"). IPFs that do not satisfy the reporting requirements of the IPF QRP are subject to a reduction of 2.0% in their annual payment update under the IPF-PPS. Our IPFs reported all quality measures required by CMS related to the IPF QRP and will receive the full market basket update for FFY 2023.

In order to qualify for reimbursement under the IPF-PPS, IPFs must meet certain classification and coverage criteria, including being primarily engaged in providing psychiatric services for the diagnosis and treatment of mentally ill persons by, or under the supervision of, a physician, in addition to special staffing and medical record retention requirements. An IPF that fails to meet the criteria to be reimbursed under the IPF-PPS will be paid under either the Medicare IPPS or OPPS, which generally provide for lower payment amounts.

Cost Reports

Hospitals participating in the Medicare and some Medicaid programs, whether paid on a reasonable cost basis or under a prospective payment system, are required to meet certain financial reporting requirements. Federal and, where applicable, state regulations require submission of annual cost reports identifying medical costs and expenses associated with the services provided by each hospital to Medicare and Medicaid recipients.

Annual cost reports required under the Medicare and some Medicaid programs are subject to routine governmental audits. These audits may result in adjustments to the amounts ultimately determined to be payable to us under these reimbursement programs. Finalization of these audits often takes several years. Providers may appeal any final determination made in connection with an audit, and it is common to contest issues raised in audits of cost reports.

Medicare Bad Debt Reimbursement

Under Medicare, the costs attributable to the deductible and coinsurance amounts that remain unpaid by Medicare beneficiaries after reasonable collection efforts can be added to the Medicare share of allowable costs as cost reports are filed. Hospitals generally receive interim pass-through payments during the cost report year which were determined by the Medicare administrative contractor (*"**MAC**"*) from prior cost report filings.

The amounts uncollectible from specific beneficiaries are to be charged off as bad debts in the accounting period in which the accounts are deemed to be worthless. In some cases, an amount previously written off as a bad debt and allocated to the program may be recovered in a subsequent accounting period. In these cases, the recoveries must be used to reduce the cost of beneficiary services for the period in which the collection is made. In determining reasonable costs for hospitals, the amount of bad debts otherwise treated as allowable costs is reduced by 35%.

Medicare Physician Fee Schedule and other Medicare Part B Services

Professional medical services provided to Medicare beneficiaries by physicians, physician assistants, nurse practitioners, and certain other healthcare practitioners, outpatient physical, occupational, and speech therapy services, and telehealth services are reimbursed under the PFS. Under the PFS, CMS has assigned a national relative value unit ("***RVU***") to most medical procedures and services that reflects the various resources required by a physician or practitioner to provide the services relative to all other services. Each RVU is calculated based on a combination of work required in terms of time and intensity of effort for the service and the practice overhead and malpractice insurance expenses that are attributable to the service. These three elements are each modified by a geographic adjustment factor to account for local practice costs and are then aggregated. The aggregated amount is multiplied by a conversion factor to determine the payment rate for the service. The conversion factor is updated by CMS on an annual basis.

MACRA, which was adopted in 2015, significantly changed how CMS determines the annual updates to the PFS. Under MACRA, the PFS payment rates that were in effect when MACRA was enacted were extended through June 30, 2015, and then increased by 0.5% for the remainder of CY 2015. PFS payment rates were increased annually by an additional 0.5% for CYs 2016, 2017 and 2018 and, after the adoption of the Bipartisan Budget Act of 2018, were increased by 0.25% for CY 2019. PFS payment rates are scheduled to remain at their CY 2019 levels through CY 2025. The final PFS rule for CY 2023 initially set the PFS conversion factor for CY 2023 at $33.06, which was a decrease of $1.55 from the CY 2022 PFS conversion factor of $34.61 and reflected, among other things, the required statutory update of 0.0% and the expiration of the temporary 3% supplemental increase for CY 2022 that was provided by the Sequester Cuts Act. However, in response to the CAA23, on January 5, 2023, CMS announced an updated PFS conversion factor for CY 2023 of $33.89, which reflects a temporary increase to the PFS conversion factor by 2.5% for CY 2023 and a decrease of $0.72 from the CY 2022 PFS conversion factor of $34.61. The CAA23 also included a 1.25% positive adjustment to the PFS conversion factor for CY 2024.

In addition to revising the methodology that is used to update payments that are made under the PFS, MACRA also established a Quality Payment Program ("***QPP***") for incentivizing physician and practitioner care that meets certain value, quality, cost, and performance criteria. Beginning in CY 2019, amounts paid to physicians and practitioners under the PFS are subject to adjustment through the QPP and participation in either the Merit-Based Incentive Payment System ("***MIPS***") or an Advanced Alternative Payment Model ("***APM***") program. Beginning with the 2023 performance year, physicians and practitioners will have the opportunity to participate in a new reporting option known as MIPS Value Pathways ("***MVPs***"). Physicians participate in "traditional" MIPS unless they are participants of specific forms of APM, report MVPs (beginning with performance year 2023), are newly enrolled in Medicare, or see a low volume of Medicare patients. Groups or eligible clinicians who choose not to participate and fall within specified circumstances may request an exception through a hardship application and incur no MIPS impact on Medicare payments. CMS also permits hardship applications, including, in 2020, 2021, and 2022 hardships based on circumstances arising from COVID related operational issues, through which clinicians can request reweighing of any or all performance categories if they encounter an extreme and uncontrollable circumstance or a public health emergency.

Physicians and practitioners who participate in the MIPS program, which essentially consolidated the prior Physician Quality Reporting System, the Value-Based Modifier, and the Meaningful Use of EHR incentive programs, are subject to positive, zero, or negative performance adjustments depending on how the physician's or practitioner's performance compared to a performance threshold. The payment adjustments are based on the physician's or practitioner's performance in the year that is two years prior to the current payment period. As a result, PFS payments in CY 2023 will be based on CY 2021 performance scores, and so on for the following years. HHS and CMS revise the MIPS reporting measures on an annual basis and have indicated that they intend to routinely increase the performance thresholds in connection with those revisions. In addition, from CY 2019 through CY 2024, MACRA provides $500 million per year for an additional performance adjustment for physicians and practitioners who participate in MIPS and achieve exceptional performance. Physicians and practitioners who participate in a specified APM program, which, among other things, requires the physician or practitioner to receive a substantial amount of their revenue from an APM, will receive, from CYs 2019 through 2024, a lump-sum incentive payment equal to 5% of their Medicare payments in the prior year for services paid under the PFS. Pursuant to the CAA23, for CY 2025, physicians and practitioners who participate in a specified APM program will receive a lump-sum incentive payment equal to 3.5 % of their Medicare payments in the prior year for services paid under the PFS. Beginning in CY 2026, PFS payment rates for physicians and practitioners participating in an APM program would be increased by 0.75% a year. Payments for other physicians and practitioners would be increased by 0.25% per year.

Medicaid

For the year ended December 31, 2022, approximately 16.9% of our revenues related to patients participating in the various state Medicaid programs. Included in these payments are DSH and other supplemental payments received under various state Medicaid programs. Medicaid programs are funded by both the federal government and states to provide healthcare benefits to limited categories of low-income individuals under 65 years of age. These programs and the reimbursement methodologies are administered by the states under approved plans and vary from state to state and from year to year. Amounts received under the Medicaid programs are often significantly less than the hospital's customary charges for the services provided. Most state Medicaid payments are made under a prospective payment system, fee schedule, cost reimbursement program, or some combination of these three methods. All of our hospitals are currently certified to participate in their respective state Medicaid programs.

As enacted, the Affordable Care Act essentially required states to expand Medicaid coverage to all individuals under age 65 with incomes effectively at or below 138% of the federal poverty level ("FPL"). However, that portion of the Affordable Care Act was held to be unconstitutional by the U.S. Supreme Court, and, as a result, states may opt out of the expansion without losing their existing Medicaid funding. Therefore, the income level required for individuals to qualify for Medicaid varies widely from state to state. To offset the cost of the Medicaid program's expansion, the Affordable Care Act authorized the federal government to provide states with "matching funds," in the form of increases to the Federal Medical Assistance Percentage (the "***FMAP***" and, as increased, referred to as "***Enhanced FMAP***"), to cover the costs of covering the newly eligible individuals. The Enhanced FMAP was 100% for CYs 2014 through 2016; 95% in CY 2017; 94% in CY 2018; 93% in CY 2019; and will be 90% in CYs 2020 and thereafter. The ARP, which was signed into law on March 11, 2021, provides a new incentive, in the form of a temporary 5% increase to the FMAP, to states that have not yet expanded their Medicaid programs in an effort to encourage them to do so. In addition, to assist state Medicaid programs with the additional expenses attributable to the COVID-19 pandemic, the CARES First Act provides a 6.2% increase in the FMAP from January 1, 2020, until the Secretary of the HHS ends the official COVID-19 public health emergency.

In recent years, we have benefited from the expansion of Medicaid under the Affordable Care Act, and since January 1, 2020, Missouri, Oklahoma, and Utah, three additional states in which we operate, expanded their Medicaid programs. However, a number of states in which we operate have not expanded their Medicaid programs or are seeking waivers that could reduce their Medicaid-eligible populations. Several states have adopted or are considering legislation designed to reduce or control their Medicaid expenditures, including enrolling Medicaid recipients in managed care programs, and imposing additional taxes on hospitals to help finance such states' Medicaid systems. Given the reductions in the Enhanced FMAP, the temporary nature of the assistance provided by the ARP and the CARES Act, and the potential for further modifications to the Affordable Care Act, we are unable to predict how many, if any, additional states in which we operate will expand their Medicaid programs or how many, if any, of the states in which we operate that have expanded their Medicaid programs will keep their expansions in place in the future.

The Affordable Care Act also included a number of provisions that are intended to improve the quality of care that is provided to Medicaid beneficiaries. Among other things, the Affordable Care Act prohibits federal funds from being used to reimburse providers for services related to provider preventable conditions, such as HACs, wrong site surgeries and other provider preventable conditions that may be designated by each state Medicaid program.

Medicaid Supplemental Payments

Medicaid supplemental payments ("***MSPs***") are payments made to providers separate from and in addition to those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid DSH and Upper Payment Limit ("***UPL***") payments.

Medicaid DSH payments are federally required to be made by the states to hospitals that serve significant numbers of Medicaid and uninsured patients in recognition of the added costs incurred by hospitals in treating those patients. The federal government distributes federal Medicaid DSH funds to each state based on a statutory formula. The states then distribute the DSH funding among qualifying hospitals. Although federal Medicaid law defines some level of hospitals that must receive Medicaid DSH funding, states have broad discretion to define additional hospitals that also may qualify for Medicaid DSH payments and the amount of such payments. However, the total amount of Medicaid DSH payments a state may make and the total amount any one hospital may receive are both capped by federal law.

Pursuant to the Affordable Care Act, as amended by subsequent legislation, funding for Medicaid DSH programs was to be reduced by $4 billion in FFY 2020 and $8 billion per year from FFY 2021 through FFY 2025. Congress has delayed the reduction in funding for Medicaid DSH programs on a number of occasions, most recently through the CCA, which eliminates the scheduled Medicaid DSH reductions for FFYs 2021 through 2023 but adds additional Medicaid DSH reductions for FFYs 2026 and 2027. We cannot predict whether Congress will further delay or otherwise modify the reductions in the future. Because many of the states in which we operate have not expanded Medicaid programs as intended under the Affordable Care Act, the reduction in Medicaid DSH payments may take place without a coupled increase in the Medicaid eligible population, thus increasing the net amount of uncompensated care we provide.

Unlike Medicaid DSH payments, UPL payments are not required to be made by states under federal law. Rather, federal regulations establish an upper payment limit above which states may not receive federal matching dollars. UPL programs have expanded in recent years, and certain of our hospitals receive payments under such programs. Because services provided to Medicaid beneficiaries enrolled in managed care are not included in state UPL calculations, as states increase their use of managed care Medicaid programs, UPL MSPs could be reduced. UPL funding and matching federal funds may also be reduced or eliminated as a result of state or local governmental legislation, state changes to historical funding levels or related taxes, compliance reviews by CMS, or changes to federal Medicaid funding affecting such programs.

On November 18, 2019, CMS released a proposed rule, the Medicaid Fiscal Accountability Rule, that was intended to increase federal oversight of MSPs and state Medicaid financing policies. Among other things, the proposed rule would have added new reporting requirements on UPL payment arrangements, imposed limitations on UPL payments that are made to physicians and certain other practitioners, and imposed limits on the use of healthcare provider taxes, intergovernmental transfers and certified public expenditures. CMS withdrew the proposed rule in 2020. However, some of the reporting requirements contained in the Medicaid Fiscal Accountability Rule were included in the CCA, and, beginning in FFY 2022, each state will be required to provide CMS with, among other things, (i) a description of the stated purpose and intended effects of the state's MSPs, (ii) an explanation of how the state's MSPs will result in payments that are consistent with the requirements of the Medicaid program, including the program's standards with respect to efficiency, economy, quality of care, and access, (iii) the criteria used to determine provider eligibility for the state's MSPs, (iv) a comprehensive description of the methodology used to calculate the amount of, and distribute, MSPs to each eligible provider, and (v) an assurance that the total Medicaid payments made by the state to inpatient hospital providers, including any MSPs, will not exceed the UPL. The CCA also further clarifies how third-party payments are to be considered when determining Medicaid DSH hospital-specific limits. We cannot predict the impact, if any, that the reporting requirements and other Medicaid provisions in the CCA will have on MSPs and UPL payments that are made by state Medicaid programs or whether Congress or CMS will adopt any additional legislation or regulations that will eliminate or otherwise limit MSPs and/or UPL payments. In addition, we cannot predict whether MSP programs will continue (and, if continued, whether we will qualify for such programs) or guarantee that revenues recognized from these programs will not decrease.

Budget cuts, federal or state legislation, or other changes in the administration or interpretation of government health programs by government agencies or contracted managed care organizations could have a material adverse effect on our financial position and results of operations.

Medicaid Block Grants and Capped Federal Funding

As part of the movement to repeal, replace or modify the Affordable Care Act and as a means to reduce the federal budget deficit, there have been Congressional and administrative efforts to move Medicaid from an open-ended program with coverage and benefits set by the federal government to one in which states receive a fixed amount of federal funds, either through block grants or per capita caps, and have more flexibility to determine benefits, eligibility and provider payments. If implemented, we cannot predict whether the amount of fixed federal funding to the states will be based on current payment amounts, or if it will be based on lower payment amounts, which would negatively impact those states that expanded their Medicaid programs in response to the Affordable Care Act. Such efforts to modify or reduce federal funding of the Medicaid program, as well as those that would reduce the amount of federal Medicaid matching funds available to states by curtailing the use of provider taxes, could have a negative impact on state Medicaid budgets resulting in less coverage for eligible individuals or lower reimbursement rates.

On November 11, 2019, Tennessee, one of the states in which we operate, submitted an amendment to CMS for its Medicaid demonstration waiver that would convert federal funding for the Tennessee Medicaid program to a modified block grant program. CMS approved the amendment on January 8, 2021, and as required by state law, the Tennessee General Assembly approved the implementation of the amendment on January 15, 2021. Under the amendment, the Tennessee Medicaid program would receive federal matching funds for expenditures up to an aggregate annual cap. The aggregate cap would be based on the Tennessee Medicaid program's historical expenditures and would be increased to reflect a reasonable growth rate over time and for unexpected increases in enrollment. In exchange, the Tennessee Medicaid program would be given increased flexibility in how it operates and would be entitled to 55% of any savings that are achieved if spending is below the aggregate cap and the state meets certain quality targets. Any savings would generally be required to be re-invested in the Tennessee Medicaid or other health related programs. Despite being granted increased administrative flexibility, the Tennessee Medicaid program would be required to maintain the coverage and benefit levels that were in place as of December 31, 2020. A lawsuit was filed in the U.S. District Court for the District of Columbia on April 22, 2021, seeking to stop the conversion of the Tennessee Medicaid program to a modified block grant program. On June 30, 2022, following a public comment period, CMS sent a letter to Tennessee requesting that the state make certain modifications to the Tennessee Medicaid demonstration waiver, which included, among other things, a request that the state submit a new financing and budget neutrality model based on a traditional per member per month cap, instead of an aggregate cap. In response, on August 30, 2022, following a public comment period, Tennessee sent CMS a proposed amendment to its demonstration waiver intended to address CMS's concerns, including changes to the financing of the demonstration, moving from an aggregate cap to a per member per month cap, and revising the framework for reinvestment of demonstration savings. We cannot predict whether CMS will accept Tennessee's proposed amendments to its demonstration waiver or whether CMS will request further modifications or rescind altogether its approval of the amendment to the Tennessee Medicaid program or the impact that the amendment and related changes to the Tennessee Medicaid program would have on our operations and revenues.

Recovery Audit and Other Review Contractors

Recovery audit contractors ("***RACs***") are used by CMS and state agencies to detect Medicare and Medicaid overpayments not identified through existing claims review mechanisms. The RAC program relies on private companies to examine Medicare and Medicaid claims filed by healthcare providers. RACs perform post-discharge audits of medical records to identify overpayments resulting from incorrect payment amounts, non-covered services, medically unnecessary services, incorrectly coded services, and duplicate services and are paid on a contingency basis. Any claims identified as overpayments are subject to a RAC program appeals process. In 2016, in connection with the procurement of the new recovery audit contracts, CMS made a number of enhancements to the RAC program, including the establishment of a RAC program Provider Relations Coordinator, requiring RACs to maintain an overturn rate of less than 10% at the first level of appeal, requiring RACs to maintain an accuracy rate of at least 95%, and establishing additional documentation request limits based on a provider's compliance with Medicare rules, that are intended to address provider and other stakeholder concerns. CMS has also limited the number of claims that RACs may audit by limiting the number of records that RACs may request from hospitals based on each hospital's claim denial rate for the previous year.

In addition to RACs, CMS employs Unified Program Integrity Contractors ("***UPICs***"), which integrate the functions of the former Zone Program Integrity Contractors, Program Safeguard Contractors, and Medicaid Integrity Contractors, to perform post-payment audits of Medicare and Medicaid claims and identify overpayments. A number of state Medicaid agencies and other contractors have also increased their review activities.

Although we believe our claims for reimbursement submitted to the Medicare and Medicaid programs are accurate, many of our facilities have had Medicare claims audited by the RAC program. While our facilities have successfully appealed many of the adverse determinations raised by Medicare RAC audits, we cannot predict if this trend will continue or the results of any future audits. We cannot predict the volume or outcome of any future audits conducted by the various RACs and other review programs to which our facilities will be subject.

Utilization and Claim Review

Federal law contains numerous provisions designed to ensure that services rendered to Medicare and Medicaid patients meet professionally recognized standards and are medically necessary and that claims for reimbursement are properly filed. These provisions include a requirement that a sampling of admissions of Medicare and Medicaid patients must be reviewed on a post-discharge basis by quality improvement organizations ("***QIOs***"), which review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of MS-DRG classifications and the appropriateness of cases of extraordinary length of stay or cost. QIOs may deny payment for services or assess fines and also have the authority to recommend to HHS that a provider which is in substantial noncompliance with the standards of the QIO be excluded from participation in the Medicare program. Utilization review is also a requirement of most non-governmental managed care organizations.

In addition to utilization reviews, CMS has also adopted a nationwide claim review and provider education program known as the Targeted Probe and Educate ("***TPE***") program, which is intended to reduce errors in the claims submission process and focuses on items and services that pose the greatest risk to the Medicare program or that have a high national error rate, such as short inpatient stays. Under the TPE program, MACs use data analysis to identify providers who, for a particular item or service, have high claim denial rates or billing practices that vary significantly from their peers. Once a provider has been identified, the MAC reviews between 20 and 40 of the provider's claims for the item or service and, if issues are noted, offers the provider an individualized education session that is based on the results of the review. The provider is then generally given 45 days to improve its systems and processes, and, after that period has ended, the MAC conducts another review of the provider's claims. If additional issues are identified, the provider is given the opportunity for another education session. Providers are typically given three rounds of review and education before being referred to CMS for further action, potentially including pre-payment review, referral for RAC review, or in some cases revocation of billing privileges.

HMOs, PPOs and Other Private Insurers

In addition to government programs, our facilities are reimbursed by differing types of private payers including HMOs, PPOs and other private insurers. Also included in this category are the patient responsibility portions for co-payment and deductible obligations under these programs. Our revenues from HMOs, PPOs and other private insurers were approximately 37.8% of our revenues for the year ended December 31, 2022. Revenues from HMOs, PPOs and other private insurers are subject to contracts and other arrangements that require us to discount the amounts we customarily charge for healthcare services or accept fixed, pre-determined fees for our services. These discounted contractual arrangements often limit our ability to increase charges or revenues in response to increasing costs. We actively negotiate with these payers in an effort to maintain or increase the pricing of our healthcare services; however, we have no control over patients switching their healthcare coverage to a payer with which we have negotiated less favorable reimbursement rates. In recent years, an increasing number of our patients have moved to lower cost healthcare coverage plans, and such plans generally provide lower reimbursement rates and require patients to pay an increased portion of the costs of care through deductibles, co-payments or exclusions. Additionally, plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices. If we provide services when we are not a participating provider in the network, it can result in higher patient responsibility amounts that a patient may not have the ability to pay or may choose not to pay. We expect these trends to continue in the coming years.

Self-Pay Patients

Self-pay revenues are primarily generated through the treatment of uninsured patients. Our revenues from self-pay patients were approximately 0.7% of our revenues for the year ended December 31, 2022. Beginning in 2014, our self-pay revenues began to decrease as a percentage of overall revenues due largely to a shift from self-pay to Medicaid and HMOs, PPOs and other private insurers for a portion of our patient population, which primarily has been a result of the Affordable Care Act and the expansion of Medicaid coverage in certain of the states in which we operate. These reductions partially offset trends our facilities experienced in prior years, which included increases in self-pay revenues due to a combination of broad economic factors, including high levels of unemployment in many of our markets and increasing numbers of individuals and employers who purchase insurance plans with high deductibles and high co-payments. We cannot predict how administrative or judicial interpretations, legislative actions or any other modifications to the Affordable Care Act that may be implemented or adopted, such as the cessation of cost sharing reduction payments or the repeal of the individual mandate, may impact our self-pay revenues. We also cannot predict whether the layoffs that may occur as a result of a decline in economic conditions, such as recession, economic downturn, and/or inflationary conditions in the U.S. will increase the number of underinsured and uninsured patients that seek treatment at our facilities.

In addition, effective January 1, 2022, the No Surprises Act requires healthcare providers, including hospitals and other healthcare facilities, to provide uninsured patients with a good faith estimate of the provider's total expected charges for scheduled items or services, including any expected ancillary services, before providing the items or services to the patient. Uninsured patients will be able to utilize a patient-provider dispute resolution process to challenge the provider's charges if they receive a bill that is substantially higher than the good faith estimate that was provided by the healthcare provider. We cannot predict how the uninsured patient good faith estimate and dispute resolution provisions of the No Surprises Act will impact the amounts collected by the Company's facilities for self-pay patients.

Surprise Medical Billing

On December 21, 2020, Congress adopted legislation that is intended to limit the "surprise" medical bills that are issued to individuals receiving emergency and certain other services (such as anesthesia services) from out-of-network providers. Effective as of January 1, 2022, the No Surprises Act prohibits, among other things, out-of-network providers from balance billing patients for emergency care services that are provided by out-of-network facilities or at in-network facilities by out-of-network providers. The No Surprises Act also generally prohibits out-of-network providers from billing patients for non-emergency medical treatment unless the provider first notifies the patient of the provider's network status and estimated charges and the patient agrees to be financially liable for the additional amounts. Violations of the No Surprises Act are punishable by civil monetary penalties of up to $10,000, and the No Surprises Act may be enforced by both the state and federal governments.

When the prohibitions of the No Surprises Act apply, a patient's financial liability will generally be limited to his or her in-network amount. In addition, the patient's third-party payer must either pay the out-of-network provider an initial payment amount or issue a notice of denial to the provider for the services that were rendered within 30 days of the payer's receipt of the provider's claim. If the provider is not satisfied with the payer's initial payment amount, the provider and the payer will begin a 30-day negotiation period. If the provider and the payer cannot agree on a payment amount during the negotiation period, the parties may elect to initiate an independent dispute resolution ("***IDR***") process. The IDR process will be conducted by a neutral arbitrator that has been approved by the federal government. Under regulations that have been issued by HHS, the Department of Labor, and the Department of Treasury (collectively, the "***Departments***"), in making a payment determination, the arbitrator must consider the "qualifying payment amount" (the "***QPA***"), which generally will be the plan or the insurer's median contracted rate, among additional information submitted by a party. A number of lawsuits have been filed against the Departments challenging various aspects of the final rules implementing the No Surprises Act, including the weight an arbitrator should give to the QPA in the IDR process. The regulations that have been issued by the Departments in connection with the No Surprises Act also require certain healthcare providers and facilities to make publicly available, post on a public website and provide a one-page notice to individuals about the requirements and prohibitions applicable to the facility or provider under the No Surprises Act, any applicable state balance billing limitations or prohibitions, and how the individual can contact the appropriate state and federal agencies if he or she believes the provider or facility has violated the requirements set forth in the notice.

We cannot predict the outcome of the lawsuits that have been filed in connection with the No Surprises Act or how the No Surprises Act will be implemented by the Departments, or how it will ultimately be enforced by the federal and various state governments. We also cannot predict the amounts that will be received by our facilities and our employed providers for out-of-network services, whether the No Surprises Act will impact the in-network payment rates that are offered by third-party payers and the willingness of those payers to enter into participation agreements with us and our facilities in the future, or the costs that we will incur in complying with the requirements of the No Surprises Act. In addition, a number of states are considering or have already adopted legislation to eliminate surprise medical billing. We cannot predict how state legislative actions to modify or pass these proposals may be implemented or adopted, or what impact, if any, those actions may have on our operations and revenues.

Price Transparency

Transparency in healthcare pricing has become a focal point for CMS, Congress, and many state legislatures. For example, effective as of January 1, 2021, hospitals generally are required to post their standard charges prominently on a publicly available website. Under CMS regulations, each hospital's standard charges must be posted in two ways: (1) a single machine-readable digital file containing the gross charges, discounted cash prices, payer-specific negotiated charges, and de-identified minimum and maximum negotiated charges for all items and services provided by the hospital and (2) a public display in a consumer-friendly manner of cash prices, payer-specific negotiated charges, and de-identified minimum and maximum negotiated charges for at least 300 "shoppable" services (70 CMS-specified and 230 hospital-selected). CMS is actively auditing and monitoring hospital compliance with its reporting requirements and has taken a number of steps to address hospital noncompliance, including issuing warning notices to and requesting corrective action plans from hospitals that are determined to be out of compliance with the price transparency requirements, implementing measures that are intended to increase the availability of the required machine-readable file, and increasing the civil monetary penalties that are applicable to violations of the price transparency requirements. CMS issued its first civil monetary penalties under the CMS hospital price transparency regulations in June of 2022. In addition to the CMS hospital price transparency regulations, the Departments have issued regulations that require most private health plans, including group health plans and individual health insurance market plans, to disclose pricing and cost-sharing information to their beneficiaries. A number of states have also adopted their own healthcare price transparency and/or disclosure statutes.

In addition to addressing surprise billing, the No Surprises Act contains a number of provisions that are intended to promote provider and health plan price transparency. Among other things, under the No Surprises Act, healthcare providers will be required to provide "good faith estimates" of their total expected charges for scheduled items and services to the patient's health plan if the patient is insured prior to the item and/or service being provided. Health plans will be required to provide patients with an "advanced explanation of benefits" that includes: (1) information regarding the network status of the provider, (2) a copy of the provider's "good faith estimate," (3) an estimate of the amount that the patient will be expected to pay for the item or service, and (4) information on any applicable pre-authorization requirements.

Although we continue to evaluate, and are taking proactive steps in response to, the legislative and regulatory developments regarding price transparency, we cannot predict how existing regulations will be implemented or interpreted or whether any other requirements will be imposed on providers and health plans. We also cannot predict what affect the public disclosure of hospitals' or insurance providers' negotiated rates will have on our future negotiations with payers or the effect that the disclosure of pricing information by healthcare providers and health plans will have on our patient volumes and revenues.

Executive Order - Competition in the American Economy

On July 9, 2021, President Biden issued an executive order that is intended to promote competition in the American economy. Among other things, the executive order encourages the Federal Trade Commission (the "***FTC***") to ban or limit non-compete agreements, directs the Food and Drug Administration to work with states and tribes to import prescription drugs from Canada, directs HHS to increase its support for generic and biosimilar drugs, issue a comprehensive plan to combat high drug prices, and support existing price transparency rules, and encourages the Department of Justice ("***DOJ***") and the FTC to review and revise their merger guidelines to ensure that patients are not harmed by hospital mergers. In response, on January 6, 2023, the FTC issued a proposed rule that would ban employers from imposing post-termination non-competes on its workers (whether employees or independent contractors), subject to certain exceptions, and require employers to rescind existing non-competes and actively inform workers that they are no longer in effect. The proposed rule may not apply to non-profit hospitals, which could create a competitive disadvantage for us in our hiring and retention efforts. Although we cannot predict whether the FTC's proposed rule will be adopted in its current form, any limitation or ban on our ability to enter into non-compete agreements with employed or contracted staff may impact our ability to hire and retain qualified physicians, nurses and other medical support personnel and may adversely affect our costs of doing business or our ability to deliver services in our communities. Also in response to the executive order, on February 3, 2023, the DOJ announced its withdrawal of three long-standing antitrust policy statements related to enforcement in the health care industry. These statements had provided guidance in the form of "safety zones," which described conduct that the antitrust agencies would not challenge under the antitrust laws, absent extraordinary circumstances. The safety zones covered a wide variety of collaborations between health care providers, including mergers, joint ventures, joint purchasing arrangements, information exchanges, and the formation and operation of financially and clinically integrated networks. The withdrawal of these antitrust policy statements signals increased antitrust scrutiny for collaborations within the health care industry. We cannot predict the impact that the withdrawal of DOJ's antitrust policy statements will have on our operations or future transactions or how, if at all, the various other initiatives set forth in the executive order will be implemented by the regulatory agencies involved.

U.S. Supreme Court Decision – Dobbs v. Jackson Women's Health Organization

On June 24, 2022, the U.S. Supreme Court issued a decision in *Dobbs v. Jackson Women's Health Organization* (the "***Dobbs Decision***") that overturned *Roe v. Wade* (the "***Roe Decision***") and held that the U.S. Constitution does not confer a right to an abortion. This decision sparked a litany of changes in state laws across the country, including a number of state "trigger" laws that have or are set to take effect and which ban or severely restrict the performance of abortion services and in some cases impose civil and criminal penalties on service providers and patients. In turn, many state legislatures have introduced bills or proposed state constitutional amendments to protect access to abortions, and lawsuits have been filed in numerous states challenging trigger bans and other abortion restrictions that went into effect after the Dobbs Decision. We cannot predict the full implications of the U.S. Supreme Court's Dobbs Decision or the impact that such decision, or any litigation arising therefrom, will have on us, our employees, or our patients.

Executive Order - Protecting Access to Reproductive Health Care Services

Following the U.S. Supreme Court's Dobbs Decision that overturned the Roe Decision, President Biden issued an executive order on July 8, 2022, that is intended, among other things, to coordinate the implementation of federal efforts to safeguard access to reproductive health care services (including abortion and contraception) and to protect patient privacy and access to accurate information. As directed by the executive order, on July 11, 2022, HHS announced new guidance that is intended to clarify provider responsibilities and protections under the federal Emergency Medical Treatment and Labor Act ("***EMTALA***") with respect to providing stabilizing medical treatment for pregnant women and those experiencing pregnancy loss. Notably, HHS affirms that EMTALA obligations preempt directly conflicting state abortion laws or bans when needed for emergency care. Consequently, according to HHS, under federal law, providers in emergency situations are required to provide stabilizing care to someone with an emergency medical condition, including the performance of abortion services if necessary, regardless of the state where they live. A violation of EMTALA could result in termination of a provider's Medicare provider agreement and/or the imposition of civil monetary penalties. On August 23, 2022, at the request of the Attorney General of the State of Texas, the U.S. District Court for the Northern District of Texas issued a preliminary injunction against enforcement of HHS's new EMTALA guidance as it pertains to Texas's abortion law. The next day, the U.S. District Court for the District of Idaho issued a preliminary injunction in favor of the DOJ blocking enforcement of Idaho's abortion ban to the extent the law conflicts with EMTALA-mandated care. As expected, the federal government appealed the decision in Texas, and we expect the Idaho decision to be appealed as well following its failed motion for reconsideration. We cannot predict the outcome of these and other lawsuits, or how federal and state government agencies will ultimately enforce EMTALA or related state laws in light of HHS's new guidance or the impact that the new guidance will have on our operations. We also cannot predict how, if at all, the various initiatives set forth in President Biden's executive order relating to reproductive health care services will be implemented by the regulatory agencies involved or the impact that the executive order will have on us, our employees, or our patients.

Healthcare Reform

In recent years, Congress has passed a number of laws, including the Affordable Care Act, that are intended to effect major changes in the U.S. healthcare system. The Affordable Care Act, which became federal law in 2010, dramatically altered the U.S. healthcare system and was intended to decrease the number of uninsured Americans and reduce the overall cost of healthcare. The net effect of the Affordable Care Act, as currently adopted, on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. While the U.S. Supreme Court rejected the most recent challenge to constitutionality of the Affordable Care Act, we cannot predict the outcome of other lawsuits that are still pending in lower courts regarding the implementation of various aspects of the Affordable Care Act or whether the U.S. Supreme Court will decide to hear future cases. Additionally, we cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

Expanded Coverage

Based on original Congressional Budget Office ("***CBO***") and CMS estimates, by 2020, the Affordable Care Act was originally expected to expand coverage for 32 to 34 million people, resulting in coverage of an estimated 95% of the legal U.S. population and an uninsured population of approximately 27 million individuals. This increased coverage was expected to occur through a combination of public program expansion and private sector health insurance and other reforms. In July 2021, the CBO estimated that, due to a number of factors, approximately 28 million people were uninsured in 2020 and that the number of uninsured individuals would remain relatively consistent through 2031.

Public program expansion has been driven primarily by expanding the categories of individuals who are eligible for Medicaid coverage and allowing individuals with relatively higher incomes to qualify for Medicaid coverage. When the Affordable Care Act was adopted, it essentially made the expansion of the Medicaid program mandatory. However, in 2012, the U.S. Supreme Court held that the provision of the Affordable Care Act that authorized the Secretary of HHS to penalize states that chose not to participate in the expansion of the Medicaid program by removing all of their existing Medicaid funding was unconstitutional. Based on the U.S. Supreme Court's ruling, a number of states, including several in which the Company has facilities, have opted not to expand their Medicaid programs. Additional public program expansion has occurred through provisions of the Affordable Care Act that authorize the federal government to subsidize states that create non-Medicaid plans for residents whose incomes are greater than 133% of the FPL but do not exceed 200% of the FPL and allow Medicaid participating hospitals to make presumptive determinations of Medicaid eligibility for certain categories of individuals, such as pregnant women, infants, children, and parents and other caretaker relatives and their spouses. If an individual is found to be presumptively eligible for Medicaid benefits, the hospital will get paid for the services it provides during the temporary presumptive eligibility period, just as though the patient were already enrolled in the Medicaid program.

The expansion of health coverage through the private sector as a result of the Affordable Care Act has occurred through new requirements on health insurers, employers and individuals. For example, commencing January 1, 2014, health insurance companies were prohibited from imposing annual coverage limits, excluding persons based upon pre-existing conditions or denying coverage for any individual who is willing to pay the premiums for such coverage. In addition, since January 1, 2011, each health plan has been required to keep its annual non-medical costs lower than 15% of premium revenue for the group market and lower than 20% in the small group and individual markets or rebate its enrollees the amount spent in excess of the percentage. Also, since September 23, 2010, health insurers have not been permitted to deny coverage to children based upon a pre-existing condition and must allow dependent care coverage for children up to 26 years old. Larger employers are subject to new requirements and incentives to provide health insurance benefits to their full-time employees, and, effective January 1, 2016, all employers subject to the requirement were required to offer health insurance coverage to 95% of their full-time employees and their dependents in order to avoid penalties.

To facilitate the purchase of health insurance by individuals and small employers, each state was required to establish an Exchange by January 1, 2014. For individuals and families below 400% of the FPL, the cost of obtaining health insurance through the Exchanges is subsidized by the federal government. Those with lower incomes will be eligible to receive greater subsidies. The ARP temporarily extends the availability of those subsidies to individuals and families with incomes over 400% of the FPL and increases the amount of the subsidies that are available for individuals and families who were already eligible for financial assistance under the Affordable Care Act. Health insurers participating in the Exchanges must offer a set of minimum benefits to be defined by HHS and may offer more benefits. Any benefits to us from the expansion of private sector coverage depend in large part on our success in contracting with payers whose policies are listed on the Exchanges. We currently have contracts with Exchange payers in every state in which we operate, and the reimbursement rates paid under those contracts generally are comparable to that paid to us by other private payers.

Public Program Spending

The Affordable Care Act provides for a number of Medicare, Medicaid and other federal healthcare program spending reductions. The CBO previously estimated that between 2013 and 2023, these program spending reductions would include $415 billion in Medicare fee-for-service market basket and productivity reimbursement reductions for all providers, the majority of which ($260 billion) would come from hospitals. The CBO's estimate also included an additional $56 billion in reductions of Medicare and Medicaid DSH funding. CMS had originally estimated that the Affordable Care Act would result in $64 billion in reductions of Medicare and Medicaid DSH funding, with $50 billion of the reductions coming from Medicare. Some of those reductions, most notably the Medicaid DSH funding reductions, have been delayed by subsequent legislation, and we cannot predict whether the public program spending reductions required by the Affordable Care Act will be further delayed or modified in the future.

Accountable Care Organizations

The Affordable Care Act required HHS to establish a Medicare Shared Savings Program that promotes accountability and coordination of care through the creation of accountable care organizations ("***ACOs***"). ACOs are groups of hospitals and/or physicians and other designated professionals and suppliers who come together voluntarily to invest in infrastructure and redesign delivery processes to achieve high quality and efficient delivery of services. The program is intended to produce savings as a result of improved quality and operational efficiency. ACOs that achieve quality performance standards established by HHS are eligible to share in a portion of the amounts saved by the Medicare program. There are several types of ACO programs, and as of January 17, 2023, 456 ACOs participate in the Medicare Shared Savings Program, and additional ACOs are being established by private payers. The number of ACOs participating in the Medicare Shared Savings Program decreased in 2023, but the policies finalized in the final PFS rule for CY 2023 are expected to grow participation next year. On November 1, 2022, CMS issued the CY 2023 PFS final rule which includes "significant reforms" to the Medicare Shared Savings Program intended to incentivize participation and promote equity and alignment across quality programs. Among other things, such measures include providing advance shared savings payments to certain new ACOs that serve underserved populations, allowing smaller ACOs more time to transition to downside risk, a health equity adjustment that would upwardly adjust ACOs' quality performance scores to reward excellent care delivered to underserved populations, and certain changes to benchmarking methodologies that are designed to encourage more ACOs to participate and succeed. A few of our facilities currently participate in ACOs.

Bundled Payment Pilot Programs

The Affordable Care Act created the Center for Medicare & Medicaid Innovation ("***CMMI***") and made it responsible for establishing demonstration projects and other initiatives in order to identify, develop, test and encourage the adoption of new methods of delivering and paying for healthcare that create savings under the Medicare and Medicaid programs while improving quality of care. Under these projects and initiatives, participating providers agree to receive one payment for services provided to Medicare patients for certain medical conditions or episodes of care and accept accountability for costs and the quality of care that is provided. By financially rewarding providers for quality, cost-effective care and penalizing providers when costs exceed a certain amount, these models are intended to lead to higher quality, more coordinated care at a lower cost to the Medicare program. In connection with these programs, CMMI has developed a voluntary Bundled Payment for Care Improvement Advanced Model ("***BPCI Advanced***") to test innovative payment and service delivery models that have the potential to reduce Medicare and Medicaid expenditures while preserving or enhancing the quality of care for beneficiaries. Participation in bundled payments programs is generally voluntary, but CMS does currently require hospitals in certain geographic areas to participate in the Comprehensive Care for Joint Replacement model, which covers certain extremity joint replacement procedures and is scheduled to end in 2024. CMS has developed a radiation oncology bundled payment program that was expected to begin on January 1, 2022, but has been delayed indefinitely until CMS determines a date through future rulemaking. CMS has indicated that it expects to develop additional voluntary and mandatory bundled payment models in the future. Several of our facilities currently participate in bundled payment programs.

Specialty Hospital Limitations

Over the last decade, we have faced competition from hospitals that have physician ownership. The Affordable Care Act prohibits newly created physician-owned hospitals from billing for Medicare patients referred by their physician owners. While the Affordable Care Act grandfathers existing physician-owned hospitals, it does not allow these hospitals to increase the percentage of physician ownership and significantly restricts their ability to expand. As of December 31, 2022, we operated two hospitals through joint ventures with physicians in which we own a controlling interest.

Competition for Patients

Our hospitals and other healthcare businesses operate in extremely competitive environments. Competition among healthcare providers occurs primarily at the local level. Accordingly, each facility develops its own strategies to address competition locally. A hospital's position within the geographic area in which it operates is affected by a number of competitive factors, including, but not limited to:

- the scope, breadth and quality of services a hospital offers to its patients and physicians;
- whether new, competitive services are subject to certificate of need or other restrictions;
- the number, quality and specialties of the physicians who admit and refer patients to the hospital;
- the nurses and other healthcare professionals employed by the hospital or on the hospital's staff;
- the hospital's reputation;
- its managed care contracting relationships;
- its location and the location and number of competitive facilities and other healthcare alternatives;
- the physical condition of its buildings and improvements;
- the quality, age and state-of-the-art of its medical equipment;
- its parking or proximity to public transportation;
- the length of time it has been a part of the community;
- the relative convenience of the manner in which care is provided (for example, whether services are available on an outpatient basis and whether services can be obtained quickly);
- the choices made by the physicians on the medical staff of the hospital; and
- the charges for its services.

In addition, tax-exempt competitors may have certain financial advantages not available to our facilities, such as endowments, charitable contributions, tax-exempt financing, exemptions from sales, property and income taxes, and participation in the 340B Program. In certain states, some not-for-profit hospitals are permitted by law to directly employ physicians while for-profit hospitals are prohibited from doing so.

We also face increasing competition from specialized care providers, including freestanding emergency departments and outpatient surgery, oncology, physical therapy, diagnostic and urgent care centers, as well as competing services rendered in physician offices. To the extent that other providers are successful in developing specialized outpatient facilities, our market share for those specialized services will likely decrease. Physician competition also has increased as physicians, in some cases, have become equity owners in surgery centers and outpatient diagnostic centers to which they refer patients. Some of our hospitals have developed specialized outpatient facilities where necessary to compete with these other providers.

Human Capital Resources

Overview

Our facilities must compete with other healthcare providers for professional talent. A significant factor in our future success will be the ability of our facilities to attract and retain physicians, as it is physicians who decide whether a patient is admitted to the hospital and the procedures to be performed.

We also compete with other healthcare providers in recruiting and retaining qualified management and other healthcare providers such as nurses, pharmacists, and lab technicians and other non-physician personnel responsible for day-to-day operations of each of our facilities. In some markets, the scarce availability of nurses and other medical support personnel presents a significant operating issue, which has been heightened by the COVID-19 pandemic or other recent factors. This shortage has required, and may continue to require us, to enhance wages and benefits to recruit and retain nurses and other medical support personnel, recruit personnel from foreign countries, and utilize more expensive temporary personnel. We also depend on the available labor pool of semi-skilled and unskilled employees in each of the markets in which we operate.

At December 31, 2022, our subsidiaries collectively had approximately 50,000 employees, including approximately 12,000 part-time employees. The majority of these employees are hospital-based, including nursing staff, physical and occupational therapists, laboratory and radiology technicians, pharmacy staff, facility maintenance workers and the administrative staffs of our facilities. We understand that, to fulfill our mission of Making Communities Healthier®, we must create places where people choose to come for healthcare, physicians want to practice, and employees want to work. To support this mission, talent development has been a longstanding strategic pillar for the organization.

Diversity, Equity and Inclusion

We are committed to creating an inclusive, community-based healthcare delivery system that provides equitable opportunities for all people, starting with our employees. We have appointed a Chief Diversity and Patient Experience officer who is leading an enterprise-wide strategy focused on training and education of our workforce, targeted efforts to address health equity in our communities, and the recruitment and development of diverse talent. This includes the creation of new formal partnerships to recruit more diverse talent and match new recruits with carefully selected mentors and sponsors within our organization.

Serving the Community

We have a culture of giving and service that impacts the community of care beyond the bedside. We do this by: (i) educating our employees on the importance of positively impacting the communities they call home, (ii) serving our communities by advancing our mission both inside and outside our facilities' walls, (iii) investing in organizations that align with our mission and are making a difference and (iv) leading by example through our collective impact nationwide.

Our Lifepoint Community Foundation guides our charitable giving and economic development efforts, reviews requests for local financial or in-kind support and continuously evaluates the effectiveness of our social responsibility efforts in supporting our mission. Our local community support includes, among other charitable causes, strategic community impact partnerships with Second Harvest Food Bank of Middle Tennessee and Special Olympics Tennessee.

We are committed to taking care of our Lifepoint family so we can better care for others. The Lifecare Fund was established in 2010 as a safety net for employees experiencing serious financial hardship from unforeseen or unpreventable circumstances. Managed by the Community Foundation of Middle Tennessee, Lifecare has provided financial assistance for thousands of our employees during their times of greatest need.

Recruitment and Retention

We believe that healthcare is best delivered close to home, and our facilities strive to recruit and retain qualified management and staff personnel. Our frontline caregivers, including nurses, are the heartbeat of our organization, and we have a robust strategy to enhance the recruitment and retention of clinical staff into the future. This strategy includes meaningful education and career advancement opportunities, and competitive compensation. The scarce availability of nurses and other medical support personnel in some markets, which has been heightened by the COVID-19 pandemic and other recent factors, has required us to enhance wages and benefits and/or utilize more expensive temporary personnel in certain situations.

Our facilities also employ and have affiliations with physicians. Many physicians today prefer to be employed, rather than operating their own practices or joining existing medical groups. When employing office-based physicians, we also often employ office employees and other personnel necessary to support these physicians and incur additional expenses as a result. We expect this trend to continue.

We seek to attract both employed and affiliated physicians by maintaining a sharp focus on quality, driven by our National Quality Program; employing high performing talent; equipping our facilities with technologically advanced equipment and an attractive, up-to-date physical plant; and otherwise creating an environment within which physicians choose to practice. While physicians may terminate their association with our facilities at any time, we believe that by striving to maintain and improve the quality of care at our facilities and by maintaining ethical and professional standards, our facilities will be better positioned to attract and retain qualified physicians with a variety of specialties.

When recruiting new physicians to our communities, the types, amount and duration of compensation and assistance we can provide to recruited physicians are limited by the federal physician self-referral law (commonly referred to as the "***Stark law***"), the federal Anti-kickback Statute (the "***Anti-kickback Statute***"), state anti-kickback and physician self-referral statutes, and related regulations. The Stark law requires, among other things, that recruitment assistance can only be provided to physicians who meet certain geographic and practice requirements, that the amount of assistance cannot be changed during the term of the recruitment agreement, and that the recruitment payments cannot generally benefit physicians currently in practice in the community beyond recruitment costs actually incurred. In addition to these legal requirements, there is competition from other communities and facilities for these physicians, and this competition continues after the physician begins practicing in one of our communities.

Labor Costs and Union Activity

Approximately 2,000 of our employees across certain of our facilities are unionized. While some of our non-unionized facilities experience union organizing activity from time to time, currently we do not expect these efforts to affect our future operations materially. Our facilities, like most facilities, have experienced rising labor costs and increases in the rate and utilization of contract labor. Our labor costs also may increase at higher rates among unionized employees. Unionized employees also may have rights under their collective bargaining agreements that restrict the ability of a facility to take certain actions with respect to these employees.

Government Regulation

Overview

All participants in the healthcare industry are required to comply with extensive government regulations at the federal, state and local levels. Under these laws and regulations, facilities must meet requirements for licensure and to qualify to participate in government healthcare programs, including the Medicare and Medicaid programs. These requirements relate to the adequacy of medical care, equipment, personnel, operating policies and procedures, maintenance of adequate records, rate-setting, use and storage of pharmaceuticals and controlled substances, compliance with building codes and environmental protection laws. If we fail to comply with applicable laws and regulations, we may be subject to criminal penalties, civil sanctions, and the imposition of corporate integrity and other similar agreements, and our facilities may lose their licenses and ability to participate in Medicare and Medicaid. In addition, government regulations frequently change. When regulations change, we may be required to make changes in our facilities, equipment, personnel and services so that our facilities remain licensed and qualified to participate in these programs. We believe that our facilities are in substantial compliance with current federal, state and local regulations and standards.

Legislative and Regulatory Developments in Response to COVID-19

Numerous legislative and regulatory actions were taken in an attempt to provide businesses, including healthcare providers, with relief from the negative impacts of the COVID-19 pandemic. The legislative and regulatory responses to COVID-19 generally impact many of the statutes, regulations and policies summarized or discussed throughout this Report. Unless otherwise noted, such summaries or discussions have not been updated to reflect the impact of the COVID-19 legislative and regulatory developments.

CARES Act and Related Stimulus Legislation

The CARES Act was signed into law on March 27, 2020. Among other things, the CARES Act contains a number of provisions that are intended to assist healthcare providers as they combat the effects of the COVID-19 pandemic. Those provisions include, among others:

- the temporary suspension of Medicare sequestration from March 1, 2020, to December 31, 2020;
- the delay of the planned reductions to the Medicaid DSH payments program until October 1, 2023;
- an appropriation of $180 million to Health Resources and Services Administration's Federal Office of Rural Health Policy that will be awarded to small rural hospitals by the states through the Small Rural Hospital Improvement Program;
- an appropriation of $250 million to the Hospital Preparedness Program; and
- an appropriation of $100 billion to the Public Health and Social Services Emergency Fund (the "***Emergency Fund***") for a new program to reimburse, through grants or other mechanisms, hospitals, healthcare providers and other approved entities for COVID-19-related expenses or lost revenues.

The Paycheck Protection Program and Health Care Enhancement Act was enacted on April 24, 2020, and, among other things, provides an additional allocation of $75 billion to the Emergency Fund and an allocation of $25 billion for COVID-19 testing.

On December 21, 2020, Congress adopted the CAA, which provides an additional $900 billion in COVID-19 relief, including an additional allocation of $3 billion to the Emergency Fund. In addition, the CAA, among other things, delays the planned reductions to the Medicaid DSH payments program through FFY 2023, adds additional reductions to the Medicaid DSH payments program in FFYs 2026 and 2027, provided for a 3.75% increase in the Medicare PFS rates in CY 2021 and allocates $30 billion for the purchase and administration of COVID-19 vaccines and related therapeutics. In addition, the CAA extended the temporary suspension of Medicare sequestration through March 31, 2021. The temporary suspension was subsequently extended through December 31, 2021, by HR 1868, which, to offset the cost of the suspension, extended Medicare sequestration through 2030. The Sequester Cuts Act further extended the temporary suspension of Medicare sequestration through March 31, 2022, and reduced the sequestration cuts for the period of April 1, 2022, through June 30, 2022, to 1%. The Sequester Cuts Act also delayed application of 4% cuts to Medicare and other federal programs resulting from the requirements of the PAYGO Act that were scheduled to go into effect in CY 2022 until CY 2023. On December 23, 2022, Congress adopted the CAA23, which reduces the Medicare sequestration cuts through CY 2024, and extends Medicare sequestration through 2032. The CAA23 also delays application of 4% cuts to Medicare and other federal programs mandated by the PAYGO Act that were scheduled to go into effect in CY 2023 and CY 2024 until CY 2025.

On March 11, 2021, the ARP was signed into law. Among other things, the ARP allocates approximately $70 billion for COVID-19 testing and vaccine efforts; provides $8.5 billion to reimburse rural healthcare providers, such as sole community hospitals, rural referral centers, rural health clinics, and providers located outside metropolitan statistical areas, for expenses and lost revenues attributable to COVID-19; provides incentives, in the form of temporary increases to the FMAP, to encourage states that have not expanded their Medicaid programs as permitted by the Affordable Care Act to do so; permits states to expand the availability and duration of Medicaid postpartum coverage; and temporarily expands the subsidies that are available to individuals who purchase insurance through the Exchanges.

Stimulus Payments

The Emergency Fund distributed approximately $43 billion to hospitals based on their 2018 net patient revenue. Additionally, since that time, the Emergency Fund has distributed more than $90 billion to a number of different types of healthcare providers, including participants in state Medicaid/CHIP programs, providers in areas particularly impacted by the COVID-19 outbreak, rural providers (including hospitals and rural health clinics), skilled nursing facilities, dentists, providers of services with lower shares of Medicare reimbursement or who predominantly serve Medicaid beneficiaries, and providers requesting reimbursement for the treatment of uninsured patients.

Payments made by the Emergency Fund to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, filing attestations acknowledging receipt of payments, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients, not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse, and submitting such reports as may be required by HHS regarding the provider's compliance with the terms and conditions of the Emergency Fund. Healthcare providers that received more than $10,000 from the Emergency Fund between April 10, 2020 through June 30, 2020 (the "***First Payment Received Period***") were required to submit a report on their use of those funds no later than September 30, 2021. We successfully submitted the required reports for all of our providers that received and retained payments from the Emergency Fund during First Payment Received Period prior to the deadline. However, we will be required to submit additional reports in the future for payments that were received and retained by our providers from the Emergency Fund after the end of the First Payment Received Period. The reporting requirements and guidance from HHS related to the Emergency Fund have been subject to frequent clarifications and revision, and there can be no assurance that we will not be required to submit additional reports or provide additional information related to the payments we received from the Emergency Fund in the future. In addition, HHS has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the Office of Inspector General of HHS (the "***OIG***"), will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, HHS temporarily expanded the CMS Accelerated and Advance Payment Program to a broad group of Medicare Part A and Part B providers. Under the expanded Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period.

We received a total of $991 million of Medicare advance payments under the CMS Accelerated and Advance Payment Program during the year ended December 31, 2020. During the year ended December 31, 2021, we fully repaid all Medicare advance payments, and we do not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program.

COVID-19 Waivers and Temporary Suspension of Certain Regulatory Requirements

In addition to the financial relief that has been provided by the federal government under the CARES Act and other legislation that has been passed by Congress, CMS and many state governments have also issued a number of waivers or temporarily suspended a number of healthcare facility licensure and reimbursement requirements in order to provide hospitals, skilled nursing facilities, and other types of healthcare providers with increased flexibility to meet the challenges that are being presented by the COVID-19 pandemic. For example, CMS has temporarily waived the enforcement of certain requirements of the Medicare hospital conditions of participation and the Stark law to enable hospitals to treat patients in temporary locations and to obtain services from physicians in a more efficient and timely manner. Likewise, many states have also suspended the enforcement of certain certificate of need and licensure requirements to ensure that hospitals and other healthcare providers have sufficient capacity to treat COVID-19 patients. Our facilities have utilized the waivers and regulatory flexibility that is being provided to the extent necessary to appropriately respond to the COVID-19 pandemic. On January 30, 2023, President Biden announced that his administration intends to end the COVID-19 public health emergency on May 11, 2023, which will result in termination of many of the flexibilities and waivers issued in response to the COVID-19 public health emergency that have not already been terminated.

CARES Act Tax Provisions

The CARES Act also provides for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, we deferred cash payments of approximately $84 million related to Social Security payroll tax payments. During the year ended December 31, 2021, we fully repaid all previously deferred Social Security payroll taxes.

The federal income tax changes brought about by the CARES Act are complex and further guidance is expected. We may change our provision for income taxes and our deferred income taxes as our understanding of the CARES Act tax provisions evolves due to additional U.S. Department of Treasury guidance. Any such adjustments could materially impact our provision for income taxes and, as a result, our financial results in the relevant periods.

Fraud and Abuse Laws

Participation in the Medicare and/or Medicaid programs is heavily regulated by federal statutes and regulations. If a facility fails to comply substantially with the numerous federal laws governing the facility's activities, the facility's participation in the Medicare and/or Medicaid programs may be terminated, and/or civil or criminal penalties may be imposed. For example, a facility may lose its ability to participate in the Medicare and/or Medicaid programs if it, among other things:

- submits claims to Medicare and/or Medicaid for services not provided or misrepresents actual services provided in order to obtain higher payments;
- pays money to induce the referral of patients or purchase of items or services where such items or services are reimbursable under a federal or state healthcare program; or
- is a hospital and fails to provide appropriate emergency medical screening services to any individual who comes to a hospital's campus or otherwise fails to properly treat and transfer emergency patients.

Anti-kickback Statute

The federal Anti-kickback Statute is a criminal statute that generally prohibits the payment, receipt, offer or solicitation of anything of value, whether in cash or in kind, with the intent of generating referrals or orders, or recommending or arranging for services or items covered by a federal or state healthcare program. Violations of the Anti-kickback Statute are punishable by, among other things, imprisonment, criminal fines, substantial civil monetary penalties that are subject to annual adjustments for inflation for each violation, damages equal to three times the total remuneration associated with the unlawful referrals or services, and/or possible exclusion from participating in Medicare, Medicaid or other governmental healthcare programs. Violations of the Anti-kickback Statute can also result in liability under the False Claims Act.

The OIG is the primary federal agency responsible for identifying fraud and abuse in government healthcare programs. In order to fulfill its duties, the OIG performs audits, investigations and inspections. In addition, it provides guidance to healthcare providers by identifying types of activities that could violate the Anti-kickback Statute. The OIG has identified the following hospital/physician incentive arrangements, among other things, as potential violations:

- payment of any incentive by a hospital based on physician referrals of patients to the hospital;
- use of free or significantly discounted office space or equipment;
- provision of free or significantly discounted billing, nursing or other staff services;
- free training (other than compliance training) for a physician's office staff, including management and laboratory technique training;
- guarantees which provide that if a physician's income fails to reach a predetermined level, the hospital will pay any portion of the remainder;
- low-interest or interest-free loans, or loans that may be forgiven if a physician refers patients to the hospital;
- payment of the costs for a physician's travel and expenses for conferences;
- payment of services which require few, if any, substantive duties by the physician or which are in excess of the fair market value of the services rendered; or
- purchasing goods or services from physicians at prices in excess of their fair market value.

In 1998, the OIG published the Provider Self-Disclosure Protocol (which was subsequently replaced in 2013 and further amended in 2021 and renamed the Health Care Fraud Self-Disclosure Protocol) to establish a process for persons to voluntarily identify, disclose, and resolve instances of potential fraud involving federal healthcare programs and provide guidance on how to investigate this conduct, quantify damages, and report the conduct to OIG to resolve liability under OIG's civil monetary penalty authorities. We have a variety of financial relationships with physicians who refer patients to our facilities, including employment contracts, independent contractor agreements, professional service agreements, leases and joint ventures. We provide financial incentives to recruit physicians to relocate to communities served by our facilities. These incentives for relocation include minimum revenue guarantees and, in some cases, loans. The OIG is authorized to publish regulations outlining activities and business relationships that would be deemed not to violate the Anti-kickback Statute. These regulations are known as "safe harbor" regulations. Failure to comply with the safe harbor regulations does not, by itself, make conduct illegal, but instead the safe harbors delineate standards that, if complied with, protect conduct that might otherwise be deemed in violation of the Anti-kickback Statute. We intend for all our business arrangements to be in full compliance with the Anti-kickback Statute and seek to structure each of our arrangements with physicians to fit as closely as possible within an applicable safe harbor. However, not all of our business arrangements fit wholly within safe harbors, so we cannot guarantee that these arrangements will not be scrutinized by government authorities or, if scrutinized, that they will be determined to be in compliance with the Anti-kickback Statute or other applicable laws.

Eliminating Kickbacks in Recovery Act

The Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (the "***SUPPORT Act***") contains a number of provisions aimed at identifying at-risk individuals, increasing access to opioid abuse treatment, reducing overprescribing and promoting data sharing with the primary goal of reducing the use and abuse of opioids. Additionally, the SUPPORT Act attempts to address the problem of "patient brokering" in the context of addiction treatment facilities and sober living homes.

One section of the SUPPORT Act, the Eliminating Kickbacks in Recovery Act ("***EKRA***"), makes it a federal crime to knowingly and willfully: (1) solicit or receive any remuneration in return for referring a patient to a recovery home, clinical treatment facility or laboratory; or (2) pay or offer any remuneration to induce such a referral or in exchange for an individual using the services of a recovery home, clinical treatment facility, or laboratory. Each conviction under the EKRA is punishable by up to $200,000 in monetary damages, imprisonment for up to ten years, or both. Unlike the Anti-kickback Statute, EKRA is not limited to services reimbursable under a government healthcare program. The EKRA also contains exceptions similar to the Anti-kickback Statute safe harbors, but those exceptions are narrower than the Anti-kickback Statute safe harbors, such that practices that would be permissible under the Anti-kickback Statute may violate EKRA.

Stark Law

The federal Stark law prohibits physicians from referring Medicare and Medicaid patients to entities with which they or any of their immediate family members have a financial relationship if those entities provide certain "designated health services" unless an exception applies. The Stark law also prohibits entities that provide designated health services reimbursable by Medicare and Medicaid from billing the Medicare and Medicaid programs for any items or services that result from a prohibited referral and requires entities to refund amounts received for items and services provided pursuant to a prohibited referral on a timely basis. "Designated health services" include, among other things, inpatient and outpatient hospital services, laboratory services and radiology services. A violation of the Stark law may result in (i) a denial of payment, (ii) substantial civil monetary penalties that are subject to annual adjustments for inflation for each violation or circumvention scheme and (iii) exclusion from participation in the Medicare and Medicaid programs and other governmental healthcare programs. In addition, violations of the Stark law could also result in penalties under the False Claims Act.

There are ownership and compensation arrangement exceptions to the self-referral prohibition. There are also exceptions for many of the customary financial arrangements between physicians and facilities, including employment contracts, leases and recruitment agreements, and there is a "whole hospital exception," which allows a physician to make a referral to a hospital if, among other things, the physician owns an interest in the entire hospital, as opposed to an ownership interest in a department of the hospital. The Affordable Care Act significantly modified the requirements of the whole hospital exception and placed a number of restrictions on the ownership structure, operations, and expansion of physician owned hospitals. Two of our facilities are subject to those requirements. We intend for our financial arrangements with physicians to comply with the exceptions included in the Stark law and regulations.

In recent years, CMS has issued a number of proposed and final rules modifying and/or clarifying the Stark law exceptions. For example, on November 20, 2020, HHS published two final rules related to the Anti-kickback Statute and the Stark law that are intended to reduce regulatory barriers to care coordination and ease unnecessary compliance burdens for physicians and other healthcare providers. Among other things, the rules create new Anti-kickback Statute safe harbors and Stark law exceptions for value-based and cyber-technology arrangements and provide new guidance and clarification as to how the Anti-kickback Statute and Stark law will be interpreted and enforced by the OIG and CMS, respectively. We cannot predict the impact that the final rules will have on our facilities and our operations or whether the recent trend toward reducing provider compliance burdens will continue in the future. We also anticipate that there will be further changes to the regulations that implement the Anti-kickback Statute and/or the Stark law, and those changes may require us to modify our activities.

In addition to issuing new regulations, or applying new interpretations to existing rules or regulations, the federal government has modified its approach for ensuring compliance with and enforcing penalties for violations of the Stark law. In 2010, CMS also issued a "self-referral disclosure protocol" for hospitals and other providers that wish to self-disclose potential violations of the Stark law and attempt to resolve those potential violations and any related overpayment liabilities at levels below the maximum penalties and amounts set forth in the statute.

False Claims Act

The federal False Claims Act prohibits providers from, among other things, knowingly submitting false or fraudulent claims for payment to the federal government and failing to refund identified overpayments received from the government. The False Claims Act defines the term "knowingly" broadly, and while simple negligence generally will not give rise to liability, submitting a claim with reckless disregard to its truth or falsity can constitute the "knowing" submission of a false or fraudulent claim for the purposes of the False Claims Act. The "qui tam" or "whistleblower" provisions of the False Claims Act allow private individuals to bring actions under the False Claims Act on behalf of the government. These private parties are generally entitled to share in any amounts recovered by the government, and, as a result, the number of "whistleblower" lawsuits that have been filed against providers has increased significantly in recent years. When a private party brings a qui tam action under the False Claims Act, because such cases are filed under seal, the defendant will generally not be aware of the lawsuit until the government makes a determination whether it will intervene and take a lead in the litigation. If found liable under the False Claims Act, a provider may be required to pay up to three times the actual damages sustained by the government plus substantial civil monetary penalties that are subject to annual adjustments for inflation for each separate false claim. The government and whistleblowers have used the False Claims Act to prosecute Medicare, Medicaid and other government healthcare program fraud such as coding errors, billing for services not provided, submitting false cost reports and providing care that is not medically necessary or that is substandard in quality. Violations of the Stark law can result in False Claims Act liability, as well.

Changes in the Regulatory Environment

The Fraud Enforcement and Recovery Act of 2009 ("***FERA***") expanded the scope of the False Claims Act by, among other things, creating liability for knowingly and improperly avoiding or decreasing an obligation to pay money to the federal government and broadening protections for whistleblowers. In addition, the Affordable Care Act made several significant changes to healthcare fraud and abuse laws, including providing additional enforcement tools to the government, increasing cooperation between agencies by establishing mechanisms for the sharing of information and enhancing criminal and administrative penalties for non-compliance. For example, the Affordable Care Act: (1) expanded the scope of the RAC program to include Medicaid, (2) authorized HHS, in consultation with the OIG, to suspend Medicare and Medicaid payments to a provider of services or a supplier "pending an investigation of a credible allegation of fraud," (3) provided Medicare contractors with additional flexibility to conduct random prepayment reviews, and (4) required providers to adopt compliance programs that meet certain specified requirements as a condition of their Medicare enrollment. The Affordable Care Act also expanded the scope of the False Claims Act to cover payments in connection with the Exchanges if those payments include any federal funds and provides that claims submitted in connection with patient referrals that result from violations of the Anti-kickback Statute constitute false claims for the purposes of the False Claims Act.

In addition to the changes mentioned above, the Affordable Care Act created False Claims Act liability for the knowing failure to report and return an overpayment within 60 days of the identification of the overpayment or the date by which a corresponding cost report is due, whichever is later. On February 11, 2016, CMS published a final rule that provides clarification around the meaning of overpayment identification and generally establishes a six-year lookback period for Medicare Part A and Part B providers and suppliers. However, on December 27, 2022, CMS issued a proposed rule that would, among other things, materially revise the meaning of overpayment identification, which, if adopted in its current form, could create uncertainty related to the timing of a provider's repayment obligations. To avoid liability, providers must, among other things, carefully and accurately code claims for reimbursement, promptly return overpayments, accurately prepare cost reports and timely resolve credit balances. In light of the provisions of FERA and the Affordable Care Act relating to reporting and refunding overpayments and the robust funding for enforcement activities and audits, an increasing number of healthcare providers have self-reported potential violations of law, including technical violations of certain fraud and abuse laws, and refunded overpayments to avoid incurring fines and penalties. It is likely such refunds and voluntary disclosures will continue in the future, and we will make such refunds and disclosures in accordance with the law.

State Laws

Many of the states in which we operate have adopted laws similar to the Anti-kickback Statute and the Stark law. These state laws are generally very broad in scope and typically apply to patients whose treatment is covered by the Medicaid program and, in some cases, to all patients regardless of payment source. In addition, many of the states in which we operate have false claims statutes that impose civil and/or criminal liability for the types of acts prohibited by the False Claims Act or that otherwise prohibit the submission of false or fraudulent claims to the state government or Medicaid program. Violations of these laws are punishable by substantial civil and/or criminal penalties and, in many cases, the loss of the facility's license. Although we believe that our operations and arrangements with physicians and other referral sources comply with the applicable state fraud and abuse laws, most of these laws have not been interpreted by any court or governmental agency, and there can be no assurance that the regulatory authorities responsible for enforcing these laws will determine that our arrangements comply with the applicable requirements.

Emergency Medical Treatment and Active Labor Act

Our acute care hospitals are all generally subject to EMTALA. This federal law requires any hospital that participates in the Medicare program and has an emergency department to conduct an appropriate medical screening examination of every person who presents to the hospital's emergency department for treatment and, if the patient is suffering from an emergency medical condition, to either stabilize that condition or make an appropriate transfer of the patient to a facility that can handle the condition. The obligation to screen and stabilize emergency medical conditions or transfer exists regardless of a patient's ability to pay for treatment. Off-campus facilities such as specialty clinics, surgery centers and other facilities that lack emergency departments or otherwise do not treat emergency medical conditions are not generally subject to EMTALA. They must, however, have policies in place that explain how the location should proceed in an emergency situation, such as transferring the patient to the closest hospital with an emergency department. There are severe penalties under EMTALA if a hospital fails to screen or appropriately stabilize or transfer a patient or if the hospital delays appropriate treatment in order to first inquire about the patient's ability to pay, including substantial civil monetary penalties and exclusion from participation in the Medicare program. In addition, an injured patient, the patient's family or a medical facility that suffers a financial loss as a direct result of another hospital's violation of the law can bring a civil suit against that other hospital. CMS has actively enforced EMTALA and has indicated that it will continue to do so in the future. Although we believe that our acute care hospitals comply with EMTALA, we cannot predict whether CMS will implement new requirements in the future and, if so, whether our hospitals will comply with any new requirements.

On July 11, 2022, in response to an executive order issued by President Biden in the wake of the U.S. Supreme Court's Dobbs Decision that overturned the Roe Decision, HHS issued guidance on the applicability of EMTALA to the performance of abortion services when needed for emergency care. In its guidance HHS stated that EMTALA requires providers to provide stabilizing care to all individuals with an emergency medical condition, including providing abortion services when necessary, regardless of the state where they live. HHS also reiterated that EMTALA preempts directly conflicting state abortion laws that may restrict or ban abortions. A number of lawsuits have been filed challenging the enforceability of HHS's guidance in states with abortion laws. We cannot predict the outcome of these and other lawsuits, or how the federal and state government agencies will ultimately enforce EMTALA or related state laws in light of HHS's EMTALA guidance or the impact that such guidance will have on our operations or the cost of providing services in the communities we serve.

Administrative Simplification Provisions and Privacy and Security Requirements

We are subject to the administrative simplification provisions of the Health Insurance Portability and Accountability Act of 1996 ("***HIPAA***") which require the use of uniform electronic data transmission standards for healthcare claims and payment transactions submitted or received electronically. These provisions are intended to encourage electronic commerce in the healthcare industry. Additionally, we are subject to the privacy, security and breach notification regulations promulgated under HIPAA and the Health Information Technology for Economic and Clinical Health Act (the "***HITECH Act***"), which are designed to protect the confidentiality, availability and integrity of protected health information ("***PHI***") and establish an array of patient rights with respect to such information. The HIPAA privacy, security and breach notification regulations apply to covered entities, which include health plans, healthcare clearinghouses, and healthcare providers that conduct certain standard transactions (such as billing insurance) electronically. In addition, certain provisions of the privacy, security and breach notification regulations apply to business associates, which are entities that perform certain functions or activities on behalf of covered entities that require access to or the use or disclosure of protected health information. In certain circumstances, a covered entity may be held liable for the actions of its business associate if HHS determines an agency relationship exists between the covered entity and the business associate under federal agency law.

The HIPAA privacy regulations, which apply to individually identifiable health information held or disclosed by a covered entity in any form, whether communicated electronically, on paper or orally, impose extensive administrative requirements on us, which require that we adopt policies and procedures to comply with HIPAA, routinely train our workforce members on our HIPAA policies, provide patients with a copy of our notice of privacy practices, comply with rules governing the use and disclosure of PHI and impose these rules, by contract, on any business associate to whom we disclose such information in order to perform functions on our behalf. They also create rights for patients in their health information, such as the right to access and amend their health information and to request an accounting for certain disclosures of their health information. The HIPAA security regulations require us to establish and maintain reasonable and appropriate administrative, technical and physical safeguards to ensure the integrity, confidentiality and the availability of electronic health information and to perform ongoing assessments of the potential risks and vulnerabilities to the confidentiality, integrity and availability of such information. In addition, the HIPAA breach notification regulations require that we report breaches of unsecured (unencrypted) PHI to affected individuals without unreasonable delay, but in no case later than 60 calendar days of discovery of the breach. Notification must also be made to HHS and, in certain cases involving large breaches, to the local media. HHS is required to report on its website a list of all covered entities that report a breach involving more than 500 individuals. All non-permitted uses or disclosures are presumed to be breaches unless the covered entity or business associate can demonstrate that there is a low probability that the information has been compromised. We implement a comprehensive set of HIPAA policies and procedures, which we believe materially complies with the privacy, security and breach notification requirements of HIPAA.

HIPAA enforcement actions arise from audits, complaints, and breach notifications. Violations of the HIPAA regulations may result in criminal penalties and substantial civil monetary penalties subject to a limit for violations of the same requirement in a calendar year, based on the level of culpability associated with the violation. The civil monetary penalties are also subject to annual inflation adjustments. In addition, state attorneys general are authorized to bring civil actions seeking either injunction or damages up to $25,000 for violations of the same requirement in a calendar year in response to HIPAA violations that affect their state residents. HHS has the discretion in many cases to resolve HIPAA violations through informal means without the imposition of penalties. However, the HIPAA privacy, security and breach notification regulations have and will continue to impose significant costs on our facilities in order to comply with these standards. In recent years, enforcement of the HIPAA regulations has increased significantly, and we expect the increased level of enforcement to continue in the future.

Our facilities continue to remain subject to other applicable federal or state laws that are more restrictive than the HIPAA privacy and security regulations, which could impose additional penalties on us. For example, the federal government and some states impose laws governing the use and disclosure of health information pertaining to substance use disorder and/or mental health treatment that are more stringent than the rules that apply to healthcare information generally. In addition, the FTC uses its consumer protection authority to initiate enforcement actions against companies whose inadequate data security programs may expose consumers to fraud, identity theft and privacy intrusions, including the security programs of entities subject to the HIPAA regulations. Other state data privacy and security laws also may be applicable to certain data held by our facilities of residents of such states, such as the California Consumer Privacy Act of 2018, as amended by the California Privacy Rights Act of 2023, and the Virginia Consumer Data Protection Act, as well as other similar laws that are selected to go into effect in the future (for example, the Colorado Privacy Act, the Connecticut Data Privacy Act, and the Utah Consumer Privacy Act).

Corporate Practice of Medicine and Fee-Splitting

Some states have laws that prohibit unlicensed persons or business entities, including corporations or business organizations that own hospitals, from employing physicians. Some states also have adopted laws that prohibit direct or indirect payments or fee-splitting arrangements between physicians and unlicensed persons or business entities. Possible sanctions for violations of these restrictions include loss of a physician's license, civil and criminal penalties and rescission of business arrangements. These laws vary from state to state, are often vague and have seldom been interpreted by the courts or regulatory agencies. We attempt to structure our arrangements with healthcare providers to comply with the relevant state laws and the few available judicial and regulatory interpretations.

Facility Licensure, Certification, and Accreditation

All of our facilities must comply with various federal, state and local licensing and certification regulations and undergo periodic inspection by licensing agencies to certify compliance with such regulations. The initial and continued licensure of our facilities and certification to participate in government healthcare programs depends upon many factors including various state licensure regulations relating to quality of care, environment of care, equipment, services, staff training, personnel and the existence of adequate policies, procedures and controls. Federal, state and local agencies survey our facilities on a regular basis to determine whether the facilities are in compliance with regulatory operating and health standards and conditions for participating in government healthcare programs.

Most of our general acute care hospitals and IRFs maintain accreditation from private entities, such as The Joint Commission or the Commission on Accreditation of Rehabilitation Facilities ("***CARF***"). The Joint Commission accredits a broad variety of healthcare organizations, including hospitals and behavioral health organizations. CARF accredits behavioral health organizations providing mental health and alcohol and drug use and addiction services, rehabilitation services, as well as opiate treatment programs, and other types of healthcare programs. These accreditation programs are intended generally to improve the quality, safety, outcomes and value of healthcare services provided by accredited facilities. Certain federal and state licensing agencies as well as many government and private healthcare payment programs require that providers be accredited as a condition of licensure, certification or participation. Accreditation is typically granted for a specified period, ranging from one to three years, and renewals of accreditation generally require completion of a renewal application and an on-site renewal survey.

The Controlled Substances Act and Drug Enforcement Administration ("***DEA***") regulations require every person who dispenses controlled substances to be registered with the DEA at each principal place of business or professional practice where the person dispenses controlled substances, subject to limited exceptions. Each hospital or clinic must hold a DEA registration at each location and may be subject to similar state registration requirements. In addition, our facilities are subject to a variety of federal and state statutes and regulations that govern operational issues related to pharmaceuticals and controlled substances, such as those related to packaging, storing, and dispensing of pharmaceutical drugs, inventory control and recordkeeping requirements for controlled substances, and other standards intended to prevent diversion of controlled substances. The DEA, the DOJ, HHS, and state boards of pharmacy have broad enforcement powers, may conduct audits and investigations and can impose substantial fines and other penalties, including revocation of registration.

Certificates of Need

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and expensive equipment at our facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of the new equipment or services and allow competing healthcare providers to challenge the need for the facility, service or equipment. We operate facilities in certain states that have adopted certificate of need laws. If we fail to obtain necessary state approval, we will not be able to expand our facilities, complete acquisitions or add new services at our facilities in these states. Violation of these state laws may result in the imposition of civil sanctions or the revocation of the applicable hospital or facility license. Some states in which we operate do not have certificate of need requirements. Additionally, from time to time, states with existing requirements may repeal or limit the scope of their certificate of need programs. Our facilities in states that do not have (or limit the scope of) certificate of need programs could be subject to increased competition from other providers who may choose to enter the market.

Not-for-Profit Hospital Conversion Legislation

Many states have adopted legislation regarding the sale or other disposition of hospitals operated by not-for-profit entities. In states that do not have such legislation, the attorneys general have demonstrated an interest in reviewing these transactions under their general obligations to protect charitable assets. These legislative and administrative efforts primarily focus on the appropriate valuation of the assets divested and the use of the proceeds of the sale by the not-for-profit seller. Reviews and, in some instances, approval processes adopted by state authorities can add additional time to the closing of a not-for-profit hospital acquisition, and can also impose on buyers ongoing requirements to provide certain levels of charity care, or limit buyers' ability to discontinue particular service lines or to sell or otherwise dispose of a converted hospital. Future actions by state legislators or attorneys general may seriously delay or even prevent our ability to acquire certain hospitals.

Environmental Regulation

Our healthcare operations generate medical waste that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Our operations, as well as our purchases and sales of healthcare facilities, are also subject to compliance with various other environmental laws, rules and regulations. Such compliance costs are not significant, and we do not anticipate that such compliance costs will be significant in the future. However, regulations limiting greenhouse gas emissions and energy inputs may increase in coming years, which may increase our costs associated with compliance, disrupt and adversely affect our operations and could materially adversely affect our financial performance.

Compliance Program

We maintain a company-wide ethics and compliance program designed to ensure that we maintain high standards of ethical conduct in the operation of our business and to meet or exceed applicable federal guidance and industry standards. We continually implement written policies and procedures for all of our employees to promote compliance with all applicable laws, regulations and Company policies and to encourage a "culture of compliance" within the Company and its facilities. The organizational structure of our ethics and compliance program includes oversight by our Board of Directors and compliance committees at the Company and facility levels. We have compliance officers and personnel at the Company level and at our facilities. Other features of our compliance program include initial and periodic ethics and compliance training, systems for identifying and tracking compliance issues (including databases and hotlines for employees to report, without fear of retaliation, any suspected legal or ethical violations), regular auditing and monitoring of compliance issues, including coding audits and reviews of our financial relationships with physicians, and prompt review and resolution of identified issues.

Our compliance program also oversees the implementation and monitoring of the standards set forth by HIPAA for privacy. Ongoing HIPAA compliance also includes self-monitoring of HIPAA policy and procedure implementation by each of our healthcare facilities and oversight at the Company level.

Risk Management and Insurance

Given the nature of our operating environment, we are subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, we maintain insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("***SIR***") and deductible levels. At December 31, 2022, our SIR for professional liability claims is $15 million per claim at the majority of our acute care hospitals. Additionally, we participate in state-specific professional liability programs in Indiana, New Mexico and Pennsylvania. We have a $25,000 deductible for professional liability at each of our IRFs and behavioral health hospitals. At December 31, 2022, our deductible for workers' compensation claims at each of our acute care and behavioral health hospitals was $1 million per claim in all states in which we operate except for Montana and Washington. We participate in state-specific programs for our workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at our IRFs. Our SIR and deductible levels are evaluated annually as a part of our insurance program's renewal process.

We also maintain directors' and officers', property, some professional liability and other types of insurance coverage with unrelated commercial carriers. Our directors' and officers' liability insurance coverage for current officers and directors is a program that protects us as well as the individual director or officer. We maintain property insurance through unrelated commercial insurance companies.

We operate a captive insurance company under the name Point of Life Indemnity, Ltd. This captive insurance company, which is licensed by the Cayman Islands Monetary Authority and is a wholly-owned subsidiary of Lifepoint, issues malpractice indemnity policies to some subsidiaries employing physicians and advanced practice providers.

Item 1A. ***Risk Factors.***

Any of the following risks could materially and adversely affect our business, financial condition, results of operations or cash flow. In addition, the risks described below are not the only risks that we face. The following information should be read in conjunction with "Part II, Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" included in this Report. Additional risks and uncertainties not currently known to us or those that we currently view to be immaterial could also materially and adversely affect our business, financial condition, results of operations or cash flow.

Risk Factor Summary

The following is a summary of the principal risks that could adversely affect our business, financial condition, results of operations or cash flow.

Business and Operational Risks

- Changes in reimbursement rates, methods or timing of payment by federal or state programs may reduce our Medicare or Medicaid payments and adversely affect our revenues, results of operations and cash flow.
- Changes to Medicaid supplemental payment programs may materially and adversely affect our revenues, results of operations and cash flow.
- Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may adversely affect our revenues, results of operations and cash flow.
- Uncertainty regarding the Affordable Care Act or future healthcare reform may adversely affect our business, financial condition, results of operations and cash flow.
- The evolving and ongoing COVID-19 global pandemic continues to affect our operations, business and financial condition, and the emergence and effects related to a future pandemic, epidemic or outbreak of an infectious disease could adversely affect our operations and financial condition.
- We may encounter difficulty operating, integrating and improving financial performance at acquired facilities. Also, if we acquire facilities with unknown or contingent liabilities, we could become liable for material obligations, or it could diminish the anticipated value of the acquired facility.
- We are subject to risks associated with outsourcing functions to third parties, including risks associated with the protection of patient data.
- We conduct a significant portion of our operations through joint ventures. We cannot provide assurances that relationships with our joint venture partners will remain strong, which could negatively affect our joint ventures, affiliations and other strategic alliances as well as our overall business.
- If our fair value declines or if our estimated future cash flows decrease, a material non-cash charge to earnings from impairment of our goodwill or our long-lived assets could result.
- Deterioration in the collectability of "patient due" accounts could adversely affect our revenues, results of operations and cash flow.
- Other hospitals and inpatient and outpatient facilities provide services similar to those which we offer. In addition, physicians and other healthcare practitioners provide services in their offices that could be provided in our facilities. These factors increase the level of competition we face and may therefore adversely affect our revenues, results of operations and cash flow.
- We may have difficulty acquiring or divesting facilities on favorable terms. Furthermore, our business could be negatively affected if acquisitions or divestitures are not successfully completed or if contingent liabilities materialize in connection with such transactions.
- If we are unable to implement successfully standardized processes, policies and systems throughout our facilities, our operating results and cash flow could be negatively impacted.
- Under each of the 2021 Master Lease (defined below) and the Springstone Master Lease (defined below), a default with respect to one facility could cause a default under all of the facilities subject to the 2021 Master Lease or the Springstone Master Lease, respectively, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.
- Because many of the facilities we operate are subject to long-term leases, failure to comply with the terms of such leases or failure to renew such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises.
- Many of the non-urban communities in which we operate continue to face challenging economic conditions and demographic trends, which may materially and adversely impede our business strategies intended to generate organic growth and improve operating results at our facilities.
- Our financial condition, results of operations and cash flow may be adversely affected by changing economic conditions.
- Supply chain issues of the medical supplies, equipment and pharmaceuticals used in our facilities could adversely affect our operating results.
- Our operations may be adversely impacted by the effects of climate change, extreme weather conditions, natural disasters such as hurricanes and earthquakes, hostilities or acts of terrorism and other criminal activities.

Credit and Liquidity Risks

- Our substantial indebtedness could materially and adversely affect our ability to raise additional capital to fund our operations or fund strategic initiatives, limit our ability to react to changes in the economy or our industry and prevent us from making debt service payments.
- Our debt agreements contain restrictions that will limit our flexibility in operating our business.
- We are dependent on cash flow generated by our subsidiaries to service our indebtedness.

- We may not be able to generate sufficient cash to service all of our indebtedness and may be forced to take other actions to satisfy our obligations under our indebtedness that may not be successful.
- Our ability to obtain, and the terms of any, financing or refinancing will be dependent on the condition of the financial markets and our financial condition and operating performance. Any inability to obtain refinancing as our debt matures could materially and adversely affect our financial condition.
- Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.
- Despite our substantial indebtedness, we may still be able to incur significantly more debt, which could intensify the risks described above.
- We may not be able to generate sufficient cash flow through operations or successfully access other capital resources to fund all of our capital expenditure programs and commitments.
- Our ability to utilize our net operating loss carryforwards ("***NOLs***") may be limited, and we may not be able to utilize our NOLs as a result of recent U.S. federal tax reform legislation.

Human Capital Risks

- Factors related to our employment of physicians could affect our financial performance.
- Our operations and ability to deliver healthcare services efficiently may be adversely affected by competition for staffing and the shortage of experienced physicians, nurses and other healthcare professionals.
- Increased labor costs due to inflation and competition for experienced physicians, nurses, qualified management and other healthcare professionals, including due to low unemployment levels and staffing shortages, could adversely affect our financial results.
- Labor union activity could raise costs and interfere with our operations. Certain of our employees are union members and subject to the terms of collective bargaining agreements.
- We are dependent on our executive management team and the loss of the services of one or more members of our executive management team could have a material adverse effect on our business.

Regulatory and Legal Risks

- We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may adversely affect our revenues, results of operations and cash flow.
- We may be subjected to actions brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the False Claims Act's "qui tam" or "whistleblower" provisions.
- We may be subjected to liabilities because of malpractice and other legal claims brought against our facilities or healthcare providers associated with, or employed by, our facilities or affiliated entities. If we become subject to these claims, we could be required to pay significant damages, which may not be covered by insurance.
- As a result of reviews of claims to Medicare and Medicaid for our services, we may experience delayed payments or incur additional costs and may be required to repay amounts already paid to us.
- Controls designed to reduce inpatient services may adversely affect our revenues, results of operations and cash flow.
- If we do not manage admissions in the IRFs that we operate or manage in compliance with a 60% threshold, reimbursement for services rendered by us in these facilities will be based upon less favorable rates.
- Certificate of need laws and regulations regarding licenses, ownership and operation may impair our future expansion in some states. In states without certificate of need laws, competing providers of healthcare services are able to expand and construct facilities without the need for significant regulatory approval.
- Failure to implement and use certified health information technology in an effective and timely manner could adversely affect our operations and result in reduced Medicare and Medicaid reimbursement and government enforcement actions.
- The industry emphasis on value-based purchasing and bundled payment arrangements may negatively affect our revenues.
- The implementation of participation and quality measurement requirements under the MACRA's Merit-Based Incentive Payment System may affect our revenues.
- If current or future laws or regulations force us or cause us to restructure our arrangements with physicians and other providers, we may incur additional costs, lose contracts and suffer a reduction in net revenue under existing contracts, and we may need to refinance our debt or obtain consent from our lenders.
- We care for a large number of vulnerable individuals with complex needs and any incident involving one or more of our patients or the failure by one or more of our facilities to provide appropriate care could adversely affect our business, financial condition, results of operations or cash flow.

Data Security and Privacy Risks

- A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business.
- If access to our information systems or those provided by our third-party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer.
- If we fail to comply with our obligations under license or technology agreements with third parties, we may be required to pay damages and we could lose license rights that are critical to our business.

Business and Operational Risks

Changes in reimbursement rates, methods or timing of payment by federal or state programs may reduce our Medicare or Medicaid payments and adversely affect our revenues, results of operations and cash flow.

For the years ended December 31, 2022, 2021 and 2020, approximately 57.1%, 56.1% and 55.7% of our revenues, respectively, related to patients participating in Medicare and Medicaid programs, collectively. Numerous factors could materially decrease, or delay timing of, Medicare and Medicaid payments to our facilities and, accordingly, adversely affect our revenues, results of operations and cash flow. These factors include statutory and regulatory changes, administrative rulings and determinations concerning patient and provider eligibility and requirements for utilization review. Furthermore, the Affordable Care Act and related federal laws provide for material scheduled reductions in the growth rate of Medicare and Medicaid program spending, including reductions in market basket updates and Medicare and Medicaid DSH funding. Additionally, a number of states have adopted or are considering legislation designed to reduce their Medicaid expenditures or reform their Medicaid programs, including enrolling Medicaid recipients in managed care programs or converting to modified block grant funded programs. States also may impose additional taxes on hospitals to help finance the state's Medicaid programs.

Changes to Medicaid supplemental payment programs may materially and adversely affect our revenues, results of operations and cash flow.

MSPs are payments made to providers separate from and in addition to those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid DSH and UPL payments. Medicaid DSH payments are federally required to be made by the states to hospitals that serve significant numbers of Medicaid and uninsured patients in recognition of the additional costs incurred by hospitals in treating these patients. The total amount of Medicaid DSH payments a state may make and the total amount any one hospital may receive are both capped by federal law. Unlike Medicaid DSH payments, UPL payments are not required to be made by states under federal law. Rather, federal regulations establish an upper payment limit above which states may not receive federal matching dollars.

The Affordable Care Act called for significant reductions in Medicaid DSH funding to account for decreases in uncompensated care anticipated under the health insurance coverage expansion. Subsequent changes in the law have delayed the implementation of these reductions until FFY 2024. Reductions in Medicaid DSH payments may take place without increases in the Medicaid eligible population, thus increasing the net amount of uncompensated care we provide.

UPL programs have expanded in recent years and certain of our hospitals receive payments under such programs. Because services provided to Medicaid beneficiaries enrolled in managed care are not included in state UPL calculations, as states increase their use of managed care Medicaid programs, UPL MSPs could be reduced. UPL funding and matching federal funds may also be reduced or eliminated as a result of state or local governmental legislation, state changes to historical funding levels or related taxes, compliance reviews by CMS, or changes to federal Medicaid funding affecting such programs. We cannot predict whether MSP programs will continue, and, if continued, whether we will qualify for such programs, or guarantee that revenues recognized from these programs will not decrease.

Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may adversely affect our revenues, results of operations and cash flow.

The amounts we receive for services provided to patients are determined by a number of factors, including the payer mix of our patients and the reimbursement methodologies and rates utilized by our payers. We have seen shifts of patients from commercial and private insurance to Medicare and Medicaid programs and from "traditional" fee-for-service Medicare and Medicaid programs to managed Medicare and Medicaid programs. Reimbursement rates generally are lower for (i) Medicare and Medicaid beneficiaries than they are for patients whose care is covered by commercial and private insurance and (ii) managed Medicare and Medicaid beneficiaries than they are for traditional Medicare and Medicaid beneficiaries. Broad economic factors, including those resulting from the COVID-19 pandemic, inflationary pressures, supply chain disruptions, labor shortages, increased unemployment and underemployment rates and reduced consumer spending and confidence, may impact our revenue mix. We also experience demographic pressures as aging populations in our non-urban communities shift from commercial insurance programs to Medicare or managed Medicare programs. Our revenues, results of operations and cash flow may be adversely affected by these shifts.

In addition, our revenues from negotiated rates with HMOs, PPOs, insurance companies, employers and other private payers may decline based on renegotiations and the respective bargaining power of these parties. Also, consolidation among private payers may increase their bargaining power over fee structures. As a result, payers increasingly are demanding discounted fee structures or the assumption by healthcare providers of all or a portion of the financial risk related to paying for care provided. These changes include moving away from a percent of charge payment structure to a fixed payment for an episode of care, which typically reduces our payment rate and limits our ability to raise prices going forward. Furthermore, low-cost plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices, restrict or exclude our facilities or impose significantly higher cost sharing obligations for care provided by our facilities if they are classified in a disfavored tier. In addition, other healthcare providers, including some with greater financial resources, greater geographic coverage or a wider range of services, may negotiate exclusivity provisions with managed care plans or otherwise restrict the ability of managed care plans to contract with us. As payments are reduced, if we are excluded from more payer networks or if the scope of services covered by payers is limited, there could be a material adverse effect on our revenues, results of operations and cash flow.

There are also an increasing number of patients enrolling in insurance plans with high deductibles or high co-payments, including those purchased on the Exchanges, which increase the amount due from the patient and may result in reimbursement for a lower portion of the total payment amount relative to traditional employer-sponsored health insurance plans for the healthcare services provided by our facilities and employed providers. Patients enrolled in higher deductible and co-payment plans tend to defer elective and non-emergency procedures or default on their portion of the payment. We may be adversely affected by the growth in patient responsibility accounts because of plan structures, including health savings accounts ("***HSAs***"), which shift more responsibility for care to individuals through greater exclusions and higher deductible and co-payment amounts. If we experience shifts in our patient volumes to these types of plan structures, our revenue, results of operations and cash flow may be adversely affected.

Uncertainty regarding the Affordable Care Act or future healthcare reform may adversely affect our business, financial condition, results of operations and cash flow.

The Affordable Care Act dramatically altered the U.S. healthcare system, and we have expended substantial cost and effort to prepare for and comply with the Affordable Care Act. The net effect of the Affordable Care Act on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. Additionally, the Affordable Care Act has been the subject of numerous legal challenges and legislative efforts to delay, defund or repeal the implementation or amend significant provisions of the Affordable Care Act. We cannot predict the outcome of lawsuits regarding the implementation of various aspects of the Affordable Care Act and whether the U.S. Supreme Court will decide to hear additional cases related to the Affordable Care Act in the future. We also cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

The evolving and ongoing COVID-19 global pandemic continues to affect our operations, business and financial condition, and the emergence and effects related to a future pandemic, epidemic or outbreak of an infectious disease could adversely affect our operations and financial condition.

The COVID-19 global pandemic has impacted and it may continue to affect our facilities, employees, patients, communities, business operations and financial performance, as well as the U.S. economy and financial markets. Although vaccines have been developed and distributed in the U.S., the length and severity of the COVID-19 pandemic continues to evolve and much of its impact remains unknown and difficult to predict because many of the driving factors are beyond our control, including the vaccination rates in the communities we serve, the number and severity of the variants and related subvariants of the virus that emerge, and the effectiveness of the vaccines against the virus and those variants and related subvariants.

Although we continue to take precautions to ensure we can continue providing quality care and safeguard the health and well-being of patients, employees, providers, volunteers and visitors in each community we serve, exposure to COVID-19 and variants of the virus has increased the cost of operating our facilities and has led to increased risks to doctors and nurses, which has caused staffing shortages and required us to utilize temporary healthcare practitioners and may further reduce our operating capacity. Certain of our facilities have experienced staffing shortages, and they could become overwhelmed by excessive demand, potentially preventing them from treating all patients who seek care. We also have experienced supply chain disruptions during the pandemic, including shortages and delays, as well as price increases in equipment, inventory, pharmaceuticals and medical supplies, particularly personal protective equipment (or PPE). Any staffing, equipment, inventory, pharmaceutical and medical supplies shortages may impact our ability to see, admit and treat patients. In addition, the impact of labor shortages across the healthcare industry may result in other healthcare facilities, such as nursing homes, limiting admissions, which may constrain our ability to discharge patients to such facilities and further exacerbate the demand on our resources, supplies and staffing.

As evidenced by the COVID-19 pandemic, the occurrence of a pandemic, epidemic, outbreak of an infectious disease or other public health crisis in an area in which we operate could adversely affect our operations and financial condition. In reaction to such a crisis or the fear of exposure to infection, patients might cancel elective procedures or fail to seek needed care at our facilities, which could result in reduced patient volumes and operating revenues, potentially over an extended period of time. Furthermore, a pandemic, epidemic or outbreak might adversely affect our operations by causing a temporary shutdown or diversion of patients, by disrupting or delaying production and delivery of materials and products in the supply chain or by causing staffing shortages in our facilities. Additionally, such a crisis could diminish the public trust in healthcare facilities, especially hospitals that fail to accurately or timely diagnose, or are treating (or have treated) patients affected by infectious diseases, and negatively affect the reputation at our facilities.

Although we have disaster plans in place and operate pursuant to infectious disease protocols, the extent to which the potential emergence of a pandemic, epidemic or outbreak would impact our business and operations is difficult to predict and would depend on many factors beyond our control, including the speed of the contagion, the development and implementation of effective preventative measures and possible treatments, the scope of governmental and other restrictions on travel and other activities, and public reactions to these factors.

We may encounter difficulty operating, integrating and improving financial performance at acquired facilities. Also, if we acquire facilities with unknown or contingent liabilities, we could become liable for material obligations or it could diminish the anticipated value of the acquired facility.

We may be unable to timely and effectively integrate facilities that we acquire with our ongoing operations. Many of the facilities we have acquired had, or future acquisitions may have, significantly lower operating margins than we do and/or operating losses prior to the time we acquired or will acquire them. In the past, we have occasionally experienced delays in improving the operating margins or effectively integrating the operations of our acquired facilities, and we may experience such delays in implementing operating procedures and systems in newly or future acquired facilities. Integrating an acquired facility could be expensive and time consuming and could disrupt our ongoing business, negatively affect cash flow, distract management and other key personnel, negatively impact our ability to attract, retain and motivate current and prospective employees, subject us to increased regulatory oversight, and result in legal proceedings. Additionally, we may experience delays in reimbursement from governmental and third-party payers as a result of the change of ownership of our acquired facilities.

We must integrate complex information, accounting and operational systems, compliance programs and internal controls over financial reporting of acquired facilities into our existing systems, processes and internal controls. While we devote a significant amount of employee and management resources on these integrations, we also rely heavily on third parties for systems integration. Our efforts to integrate new facilities, including causing those third parties to convert our newly acquired facilities' systems, may fail or be significantly delayed. Failure to timely and effectively integrate or convert any of these systems could cause business interruption, affect provider and staff morale and our ability to accurately manage accounting, clinical, compliance and operational functions. As future acquisitions may involve large operations, any such failure could cause a material adverse effect on our results of operations or cash flow.

Facilities we have acquired or facilities we acquire in the future, may have unknown or contingent liabilities for historical activities or conditions, including liabilities for failure to comply with laws and regulations, retroactive payment adjustments or recoupments from payer and Emergency Fund audits, medical and general professional malpractice liabilities, unfunded pension liabilities, workers' compensation or other employee-related liabilities, previous tax or environmental liabilities, regulatory and compliance related liabilities, and unacceptable business or accounting practices. Although we endeavor to obtain contractual indemnification from sellers covering these matters in connection with some acquisitions, we have not obtained contractual indemnifications in connection with all of them, and any indemnification obtained from sellers may be insufficient to cover material claims or liabilities for past activities of acquired businesses and the sellers may have insufficient funds to satisfy any claims or liabilities for which we may otherwise be entitled to be reimbursed.

We typically retain and rely on existing local management teams at newly acquired facilities to implement changes to operating procedures and systems. Integrating local management teams can involve cultural and systems challenges that may demand a disproportionate share of our resources and senior management's attention, and we may experience turnover of providers and other key personnel. Our acquisitions have become, and may continue to become larger, and may occur in communities with competing facilities. As a result, the issues surrounding integration may become more complex, expensive and time-consuming and may have a greater impact on our financial performance when we experience delays or difficulties.

Our growth has placed, and will continue to place, increased demands on our management, operational and financial information systems and other resources. Furthermore, expansions into new geographic markets and diversification of services and service lines may require us to comply with new and unfamiliar legal and regulatory requirements, which could impose substantial obligations on us and our management, cause us to expend additional time and resources, and increase our exposure to penalties or fines for non-compliance with such requirements. To accommodate our past and anticipated future growth, and to compete effectively, we will need to continue to improve our management, operational and financial information systems and to expand, train, manage and motivate our workforce. Our personnel, systems, procedures or controls may not be adequate to support our operations in the future. Further, focusing our financial resources and management attention on the expansion and diversification of our operations may negatively impact our financial results. Any failure to improve our management, operational and financial information systems, or to expand, train, manage or motivate our workforce, could reduce or prevent our growth.

We are subject to risks associated with outsourcing functions to third parties, including risks associated with the protection of patient data.

We outsource selected business functions to third parties, including electronic health record software and data hosting, revenue cycle management, patient access, billing, cash collections, payment compliance and support services, project implementation, supply chain management, payroll system services and a portion of our cybersecurity management. We take steps to monitor and regulate the performance of the independent third parties to whom we delegate selected functions. Arrangements with third-party service providers may make our operations vulnerable if vendors fail to satisfy their obligations to us as a result of their performance, changes in their own operations, financial condition, or other matters outside of our control. We may also face legal, financial or reputational harm for the actions or omissions of such providers, including for violations of HIPAA and other privacy and security laws applicable to healthcare providers and the Cures Act information blocking regulations, and we may not have effective recourse against the providers for those harms. While we evaluate the information security programs and defenses of such third parties, we cannot be certain that our evaluations will identify all or any potential information security weaknesses, or that such third parties' information security protocols are or will be sufficient to withstand or adequately respond to a cyber-attack or other information security incident. The expanding role of third-party providers may also require changes to our existing operations and the adoption of new procedures and processes for retaining and managing these providers, as well as redistributing responsibilities as needed. Effective management, development and implementation of our outsourcing strategies are important to our business and strategy. If there are delays or difficulties in enhancing business processes or our third-party providers do not perform as anticipated, we may not fully realize on a timely basis the anticipated economic and other benefits of the outsourcing projects or other relationships we enter into with key vendors, which could result in substantial costs, divert management's attention from other strategic activities, negatively affect employee morale or create other operational or financial problems for us. Terminating, transitioning or renegotiating arrangements with key vendors or failure to renegotiate on favorable terms could result in additional costs and a risk of operational delays, potential errors and possible control issues as a result of the termination or during the transition or renegotiation phase.

We conduct a significant portion of our operations through joint ventures. We cannot provide assurances that relationships with our joint venture partners will remain strong, which could negatively affect our joint ventures, affiliations and other strategic alliances as well as our overall business.

We are a party to a number of joint ventures, affiliations and other strategic alliances as part of our business strategy. We expect to enter into similar transactions in the future, including joint ventures where we may have a noncontrolling interest. Any changes in our relationships with our joint venture partners could disrupt ongoing business, negatively affect results of operations or cash flow and distract management and other key personnel. In the event of a material disagreement with any of our joint venture partners or the breach of any of our joint venture agreements, a joint venture may be subject to dissolution, unwinding or purchase of either party's interest, which could adversely affect our revenues, results of operations or cash flow, or result in reputational harm.

As a general matter, our joint venture partners may have investment and operational goals that are not aligned with our company-wide objectives, including the timing, terms and strategies for future growth and development opportunities, and we could reach an impasse on certain decisions, which may hinder our ability to pursue preferred strategies for growth and development, could require significant resources and attention from management and key employees to resolve and could have an adverse effect on our operations, cash flow and revenue growth. In addition, our joint venture relationships with not-for-profit partners and the agreements that govern these relationships are structured based on current provisions of the Internal Revenue Code of 1986, as amended (the "***Code***") (and the Treasury Regulations thereunder), published rulings by the Internal Revenue Service ("***IRS***"), as well as case law relevant to joint ventures between for-profit and not-for-profit entities. Material changes in these legal authorities could adversely affect our relationships with not-for-profit partners and related joint venture arrangements.

Furthermore, joint ventures in which we have a noncontrolling equity interest and noncontrolling investments may involve a lesser degree of control over business operations, thereby potentially increasing the financial, legal, operational and compliance risks associated with the joint venture or noncontrolling investment. We may be dependent on joint venture partners or management who may have business interests, strategies or goals that are inconsistent with ours. Business decisions or other acts or omissions of the joint venture partner or management may adversely affect the value of our investment, result in litigation or regulatory action against us or result in reputational harm to us. To the extent another party makes decisions that negatively impact the joint venture or internal control issues arise within the joint venture, we may have to take responsive or other actions or we may be subject to penalties, fines or other related actions for these activities.

If our fair value declines or if our estimated future cash flows decrease, a material non-cash charge to earnings from impairment of our goodwill or our long-lived assets could result.

As of December 31, 2022, we had approximately $3.9 billion of goodwill and other intangible assets and approximately $3.1 billion of property and equipment, net of accumulated depreciation. We expect to recover the carrying values of our goodwill and other long-lived assets through our future cash flows. We evaluate the carrying value of our goodwill at least annually, based on our fair value determined using a discounted cash flow analysis and consideration of certain market inputs, to determine whether it is impaired. We evaluate our long-lived assets for possible impairment whenever circumstances indicate that the carrying amount of the asset, or related group of assets, may not be recoverable from estimated future cash flows. If the carrying value of our goodwill or our long-lived assets is impaired, we may incur a material non-cash charge to earnings.

Deterioration in the collectability of "patient due" accounts could adversely affect our revenues, results of operations and cash flow.

The primary collection risks associated with our accounts receivable relate to uninsured patient accounts and patient accounts for which the primary insurance carrier has paid the amounts covered by the applicable agreement, but patient responsibility amounts (exclusions, deductibles and co-payments) remain outstanding. The provision for doubtful accounts relates primarily to amounts due directly from patients. The amount of our provision for doubtful accounts is based on management's assessment of historical collection trends, business and economic conditions, trends in federal and state governmental and private employer health coverage, the rate of growth in uninsured patient admissions and other collection indicators.

If we experience growth in self-pay volume and revenue, including increased acuity levels for uninsured patients and increases in co-payments and deductibles for insured patients, our revenues, results of operations and cash flow could be adversely affected. Although we have experienced a reduction in uninsured patients since 2014 as a result of the Affordable Care Act and the expansion of state Medicaid programs, we are unable to predict whether that trend will continue in light of the repeal of the penalties associated with the individual mandate, the cessation of the cost sharing reduction payments to insurers, the decision by some states not to expand their Medicaid programs, and the availability and utilization of employer-sponsored health plans. In addition, the risk of collection from insured patients (and the amounts due) has increased, and will likely continue to increase, as a result of more individuals being enrolled in insurance plans with high deductibles and high co-payments, including those purchased on the Exchanges. Furthermore, our ability to improve co-insurance collections and collections from self-pay patients may be limited by legislative developments, such as federal and state legislation designed to reduce "surprise billing," or by other regulatory or investigatory initiatives, including private lawsuits directed at hospital charges and collection practices for uninsured and underinsured patients.

An increase in the proportion of our accounts receivable being comprised of uninsured accounts and a deterioration in the collectability of these both insured and uninsured accounts could adversely affect our revenues, results of operations and cash flow. Even if the Affordable Care Act remains implemented in its current form, we may continue to experience bad debts and be required to provide uninsured discounts and charity care for patients who choose not to purchase coverage, are undocumented immigrants who are not permitted to enroll in the Exchanges or government healthcare programs or live in states that do not expand or maintain the expansion of their Medicaid programs.

Other hospitals and inpatient and outpatient facilities provide services similar to those which we offer. In addition, physicians and other healthcare practitioners provide services in their offices that could be provided in our facilities. These factors increase the level of competition we face and may therefore adversely affect our revenues, results of operations and cash flow.

Competition among hospitals and other healthcare service providers, including inpatient and outpatient facilities, has intensified in recent years. We also have acquired, and may continue to acquire, larger facilities in more concentrated population centers, which experience greater competition for healthcare services. We compete with other facilities, including larger tertiary and quaternary care centers located in metropolitan areas. Although the facilities with which we compete may be a significant distance away from our facilities, patients in our markets may migrate on their own to, may be referred by local providers to, or may be required by their health plan to travel to these facilities. Furthermore, some of the facilities with which we compete may offer more or different services than those available at our facilities, may have more advanced equipment or technology or may have a medical staff that is perceived to be better qualified. We also compete with facilities and health systems that are implementing physician and other provider alignment strategies, such as employing providers, acquiring physician practice groups and participating in ACOs or other clinical integration models, which may impact our competitive position. Also, many of the facilities that compete with our facilities are owned by tax-supported governmental agencies or not-for-profit entities supported by endowments and charitable contributions and are eligible to participate in the 340B Program. These facilities, in most instances, are also exempt from paying sales, property and income taxes and have the ability to issue tax-exempt bonds for financing.

Quality of care, value-based purchasing, and price transparency have also become significant trends and competitive factors in the healthcare industry. CMS makes public the performance data relating to multiple quality measures that facilities submit in connection with their Medicare payment. CMS also requires every Medicare participating hospital to establish and update annually a public online listing of the hospital's standard charges for items and services and has issued regulations that significantly increase hospital charge reporting requirements. If the publicly-available performance and charge data become a primary factor in where patients choose to receive care, and if competing facilities have lower charges or better results than our facilities on those measures, our revenues and/or patient volumes could decline.

We also face significant and increasing competition from services offered by providers (including providers on our medical staffs) in their offices and from other specialized care providers, including freestanding emergency departments and outpatient surgery, oncology, physical therapy, diagnostic and urgent care centers (including many in which providers may have an ownership interest). We also compete with specialty facilities that focus on one or a small number of lucrative service lines, some of which are not required to operate emergency departments. Some of our facilities have and will seek to develop outpatient facilities where necessary to compete effectively. However, to the extent that other providers are successful in developing outpatient facilities or providers are able to offer additional, advanced services in their offices, our market share for these services will likely decrease in the future.

We may have difficulty acquiring or divesting facilities on favorable terms. Furthermore, our business could be negatively affected if acquisitions or divestitures are not successfully completed or if contingent liabilities materialize in connection with such transactions.

A significant element of our business strategy is expansion through the acquisition of acute care and post-acute care facilities along the continuum of care, especially those around which a system of facilities and other healthcare services can be created. We face significant competition to acquire attractive facilities, and we may not find suitable acquisitions on favorable terms. Our primary competitors for acquisitions have included for-profit and tax-exempt facilities and hospital systems and privately capitalized start-up companies. Buyers with a strategic desire for any particular facility—for example, a facility located near existing facilities or those who will realize economic synergies—have demonstrated an ability and willingness to pay premium prices for facilities. Strategic buyers, as a result, can present a competitive barrier to our acquisition efforts.

The cost of an acquisition could result in a dilutive effect on our results of operations, depending on various factors, including the amount paid for the acquisition, the acquired facility's results of operations, allocation of purchase price, effects of subsequent legislation and limitations on rate increases. As part of our acquisition strategy, we may commit to making significant capital improvements at acquired facilities. Such improvements may be difficult to achieve in the anticipated timeframe, if at all, due to a variety of factors beyond our control, such as zoning, environmental, licensing and certificate of need regulations and restrictions.

Our ability to engage in certain acquisitions in several states may be limited due to exclusivity, non-competition and non-solicitation provisions that we have agreed to in connection with our joint ventures, leases and previous acquisitions and divestiture transactions. Additionally, certain acquisitions may require the consent of and collaboration with our joint venture partners based upon the applicable governing documents. If we cannot obtain the cooperation of our joint venture partners in certain instances, we may not be able to pursue these opportunities.

Even if we are able to identify an attractive target, we may need to obtain financing for acquisitions, joint ventures or required capital improvements. Such financing may not be available, or we may incur or assume additional indebtedness as a result. Any financing arrangements we enter into may not be on terms favorable to us, and this could have a material adverse effect on our results of operations and cash flow.

In recent years, the legislatures and attorneys general of several states have sought to exercise more active oversight authority regarding sales of facilities by tax-exempt entities. For example, as a condition to approving an acquisition involving a non-profit hospital, the state attorney general of a state in which an acquisition takes place may require us to maintain specific service lines or provide charity care at certain minimum levels for set periods of time after closing of the acquisition, regardless of profitability. Additionally, the federal government and most states have enacted antitrust laws that prohibit certain types of conduct deemed to be anti-competitive, and antitrust enforcement in the healthcare industry is currently a priority of the FTC and the DOJ, including with respect to hospital and physician practice acquisitions. This heightened scrutiny may increase the cost and difficulty, or prevent the completion, of transactions in the future. Our failure to acquire facilities consistent with our growth plans could prevent us from increasing our revenues.

We regularly evaluate the potential disposition of assets and facilities that may no longer help us attain our objectives. When we decide to sell assets or facilities, we may encounter difficulties in finding buyers or alternative exit strategies on acceptable terms or in a timely manner, which could delay the accomplishment of our strategic objectives. Certain of our facilities are subject to master leases which, in general, may make it more difficult for us to dispose of facilities or terminate facility leases subject to the terms of such master leases, including under the terms of our Master Lease Agreement, dated December 23, 2021, entered into with certain affiliates of Medical Properties Trust, Inc. ("***MPT***") (as amended from time to time, the "***2021 Master Lease***") and the Amended and Restated Master Lease, dated February 7, 2023, entered into with certain affiliates of MPT (as amended from time to time, the "***Springstone Master Lease***"). We may also dispose of assets or a facility at a price, or on terms, less desirable than we anticipated. In addition, we may experience greater dis-synergies than expected. After reaching an agreement with a buyer for the disposition of assets or a facility, we will be subject to satisfaction of pre-closing conditions as well as to necessary regulatory and governmental approvals on acceptable terms, which, if not satisfied or obtained, may prevent us from completing the transaction. Dispositions may also involve continued financial involvement in the divested facilities, such as through continuing equity ownership, guarantees, indemnities, transition service agreements or other financial and commercial obligations, and inability to avoid retention of certain regulatory and compliance risks. There can be no assurance that the anticipated benefits of our future divestiture strategies will be realized. Furthermore, we may be exposed to contingent liabilities in connection with completed divestitures. Finally, certain acquisition agreements and joint venture arrangements contain covenants that restrict our ability to dispose of certain facilities without first seeking consent of a joint venture partner or other third parties, which may affect our ability to take advantage of business opportunities that may be in our interest. If we do not realize the anticipated benefits of such divestitures, if contingent liabilities related to such divestitures materialize or if we are unable to divest certain properties on favorable terms or at all, this could have a material adverse effect on our results of operations and cash flow.

If we are unable to implement successfully standardized processes, policies and systems throughout our facilities, our operating results and cash flow could be negatively impacted.

We have initiated a multi-year business initiative to standardize certain processes, policies and systems throughout our facilities, including migrating our multiple IT platforms to a smaller number of enterprise-wide systems solutions. If we do not allocate and effectively manage the resources necessary to build and sustain the proper IT infrastructure and implement standardized systems, or if we fail to achieve the expected benefits from this initiative, it may impact our ability to operate profitably and efficiently, as well as comply in a timely manner with changing regulatory requirements and with the requests of patients, payers and business partners. The failure to transition to these systems on time, or anticipate necessary readiness and training needs, could lead to business disruption and loss of revenue. In addition, the operating results of newly acquired facilities could be impacted if such facilities are not integrated on a timely basis into our new systems. The actions we take to resolve compliance or regulatory issues within acquired facilities may affect our revenue, results of operations or cash flow.

In addition, as new information systems are developed in the future, we will need to integrate them into our existing systems. Evolving industry and regulatory standards may require changes to our systems in the future. System conversions are costly, time consuming and disruptive for providers, staff and, in some cases, patients. Some of our facilities have recently converted or are currently converting from their existing system to another third-party information system. If such conversions occurred on a large scale or if conversions at our larger facilities experience difficulties, the costs and disruptions could have a material adverse effect on our revenues, results of operations or cash flow.

Under each of the 2021 Master Lease and the Springstone Master Lease, a default with respect to one facility could cause a default under all of the facilities subject to the 2021 Master Lease or the Springstone Master Lease, respectively, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.

Upon certain defaults under each of the 2021 Master Lease and the Springstone Master Lease, even if such default relates to one facility under the 2021 Master Lease or the Springstone Master Lease, as the case may be, the applicable lessors may terminate the 2021 Master Lease or Springstone Master Lease in its entirety with respect to all of the facilities governed by such 2021 Master Lease or Springstone Master Lease, as the case may be. Under each of the 2021 Master Lease and the Springstone Master Lease, the portfolio of facilities supporting each of the 2021 Master Lease and the Springstone Master Lease is subject to financial covenants, including required minimum lease coverage and fixed charge coverage ratios. The failure to meet or obtain a waiver of such covenants or otherwise cure such non-compliance with such financial covenants in the 2021 Master Lease or the Springstone Master Lease in the future could result in an event of default under the 2021 Master Lease or the Springstone Master Lease, as the case may be.

Other events that could trigger a default under the 2021 Master Lease or the Springstone Master Lease if not cured within the time periods required by the 2021 Master Lease or the Springstone Master Lease, as the case may be, include, without limitation, (i) failure to pay rent or other amounts due under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (ii) failure to comply with the non-financial covenants under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (iii) the bankruptcy of any facility lessee under the 2021 Master Lease or the Springstone Master Lease or the guarantor of the facility lessees under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (iv) termination of any licenses necessary for operation of a facility or required for certification under Medicare or Medicaid for any facility leased under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (v) a change of control in violation of the 2021 Master Lease or the Springstone Master Lease, as the case may be, and (vi) a default under any material documents between any lessee of the facilities and any lessor of any facility leased under the 2021 Master Lease or the Springstone Master Lease, as the case may be. A default under the 2021 Master Lease or the Springstone Master Lease that results in a termination of the 2021 Master Lease or the Springstone Master Lease, as the case may be, would cause us to lose the ability to operate all of the facilities subject to the 2021 Master Lease or the Springstone Master Lease, respectively, and to incur substantial costs in restoring the premises, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.

If the 2021 Master Lease or the Springstone Master Lease is terminated prior to its expiration because of a default and the lessor exercises its rights thereunder, in addition to losing the ability to operate our facilities, we may be liable for (i) damages and charges such as continued lease payments through the end of the lease term (or such shorter period as provided in the 2021 Master Lease or the Springstone Master Lease, as the case may be, or by law) and (ii) maintenance costs for the leased property leased under the 2021 Master Lease or the Springstone Master Lease, as the case may be. Upon termination of the 2021 Master Lease or the Springstone Master Lease, as the case may be, we will be obligated to restore the applicable premises to its original condition and repair all damage caused by the installation or removal of our personal property, ordinary wear and tear excepted. We also have restoration obligations with respect to certain casualty and condemnation events. In addition, upon termination of the 2021 Master Lease or the Springstone Master Lease, the lessor will have the option to purchase all of the applicable lessee's personal property at fair market value.

The 2021 Master Lease and the Springstone Master Lease are not cross-defaulted to one another.

Because many of the facilities we operate are subject to long-term leases, failure to comply with the terms of such leases or failure to renew such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises.

The rights to use many of our facilities are based upon long-term leases, including the 2021 Master Lease and the Springstone Master Lease. Pursuant to the terms of these leases, we are required to pay all rent due and comply with all other lessee obligations. As of December 31, 2022, the remaining term of these leases (including renewal options) generally ranged from less than one year up to 73 years. A pledge of our interest in some of these leases may also require the consent of the respective lessor and its lenders. As a result, we may not be able to sell, assign, transfer or convey our interest in certain facilities subject to such leases in the future absent consent of such third parties even if such transactions may be in our best interest. Most of the leases require that, upon the expiration or termination of the leases, we must surrender any improvements to the land to lessor. In addition, some of our leases include early termination provisions. We are typically responsible for all taxes, insurance, assessments and maintenance obligations under the leases. The leases also generally require the lessee to either reconstruct or restore the premises to its original condition following a casualty and to apply in a specified manner any proceeds received in connection therewith. In some leases, the lessor has the option to purchase some or all of the assets owned by us and used in connection with the operation of the applicable facility. Accordingly, failure to comply with the terms of such leases, the invalidity of or default or termination under such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.

Many of the non-urban communities in which we operate continue to face challenging economic conditions and demographic trends, which may materially and adversely impede our business strategies intended to generate organic growth and improve operating results at our facilities.

Many of the non-urban communities in which we operate continue to face challenging economic conditions, including high levels of unemployment and unfavorable demographic trends, which may impede our business strategies intended to generate organic growth and improve operating results at our facilities. These challenging economic conditions have been further exacerbated recently by inflationary pressures and the continuing impacts of the COVID-19 pandemic. The economies in the non-urban communities in which our facilities primarily operate are often dependent on a small number of large employers, especially manufacturing or similar facilities. These employers often provide income and health insurance for a disproportionately large number of community residents who may depend on our facilities for care. The failure of one or more large employers, or the closure or substantial reduction in the number of individuals employed at manufacturing or similar facilities located in or near many of the non-urban communities in which our facilities primarily operate, could cause affected employees to move elsewhere for employment or lose insurance coverage that was otherwise available to them.

When patients are experiencing personal financial difficulties or have concerns about general economic conditions, they may choose to (i) defer or forego elective surgeries and other non-emergent procedures, which are generally more profitable lines of business for facilities, or (ii) purchase a high-deductible insurance plan or no insurance at all, which increases a facility's dependence on self-pay revenue. Moreover, a greater number of uninsured patients may seek care in our emergency rooms, which are generally more costly settings for us to administer care.

Additionally, non-urban communities are experiencing a much slower rate of growth, if any, as compared to more concentrated population centers. As a result, we may experience payer mix pressures as aging populations in our non-urban communities shift from commercial insurance programs to Medicare or managed Medicare programs.

Our financial condition, results of operations and cash flow may be adversely affected by changing economic conditions.

A decline in economic conditions, such as recession, economic downturn, and/or inflationary conditions in the U.S. can adversely and negatively impact our patients in a manner that could adversely affect our financial condition, results of operations and cash flow. Further, broad economic factors in connection with a potential economic recession or slowdown, including increased unemployment rates, increased inflation rates and decrease in disposable income and wages, could also negatively affect our payer mix, increase the relative proportion of lower margin services we provide and reduce patient volumes, as well as diminish our ability to collect outstanding receivables. In addition, government actions intended to reduce inflation, including raising the federal funds rate, will increase our cost of borrowing, which in turn could make it more difficult to obtain financing for our operations or investments on favorable terms.

Supply chain issues of the medical supplies, equipment and pharmaceuticals used in our facilities could adversely affect our operating results.

We are dependent on various medical supplies, equipment and pharmaceuticals used in our facilities to conduct our operations. Supply chain issues, such as shortages, delivery delays, manufacturing disruptions, and other supply chain interruptions affecting such supplies, equipment and pharmaceuticals, and price increases of such supplies, equipment, pharmaceuticals and raw materials could adversely impact our results of operations.

Our operations may be adversely impacted by the effects of climate change, extreme weather conditions, natural disasters such as hurricanes and earthquakes, hostilities or acts of terrorism and other criminal activities.

Global climate change presents both immediate and long-term physical risks (such as extreme weather conditions) and risks associated with the transition to a low-carbon economy (such as regulatory or technology changes). These changes could result in, for example, temporary declines in the number of patients seeking our services, closures of our hospitals and related facilities, and supply chain disruptions, as well as increased costs of products, commodities and energy (including utilities), and disruptions in our information systems, which in turn could negatively impact our business and results of operations. In addition, certain of our operations and facilities are located in regions that may be disproportionately impacted by the physical risks of climate change (including hurricanes and flooding), and we face the risk of losses incurred as a result of physical damage to our hospitals and related facilities and business interruptions caused by such events. We maintain property insurance coverage to address the impact of physical damage to our facilities and for business interruption losses. However, such insurance coverage may be insufficient to cover all losses and we may experience a material, adverse effect on our results of operations that is not recoverable through our insurance policies. Additionally, if we experience a significant increase in climate-related events that result in material losses we may be unable to obtain similar levels of property insurance coverage in the future or at rates that are significantly higher than our current rates. Changes in consumer preferences and additional legislation and regulatory requirements, including those associated with the transition to a low-carbon economy, may increase costs associated with compliance, the operation of our facilities and supplies. Regulations limiting greenhouse gas emissions and energy inputs may also increase in coming years, which may adversely impact us through increased compliance costs for us and our suppliers and vendors.

Our operations are always subject to adverse impacts resulting from extreme weather conditions, natural disasters, hostilities or acts of terrorism or other criminal activities. Such events may result in a temporary decline in the number of patients who seek our services or in our employees' ability to perform their job duties. In addition, such events may temporarily interrupt our ability to provide our services. The occurrence of any such event and/or a disruption of our operations as a result may adversely affect our financial condition, results of operations and cash flow.

Credit and Liquidity Risks

Our substantial indebtedness could materially and adversely affect our ability to raise additional capital to fund our operations or fund strategic initiatives, limit our ability to react to changes in the economy or our industry and prevent us from making debt service payments.

We are a highly leveraged company. As of December 31, 2022, we had total outstanding debt of approximately $6.2 billion, excluding finance lease obligations and unamortized debt issuance costs. Our substantial indebtedness could have important consequences for the Lenders and Holders of our indebtedness. For example, it could:

- limit our ability to borrow money for our working capital, capital expenditures, debt service requirements, strategic initiatives or other purposes;
- make it more difficult for us to satisfy our obligations with respect to our indebtedness and any failure to comply with the obligations of any of our debt instruments, including restrictive covenants and borrowing conditions, could result in an event of default under the agreements governing our indebtedness;
- require us to dedicate a substantial portion of our cash flow from operations to the payment of interest and the repayment of our indebtedness, thereby reducing funds available to us for other purposes;
- limit our flexibility in planning for, or reacting to, changes in our operations or business;
- make us more highly leveraged than some of our competitors, which may place us at a competitive disadvantage;
- make us more vulnerable to downturns in our business, our industry or the economy;
- restrict us from making strategic acquisitions, engaging in development activities, introducing new technologies or exploiting business opportunities;
- compel us to make non-strategic divestitures;
- limit, along with the financial and other restrictive covenants in our indebtedness, among other things, our ability to borrow additional funds or dispose of assets;
- prevent us from raising the funds necessary to repurchase all notes tendered to us upon the occurrence of certain changes of control, which failure to repurchase would constitute an event of default under the Indentures governing the Notes; or
- expose us to the risk of increased interest rates, as certain of our borrowings, including borrowings under the ABL Facility and the Term Loan Facility, are at variable rates of interest.

In addition, the Indentures and the Credit Agreements contain restrictive covenants that limit or will limit our ability to engage in activities that may be in our long-term best interest. Our failure to comply with those covenants could result in an event of default which, if not cured or waived, could result in the acceleration of substantially all of our existing and future indebtedness.

Our debt agreements contain restrictions that will limit our flexibility in operating our business.

The Indentures and the Credit Agreements contain, and any other existing or future indebtedness of ours would likely contain, a number of covenants that will impose significant operating and financial restrictions on us, including restrictions on our and our subsidiaries ability to, among other things:

- incur additional debt, guarantee indebtedness or issue certain preferred shares;
- pay dividends on or make distributions in respect of, or repurchase or redeem, our capital stock or make other restricted payments;
- prepay, redeem or repurchase certain debt;
- make loans or certain investments;
- sell certain assets;
- create liens on certain assets;
- consolidate, merge, sell or otherwise dispose of all or substantially all of our assets;
- enter into certain transactions with our affiliates;
- alter the businesses we conduct;
- enter into agreements restricting our subsidiaries' ability to pay dividends; and
- designate our subsidiaries as unrestricted subsidiaries.

As a result of these covenants, we will be limited in the manner in which we conduct our business, and we may be unable to engage in favorable business activities or finance future operations or capital needs.

In addition, the ABL Facility requires us to maintain a minimum fixed charge coverage ratio at any time when the average availability is less than the greater of $65 million and 10% of the lesser of the aggregate amount of revolving facility commitments and the borrowing base at such time. In that event, we must satisfy a minimum fixed charge ratio of 1.0 to 1.0. At December 31, 2022, we were in compliance with this financial maintenance covenant.

A failure to comply with the covenants under the Indentures, the Credit Agreements or any of our other future indebtedness could result in an event of default, which, if not cured or waived, could have a material adverse effect on our business, financial condition, results of operations and cash flow. In the event of any such default, the Lenders thereunder:

- will not be required to lend any additional amounts to us;
- could elect to declare all borrowings outstanding, together with accrued and unpaid interest and fees, to be due and payable and terminate all commitments to extend further credit;
- could require us to apply all of our available cash to repay these borrowings; or
- could effectively prevent us from making debt service payments on the Notes (due to a cash sweep feature under the ABL Facility).

Such actions by the Lenders could cause cross defaults under our other indebtedness. If we were unable to repay those amounts, the Lenders and Holders under the ABL Facility, the Term Loan Facility, the 6.75% Secured Notes and the 4.375% Secured Notes could proceed against the collateral granted to them to secure the ABL Facility, the Term Loan Facility or the 6.75% Secured Notes and the 4.375% Secured Notes, respectively. If any of our outstanding indebtedness under the ABL Facility, the Term Loan Facility, Notes or any of our other existing or future indebtedness were to be accelerated, there can be no assurance that our assets would be sufficient to repay such indebtedness in full.

We are dependent on cash flow generated by our subsidiaries to service our indebtedness.

We are a holding company with no operations and are dependent on our operating subsidiaries' cash flow and their ability to make such cash available to us to meet our financial obligations, including principal and interest payments related to the ABL Facility, the Term Loan Facility and the Notes. Unless they are guarantors of the indebtedness, our subsidiaries do not have any obligation to pay amounts due on such indebtedness or to make funds available for that purpose. Our subsidiaries may not be able to, or may not be permitted to, make distributions to enable us to make payments in respect of our indebtedness. Each subsidiary is a distinct legal entity and, under certain circumstances, legal and contractual restrictions may limit our ability to obtain cash from our subsidiaries. While our debt agreements will limit the ability of our restricted subsidiaries to incur consensual restrictions on their ability to pay dividends or make other intercompany payments to us, these limitations are subject to certain qualifications and exceptions. In the event that we do not receive distributions from our subsidiaries, we may be unable to make required principal and interest payments on our indebtedness.

We may not be able to generate sufficient cash to service all of our indebtedness and may be forced to take other actions to satisfy our obligations under our indebtedness that may not be successful.

Our ability to pay principal and interest and to satisfy our other debt obligations will depend upon, among other things:

- our future financial and operating performance, which will be affected by prevailing economic, industry and competitive conditions and financial, business, legislative, regulatory and other factors, many of which are beyond our control; and
- our future ability to borrow under the ABL Facility, the availability of which depends on, among other things, the borrowing base and our complying with the covenants in the credit agreement governing the ABL Facility.

We cannot assure you that our business will generate cash flow from operations, or that we will be able to draw under the ABL Facility or otherwise, in an amount sufficient to fund our liquidity needs, including the payment of principal and interest on the ABL Facility, the Term Loan Facility and the Notes.

If our cash flows and capital resources are insufficient to service our indebtedness, we may be forced to reduce or delay capital expenditures, sell assets, seek additional capital or restructure or refinance our indebtedness, including the Notes and any indebtedness under the Credit Agreements. These alternative measures may not be successful and may not permit us to meet our scheduled debt service obligations.

Our ability to obtain, and the terms of any, financing or refinancing will be dependent on the condition of the financial markets and our financial condition and operating performance. Any inability to obtain refinancing as our debt matures could materially and adversely affect our financial condition.

Our ability to restructure or refinance our debt will depend on the condition of the capital markets and our financial condition and performance at such time. Disruptions or prolonged downturns in the financial markets may cause us to seek alternative sources of potentially less attractive financing or refinancing. Any refinancing of our debt could be at higher interest rates and may require us to comply with more onerous covenants, which could further restrict our business operations. In addition, the terms of existing or future debt agreements, including the ABL Facility, the Term Loan Facility and the Indentures, may restrict us from adopting some of these alternatives. In the absence of such operating results and resources, we could face substantial liquidity problems and might be required to dispose of material assets or operations to meet our debt service and other obligations. We may not be able to consummate those dispositions for fair market value or at all. Furthermore, any proceeds that we could realize from any such dispositions may not be adequate to meet our debt service obligations then due. The Sponsor and its affiliates have no continuing obligation to provide us with debt or equity financing. Our inability to generate sufficient cash flow to satisfy our debt obligations, or to refinance our indebtedness on commercially reasonable terms or at all, could result in a material adverse effect on our business, financial condition and results of operations and could negatively impact our ability to satisfy our obligations under our indebtedness.

If we cannot make scheduled payments on our indebtedness, we will be in default, and the Lenders under the Term Loan Facility and the Holders of the Notes could declare all outstanding principal and interest to be due and payable, the Lenders under the ABL Facility could terminate their commitments to loan money, our secured lenders (including the Lenders under the ABL Facility and the Holders of the Notes) could foreclose against the assets securing their loans and the Notes and we could be forced into bankruptcy or liquidation.

Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.

Interest rates are highly sensitive to many factors that are beyond our control, including general economic conditions and policies of various governmental and regulatory agencies and, in particular, the Federal Reserve Board. If the Federal Reserve Board continues to increase the federal funds rate, which it has recently done in an effort to help counter inflation and has indicated that it may continue to do so, overall interest rates will likely rise. Interest rate increases would increase the interest costs on our borrowings under the ABL Facility and the Term Loan Facility, which have variable rates of interest and expose us to interest rate risk. Assuming the revolving credit facility is fully drawn, each 1% change in assumed blended interest rates would result in an approximately $40 million change in aggregate annual interest expense on indebtedness under the ABL Facility and the Term Loan Facility.

Despite our substantial indebtedness, we may still be able to incur significantly more debt, which could intensify the risks described above.

We and our subsidiaries may be able to incur substantial indebtedness in the future. Although the terms of the Credit Agreements and the Indentures contain restrictions on our and our subsidiaries' ability to incur additional indebtedness, these restrictions are subject to a number of important qualifications and exceptions, and the indebtedness incurred in compliance with these restrictions could be substantial. These restrictions also will not prevent us from incurring obligations that do not constitute indebtedness. As of December 31, 2022, we had $573 million available for additional borrowing under the ABL Facility (after giving effect to any letters of credit issued thereunder (which were approximately $53 million as of December 31, 2022)), all of which would be secured. In addition to the Notes and our borrowings under the Credit Agreements, the covenants under any other existing or future debt instruments could allow us to incur a significant amount of additional indebtedness and, subject to certain limitations, such additional indebtedness could be secured. The more leveraged we become, the more we, and in turn our security holders, will be exposed to certain risks described above under "—Our debt agreements contain restrictions that will limit our flexibility in operating our business."

We may not be able to generate sufficient cash flow through operations or successfully access other capital resources to fund all of our capital expenditure programs and commitments.

We require substantial capital resources to fund our growth strategy and ongoing capital expenditure programs, including capital expenditure programs for renovation, expansion and construction at our facilities and the addition of equipment and technology at our facilities. We often commit to significant capital expenditures well in advance of the time these expenditures will be made. Additionally, we are subject to annual capital expenditure commitments in connection with several of our facilities. At December 31, 2022, we estimated our total remaining annual capital expenditure commitments to be approximately $573 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues at the applicable facility. Our cash flows and available capital resources may be insufficient to fund our capital expenditure programs and commitments, and we may be forced to reduce or delay planned and required capital expenditures. Additionally, we may experience delays or impediments in satisfying the schedule for capital expenditures and these commitments because of a variety of factors beyond our control, such as zoning, environmental, licensing and certificate of need regulations and restrictions, adverse weather conditions, shortages of labor or materials or other unforeseen problems or delays. The failure to satisfy our capital expenditure commitment obligations could also damage our reputation within our communities, expose us to potential claims from former owners of acquired facilities, lessors or other governing or regulatory agencies, and adversely impact our ability to negotiate and complete future acquisitions. Additionally, as a result, if our cash flows and available capital resources are not sufficient to fund all of our anticipated capital expenditures, it may be necessary for us to give priority to contractual capital expenditure commitment obligations over other elective capital expenditure programs.

Our ability to utilize our NOLs may be limited, and we may not be able to utilize our NOLs as a result of recent U.S. federal tax reform legislation.

As of December 31, 2022, we had federal NOLs of approximately $106 million with an indefinite carryforward period and subject to annual usage limitations under Section 382 of the Code. In addition, we had state and local NOLs of approximately $2 billion that expire at various dates between 2023 and 2042 or have an indefinite carryforward period. To the extent available and not otherwise utilized, we intend to use any NOLs to reduce the applicable federal and state corporate income tax liability associated with our operations. However, our ability to utilize our NOLs is based on the extent to which we generate future taxable income and on prevailing corporate income tax rates, and we cannot provide any assurance as to when and to what extent we will generate sufficient future taxable income to realize our deferred tax assets, whether in whole or in part. Furthermore, the utilization of our NOLs may become subject to an annual limitation under Section 382 of the Code (and similar state provisions) in the event of certain cumulative changes in the ownership interest of significant shareholders in excess of 50 percent over a three-year period. This could limit the amount of NOLs that can be utilized annually to offset taxable income. The amount of the annual limitation is determined based on the value of a company immediately prior to the ownership change. Subsequent ownership changes may further affect the limitation in future years. For these reasons, our ability to utilize our NOLs may be limited.

Human Capital Risks

Factors related to our employment of physicians could affect our financial performance.

Our subsidiaries employ a large number of physicians. Physician employment by health systems and healthcare facilities, where permissible, is a trend in the industry and has become more common as a result of actual and potential reductions in payment amounts for physician services and increasing operating costs to physicians. Employed physicians generally present more direct risks to us than those presented by independent members of our hospitals' medical staffs, such as risks of unsuccessful physician integration, challenges associated with physician practice management and compliance risks arising from the increased billing and coding activities associated with the employment of physicians, the possibility of legal claims under federal and state employment law, and governmental scrutiny of physician employment arrangements. Employed physicians also require us to incur additional expenses, such as increased salary and benefit costs, medical malpractice expense and rent expense. Payments received by us for services provided by our employed physicians, the physicians to whom our facilities have provided recruitment assistance, and the physician members of our medical staffs could be adversely affected as physician payment methodologies move toward pay-for-performance similar to what hospital payment models are doing. The combination of payment cuts, potential liabilities and increased expenses could have an adverse effect on our results of operations and cash flow.

Our operations and ability to deliver healthcare services efficiently may be adversely affected by competition for staffing and the shortage of experienced physicians, nurses and other healthcare professionals.

The success of our business operations and the efficiency with which we deliver healthcare services depends on the number and quality of our physicians and other healthcare providers such as nurses, pharmacists and lab technicians, and management and other non-physician personnel responsible for the day-to-day operations of each of our facilities. Our ability to recruit and retain quality providers and personnel in turn depends on several factors, including the actual and perceived quality of services furnished by our facilities, our ability to meet demands for new technology, our ability to identify and communicate with providers who want to practice in our communities and our ability to provide competitive financial compensation packages. In many markets, the availability of nurses and other medical support personnel has been a significant operating issue to healthcare providers, including at certain of our facilities. The COVID-19 pandemic has exacerbated workforce competition and shortages, both of which appear to be continuing beyond the duration of the pandemic. This may result in personnel turnover, require us to enhance wages and benefits to recruit and retain management, nurses and other medical support personnel, recruit personnel from foreign countries, and hire more expensive temporary or contract personnel. We also depend on the available labor pool of semi-skilled and unskilled employees in each of the markets in which we operate. Because a significant percentage of our revenue consists of fixed, prospective payments, our ability to pass along increased labor costs is constrained. Our failure to recruit and retain qualified physicians, nurses and other medical support staff, and management and non-physician personnel, or to control our labor costs could have a material adverse effect on our revenues, results of operations and cash flow.

Federal and state laws and regulations may impact our ability to hire and retain and increase our costs of employing qualified physicians, nurses and other medical support personnel. For example, a significant portion of the providers serving our facilities are native to countries other than the U.S. Our ability to recruit such providers and their ability and willingness to remain and work in the U.S. are impacted by immigration laws and regulations. Changes in immigration or naturalization laws, regulations, or procedures may adversely affect our ability to hire or retain providers and may adversely affect our costs of doing business or our ability to deliver services in our communities. In addition, the states in which we operate have adopted or could adopt mandatory nurse staffing ratios, or could increase mandatory nurse staffing ratios. State-mandated nurse staffing ratios could significantly affect labor costs and have an adverse impact on revenues if we are required to limit admissions in order to meet the required ratios. Also, the types, amount and duration of compensation and assistance we can provide to recruited physicians are limited by the federal physician self-referral law (commonly referred to as the Stark law), the Anti-kickback Statute, state anti-kickback and self-referral statutes, and related regulations. The Stark law requires, among other things, that recruitment assistance can only be provided to physicians who meet certain geographic and practice requirements, that the amount of assistance cannot be changed during the term of the recruitment agreement, and that the recruitment payments cannot generally benefit physicians currently in practice in the community beyond recruitment costs actually incurred by them. All arrangements with physicians must also be fair market value and commercially reasonable. In addition, some of the states in which we operate limit or restrict our ability to enter into non-compete agreements or enforce restrictive covenants with physicians we employ, which may impact our ability to hire and retain qualified physicians in those states. Also, on January 5, 2023, the FTC issued a proposed rule that would ban employers from imposing post-termination non-competes on its workers (whether employees or independent contractors), subject to certain exceptions, and require employers to rescind existing non-competes and actively inform workers that they are no longer in effect. The proposed rule may not apply to non-profit hospitals, which could create a competitive disadvantage for us in our hiring and retention efforts. The FTC's proposed rule follows President Biden's July 9, 2021 executive order in which the administration encouraged the FTC to ban or limit non-compete agreements. Although we cannot predict whether the FTC's proposed rule will be adopted in its current form, any limitation or ban on our ability to enter into non-compete agreements with employed or contracted physicians, nurses and other medical support personnel may impact our ability to hire and retain qualified physicians, nurses and other medical support personnel and may adversely affect our costs of doing business or our ability to deliver services in our communities.

In addition to these legal requirements, there is competition from other communities and facilities for these providers, and this competition continues after the provider is practicing in one of our communities. For example, integrated ACOs and other kinds of "narrow" provider networks or organizations may exclude our providers from their plans' networks of healthcare providers. These contracting networks often organize hospitals, providers and ancillary healthcare providers into exclusive networks involving fewer healthcare providers. If our affiliated providers are excluded from such networks, we may have difficulty recruiting new providers or retaining existing providers.

Finally, a small number of attending physicians within each of our facilities may represent a large share of our inpatient revenues and admissions. The loss of one or more of these physicians—even if temporary—could cause a material reduction in our revenues, which could take significant time to replace given the difficulty and cost associated with recruiting and retaining physicians.

Increased labor costs due to inflation and competition for experienced physicians, nurses, qualified management and other healthcare professionals, including due to low unemployment levels and staffing shortages, could adversely affect our financial results.

Our success depends on the ability of our facilities to attract and retain experienced physicians, nurses, qualified management and other healthcare professions such as pharmacists and lab technicians, and we compete with other healthcare providers in recruiting and retaining these positions. Significant increases in labor costs due to inflation and the shortage of experienced physicians, nurses, management and other healthcare professionals may have an adverse impact on our business, financial condition, results of operations and cash flow. In some markets, the scarce availability of nurses and other medical support personnel presents a significant operating issue, which has been exacerbated by the COVID-19 pandemic and inflationary pressures. This shortage has required, and may continue to require us, to enhance wages and benefits to recruit and retain nurses and other medical support personnel, recruit personnel from foreign countries, and utilize more expensive temporary personnel. If we fail to attract and retain experienced physicians, nurses, qualified management and other healthcare professionals, our ability to conduct our business operations effectively, our overall operating results and cash flow could be harmed.

Labor union activity could raise costs and interfere with our operations. Certain of our employees are union members and subject to the terms of collective bargaining agreements.

Increased or ongoing labor union activity could adversely affect our labor costs or otherwise adversely impact us. Several of our facilities, including those in which we have a non-controlling interest, have unionized employees. When a new collective bargaining agreement with a union must be negotiated, whether such agreements are renewals or first contracts, there is the possibility that strikes could occur, and our operations could be disrupted or our labor costs increased as a result of these disruptions. Our labor costs also could increase significantly if a substantial number of other employees at our facilities unionize. If our labor costs increase, we may not be able to raise our payer rates sufficiently or commensurately in order to offset these increased costs. Because a significant percentage of our revenue consists of fixed, prospective payments, our ability to pass along increased labor costs is constrained.

The terms of the collective bargaining agreements also set forth certain requirements related to the respective facility's employment practices, seniority, hours of work, overtime, holidays, use and redemption of paid time off, extended illness bank, vacation scheduling, compensation, pay practice, health and non-health benefits, leaves of absence, grievance procedures, disability accommodations and the facility's drug and alcohol policies. If these facilities fail to fulfill any of these requirements, it could result in discussions with union representatives or the filing of a grievance that could be costly and time-consuming for those facilities. Furthermore, the terms of the collective bargaining agreements constrain our flexibility with respect to these and other employee issues. The inability to negotiate future collective bargaining agreements on favorable terms with these employees or with other unionized employees could have a material adverse effect on our business, financial condition, results of operations and cash flow.

We are dependent on our executive management team and the loss of the services of one or more members of our executive management team could have a material adverse effect on our business.

The success of our business is largely dependent upon the services and management experience of our executive management team. In addition, we depend on the ability of our executive officers and key employees to manage growth successfully and on our ability to attract and retain skilled employees. We do not maintain key man life insurance policies on any of our officers. If we were to lose any of our executive management team or members of our local management teams, or if we are unable to attract other necessary personnel in the future, it could have a material adverse effect on our business, financial condition and results of operations. If we were to lose the services of one or more members of our executive management team, we could experience a significant disruption in our operations and failure of the affected facilities to adhere to their respective business plans.

Regulatory and Legal Risks

We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may adversely affect our revenues, results of operations and cash flow.

All participants in the healthcare industry are required to comply with numerous overlapping laws and regulations at the federal, state and local government levels. These laws and regulations require that healthcare facilities and providers meet various requirements, including those relating to relationships with referral sources, the adequacy and quality of medical care, inpatient admission criteria, privacy and security of health information, standards for equipment, personnel, operating policies and procedures, billing and cost reports, payment for services and supplies, maintenance of adequate records, the use and storage of pharmaceuticals and controlled substances and other standards intended to prevent diversion of controlled substances, compliance with building codes and environmental protection, among other matters. Many of the laws and regulations applicable to the healthcare industry are complex and may be violated inadvertently, and there are numerous enforcement authorities, including CMS, the OIG, the DOJ, the DEA, state attorneys general, and contracted auditors, as well as private plaintiffs.

There are also heightened coordinated civil and criminal enforcement efforts by both federal and state government agencies relating to the healthcare industry, including the hospital segment, which has led to a number of investigations, prosecutions, convictions and settlements in the healthcare industry. Recent enforcement actions have focused on, among other things, financial arrangements between hospitals and providers, billing for services without adequately documenting the medical necessity for such services and billing for services outside the coverage guidelines for such services. Hospital services, IRF services and certain other ancillary services that our facilities provide, such as physical therapy services, continue to be focal areas of the OIG and other governmental fraud and abuse programs, as described in the OIG Work Plan. Dealing with investigations can be time and resource consuming and can divert management's attention from the business. Any such investigation or settlement could increase our costs or otherwise have an adverse effect on our business. In addition, because of the potential for large monetary exposure under the False Claims Act, which provides for treble damages and substantial civil monetary penalties for each separate false claim or statement, healthcare providers often resolve allegations without admissions of liability for significant and material amounts to avoid the uncertainty of damages and penalties that may be awarded in litigation proceedings. Such settlements often contain additional compliance and reporting requirements as part of a consent decree, settlement agreement or corporate integrity agreement. These additional requirements can result in significant additional and ongoing expenditures. Given the significant size of actual and potential settlements, it is expected that the government will continue to devote substantial resources to investigating healthcare facility and provider compliance with the healthcare payment rules and fraud and abuse laws. Over the past several years, certain of our facilities have received inquiries and subpoenas from various governmental agencies regarding these matters, and we are also subject to various claims and lawsuits relating to these and other matters.

The laws and regulations with which we must comply continually change. In the future, different interpretations or enforcement of these laws and regulations could subject our business practices to allegations of impropriety or illegality or could require us to make changes in our facilities, equipment, personnel, services, capital expenditure programs and operating expenses. Although we intend and will endeavor to conduct our business in compliance with all applicable federal and state laws and regulations, many of these laws and regulations are broadly worded and may be interpreted or applied in ways that cannot be predicted. Therefore, we cannot assure you that our arrangements or business practices will be free from government scrutiny or be found to be in compliance with applicable laws and regulations. If we fail to comply with applicable laws and regulations, we could suffer substantial civil or criminal penalties, including the loss of our licenses to operate our facilities or loss of our ability to participate in the Medicare, Medicaid and other governmental programs.

Additionally, we are subject to a variety of different federal, state and local employment and wage and hour laws. While we strive to comply with those laws, if we fail to do so, we may be subject to lawsuits by governmental authorities or private plaintiffs (including employee class action lawsuits). In addition, the IRS and/or state taxing authorities may successfully challenge positions taken on our tax returns.

We are also subject to various federal, state and local statutes and ordinances regulating the discharge of materials into the environment. For example, our healthcare operations generate medical waste, such as pharmaceuticals, biological materials and disposable medical instruments that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Environmental regulations also may apply when we build new facilities or renovate existing facilities, particularly older facilities. If we fail to comply with environmental regulations, we may be liable for substantial investigation and clean-up costs or we may be subject to lawsuits by governmental authorities or private plaintiffs.

Finally, we communicate with patients, with prior consent, through short message service ("***SMS***") text messages. While we obtain consent from these individuals to send text messages and limit the content of those messages, federal or state regulatory authorities or private litigants may claim that the notices and disclosures we provide, form of consents we obtain, or our SMS texting practices are not adequate or violate applicable law. In addition, we must ensure that our SMS texting practices comply with regulations and agency guidance under the Telephone Consumer Protection Act (the "***TCPA***"), a federal statute that protects consumers from unwanted telephone calls, faxes and text messages, HIPAA, and all applicable state data privacy and security laws and regulations. While we strive to adhere to strict policies and procedures that comply with the TCPA, the Federal Communications Commission, as the agency that implements and enforces the TCPA, may disagree with our interpretation of the TCPA and impose penalties and other consequences for noncompliance. Determination by a court or regulatory agency that our SMS texting practices violate the TCPA could subject us to civil penalties and could require us to change some portions of our business. Even an unsuccessful challenge by patients or regulatory authorities of our activities could result in adverse publicity and could require a costly response from and defense by us.

We may be subjected to actions brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the False Claims Act's "qui tam" or "whistleblower" provisions.

The False Claims Act prohibits healthcare facilities and providers, as well as other entities or individuals from, among other things, knowingly submitting false claims for payment to the federal government, or knowingly causing the submission of such claims. The "qui tam" or "whistleblower" provisions of the False Claims Act allow private individuals to bring actions under the False Claims Act on behalf of the government. These private parties are generally entitled to share in any amounts recovered by the government, and, as a result, the number of "whistleblower" lawsuits that have been filed against providers has increased significantly in recent years. We are required to provide information to our employees and certain contractors about state and federal false claims laws and whistleblower provisions and protections. Defendants found to be liable under the False Claims Act may be required to pay up to three times the actual damages sustained by the government, plus substantial civil monetary penalties, that are subject to annual inflation adjustments, for each separate false claim.

There are many potential bases for liability under the False Claims Act, including reckless or intentional acts or omissions. The government has used the False Claims Act to prosecute Medicare and other government healthcare program violations such as coding errors, billing for services not provided, submitting false cost reports, falsely certifying meaningful use of certified health information technology, and providing care that is not medically necessary or that is substandard in quality. The Affordable Care Act also (i) created potential False Claims Act liability for failing to report and repay identified overpayments within sixty (60) days of the identification of the overpayment or the date by which a corresponding cost report is due, whichever is later, and (ii) provided that claims submitted in connection with patient referrals that result from violations of the Anti-kickback Statute constitute false claims for the purposes of the False Claims Act. Violations of the Stark law can result in False Claims Act liability, as well. In addition, a number of states have adopted their own false claims and whistleblower provisions whereby a private party may file a civil lawsuit in state court.

Although we intend and will endeavor to conduct our business in compliance with all applicable federal and state laws, many of these laws are broadly worded and may be interpreted or applied in ways that cannot be predicted. Therefore, we cannot assure you that our arrangements or business practices will be free from government scrutiny or be found to be in compliance with applicable fraud and abuse laws.

We may be subjected to liabilities because of malpractice and other legal claims brought against our facilities or healthcare providers associated with, or employed by, our facilities or affiliated entities. If we become subject to these claims, we could be required to pay significant damages, which may not be covered by insurance.

We may be subjected to medical malpractice lawsuits and other legal actions arising out of the operations of our facilities and the activities of our employed or affiliated providers, including regulatory proceedings and private litigation (including employee class action lawsuits) concerning our application of various federal and state labor laws, rules and regulations governing a variety of workplace wage and hour issues. As a matter of policy, we typically notify patients of any potential harms they may have suffered at our facilities, regardless of whether such notifications are required by law and notwithstanding our uncertainty as to the severity of such harms or whether they even took place. This may lead to class actions or other multi-plaintiff lawsuits or whistleblower reports. These actions may involve large claims and significant defense costs and, if we or our facilities are found liable, any judgments against us may be material. Furthermore, some states in which we operate do not impose caps on non-economic malpractice damages and, even in the states that have imposed caps on such damages, litigants may seek recoveries under alternative theories of liability that might not be subject to such caps. In an effort to resolve one or more of these matters, we may choose to negotiate a settlement whether or not we believe we are liable. Amounts we pay to settle any of these matters also may be material.

Although we maintain professional and general liability insurance with unrelated commercial insurance carriers, each individual plaintiff's claim is generally subject to a deductible or SIR insurance program administered in-house by our risk department with assistance from our insurance brokers. As a result, we are effectively self-insured for claims or portions of claims that are less than our deductible or SIR amounts and for claims or portions of claims that are not covered by insurance or exceed policy limits. Any successful claim against us that is within our deducible or SIR amounts or that is not covered by insurance or exceeds our policy limits could have an adverse effect on our financial condition, results of operations or cash flow.

Insurance coverage in the future may not continue to be available at a cost allowing us to maintain adequate levels of insurance with acceptable deductibles or SIR attachments. One or more of our insurance carriers may become insolvent and unable to fulfill its obligation to pay or reimburse us when that obligation becomes due. In addition, providers practicing at our facilities may be unable to obtain insurance on acceptable terms, which could result in these providers not being able to meet the minimum insurance requirements in the applicable facilities' medical staff bylaws or necessitate a reduction in the level of insurance required to be carried under such bylaws.

As a result of reviews of claims to Medicare and Medicaid for our services, we may experience delayed payments or incur additional costs and may be required to repay amounts already paid to us.

We are subject to regular post-payment inquiries, investigations and audits of the claims we submit to Medicare and Medicaid for payment for our services. These post-payment reviews may increase as a result of government cost-containment initiatives, including, without limitation, enhanced medical necessity reviews for patients admitted as inpatients to general acute care hospitals for certain procedures and audits of claims under the RAC programs to detect overpayments not identified through existing claims review mechanisms. RACs utilize a post-payment targeted review process employing data analysis techniques in order to identify those claims most likely to contain overpayments, such as incorrectly coded services, short stays, incorrect payment amounts, non-covered services and duplicate payments. The claims review strategies used by the RACs generally include a review of high dollar claims, including, for example, inpatient hospital claims. As a result, a large majority of the total amounts recovered by RACs has come from hospitals.

In addition, CMS and the states use UPICs to perform post-payment audits of claims and identify Medicare and Medicaid overpayments. Third party audits or investigations of Medicare or Medicaid claims could result in increases or decreases in operating revenues to be recognized in periods subsequent to when the related services were performed, which may have a material adverse effect on our results of operations and cash flow.

Controls designed to reduce inpatient services may adversely affect our revenues, results of operations and cash flow.

Over the last several years, payers have instituted policies and procedures to reduce or limit the use of inpatient services. Controls imposed by Medicare, Medicaid, and commercial third-party payers designed to reduce admissions and lengths of stay, commonly referred to as "utilization review," have affected and are expected to continue to affect our facilities. Federal law contains numerous provisions designed to ensure that services rendered by hospitals to Medicare and Medicaid patients meet professionally recognized standards and are medically necessary and that claims for payment are properly filed. In the hospital context, these provisions include a requirement that a sampling of admissions of Medicare and Medicaid patients must be reviewed by QIOs, which review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of the MS-DRG classifications and the appropriateness of cases of extraordinary length of stay or cost on a post-discharge basis. QIOs may deny payment for services or assess fines and also have the authority to recommend to HHS that a provider that is in substantial noncompliance with quality standards be excluded from participation in the Medicare program.

Utilization review is also a requirement of most non-governmental managed care organizations and other third-party payers. Inpatient utilization, average lengths of stay and occupancy rates continue to be negatively affected by payer-required preadmission authorization and utilization review and by payer pressure to maximize outpatient and alternative healthcare delivery services for less acutely ill patients. Additionally, in some states in which we operate, commercial third-party payers and Medicaid managed care plans have instituted policies that retroactively limit or deny patient coverage for emergency department and certain other services provided at hospitals or services provided at other inpatient facilities if the payers believe the services could have been provided in less expensive settings. For example, such payers are increasingly seeking to pay relatively low "triage fees" for patients seen in emergency departments when the payers retrospectively determine the patients' treatment did not qualify as an emergency service. Significant limits on the scope of services reimbursed or on the amounts paid for such services may adversely affect our revenues, results of operations and cash flow.

If we do not manage admissions in the IRFs that we operate or manage in compliance with a 60% threshold, reimbursement for services rendered by us in these facilities will be based upon less favorable rates.

IRFs and ARUs are subject to a Medicare requirement that 60% or more of the patients admitted to the facilities have one or more specific conditions in order to qualify for reimbursement under the IRF PPS. If that compliance threshold is not maintained, the IRFs and ARUs will be reimbursed by Medicare at IPPS rates applicable to acute care hospitals. That likely would lead to reduced revenue in the IRFs and ARUs that we operate or manage and also may lead customers of IRFs and ARUs to attempt to renegotiate the terms of their contracts or terminate their contracts. Our inability to appropriately manage admissions in our IRFs and ARUs in compliance with applicable thresholds could have a material adverse effect on our business, financial position, results of operations and cash flow.

Certificate of need laws and regulations regarding licenses, ownership and operation may impair our future expansion in some states. In states without certificate of need laws, competing providers of healthcare services are able to expand and construct facilities without the need for significant regulatory approval.

Some states require prior approval for the purchase, construction and expansion of healthcare facilities, based on the state's determination of need for additional or expanded healthcare facilities or services. Certain states in which we operate facilities require a certificate of need for the purchase, construction or expansion of hospital facilities, capital expenditures exceeding a prescribed amount, changes in bed capacity or services, or for other hospital-related activities. We may not be able to obtain certificates of need required for expansion activities or to effectively compete with competing healthcare providers in the future. In addition, all of the states in which we operate facilities require hospitals, other healthcare facilities, and most healthcare providers to maintain one or more licenses. If we fail to obtain any required certificate of need or license, our ability to operate or expand operations in those states could be impaired.

In the states in which we operate that do not require certificates of need for the purchase, construction and expansion of hospital facilities, competing healthcare facilities face lower regulatory barriers to entry and expansion. If competing healthcare entities are able to purchase, construct or expand healthcare facilities without the need for regulatory approval, we may face decreased market share and revenues in those markets.

Failure to implement and use certified health information technology in an effective and timely manner could adversely affect our operations and result in reduced Medicare and Medicaid reimbursement and government enforcement actions.

The federal government has adopted laws and regulations intended to promote the adoption of health information technology, advance the interoperability of medical record systems, and support the access, exchange, and use of electronic health information. For example, under the Medicare Promoting Interoperability Programs (formerly the Medicare EHR Incentive Program), eligible hospitals, critical access hospitals and eligible professionals that do not successfully demonstrate meaningful use of certified electronic health record technologies every year (absent a hardship exception) may be subject to a downward payment adjustment under Medicare. In addition, health information technology that is certified by CMS is subject to an annual certification process. While we generally have no control over whether the health information technology we have implemented will continue to maintain CMS certification, we routinely monitor and evaluate our health information technology for compliance with the applicable CMS certification standards. Failure of our health information technology to maintain CMS certification could result in reduced Medicare and Medicaid reimbursement. Also, the Cures Act and its implementing regulations impose regulatory obligations, including new Medicare conditions of participation on hospitals and critical access hospitals, related to the access and exchange of electronic health information and prohibit information blocking, which includes any practice that is unreasonable and likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information, by healthcare providers and certain other entities, unless required by law or otherwise permitted by an exception in the applicable regulations. Failure to comply with these requirements could subject us to financial penalties or other disincentives or reputational damage. Complying with these and future initiatives related to healthcare technology and interoperability may also require us to change our operations or incur additional costs related to investments in information technology and EHR system software upgrades, and our payers may not adequately reimburse us for these costs and investments.

The industry emphasis on value-based purchasing and bundled payment arrangements may negatively affect our revenues.

There is a trend in the healthcare industry toward value-based purchasing of healthcare services and bundled payment arrangements. Value-based purchasing programs include both public reporting of quality data and payment limitations tied to the incidence of preventable adverse events or the quality and efficiency of care provided by facilities. For example, Medicare, Medicaid and many large commercial payers may require facilities to report certain quality data to receive full payment updates or avoid payment reductions. They may also impose payment reductions in connection with HACs and excessive readmissions for certain conditions designated by HHS. Our revenue may be negatively impacted by the application of one or more of these measures. Bundled payment arrangements generally set target payment amounts for all healthcare services provided to patients during particular episodes of care. They are intended to create incentives for physicians, hospitals and other providers to work together to provide higher quality and more coordinated care at a lower cost. We currently participate in a few ACOs as well as a number of bundled payment programs, and we expect value-based purchasing programs, including programs that condition payment on patient outcome measures, to become more common and to involve a higher percentage of our payment amounts. We are unable at this time to predict how this trend will affect our results of operations and cash flow, but it could negatively affect our revenues.

The implementation of participation and quality measurement requirements under the MACRA's Merit-Based Incentive Payment System may affect our revenues.

Under MACRA, CMS updates payment rates for physician and practitioner services on an annual basis, and implements the QPP that rewards value and outcomes through participation in traditional MIPS, an APM program, or, beginning with the 2023 performance year, MVPs. MIPS measures provider performance under four categories: quality, improvement activities, promoting interoperability and cost, and annually establishes a point threshold for each category and overall performance. The results of the measurement are used to establish a positive, negative, or neutral payment adjustment for the physician or practitioner for claims that are submitted two years after the applicable MIPS measurement period. The MIPS adjustment has a more significant impact on payment for physician and practitioner services than the annual inflationary update to the Medicare PFS.

Physicians participate in traditional MIPS unless they are participants of specific forms of APM report MVPs, are newly enrolled in Medicare, or see a low volume of Medicare patients (i.e., no more than 200 Medicare Part B patients in a calendar year, 200 covered professional services to Medicare Part B patients, or $90,000 in charges for Medicare Part B professional services). Groups or eligible clinicians who choose not to participate and fall within specified circumstances may request an exception through a hardship application and incur no MIPS impact on Medicare payments. CMS permits hardship applications, including, in the 2022 performance year, hardships based on circumstances arising from COVID related operational issues, through which clinicians can request reweighing of any or all performance categories if they encounter an extreme and uncontrollable circumstance or a public health emergency. MIPS eligible clinicians or Group Practices are subject to a sliding scale payment adjustment of minus to plus 9% per claim in CY 2022 and beyond. In addition, MIPS eligible clinicians with exceptional performance may receive up to 10% bonus payment from $500 million specifically allocated for this purpose through the end of CY 2024. MIPS is a budget neutral program, and, as a result, any upward payment adjustments that are made for highly performing clinicians are offset by downward payment adjustments for others. Providers participating in an APM may be eligible for more advantageous adjustments under MIPS (or avoid any negative adjustment) and receive a 5% bonus. At this time, we have limited participation in APMs.

If an eligible clinician has not been satisfactorily participating in MIPS (and is not qualified to participate in an APM), his or her claims for Medicare Part B services are likely to be subject to negative payment adjustments in CY 2022 (which was based on CY 2020 performance) and CY 2023 (which was based on CY 2021 performance). For participating eligible clinicians that meet or exceed the MIPS threshold or APM requirements, claims for payment are likely to be subject to positive adjustments as well as a share of an additional pool of bonus payments. At this time, and as CMS continues to modify MIPS payment policies, it is unclear how MIPS will impact our overall physician payments under the Medicare program. If we have not timely and effectively implemented policies and procedures, quality programs and appropriate clinician contracting to ensure compliance with MACRA and other QPP requirements, we would experience a negative effect on future revenues related to Medicare Part B claims.

MACRA requires that CMS publish each eligible clinician's MIPS score and performance category scores on its Physician Compare website. Publishing of MIPS scores could have an adverse reputational effect on us if our employed physicians have low scores or scores that are lower than those of the other clinicians in the relevant communities.

If current or future laws or regulations force us or cause us to restructure our arrangements with physicians and other providers, we may incur additional costs, lose contracts and suffer a reduction in net revenue under existing contracts, and we may need to refinance our debt or obtain consent from our lenders.

A number of laws impact our relationships with our physicians and other providers. There is a risk that state authorities in some jurisdictions may find that our contractual relationships with our physicians violate laws prohibiting the corporate practice of medicine and fee-splitting. These laws generally prohibit the practice of medicine by lay entities or persons and are intended to prevent unlicensed persons or entities from interfering with or inappropriately influencing the physician's professional judgment. They may also prevent the sharing of professional services income with non-professional or business interests. In states that have enacted corporate practice of medicine and fee-splitting prohibitions, we believe that we have structured our physician contracts in an effort to remain compliant with such laws. A regulatory agency, however, could still make a determination that our arrangements constitute a corporate practice of medicine or fee splitting violation. A review or action by regulatory authorities or the courts could force us to terminate or modify our contractual relationships with physicians and affiliated medical groups or revise them in a manner that could be materially adverse to our business.

In addition, we have also entered into a number of joint venture arrangements with physicians and other potential sources of referrals (e.g., hospitals and hospital operators) that are subject to state and federal fraud and abuse laws, including the Anti-kickback Statute and False Claims Act. See "—We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may reduce our revenues and profitability." To the extent applicable, regulatory agencies may view these transactions as prohibited arrangements that must be restructured, or discontinued, or for which we could be subject to other significant penalties, including debarment, suspension or exclusion from state and federal government healthcare programs. Although compliance programs can mitigate the risk of investigation and prosecution for violations of these laws, the risks cannot be entirely eliminated. Any action against us for violation of these laws, even if we successfully defend against it, could cause us to incur significant legal expenses and loss of revenue from those joint ventures and divert our management's attention from the operation of our business.

We care for a large number of vulnerable individuals with complex needs and any incident involving one or more of our patients or the failure by one or more of our facilities to provide appropriate care could adversely affect our business, financial condition, results of operations or cash flow.

Many of our patients, including those in our behavioral health facilities, have complex medical conditions or special needs, are vulnerable and often require a substantial level of care and supervision. There is a risk that one or more patients could be harmed by one or more of our employees, either intentionally, through negligence or by accident. Further, individuals cared for by us have in the past engaged, and may in the future engage, in behavior that results in harm to themselves, our employees or to one or more other individuals, including members of the public. Further, because many of the patients we treat, including those in our behavioral health facilities, suffer from severe mental health and chemical dependency disorders, patient incidents, including deaths, sexual abuse, assaults and theft, occur from time to time. If one or more of our facilities experiences an adverse patient incident or is found to have failed to provide appropriate patient care, loss of accreditation, license revocation or other adverse regulatory action could be taken against us. Any such patient incident or adverse regulatory action could result in damage to our reputation, governmental investigations, judgments or fines and could adversely affect our business, financial condition, results of operations or cash flow.

Data Security and Privacy Risks

A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business.

We rely extensively on our information systems and certain systems operated by us and third-parties to manage clinical, financial and employee data, communicate with our patients, payers, vendors and other third parties and summarize and analyze operating results. These systems are at risk from cybersecurity attacks, ransomware attacks, denial-of-service attacks, and other intrusions, including attempts to gain unauthorized access to and theft of our confidential data, misuse, corruption or destruction of confidential data and damage, disruptions or shutdowns of these systems due to viruses, malware, ransomware, malicious code, employee error or malfeasance, and other electronic security breaches. Our systems, which transmit and store sensitive and confidential data, including personally identifiable information ("***PII***") and other PHI of our patients, employees and others, and our proprietary and confidential business performance and other data, will continue to be a target for attempts to gain unauthorized access and data theft due to the valuable nature of the information they contain, as well as at risk for accidental exposure. In addition, certain third-party medical devices and equipment are used at our facilities, and may be vulnerable to cybersecurity attacks or other breaches which could negatively impact our systems or our patients.

Cybersecurity breaches and other unauthorized access to our data can sometimes be difficult to discern, and any delays in detection may lead to increased harm. Such attacks or breaches are common in the healthcare sector and could result in the compromise of health information or other data subject to protection by HIPAA and other laws and regulations or disrupt our IT systems or business. There can be no assurance that we will not be subject to material cyber-attacks or security breaches in the future, or that the preventive actions we take to reduce the risk of such incidents and protect our IT and data will be sufficient. We continue to develop our cybersecurity practices and controls to protect our systems. However, regardless of the nature, extent and timing of our actions, these measures may not prevent security breaches. If our services are subject to cyber-attacks that impair or deny the ability of patients to access our services, current and potential patients may become unwilling to provide us the information necessary for them to become users of our services or may curtail or stop using our services. As cyber-threats continue to evolve, we may be required to expend significant additional resources to continue to modify or enhance our protective measures and to investigate and remediate any information security vulnerabilities. As we are subjected to cyber-attacks and possible security breaches in the future, this could have an adverse impact on our business, reputation, financial condition and results of operations, as well as expose us to class action lawsuits and regulatory investigation, action, and penalties. We also cannot be sure that our existing insurance coverage will continue to be available on acceptable terms or will be available in sufficient amounts to cover one or more large claims related to a security breach, or that the insurer will not deny coverage as to any future claim.

The secure processing, maintenance and transmission of this information is critical to our operations and business strategy. If, in spite of our security and compliance efforts we or any of our business associates were to experience a breach, loss, or other compromise of PHI or PII, such event could disrupt our operations, result in increased data protection costs, damage our reputation, or result in regulatory penalties, legal claims and civil or criminal liability under HIPAA and other state and federal laws, which could have a material adverse effect on our results of operations. In addition, failure to comply with state and federal data breach notification and reporting laws could result in additional regulatory penalties, legal claims and civil or criminal liability, which could have a material adverse effect on our financial condition, results of operations and cash flow.

If access to our information systems or those provided by our third-party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer.

Our business depends heavily on effective information systems to process clinical, operational and financial information. Information systems require an ongoing commitment of significant resources to maintain and enhance existing systems and to develop new systems in order to keep pace with continuing changes in information processing technology. In addition to our own systems, we rely on multiple third-party providers of financial, clinical, supply chain, patient accounting and network information services and, as a result, we face operational challenges in maintaining multiple provider platforms and facilitating the interface of such systems with one another. The third-party providers may not have appropriate controls to protect confidential information. We do not control the information systems of third-party providers, and in some cases we may have difficulty accessing information archived on third-party systems, which could subject us to liability for failure to respond to legal, regulatory or payer obligations or information requests. Our networks and technology systems are also subject to disruption due to events such as a major earthquake, fire, flood, hurricane, telecommunications failure, terrorist attack or other catastrophic event. If these systems fail or are interrupted, if our access to these systems is limited in the future or if providers develop systems more appropriate for more urban healthcare markets and not suited for our facilities, our operations could suffer.

We intend to expand our operations, including by acquiring more facilities, which will require us to integrate and transition certain existing information systems. In addition, as new information systems are developed in the future, we will need to integrate them into our existing systems. Evolving industry and regulatory standards, such as the HITECH Act, HIPAA and EHR meaningful use regulations, also may require changes to our information systems in the future. System conversions are costly, time consuming and disruptive for providers, staff and, in some cases, patients. If such conversions occurred on a large scale or if we are unable to properly integrate other information systems or expand or update our current information systems, the costs and disruptions could have a material adverse effect on our revenues, results of operations and cash flow.

If we fail to comply with our obligations under license or technology agreements with third parties, we may be required to pay damages and we could lose license rights that are critical to our business.

We license certain intellectual property, including technologies and software from third parties, that is important to our business, and in the future we may enter into additional agreements that provide us with licenses to valuable intellectual property or technology. If we fail to comply with any of the obligations under our license agreements, we may be required to pay damages and the licensor may have the right to terminate the license. Termination by the licensor would cause us to lose valuable rights, and could prevent us from selling our solutions and services, or adversely impact our ability to commercialize future solutions and services. Our business would suffer if any current or future licenses terminate, if the licensors fail to abide by the terms of the license agreement, if the licensors fail to enforce licensed intellectual property against infringing third parties, if the licensed intellectual property are found to be invalid or unenforceable, or if we are unable to enter into necessary license agreements on acceptable terms or at all. Any of the foregoing could have an adverse effect on our business, financial condition, or results of operations and cash flow.

Item 2. ***Properties.***

The following tables and map present certain information with respect to our consolidated facilities as of December 31, 2022:

Service Line	Facilities	Licensed Beds	States
Acute Care	62	8,487	22
Inpatient Rehabilitation [(a)]	31	1,617	19
Behavioral Health	3	154	2
	96	10,258	28

(a) Excludes two non-consolidated IRFs.

We own or lease and operate medical office buildings, clinics and other ancillary properties in conjunction with many of our hospitals. These medical office buildings and clinics are primarily occupied by physicians who practice at our hospitals. Additionally, we lease office space in Brentwood, Tennessee and Louisville, Kentucky for our HSC. All of our facilities are suitable for their respective uses and are generally adequate for our present needs.

Item 3. ***Legal Proceedings.***

Healthcare facilities are, from time to time, subject to claims and suits arising in the ordinary course of business, including claims for damages for personal injuries, medical malpractice, breach of contracts, wrongful restriction of or interference with physicians' staff privileges and employment related claims. In certain of these actions, plaintiffs request payment for damages, including punitive damages, that may not be covered by insurance.

The information set forth under "Legal Proceedings and General Liability Claims" in Note 13 to our accompanying consolidated financial statements included elsewhere in this Report, is incorporated herein by reference.

Item 4. ***Mine Safety Disclosures*****.**

Not applicable.

PART II

Item 5. ***Market for Company's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.***

All of our equity securities are held by Holdings, an indirect subsidiary of DSB Parent L.P., a Delaware limited partnership (the "***Parent***"). As of December 31, 2022, our Sponsor and certain co-investors beneficially owned approximately 97.4% of the capital units of the Parent with the remaining approximate 2.6% owned by our or our affiliates' current or former directors, members of management, employees and certain other service providers, and/or our affiliates. Because our equity securities are privately held, there is no established public trading market for our equity securities.

Equity Compensation Plan Information

Refer to Note 12 to our accompanying consolidated financial statements included elsewhere in this Report for a discussion of profits units issued by the Parent to certain of our current and former service providers.

Recent Sales of Unregistered Securities

There have been no recent sales of unregistered equity securities of the Company within the period covered by this Report.

Item 6. [Reserved.]

Item 7. ***Management's Discussion and Analysis of Financial Condition and Results of Operations.***

The following is management's discussion and analysis of our financial condition and results of operations for the years ended December 31, 2022 and December 31, 2021. We recommend that you read this discussion together with our accompanying consolidated financial statements and related notes included elsewhere in this Report.

Refer to "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Results of Operations" in our Annual Report for the year ended December 31, 2021 for management's discussion and analysis of changes in financial condition and results of operations as of and for the years ended December 31, 2021 and 2020.

Overview

We are a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. We generate revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network, which at December 31, 2022 was comprised of 62 community hospital campuses, 31 IRFs, three behavioral health facilities, and additional sites of care that include ARUs, outpatient centers and post-acute care facilities. As of December 31, 2022, we operated 96 healthcare facilities in 28 states throughout the U.S. with approximately 10,000 licensed beds and approximately 50,000 dedicated employees.

We seek to fulfill our mission of *making communities healthier*® and strive to create places where people choose to come for healthcare, physicians and providers want to practice and employees want to work. Additionally, we are committed to upholding our core values, which are champion patient care; do the right thing; embrace individuality; act with kindness; and make a difference together. Together, our shared mission, vision and values guide our work and unite our employees across our organization.

We generated revenues of $8,020 million and $8,937 million for the years ended December 31, 2022 and 2021, respectively. For the years ended December 31, 2022 and 2021, approximately 57.1% and 56.1% of our revenues, respectively, related to patients participating in Medicare and Medicaid programs, collectively. Payments made to our facilities pursuant to the Medicare and Medicaid programs for services rendered rarely exceed our costs for such services. As a result, we rely largely on payments made by private or commercial payers, together with certain limited services provided to Medicare recipients, to generate an operating profit. The healthcare industry continues to endure a period where the costs of providing care are rising faster than reimbursement rates from government or private commercial payers. This places a premium on efficient operation, the ability to reduce or control costs and the need to leverage the benefits of our organization across all of our facilities.

Developments, Trends and Operating Environment

Springstone Transaction

On August 26, 2022, we entered into a definitive agreement with (i) entities affiliated with MPT and (ii) BH EIK Management, LP, a management company owned by certain members of the executive leadership team ("***Springstone Management***") of Springstone Health Opco, LLC ("***Springstone***"), to acquire a majority ownership interest in Springstone from Springstone Management and to acquire a promissory note issued by Springstone to an affiliate of MPT (the "***Springstone Transaction***"). Springstone is a national behavioral health provider with 18 behavioral health hospitals and 35 outpatient locations across nine states. Pursuant to the Springstone Transaction, MPT will continue to own the majority of Springstone's real estate locations, subject to the Springstone Master Lease, and retain a noncontrolling interest in Springstone, subject to a put/call agreement. The Springstone Transaction was consummated on February 7, 2023, upon which certain of our subsidiaries entered into the Springstone Master Lease and we funded $230 million in cash to complete the transaction. For additional information regarding the Springstone Transaction, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Cornerstone Behavioral Health El Dorado

On January 20, 2023, we acquired Cornerstone Behavioral Health El Dorado ("***El Dorado***"), a 54-bed behavioral health facility located in Tucson, Arizona for $35 million (the "***El Dorado Transaction***"). For additional information regarding the El Dorado Transaction, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Everest Rehabilitation

On January 24, 2023, a wholly-owned, indirect subsidiary of ours entered into a definitive agreement with entities affiliated with Everest Rehabilitation Hospitals, LLC ("***Everest***"), to acquire four IRFs (the "***Operational IRFs***") located in Arkansas, Texas, and Ohio (the "***Operational IRF Transaction***") for an aggregate purchase price of approximately $38 million. The closing of the Operational IRF Transaction was consummated on March 1, 2023. Additionally, in connection with the closing of the Operational IRF Transaction, certain of our affiliated entities entered into a definitive agreement with entities affiliated with Everest to acquire six IRFs that Everest is currently developing in Texas and Florida (the "***Developing IRFs***") for an aggregate purchase price of approximately $60 million. We anticipate closing our acquisition of the Developing IRFs on a rolling basis beginning in the third or fourth quarter of 2023. For additional information regarding the Operational IRF Transaction and the Developing IRFs, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

De Novo IRF Openings

We commenced the operations of four de novo IRFs during 2022. The results of operations of these four IRFs are excluded from the classification of "same-facility" in the forthcoming discussion and analysis of our results of operations for the years ended December 31, 2022 and 2021. Refer to the table below for additional details.

Facility Name	Location	Opening Date	Licensed Beds
Dignity Health East Valley Rehabilitation Hospital - Gilbert	Gilbert, Arizona	December 21, 2022	40
Mercy Rehabilitation Hospital South	St. Louis, Missouri	December 6, 2022	50
Saint Thomas Rehabilitation Hospital (a)	Nashville, Tennessee	June 14, 2022	40
Tampa Rehabilitation Hospital	Tampa, Florida	May 17, 2022	80

(a) We hold a noncontrolling ownership interest in Saint Thomas Rehabilitation Hospital and have accounted for it as an equity investment in accordance with Accounting Standards Codification ("***ASC***") 323, "Investments – Equity Method and Joint Ventures" ("***ASC 323***").

Kindred Transaction

On June 18, 2021, we entered into the Kindred Purchase Agreement for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred, a leading specialty hospital company that operates facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. The Kindred Transaction closed on December 23, 2021. Upon the closing of the Kindred Transaction, a new healthcare company was established operating under the name ScionHealth, which is separate from Lifepoint. For additional information regarding the Kindred Transaction, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Divestitures

Effective May 1, 2022, we sold Colorado Plains Medical Center ("***Colorado Plains***"), a 50 bed acute care facility located in Fort Morgan, Colorado, and Western Plains Medical Complex ("***Western Plains***"), a 99 bed acute care facility located in Dodge City, Kansas, to an unrelated third party. The results of operations of Colorado Plains and Western Plains are excluded from the classification of "same-facility" in the forthcoming discussion and analysis of our results of operations for the years ended December 31, 2022 and 2021. For additional information regarding our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Ongoing Impact of COVID-19

While we continue to diagnose and treat COVID-19 patients in our facilities, the prevalence and widespread impact of the virus has decreased both across our organization and the country at large. Our focus continues to be on protecting our patients, our people and our communities by managing this infectious disease according to standard infection prevention and control protocols and guidance from the CDC. Our internal COVID-19 taskforce, which was established during the early stages of the pandemic, continues to carefully monitor any trends that may impact the organization and meets on an ad hoc basis to address the specific needs of our facilities.

We initially implemented during the early stages of the COVID-19 pandemic and have continued to retain a number of health and safety measures to protect our patients, providers, employees, volunteers and visitors. These include monitoring local COVID-19 infection and hospitalization trends, adhering to stringent infection control protocols, maintaining rigorous cleaning and disinfection practices, and regularly assessing crucial supplies, among others.

Our evaluation of the measures taken across our health system in response to COVID-19 is ongoing and additional updates to our policies, procedures and operations could occur as best practices continue to evolve. Furthermore, our facilities are located across a wide geographic range of communities, which may require us to modify measures we take at specific facilities based on local conditions, including the severity of COVID-19 and any variants of the virus in the community served by a facility and changes in state and local executive orders that may restrict certain services or activities.

Taking into account the COVID-19 pandemic and other factors, the U.S. economy has recently experienced general inflationary pressures, significant disruptions to global supply networks, and an extremely competitive labor market, including staffing shortages and increases to expenses related to staffing. We have incurred, and may continue to incur, certain increased expenses arising from the pandemic and these economic conditions, including additional labor, supply chain, capital and other expenditures. While we have implemented cost containment and other measures to try to counteract these developments, we may be unable to fully offset these increases in our costs and otherwise effectively respond to supply disruptions.

Legislative and Regulatory Developments in Response to COVID-19

Numerous legislative and regulatory actions, including the CARES Act and related stimulus legislation, have been taken in an attempt to provide businesses, including healthcare providers, with relief from and to combat the negative effects of the COVID-19 pandemic.

Under the CMS Accelerated and Advance Payment Program as expanded by the CARES Act, we received a total of $991 million of Medicare advance payments during the year ended December 31, 2020, which we fully repaid in the year ended December 31, 2021. We do not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program, and although we have previously repaid or declined funds that are available to us and our facilities under the CARES Act and related stimulus legislation, we cannot predict if we will need to seek such funds in the future, and we cannot assure you that we will be able to access such funds in a timely manner or at all.

In addition to the financial relief that has been provided by the federal government under the CARES Act and other legislation that has been passed by Congress, CMS and many state governments have also issued a number of waivers or temporarily suspended a number of healthcare facility licensure and reimbursement requirements in order to provide hospitals, skilled nursing facilities, and other types of healthcare providers with increased flexibility to meet the challenges that are being presented by the COVID-19 pandemic. For example, CMS has temporarily waived the enforcement of certain requirements of the Medicare hospital conditions of participation and the Stark law (as defined in this Report) to enable hospitals to treat patients in temporary locations and to obtain services from physicians in a more efficient and timely manner. Likewise, many states have also suspended the enforcement of certain certificate of need and licensure requirements to ensure that hospitals and other healthcare providers have sufficient capacity to treat COVID-19 patients. Our facilities have utilized the waivers and regulatory flexibility that are being provided to the extent necessary to appropriately respond to the COVID-19 pandemic. On January 30, 2023, President Biden announced that his administration intends to end the COVID-19 public health emergency on May 11, 2023, which will result in termination of many of the flexibilities and waivers issued in response to the COVID-19 public health emergency that have not already been terminated.

The CARES Act also provides for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, we deferred cash payments of approximately $84 million related to Social Security payroll tax payments, which we fully repaid during the year ended December 31, 2021.

Healthcare Reform Efforts

In recent years, Congress has passed a number of laws, including the Affordable Care Act, that are intended to effect major changes in the U.S. healthcare system. The Affordable Care Act, which became federal law in 2010, dramatically altered the U.S. healthcare system and was intended to decrease the number of uninsured Americans and reduce the overall cost of healthcare. The net effect of the Affordable Care Act, as currently adopted, on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. While the U.S. Supreme Court rejected the most recent challenge to constitutionality of the Affordable Care Act, we cannot predict the outcome of other lawsuits that are still pending in lower courts regarding the implementation of various aspects of the Affordable Care Act or whether the U.S. Supreme Court will decide to hear future cases. Additionally, we cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

Refer to "Part I, Item 1. Business—Healthcare Reform" included in this Report for more information about the Affordable Care Act.

Competitive and Structural Environment

The environment in which our facilities operate is extremely competitive. We face competition from other healthcare providers and facilities, including larger tertiary hospitals located in larger markets and/or affiliated with universities; specialty hospitals that focus on one or a small number of very lucrative service lines but that are not required to operate emergency departments; freestanding emergency departments and outpatient surgery, diagnostic, cancer care and urgent care centers; and physicians on the medical staffs of our hospitals. In many cases, our competitors focus on the service lines that offer the highest margins. By doing so, our competitors can potentially draw the best-paying business out of our hospitals. This, in turn, can reduce the overall operating profit of our hospitals, which are often obligated to offer service lines that operate at a loss or that have much lower profit margins. We continue to see the shift of increasingly complex procedures from the inpatient to the outpatient setting and have also seen growth in the general shift of lower acuity procedures to physician offices and other non-hospital outpatient settings. These trends have contributed to decreases in admissions and surgical volumes and have, to some extent, offset our efforts to improve equivalent admission rates at many of our hospitals.

Our facilities also face extreme competition in their efforts to recruit and retain physicians on their medical staffs. It is widely recognized that the U.S. has a shortage of physicians in certain practice areas, including primary care physicians and specialists such as cardiologists, oncologists, urologists and orthopedists, in various areas of the country. This fact, and our ability to overcome these shortages, is directly relevant to our growth strategies because cardiologists, oncologists, urologists and orthopedists are often the physicians in highest demand in communities where our facilities are located. Larger tertiary medical centers are acquiring physician practices and employing physicians in some of our communities. While physicians in these practices may continue to be members of the medical staffs of our facilities, they may be less likely to refer patients to our facilities over time.

We believe other key factors in our competition for patients is the quality of our patient care and the perception of that quality in the communities where our facilities are located, which may be influenced by, among other things, the technology, service lines and capital improvements made at our facilities and by the skills and experience of our non-physician employees involved in patient care.

In addition to competitive concerns, many of our communities are experiencing slow growth, and in some cases, population losses. We believe this trend has occurred mainly as a result of challenging economic conditions in the non-urban communities where our facilities primarily operate, which are often dependent on a small number of larger employers, especially manufacturing or other facilities. This causes the economies of our communities to be more sensitive to economic downturns and slower to rebound when the overall U.S. economy improves. In addition, other economic factors, including, the recent economic downturn resulting from the COVID-19 pandemic, rising inflation and, potentially, self-rationing of healthcare services, have made it more difficult to increase the number of patients who seek care at many of our facilities.

Regulatory Environment

Our business and our facilities are highly regulated, and the penalties for noncompliance can be severe. We are required to comply with extensive, complicated and overlapping government laws and regulations at the federal, state and local levels. These laws and regulations govern every aspect of how our hospitals conduct their operations, from what service lines must be offered in order to be licensed as an acute care hospital, to whether our hospitals may employ physicians, and to how (and whether) our hospitals may receive payments pursuant to the Medicare and Medicaid programs. The failure to comply with these laws and regulations can result in severe penalties including criminal penalties, civil sanctions, the imposition of corporate integrity and other similar agreements, and the loss of our ability to receive reimbursements through the Medicare and Medicaid programs or the refund of such payments we previously received.

Not only are our facilities heavily regulated, but the rules, regulations and laws to which they are subject often change, with little or no notice, and are often interpreted and applied differently by various regulatory agencies with authority to enforce such requirements. Each change or conflicting interpretation may require our facilities to make changes in space usage, equipment, personnel or services, and may also require that standard operating policies and procedures be re-written and re-implemented. The cost of complying with such laws and regulations is a significant component of our overall expenses. Further, this expense has grown in recent periods because of new regulatory requirements and the severity of the penalties associated with non-compliance. Management anticipates that compliance expenses will continue to grow in the foreseeable future. The healthcare industry has seen a number of ongoing investigations related to patient referrals, physician recruiting and employment practices, cost reporting and billing practices, medical necessity of inpatient admissions, physician office leasing, laboratory and home healthcare services, physician ownership of hospitals and other healthcare providers, and joint ventures involving hospitals and physicians. Hospitals continue to be one of the primary focal areas of the OIG, the DOJ and other governmental fraud and abuse programs.

The Affordable Care Act imposed an affirmative obligation on healthcare providers to report and refund any overpayments received. “Overpayments” in this context include any amount received from a government program by a provider to which it is not entitled, regardless of the cause. Such overpayments are deemed to be fraudulent and become violations of the False Claims Act if not reported and refunded within the later of 60 days of identification or the date any corresponding cost report is due (if applicable). Hospitals can meet the obligation to report and refund in three ways: (1) refunding overpayments directly to the program; (2) self-disclosing the overpayment to the OIG via its voluntary self-disclosure protocol (with respect to False Claims Act and other violations not related to the Stark law); and (3) self-disclosing to CMS via the self-referral disclosure protocol (with respect to overpayments caused by potential violations of the Stark law only) for which CMS has the authority to reduce the amounts otherwise owed.

In light of the provisions of the Affordable Care Act relating to reporting and refunding overpayments and the robust funding for enforcement activities and audits, an increasing number of healthcare providers have self-reported potential violations of law and refunded overpayments to avoid incurring fines and penalties. It is likely such refunds and voluntary disclosures will continue in the future, and we will make such refunds and disclosures in accordance with the law.

Revenue Sources

Our facilities generate revenues by providing healthcare services to our patients. Depending upon the patient’s medical insurance coverage, we are paid for these services by governmental Medicare and Medicaid programs, commercial insurance, including managed care organizations, and directly by the patient. The amounts we are paid for providing healthcare services to our patients vary depending upon the payer. Governmental payers generally pay significantly less than a hospital’s customary charges for the services provided. Insured patients are generally not responsible for any difference between customary hospital charges and the amounts received from commercial insurance payers. However, insured patients are responsible for payments not covered by insurance, such as exclusions, deductibles and co-payments.

Medicare and Medicaid Reimbursement

Revenues from governmental payers, such as Medicare and Medicaid, are controlled by complex rules and regulations that stipulate the amount a healthcare provider is paid for providing healthcare services. We must comply with these rules and regulations to continue to be eligible to participate in the Medicare and Medicaid programs. These rules and regulations are subject to frequent changes as a result of legislative and administrative action and annual payment adjustments on both the federal and the state levels. In addition, Medicare payment methodologies have been, and are expected to continue to be, revised significantly based on cost containment and policy considerations.

For more information about Medicare and Medicaid reimbursement matters, refer to “Part I, Item 1. Business—Sources of Revenue” included in this Report.

Physician & Non-Physician Practitioner Services

We employ an increasing number of physicians and non-physician practitioners, such as physician assistants and nurse practitioners, in our hospital markets. Medicare pays us for services provided by our employed physicians and non-physician practitioners under the PFS system. MACRA, which was adopted in 2015, significantly changed how CMS determines the annual updates to the PFS. Under MACRA, the PFS payment rates that were in effect when MACRA was enacted were extended through June 30, 2015, and then increased by 0.5% for the remainder of CY 2015. PFS payment rates were increased annually by an additional 0.5% for CYs 2016, 2017 and 2018 and, after the adoption of the Bipartisan Budget Act of 2018, were increased by 0.25% for CY 2019. PFS payment rates are scheduled to remain at their CY 2019 levels through CY 2025. In addition, MACRA also established the QPP for incentivizing physician and practitioner care that meets certain value, quality, cost, and performance criteria, and, beginning in CY 2019, amounts paid to physicians and practitioners under the PFS are subject to adjustment through the QPP and participation in either MIPS or an APM. For more information, refer to "Part I, Item 1. Business—Sources of Revenue—Medicare Physician Fee Schedule" included in this Report.

HMOs, PPOs and Other Private Insurers

In addition to government programs, our facilities are reimbursed by differing types of private payers, including HMOs, PPOs and other private insurers. Revenues from HMOs, PPOs and other private insurers are subject to contracts and other arrangements that require us to discount the amounts we customarily charge for healthcare services or accept fixed, pre-determined fees for our services. These contractual discounted arrangements often limit our ability to increase charges or revenues in response to increasing costs. We actively negotiate with these payers in an effort to maintain or increase the pricing of our healthcare services; however, we have no control over patients switching their healthcare coverage to a payer with which we have negotiated less favorable reimbursement rates. In recent years, an increasing number of our patients have moved to lower-cost healthcare coverage plans, and such plans generally provide lower reimbursement rates and require patients to pay an increased portion of the costs of care through deductibles, co-payments or exclusions. Additionally, plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices. If we provide services when we are not a participating provider in the network, it can result in higher patient responsibility amounts that a patient may not have the ability to pay or may choose not to pay. We expect these trends to continue in the coming years.

Self-pay Patients

Self-pay revenues are primarily generated through the treatment of uninsured patients. Beginning in 2014, our self-pay revenues began to decrease as a percentage of overall revenues due largely to a shift from self-pay to Medicaid and HMOs, PPOs and other private insurers for a portion of our patient population, which primarily has been a result of the Affordable Care Act and the expansion of Medicaid coverage in certain of the states in which we operate. These reductions partially offset trends our facilities have experienced in prior years, which included increases in self-pay revenues due to a combination of broad economic factors, including high levels of unemployment in many of our markets and increasing numbers of individuals and employers who purchase insurance plans with high deductibles and high co-payments. We cannot predict how administrative or judicial interpretations, legislative actions or any other modifications to the Affordable Care Act that may be implemented or adopted, such as the cessation of cost sharing reduction payments or the repeal of the individual mandate, may impact our self-pay revenues.

Surprise Billing Regulations

On December 21, 2020, Congress adopted legislation that is intended to limit the "surprise" medical bills that are often received by individuals receiving emergency and certain other services (such as anesthesia services) from out-of-network providers. Effective as of January 1, 2022, the No Surprises Act prohibits, among other things, out-of-network providers from balance billing patients for emergency care services that are provided by out-of-network facilities or at in-network facilities by out-of-network providers. The No Surprises Act also generally prohibits out-of-network providers from billing patients for non-emergency medical treatment unless the provider first notifies the patient of the provider's network status and estimated charges and the patient agrees to be financially liable for the additional amounts. Violations of the No Surprises Act are punishable by civil monetary penalties of up to $10,000, and the No Surprises Act may be enforced by both the state and federal governments. We cannot predict how the No Surprises Act will be implemented or enforced. We also cannot predict the amounts that will be received by our facilities and our employed providers for out-of-network services, whether the No Surprises Act will impact the in-network payment rates that are offered by third-party payers and the willingness of those payers to enter into participation agreements with us and our facilities in the future, or the costs we will incur in complying with the requirements of the No Surprises Act. For more information, see "Business—Sources of Revenues—Surprise Medical Billing" included elsewhere in this Report —Item 1.

Price Transparency

Transparency in healthcare pricing has become a focal point for CMS, Congress, and many state legislatures. For example, effective as of January 1, 2021, hospitals generally are required to post their standard charges prominently on a publicly available website. Although we continue to evaluate, and are taking proactive steps in response to, the legislative and regulatory developments regarding price transparency, we cannot predict how existing regulations will be implemented or interpreted or whether any other requirements will be imposed on providers and health plans. We also cannot predict what affect the public disclosure of hospitals' or insurance providers' negotiated rates will have on our future negotiations with payers or the effect that the disclosure of pricing information by healthcare providers and health plans will have on our patient volumes and revenues. For more information, see "Business—Sources of Revenues—Price Transparency" included elsewhere in this Report—Item 1.

Results of Operations

Certain Definitions

The following definitions apply throughout the remaining portion of Management's Discussion and Analysis of Financial Condition and Results of Operations:

Adjusted EBITDA. EBITDA adjusted to exclude unusual items and other adjustments required or permitted in calculating debt covenant compliance under the Indentures governing the Notes and/or the Credit Agreements. We believe that this inclusion of supplementary adjustments to EBITDA applied in presenting Adjusted EBITDA are appropriate to provide additional information to investors about the impact of certain non-cash, non-recurring or unusual items that we do not expect to continue or to continue at the same level in the future and other items.

Admissions. The total number of patients admitted to our facilities for inpatient treatment.

Case mix index. Refers to the acuity or severity of illness of an average patient at our acute care facilities.

Consolidated. Consolidated information includes the results of all facility operations and corporate overhead costs, including the results of our new facility openings and our completed divestitures through the date of disposal during the applicable periods.

EBITDA. Earnings before interest, taxes, depreciation and amortization.

Equivalent admissions. Management and investors use equivalent admissions as a general measure of combined inpatient and outpatient volume. We compute equivalent admissions by multiplying admissions (inpatient volume) by the Outpatient factor. The equivalent admissions computation "equates" outpatient revenue to the volume measure (admissions) used to measure inpatient volume resulting in a general measure of combined inpatient and outpatient volume.

Outpatient factor. The sum of gross inpatient revenue and gross outpatient revenue divided by gross inpatient revenue.

Patient days. The total number of days of care provided to patients admitted to our facilities for inpatient treatment.

Same-facility. Same-facility information includes the results of the same facilities operated during the entire three months and years ended December 31, 2022 and 2021, as if the Kindred Transaction had occurred on January 1, 2021. Same-facility information excludes the results of the Artemis Business, as well as our newly opened facilities and our completed divestitures.

Summary

The following table summarizes our consolidated results of operations for the years ended December 31, 2022 and 2021 (dollars in millions):

	Years Ended December 31,			
	2022		2021	
	Amount	% of Revenues	Amount	% of Revenues
Revenues	$ 8,020	100.0 %	$ 8,937	100.0 %
Salaries and benefits	4,016	50.1	4,176	46.7
Supplies	1,243	15.5	1,505	16.8
Other operating expenses, net	2,039	25.4	2,245	25.1
Government stimulus income	(14)	(0.2)	(17)	(0.2)
Depreciation and amortization	323	4.0	345	3.9
Interest expense, net	480	6.0	466	5.2
Transaction-related costs	46	0.6	86	1.0
Other non-operating (gains) losses, net	(8)	(0.1)	19	0.2
	8,125	101.3	8,825	98.7
(Loss) income before income taxes	(105)	(1.3)	112	1.3
Provision for (benefit from) income taxes	100	1.3	(27)	(0.3)
Net (loss) income	(205)	(2.6)	139	1.6
Less: Net income attributable to noncontrolling interests and redeemable noncontrolling interests	(66)	(0.8)	(9)	(0.1)
Net (loss) income attributable to Lifepoint Health, Inc.	$ (271)	(3.4) %	$ 130	1.5 %

Revenues

The following table summarizes our key revenue metrics on a consolidated basis for the years ended December 31, 2022 and 2021:

	Years Ended December 31,		Increase	% Increase
	2022	2021	(Decrease)	(Decrease)
Number of facilities (at end of period) (a)	96	96		
Revenues (in millions)	$ 8,020	$ 8,937	$ (917)	(10.3)%
Patient days	1,541,709	1,524,403	17,306	1.1 %
Admissions	248,646	284,918	(36,272)	(12.7)%
Equivalent admissions	636,886	734,730	(97,844)	(13.3)%
Revenues per equivalent admission	$ 12,593	$ 12,164	$ 429	3.5 %
Case mix index	1.47	1.49	(0.02)	(1.3)%
Total surgeries	306,655	380,293	(73,638)	(19.4)%
Emergency department visits	1,275,070	1,606,668	(331,598)	(20.6)%

(a) Excludes two non-consolidated IRFs accounted for as equity method investments in accordance with ASC 323.

For the year ended December 31, 2022, our consolidated revenues decreased $917 million, or 10.3%, to $8,020 million compared to $8,937 million for the prior year. The decrease in our consolidated revenues was primarily attributable to the impact of the Kindred Transaction, including the transfer of the Artemis Business and acquisition of the Knight Transferred Business, as well as our acute care facility divestitures completed during 2021 and 2022. Refer to *"Supplemental Results of Operations on a Same-Facility Basis"* included elsewhere in this Report for a more comparable analysis of our key revenue metrics.

Our revenues by payer and approximate percentages of revenues on a consolidated basis were as follows for the years ended December 31, 2022 and 2021 (dollars in millions):

	Years Ended December 31,			
	2022		2021	
	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,227	40.2 %	$ 3,368	37.7 %
Medicaid	1,353	16.9	1,645	18.4
HMOs, PPOs and other private insurers	3,030	37.8	3,691	41.3
Self-pay	57	0.7	55	0.6
Other (a)	338	4.2	156	1.8
Revenue from contracts with customers	8,005	99.8	8,915	99.8
Rental income	15	0.2	22	0.2
Revenues	$ 8,020	100.0 %	$ 8,937	100.0 %

(a) Includes revenues from managed ARUs and ancillary goods and services.

Salaries and Benefits

For the year ended December 31, 2022, our consolidated salaries and benefits expense was $4,016 million, or 50.1% of revenues, compared to $4,176 million, or 46.7% of revenues, for the prior year. The decrease in our salaries and benefits expense was primarily attributable to $112 million of accelerated stock-based compensation expense recognized in the prior year and the transfer of the Artemis Business in connection with the Kindred Transaction, and our acute care facility divestitures completed during 2021 and 2022, partially offset by the impact of wage inflation and increases in the rate and utilization of contract labor across the majority of our markets. For additional information regarding our accounting for stock-based compensation, refer to Note 12 to our accompanying consolidated financial statements included elsewhere in this Report.

Supplies

For the year ended December 31, 2022, our consolidated supplies expense was $1,243 million, or 15.5% of revenues, compared to $1,505 million, or 16.8% of revenues, for the prior year. The decrease in our supplies expense was primarily a result of the transfer of the Artemis Business in connection with the Kindred Transaction, as well as our acute care facility divestitures completed during 2021 and 2022.

Other Operating Expenses, Net

Other operating expenses include, among other things, contract services, professional fees, rents and leases, repairs and maintenance, utilities, insurance, non-income taxes, other income and other expenses. For the year ended December 31, 2022, our consolidated other operating expenses were $2,039 million, or 25.4% of revenues, compared to $2,245 million, or 25.1% of revenues, for the prior year. The decrease in our other operating expenses was primarily a result of the transfer of the Artemis Business in connection with the Kindred Transaction, our acute care facility divestitures completed during 2021 and 2022 and investment income recognized during the current year in connection with the receipt of a dividend from a non-consolidated cost method investment, partially offset by increases in professional fees and contract services resulting from inflation across the majority of our markets during the current year as compared to the prior year.

Government Stimulus Income

As a result of the adverse impact of the COVID-19 pandemic on our business, we received stimulus payments from the Emergency Fund established under the CARES Act. For the years ended December 31, 2022 and 2021, we recognized $14 million and $17 million, respectively, of stimulus payments as other income. For additional information regarding the CARES Act and related financial impact, refer to Note 1 to our accompanying consolidated financial statements included elsewhere in this Report.

Depreciation and Amortization

For the year ended December 31, 2022, our consolidated depreciation and amortization expense was $323 million, or 4.0% of revenues, compared to $345 million, or 3.9% of revenues, for the prior year. The decrease in our depreciation expense was primarily attributable to the impact of the Kindred Transaction, including the transfer of the Artemis Business and acquisition of the Knight Transferred Business, as well as our acute care facility divestitures completed during 2021 and 2022.

Interest Expense, Net

For the year ended December 31, 2022, our consolidated interest expense was $480 million, or 6.0% of revenues, compared to $466 million, or 5.2% of revenues, for the prior year. The increase in our interest expense was primarily attributable to rising variable interest rates during the current year, partially offset by the discontinuation of finance lease amortization in connection with certain of our acute care facility divestitures completed during 2021 and 2022. For a further discussion of our debt and corresponding interest expense, refer to Notes 3 and 10 to our accompanying consolidated financial statements included elsewhere in this Report.

Transaction-Related Costs

For the years ended December 31, 2022 and 2021, we recognized transaction and advisory-related costs of $46 million and $86 million, respectively, primarily in connection with the Kindred Transaction, the Springstone Transaction and other business development activities. For additional information regarding our business development activities, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Other Non-Operating (Gains) Losses, Net

For the year ended December 31, 2022, we recognized a net other non-operating gain of $8 million, primarily comprised of gains related to our divestitures of Colorado Plains and Western Plains and the repurchase of a portion of our 9.75% Unsecured Notes, partially offset by losses recognized in connection with miscellaneous disposals of property and equipment. For the year ended December 31, 2021, we recognized a net other non-operating loss of $19 million, primarily comprised of net gains and losses recognized in connection with our recent hospital divestitures, as well as other miscellaneous disposals of property and equipment. For additional information regarding our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Income Taxes

For the years ended December 31, 2022 and 2021, we recognized a provision for income taxes of $100 million and a benefit from income taxes of $27 million, respectively. For a further discussion of our income taxes, refer to Note 5 to our accompanying consolidated financial statements included elsewhere in this Report.

Noncontrolling Interests

For the years ended December 31 2022 and 2021, we recognized net income attributable to noncontrolling interests and redeemable noncontrolling interests of $66 million and $9 million, respectively. The increase in our net income attributable to noncontrolling interests and redeemable noncontrolling interests was primarily attributable to the impact of the Kindred Transaction, including the transfer of the Artemis Business and acquisition of the Knight Transferred Business.

Non-GAAP Measures

Supplemental Results of Operations on a Same-Facility Basis

The following table summarizes our key supplemental results of operations for the three months and years ended December 31, 2022 and 2021 on a same-facility basis as if the Kindred Transaction had occurred on January 1, 2021. GAAP does not allow for such a combination of results of operations; however, we believe this information is useful in evaluating our financial performance.

	Three Months Ended December 31,		Increase (Decrease)	% Increase (Decrease)
	2022	2021		
Number of facilities (at end of period) (a)	93	93		
Revenues (in millions)	$ 2,024	$ 2,108	$ (84)	(4.0)%
Patient days	379,934	411,486	(31,552)	(7.7)%
Admissions	62,027	63,619	(1,592)	(2.5)%
Equivalent admissions	161,038	152,966	8,072	5.3 %
Revenues per equivalent admission	$ 12,567	$ 13,779	$ (1,212)	(8.8)%
Case mix index	1.46	1.53	(0.07)	(4.6)%
Total surgeries	76,311	77,099	(788)	(1.0)%
Emergency department visits	333,836	311,665	22,171	7.1 %

	Years Ended December 31,		Increase	% Increase
	2022	2021	(Decrease)	(Decrease)
Number of facilities (at end of period) (a)	86	86		
Revenues (in millions)	$ 7,889	$ 8,108	$ (219)	(2.7)%
Patient days	1,480,239	1,563,114	(82,875)	(5.3)%
Admissions	242,772	254,237	(11,465)	(4.5)%
Equivalent admissions	628,514	625,517	2,997	0.5 %
Revenues per equivalent admission	$ 12,551	$ 12,962	$ (411)	(3.2)%
Case mix index	1.47	1.49	(0.02)	(1.3)%
Total surgeries	305,705	307,120	(1,415)	(0.5)%
Emergency department visits	1,269,197	1,240,081	29,116	2.3 %

(a) Excludes two non-consolidated IRFs accounted for as equity method investments in accordance with ASC 323.

The decrease in our same-facility revenues for the three months and year ended December 31, 2022 compared to the same periods last year was attributable to decreases in revenues per equivalent admission of 8.8% and 3.2%, respectively, partially offset by increases in equivalent admissions of 5.3% and 0.5%, respectively. Our same-facility revenues per equivalent admission for the three months and year ended December 31, 2022 were negatively impacted by expected changes to certain governmental reimbursement programs, including declining COVID add-on payments and the return of Medicare sequestration, as well as changes in acuity, service mix and payer mix. The increase in our same-facility equivalent admissions for the three months and year ended December 31, 2022 was attributable to increases in emergency department visits and outpatient volumes as compared to the same periods last year.

EBITDA and Adjusted EBITDA

The following table presents a reconciliation of net (loss) income to EBITDA and Adjusted EBITDA prepared in accordance with the calculations set forth in the Indentures and the Credit Agreements for the three months ended December 31, 2022 and 2021 and the twelve months ended December 31, 2022 and September 30, 2022 (in millions):

	Three Months Ended December 31,		Twelve Months Ended December 31,	September 30,
	2022	2021	2022	2022
Net (loss) income	$ (167)	$ 108	$ (205)	$ 70
Interest expense, net	135	114	480	458
Income taxes	81	(61)	100	(42)
Depreciation and amortization	84	85	323	324
EBITDA	133	246	698	810
Transaction-related costs (a)	19	33	46	60
Facility lease expense (b)	(12)	(20)	(45)	(53)
One-time costs, non-cash and non-recurring items (c)	42	2	107	67
Subtotal	182	261	806	884
Pro forma run rate adjustments (d)	62	43	301	221
Adjusted EBITDA	$ 244	$ 304	$ 1,107	$ 1,105

(a) Represents the exclusion of certain transaction-related expenses, including costs associated with the Springstone Transaction and the Kindred Transaction, as well as other business development activities occurring during the applicable periods. For additional information regarding our business development activities, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

(b) Represents cash interest expense in connection with certain finance leases. Pursuant to the terms of our financial covenants contained in our debt agreements, we are required to consider cash interest expense on facility-related finance leases within the calculation of Adjusted EBITDA.

(c) Represents the exclusion of certain one-time costs, non-cash and non-recurring items, including, but not limited to, incremental operating expenses associated with the COVID-19 pandemic, litigation-related expenses, facility pre-opening costs and start-up related expenses, employee severance and other restructuring charges, the elimination of EBITDA associated with facilities that have been divested, differences between cash payments and reported rent expense for facility operating leases, stock-based compensation expense, gains and losses related to hospital divestitures and other disposals of property and equipment, as well as other non-operational items.

(d) Represents the estimated pro forma EBITDA impact attributable to various strategic initiatives and investments as permitted by our debt agreements. Such items primarily consist of (i) new or expanded service lines, newly opened or constructed facilities and other strategic investments; (ii) our recently announced 2023 acquisitions, including the Springstone Transaction, the El Dorado Transaction and the Everest Operational IRF Transaction; (iii) our IRF and behavioral health de novo pipeline; and (iv) unrealized savings associated with various cost reduction initiatives across our business, including supply chain, revenue cycle management and other functional areas.

Leverage

The following table illustrates our indebtedness and certain leverage ratios prepared in accordance with the calculations set forth in the Indentures and the Credit Agreements as of and for the twelve months ended December 31, 2022 and September 30, 2022 (dollars in millions):

	December 31, 2022	September 30, 2022
Cash and cash equivalents	$ 395	$ 475
ABL Facility	$ -	$ -
Term Loan Facility	3,215	3,215
6.75% Secured Notes	600	600
4.375% Secured Notes	600	600
Total Secured Debt (a)	$ 4,415	$ 4,415
Net Secured Debt (a)	$ 4,020	$ 3,940
9.75% Unsecured Notes	$ 1,270	$ 1,320
5.375% Unsecured Notes	500	500
Total Debt (a)	$ 6,185	$ 6,235
Net Debt (a)	$ 5,790	$ 5,760
Adjusted EBITDA	$ 1,107	$ 1,105
Total Secured Debt (a) / Adjusted EBITDA	3.99x	4.00x
Net Secured Debt (a) / Adjusted EBITDA	3.63x	3.57x
Total Debt (a) / Adjusted EBITDA	5.59x	5.64x
Net Debt (a) / Adjusted EBITDA	5.23x	5.21x

(a) Excludes finance lease obligations, which are not considered indebtedness for purposes of calculating the ratios set forth in the Indentures and the Credit Agreements, as well as unamortized debt issuance costs.

Liquidity and Capital Resources

Liquidity

Our primary sources of liquidity are cash generated by operations and borrowings under the ABL Facility. Our primary uses of cash are working capital requirements, debt service requirements and capital expenditures. Based on our current level of operations and available cash, we believe our cash flows from operations, combined with availability under the ABL Facility, will provide sufficient liquidity to fund our current obligations, projected working capital requirements, debt service requirements and capital spending requirements over the next twelve months. We cannot assure you, however, that our business will generate sufficient cash flows from operations or that future borrowings will be available to us under the ABL Facility, which is subject to a borrowing base, in an amount sufficient to enable us to pay principal and interest on the ABL Facility, the Term Loan Facility and the Notes, or to fund other liquidity needs. Our ability to do so depends on prevailing economic conditions, many of which are beyond our control. In addition, upon the occurrence of certain events, such as a change of control, we could be required to repay or refinance our indebtedness. We cannot assure you that we will be able to refinance any of our indebtedness on commercially reasonable terms or at all. Any future acquisitions, joint ventures or other similar transactions will likely require additional capital, and there can be no assurance that any such capital will be available to us on acceptable terms or at all. Any refinancing of our indebtedness could be at higher interest rates and may require us to comply with more onerous covenants that could further restrict our business operations. See "Item 1A, Risk Factors—Credit and Liquidity Risks" included elsewhere in this Report.

The following table presents summarized cash flow information for the years ended December 31, 2022 and 2021 (in millions):

	2022	2021
Net cash provided by (used in) operating activities	$ 82	$ (590)
Net cash used in investing activities	(138)	(1,034)
Net cash used in financing activities	(402)	(176)
Change in cash and cash equivalents	$ (458)	$ (1,800)

Operating Activities

When adjusted to exclude the impact of the repayments of Medicare advance payments and deferred payroll taxes in connection with the CARES Act during 2021, our net cash provided by operating activities for the years ended December 31, 2022 and 2021 was $82 million and $485 million, respectively. The decrease in our net cash provided by operating activities on such adjusted basis was primarily attributable to lower net income and differences in the amount and timing of various working capital accounts, partially offset by the receipt of a dividend related to a non-consolidated cost method investment.

Investing Activities

We invested $227 million and $274 million in purchases of property and equipment for the years ended December 31, 2022 and 2021, respectively. Refer to "—Capital Expenditures" below for further information.

During the year ended December 31, 2022, we received cash proceeds of $135 million in connection with the sale of Colorado Plains and Western Plains. Additionally, during the year ended December 31 2022, certain of our subsidiaries invested approximately $47 million for an aggregate $50 million principal amount of ScionHealth's senior secured term loan.

In connection with the Kindred Transaction, we transferred cash of $946 million to ScionHealth and received cash of $71 million associated with the Knight Transferred Business, resulting in a net cash outflow of $875 million for the year ended December 31, 2021. Additionally, during the year ended December 31, 2021, we received cash proceeds of $119 million in connection with our recent divestitures.

For a further discussion of the Kindred Transaction and our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Financing Activities

On June 3, 2022, the Executive Committee of the Board of Directors of the Company authorized the repurchase of up to $200 million aggregate principal amount of the Notes (the "***Notes Repurchase Program***"). Our net cash used in financing activities for the year ended December 31, 2022 primarily consisted of repurchases of a portion of our 9.75% Unsecured Notes in connection with our Notes Repurchase Program, distributions to our joint venture partners and a cash distribution to our Parent to fund the repurchase of certain previously issued profit interest units and capital units held by certain of our former employees. Additionally, our net cash used in financing activities for the year ended December 31, 2022 included payments to terminate the finance lease obligations related to one of our acute care facilities that we continue to operate and Western Plains.

Our net cash used in financing activities for the year ended December 31, 2021 includes a $93 million cash distribution to the Parent to partially fund the repurchase of certain previously issued Units and capital units, primarily held by certain of our former employees, as well as certain of our current employees, executives, and directors, in addition to distributions to certain joint venture partners, and payments made under finance lease arrangements.

Capital Expenditures

We continue to make significant, targeted investments at our facilities to add new technologies, modernize facilities and expand the services available. These investments should assist in our efforts to attract and retain physicians, to offset outmigration of patients and to make our facilities more desirable to our employees and potential patients.

The following table summarizes our capital expenditures as a percentage of revenues and as a percentage of depreciation expense for the years ended December 31, 2022 and 2021 (dollars in millions):

	2022		2021	
	Amount	% of Revenues	Amount	% of Revenues
Capital expenditures	$ 227	2.8 %	$ 274	3.1 %
Depreciation expense	$ 323		$ 344	
Ratio of capital expenditures to depreciation expense	70.3 %		79.7 %	

We have a formal and intensive review procedure for the authorization of capital expenditures that exceed an established threshold. One of the most important financial measures of acceptability for a discretionary capital project is whether its projected discounted cash flow return on investment exceeds our projected cost of capital for that project. We expect to continue to invest in information systems, modern technologies, emergency room and operating room expansions, the construction of medical office buildings for physician expansion and the reconfiguration of the flow of patient care. Additionally, we may from time to time replace existing hospital buildings with new buildings as we evaluate ongoing repair and maintenance costs and other factors that impact the future operations of the existing buildings. Refer to "—Liquidity and Capital Resources Outlook" below for further information regarding our long-term capital expenditure commitments.

Capital Resources

ABL Facility

Effective November 16, 2018, we entered into the ABL Facility in an aggregate principal amount of $800 million with a maturity of five years. As of December 31, 2022, we had no borrowings outstanding under the ABL Facility and approximately $53 million in letters of credit outstanding primarily related to the self-insured retention level of our general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements. Amounts available for borrowing under the ABL Facility were approximately $573 million as of December 31, 2022.

On January 27, 2023, we entered into an Incremental Assumption and Amendment Agreement No. 2, which amended and restated the ABL Facility. The ABL Facility, as amended and restated, has a stated maturity of five years; provided, that if more than $200 million aggregate principal amount of the Notes or the Term Loan Facility remain outstanding 91 days before the stated maturity thereof, then the ABL Facility will mature and the commitments under the facility will terminate on such date. The ABL Facility, as amended and restated, continues to provide revolving availability of $800 million, with a $150 million letter of credit sub-facility and a $40 million swingline sub-facility.

On February 6, 2023, we borrowed $250 million under the ABL Facility in order to fund the Springstone Transaction, El Dorado Transaction and Everest Operational IRF Transaction as discussed further in Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Availability under the ABL Facility continues to be subject to a borrowing base that is based on a specified percentage of eligible accounts receivable. Borrowings under the ABL Facility continue to be subject to the satisfaction of customary conditions, including the absence of a default and the accuracy of representations and warranties. For further information regarding the ABL Facility, including certain restrictive covenants and such amendment and restatement, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Term Loan Facility

Effective November 16, 2018, we entered into the Term Loan Facility, which is a senior secured term loan credit facility with a maturity of seven years. As of December 31, 2022, approximately $3,215 million was outstanding on the Term Loan Facility. For further information regarding the Term Loan Facility, including certain restrictive covenants and our optional prepayments and incremental borrowings made in 2020, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

6.75% Secured Notes

On April 13, 2020, we issued the 6.75% Secured Notes in an aggregate principal amount of $600 million with a maturity of five years. For further information regarding the 6.75% Secured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

4.375% Secured Notes

On February 13, 2020, we issued the 4.375% Secured Notes in an aggregate principal amount of $600 million with a maturity of seven years. For further information regarding the 4.375% Secured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

9.75% Unsecured Notes

On November 16, 2018, we issued the 9.75% Unsecured Notes in an aggregate principal amount of $1,425 million with a maturity of eight years. During year ended December 31, 2022, we repurchased $155 million aggregate principal amount of the 9.75% Unsecured Notes in connection with our Notes Repurchase Program. For further information regarding the 9.75% Unsecured Notes, including certain restrictive covenants, and our Notes Repurchase Program, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

5.375% Unsecured Notes

On December 4, 2020, we issued the 5.375% Unsecured Notes in an aggregate principal amount of $500 million with a maturity of eight years. For further information regarding the 5.375% Unsecured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

We monitor the capital markets and our capital structure and make changes from time to time, with the goal of maintaining financial flexibility, preserving or improving liquidity and/or achieving cost efficiency. From time to time, we may elect to repurchase amounts of our outstanding debt for cash through open market repurchases or privately negotiated transactions with certain of our debt holders, although there is no assurance we will do so.

Liquidity and Capital Resources Outlook

We continue to have ongoing capital commitments in connection with several of our facilities. At December 31, 2022, we estimated our total remaining capital expenditure commitments to be approximately $573 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues at the applicable facility. We anticipate funding these expenditures through cash provided by operating activities, available cash and borrowings available under the ABL Facility.

Our business strategy contemplates the selective acquisition of additional hospitals and other healthcare service providers, and we regularly review potential acquisitions. These acquisitions may, however, require additional financing. Our primary sources of liquidity are cash flows provided by our operations and our borrowings available under the ABL Facility. We believe that our internally generated cash flows and borrowing availability under the ABL Facility will be adequate to service existing debt, finance internal growth and fund capital expenditures and small to mid-size hospital acquisitions over the next twelve months and into the foreseeable future prior to maturity dates of our outstanding debt. Certain larger hospital acquisitions may, however, require additional financing.

Inflation

The healthcare industry is labor-intensive. Wages and other expenses increase during periods of inflation and when labor shortages in marketplaces occur. In addition, suppliers pass along rising costs to us in the form of higher prices. Private insurers pass along their rising costs in the form of lower reimbursement to us. Our ability to pass on these increased costs in increased rates is limited because of increasing regulatory and competitive pressures and the fact that the majority of our revenues are fee-based. Accordingly, inflationary pressures could have a material adverse effect on our results of operations. Additionally, there is uncertainty surrounding the impact of any monetary policy changes taken by the U.S. Federal Reserve and other central banks to address the structural risks associated with inflation.

Contractual Obligations and Material Cash Requirements

We have certain material contractual obligations which are recorded as liabilities in our consolidated financial statements, primarily including:

- long-term debt obligations (refer to "—Capital Resources" above and to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report); and
- finance and operating lease obligations (refer to Note 7 to our accompanying consolidated financial statements included elsewhere in this Report).

Additionally, we have certain other material cash requirements related to items that are not recognized as liabilities in our consolidated financial statements, primarily including:

- capital expenditure commitments (refer to "—Capital Expenditures" above and to Note 13 to our accompanying consolidated financial statements included elsewhere in this Report);
- shared centralized resource model arrangements with various third parties to provide certain nonclinical business functions to us, including payroll, supply chain management and revenue cycle management;
- information technology services, including, but not limited to, financial, clinical, patient accounting and other information services;
- diagnostic imaging equipment maintenance and bio-medical services; and
- other minimum commitments to purchase miscellaneous goods or services under non-cancelable contracts.

Adoption of Recently Issued Accounting Standards

None.

Critical Accounting Estimates

The preparation of financial statements in accordance with GAAP requires us to make estimates and assumptions that affect the reported amounts and related disclosures. We consider an accounting estimate to be critical if:

- it requires assumptions to be made that were uncertain at the time the estimate was made; and
- changes in the estimate or different estimates that could have been made could have a material impact on our consolidated results of operations or financial condition.

Our critical accounting estimates include the following areas:

- Revenue recognition and accounts receivable;
- Goodwill impairment analysis;
- Accounting for income taxes;
- Reserves for self-insurance claims; and
- Accounting for CARES Act stimulus payments.

The following discussion of critical accounting estimates is not intended to be a comprehensive list of all of our accounting policies that require estimates, but the estimates discussed below involve a higher degree of judgment and complexity. We believe the current assumptions and other considerations used to estimate amounts reflected in our consolidated financial statements are appropriate. However, if actual experience differs from the assumptions and other considerations used in estimating amounts reflected in our consolidated financial statements, the resulting changes could have a material adverse effect on our consolidated results of operations and our financial condition. The discussion that follows presents information about our critical accounting estimates, as well as the effects of hypothetical changes in the material assumptions used to develop each estimate.

Revenue Recognition and Accounts Receivable

We recognize revenues in the period in which performance obligations are satisfied. Generally, we bill patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. Our ability to collect outstanding receivables is critical to our results of operations and cash flows. Amounts we receive for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, HMOs, PPOs and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in our financial statements are recorded at the net consideration to which we expect to be entitled to receive in exchange for providing patient care.

Approximately 95.6%, 98.0% and 98.0% of our patient revenues recognized during the years ended December 31, 2022, 2021 and 2020, respectively, related to discounted charges, which were comprised of the following sources (as a percentage of our revenues):

	2022	2021	2020
Medicare	40.2 %	37.7 %	38.6 %
Medicaid	16.9 %	18.4 %	17.1 %
HMOs, PPOs and other private insurers	37.8 %	41.3 %	41.6 %
Self-pay	0.7 %	0.6 %	0.7 %

Revenues are recorded at estimated net amounts due from patients, third-party payers and others for healthcare services provided. For certain payers, such as Medicare, Medicaid, as well as some managed care payers with which we have contractual arrangements, the contractual allowances are calculated by computerized logging systems based on defined payment terms. For other payers, the contractual allowances are determined based on historical data by insurance plan. All contractual adjustments, regardless of payer type or method of calculation, are reviewed and compared to actual experience.

We monitor our processes for calculating contractual allowances through:

- review of payment discrepancy reports for logged payers;
- analysis of historical contractual allowance trends based on actual claims paid by HMOs, PPOs and other private insurers;
- review of contractual allowance information reflecting current contract terms;
- consideration and analysis of changes in charge rates and payer mix reimbursement levels; and
- other issues that may impact contractual allowances.

Medicare and Medicaid

The majority of services performed on Medicare and Medicaid patients are reimbursed at predetermined reimbursement rates. The differences between the established billing rates (i.e. gross charges) and the predetermined reimbursement rates are recorded as contractual discounts and deducted from gross charges. Under the Medicaid program's prospective reimbursement systems, there is no adjustment or settlement of the difference between the actual cost to provide the service and the predetermined reimbursement rates.

Discounts for retrospectively cost-based revenues are estimated based on historical and current factors and are adjusted in future periods when settlements of filed cost reports are received. Final settlements under these programs are subject to adjustment based on administrative review and audit by third-party intermediaries, which can take several years to resolve completely.

Because the laws and regulations governing the Medicare and Medicaid programs are complex and subject to change, the estimates of contractual discounts we record could change by material amounts. A significant increase in our estimate of contractual discounts for Medicare and Medicaid would lower our earnings. This would adversely affect our results of operations, financial condition, liquidity and future access to capital.

HMOs, PPOs and Other Private Insurers

Amounts we receive for the treatment of patients covered by HMOs, PPOs and other private insurers (collectively, "***managed care plans***") are generally less than our established billing rates. We include contractual allowances as a reduction to revenues in our consolidated financial statements based on payer specific identification and payer specific factors for rate increases and denials. For most managed care plans, estimated contractual allowances are adjusted to actual contractual allowances as cash is received and claims are reconciled.

The process of determining the allowance requires us to estimate the amount expected to be received based on payer contract provisions, historical collection data as well as other factors and requires a high degree of judgment. It is impacted by changes in managed care contracts and other related factors. A significant increase in our estimate of contractual discounts for managed care plans would lower our earnings. This would adversely affect our results of operations, financial condition, liquidity and future access to capital.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. We evaluate these patients, after the patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. We estimate the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that we utilize include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that we expect to collect. Because we provide care to patients regardless of their ability to pay, we have determined that the differences between the amounts we bill based on gross or discounted charges and the amounts we expect to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and we account for this variable consideration in accordance with the provisions of ASC 606. Self-pay accounts receivable are written off after collection efforts have been followed in accordance with our policies.

Goodwill Impairment Analysis

Goodwill represents the excess of the purchase price over the fair value of the net assets of acquired businesses. Our goodwill included in our consolidated balance sheet as of December 31, 2022 was $3.8 billion. Refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report for a detailed roll forward of changes in our goodwill during the years ended December 31, 2022 and 2021.

In accordance with ASC 350, "Intangibles — Goodwill and Other" (**"*ASC 350*"**) goodwill and intangible assets with indefinite lives are reviewed by us at least annually for impairment on October 1. Prior to the Kindred Transaction, we historically determined that our consolidated business comprised a single reporting unit for goodwill impairment testing purposes. Due to the significance of the Kindred Transaction and the impact on our management team and business operations, we re-evaluated our reporting units in accordance with ASC 280, "Segment Reporting" ("***ASC 280***") and ASC 350 during 2022 and determined that we are now comprised of two distinct reporting units (i) acute hospital operations and (ii) rehabilitation hospital operations.

For the annual impairment evaluation, we estimate fair values of our reporting units utilizing both a discounted cash flow ("***DCF***") analysis and a guideline public company analysis considering observable market data of the Company's industry peers. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates, profitability and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing the Company's assumptions. The cash flows employed in the DCF analysis are based on the Company's most recent financial budgets and business plans and, when applicable, various growth rates and profitability for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the reporting unit.

If we determine the carrying value of goodwill is impaired, or if the carrying value of a business that is to be sold or otherwise disposed of exceeds its fair value, then we reduce the carrying value, including any allocated goodwill, to fair value. Refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report for further discussion of the results of our annual goodwill impairment evaluation procedures.

Accounting for Income Taxes

Deferred tax assets generally represent items that will result in a tax deduction in future years for which we have already recorded the tax benefit in our income statement. We assess the likelihood that deferred tax assets will be recovered from future taxable income. To the extent we believe that recovery is not probable, a valuation allowance is established. To the extent we establish a valuation allowance or subsequently increase or decrease this allowance, we must include an adjustment as part of the income tax provision in our results of operations. Our deferred tax asset balances in our consolidated balance sheets were $488 million and $504 million as of December 31, 2022 and 2021, respectively. Our valuation allowances for deferred tax assets in our consolidated balance sheets were $305 million and $197 million as of December 31, 2022 and 2021, respectively.

In addition, significant judgment is required in determining and assessing the impact of certain tax-related contingencies. We establish accruals when, despite our belief that our tax return positions are fully supportable, it is probable that we have incurred a loss related to tax contingencies and the loss or range of losses can be reasonably estimated. We adjust the accruals related to tax contingencies as part of our provision for income taxes in our results of operations based upon changing facts and circumstances, such as progress of a tax audit, development of industry related examination issues, as well as legislative, regulatory, or judicial developments. A number of years may elapse before a particular matter, for which we have established an accrual, is audited and resolved.

The first step in determining the deferred tax asset valuation allowance is identifying reporting jurisdictions where we have a history of tax and operating losses or are projected to have losses in future periods as a result of changes in operational performance. We then determine if a valuation allowance should be established against the deferred tax assets for that reporting jurisdiction. The second step is to determine the amount of the valuation allowance. We will generally establish a valuation allowance equal to the net deferred tax asset (deferred tax assets less deferred tax liabilities) related to the jurisdiction identified in step one of the analysis. In certain cases, we may not reduce the valuation allowance by the amount of the deferred tax liabilities depending on the nature and timing of future taxable income attributable to deferred tax liabilities.

In assessing tax contingencies, we apply the provisions of ASC 740, "Income Taxes". We apply the recognition threshold and measurement of a tax position taken or expected to be taken in a tax return and follow the guidance on various matters such as derecognition, interest, penalties and disclosure. We classify interest and penalties as a component of income tax expense. During each reporting period, we assess the facts and circumstances related to recorded tax contingencies. If tax contingencies are no longer deemed probable based upon new facts and circumstances, the contingency is reflected as a reduction of the provision for income taxes in the current period.

Our deferred tax assets exceeded our deferred tax labilities by $286 million as of December 31, 2022, excluding the impact of valuation allowances. Historically, we have not produced federal taxable income, and in connection with the Lifepoint/RCCH Merger, we became highly leveraged. As such, we believe it is likely that a significant component of our deferred tax assets will not be realized and thus have established a valuation allowance against these deferred tax assets as of December 31, 2022. In addition, we have subsidiaries with a history of tax losses in certain state jurisdictions, and, based upon those historical tax losses, we have assumed that the subsidiaries would not be profitable in the future for those states' tax purposes. If our assertion regarding the future profitability of those subsidiaries would have been different, then our deferred tax assets would be understated by the amount of the state valuation allowance of $153 million at December 31, 2022. During the year ended December 31, 2021, we reduced our valuation allowance by $163 million as a result of the transfers and utilization of certain net deferred tax assets and liabilities between us and ScionHealth.

Reserves for Self-Insurance Claims

Given the nature of our operating environment, we are subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, we maintain insurance for individual professional liability claims and employee workers' compensation claims exceeding SIR and deductible levels. At December 31, 2022, our SIR for professional liability claims is $15 million per claim at the majority of our acute care hospitals. Additionally, we participate in state-specific professional liability programs in Indiana, New Mexico and Pennsylvania. We have a $25,000 deductible for professional liability at each of our IRFs and behavioral health hospitals. At December 31, 2022, our deductible for workers' compensation claims at each of our acute care and behavioral health hospitals was $1 million per claim in all states in which we operate except for Montana and Washington. We participate in state-specific programs for our workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at our IRFs. Our SIR and deductible levels are evaluated annually as a part of our insurance program's renewal process.

Each year, we obtain quotes from various insurers with respect to the cost of obtaining insurance coverage. We compare these quotes to our most recent actuarially determined estimates of losses at various self-insured retention and deductible levels. Accordingly, changes in insurance costs affect the self-insured retention and deductible levels we choose each year.

Our reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. Our expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of our self-insured retention and deductible levels; the administrative costs of the insurance program; and interest expense related to the discounted portion of the liability.

Our reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. Our reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. We have discounted our reserves for self-insured claims to their present value using a discount rate of 1.8% at December 31, 2022, 1.6% at December 31, 2021, and 1.7% at December 31, 2020. We select a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

The following table provides information regarding our reserves for self-insured claims at December 31, 2022 and 2021 (in millions):

	2022	2021
Undiscounted	$ 308	$ 308
Discounted (as reported)	$ 293	$ 295

As of December 31, 2022 and 2021, our reserves for self-insurance claims did not include any significant amounts for settled and unpaid claims. Our average lag time between the settlement and payment of a self-insured claim ranges from 1 to 2 weeks.

Our estimated reserves for self-insured claims will be significantly affected if current and future claims differ from historical trends. While we monitor reported claims closely and consider potential outcomes when determining our reserves for self-insured claims, the complexity of the claims, the extended period of time to settle the claims and the wide range of potential outcomes complicate the estimation process. In addition, certain states have passed varying forms of tort reform which attempt to limit the amount of awards. If such laws are passed in the states where our hospitals are located, our loss estimates could decrease.

Our estimate of reserves for self-insured and deductible claims are based upon actuarial calculations and are significantly influenced by key assumptions and other factors. These factors include, but are not limited to: historical paid claims; trending of loss development factors; trends in the frequency and severity of claims, which can differ significantly by jurisdiction as a result of the legislative and judicial climate in such jurisdictions; coverage limits of third-party insurance and actuarial determined statistical confidence levels. Given the number of assumptions and characteristics of each assumption considered in establishing the reserves for self-insured claims, it is difficult to compute the individual financial impact of each assumption or groups of assumptions. Some of the assumptions are dependent upon the quantitative measurement of other assumptions, and therefore are not accurately evaluated in isolation. For example, a change in the frequency of claims assumption is also affected by the estimated severity of these claims resulting in an inability to properly isolate and quantify the impact of a change in this assumption.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Our reserves for self-insured claims are comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period. We have the ability to reliably determine the amount and timing of payments based on sufficient history of our claims development, the use of external actuarial expertise and our rigorous review process. Actuarial payment patterns are based on our individual hospital historical data both prior to and after our inception. The processes, performed by both external actuaries and our management, enable us to reliably determine the amount of our ultimate losses as well as the timing of the loss settlements such that discounting of the reserves for self-insured claims is appropriate. Given the number of factors considered in establishing the reserves for self-insured claims, it is neither practical nor meaningful to isolate a particular assumption or parameter of the process and calculate the impact of changing that single item.

Ultimately, from an actuarial standpoint, the sensitivity in the estimates of reserves for self-insured claims is reflected in the various actuarial confidence levels. Our best estimate of our reserves for self-insured claims utilizes an actuarial central estimate, which employs a statistical confidence level that approximates 50%. Higher statistical confidence levels, while not representative of our best estimate, reflect reasonably likely outcomes upon the ultimate resolution of related claims. Using a higher statistical confidence level would increase the estimated reserves for self-insured claims. At a 75% statistical confidence level, our estimated reserve would increase by $32 million. Changes in our estimates of reserves for self-insured claims are non-cash charges and accordingly, do not impact our liquidity or capital resources.

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of our quarterly and semi-annual actuarial calculations resulted in changes to our reserves for self-insured claims for prior years. For the years ended December 31, 2022 and 2021 our related self-insured claims expense increased by $5 million and $13 million, respectively.

Accounting for CARES Act Stimulus Payments

For the years ended December 31, 2022 and 2021, respectively, we recognized $14 million and $17 million of stimulus payments as other income under the caption "Government stimulus income" in our accompanying consolidated statements of operations included elsewhere in this Report. Payments made by the Emergency Fund and the ARP rural program to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, filing attestations acknowledging receipt of payments, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients, not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse, and submitting such reports as may be required by HHS regarding the provider's compliance with the terms and conditions of the Emergency Fund. Healthcare providers that received more than $10,000 from the Emergency Fund between April 10, 2020 through June 30, 2020 (the "***First Payment Received Period***"), were required to submit a report on their use of those funds no later than September 30, 2021. We successfully submitted the required reports for all of our providers that received and retained payments from the Emergency Fund during First Payment Received Period prior to the deadline. However, we will be required to submit additional reports in the future for payments that were received and retained by our providers from the Emergency Fund after the end of the First Payment Received Period. The reporting requirements and guidance from HHS related to the Emergency Fund have been subject to frequent clarifications and revision, and there can be no assurance that we will not be required to submit additional reports or provide additional information related to the payments we receive from the Emergency Fund in the future. In addition, HHS has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the OIG of HHS, will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

We have accounted for the stimulus payments received as a government grant related to income in a manner consistent with International Accounting Standards 20, "Accounting for Government Grants and Disclosure of Government Assistance" ("***IAS 20***"). In accordance with IAS 20, government grants are recognized either as other income or a reduction to a related expense when there is reasonable assurance that the grant will be received, and the entity will comply with any conditions attached to the grant. There is currently limited, and sometimes changing, guidance available regarding the accounting treatment of funds that have been received by us and our facilities under the CARES Act and the related stimulus legislation. This lack of guidance requires us to apply professional judgement and make certain estimates and assumptions with respect to the presentation, amount and timing of our recognition of stimulus received under the CARES Act. For additional information regarding the CARES Act and related financial impact, refer to "Part I, Item 1. Business—Government Regulation—Legislative and Regulatory Developments in Response to COVID-19" and Note 1 to our accompanying consolidated financial statements included elsewhere in this Report.

Item 7A. ***Quantitative and Qualitative Disclosures About Market Risk.***

Market Risk

Market risk is defined as the risk of loss resulting from changes in market prices as a result of changes in interest rates, credit and liquidity or general economic conditions. Our principal market risks in the ordinary course of business are credit risk, liquidity risk and interest rate risk. We currently do not have direct exposure to either market risk from trading activities or foreign currency exchange rate risk.

Credit Risk

We define credit risk as the risk that amounts payable by uninsured patients and remaining patient responsibility amounts (deductibles and co-payments) for patient accounts where the primary insurance carrier has paid the amounts covered by the applicable agreements will not be paid. The provision for doubtful accounts relates primarily to amounts due directly from patients. While we have experienced a reduction in uninsured patients, the risk of collection from insured patients and the amounts due, may increase as more individuals are enrolled in insurance plans with larger deductibles and/or co-payments, including those purchased on insurance exchanges.

Liquidity Risk

We define liquidity risk as the risk that we will not meet our payment obligations in a timely manner or the risk that market conditions or institution-specific events may reduce our ability to raise funds from market counterparties. An adverse institution-specific event such as a major loss that causes a perceived or actual deterioration in our financial condition or an adverse systemic event could affect our funding liquidity.

Interest Rate Risk

Borrowings under the ABL Facility and the Term Loan Facility are at variable rates of interest and expose us to interest rate risk. As of December 31, 2022, we had total outstanding debt of approximately $6.2 billion, excluding finance lease obligations and unamortized debt issuance costs, of which approximately $3.2 billion, or 51.6%, was subject to variable rates of interest. If the interest rate on our variable rate long-term debt outstanding as of December 31, 2022 were to increase by 100 basis points during any annual period, our cash flows would be negatively impacted by approximately $32 million.

Item 8. ***Financial Statements and Supplementary Data.***

Information with respect to this Item is contained in our accompanying consolidated financial statements beginning on page F-1 of this Report.

Item 9. ***Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.***

None.

Item 9A. ***Controls and Procedures.***

The information that would be required to be disclosed under Part II, Item 9A of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 9B. ***Other Information.***

None.

Item 9C. ***Disclosure Regarding Foreign Jurisdictions that Prevent Inspections.***

None.

PART III

Item 10. ***Directors, Executive Officers and Corporate Governance*****.**

The following table provides information regarding our executive officers and the members of our Board of Directors (ages as of March 2, 2023):

Name	Age	Position(s)
David M. Dill	54	President, Chief Executive Officer, Director and Chairman
Michael S. Coggin	53	Executive Vice President and Chief Financial Officer
Jennifer C. Peters	51	Executive Vice President, General Counsel
Terry W. Terrill, Jr.	56	Executive Vice President, Human Resources
Jason Zachariah	45	Executive Vice President, Chief Operating Officer
Aaron Lewis	39	Executive Vice President, Growth and Integrated Solutions
Norman Brownstein	79	Director
Nell Buhlman	56	Director
Christine Cahill	28	Director
Christopher J. Christie	60	Director
Maxwell David	32	Director
Holly McMullan	46	Director
Matthew H. Nord	43	Director
Eric L. Press	57	Director
Wendell Pritchett	58	Director
G. Rodney Wolford	76	Director

David M. Dill became our Chief Executive Officer upon consummation of the Lifepoint/RCCH Merger. Prior to the consummation of the Lifepoint/RCCH Merger, Mr. Dill served in various roles at Legacy Lifepoint as President since January 2011 and as Chief Operating Officer since April 2009. Mr. Dill served as Executive Vice President from February 2008 to January 2011. Mr. Dill joined Legacy Lifepoint in July 2007 as Chief Financial Officer and continued to serve in that role until April 2009. From March 2006 until Mr. Dill joined Legacy Lifepoint, he served as executive vice president of Fresenius Medical Care North America and as chief executive officer of one of two U.S. divisions of Fresenius Medical Care Services, a wholly owned subsidiary of Fresenius Medical Care AG & Co. KGaA. Mr. Dill previously served as executive vice president, chief financial officer and treasurer of Renal Care Group, Inc., a publicly-traded dialysis services company, from November 2003 until Renal Care Group, Inc. was acquired by Fresenius Medical Care in March 2006. From 1996 to November 2003, Mr. Dill served in various finance and accounting roles with Renal Care Group, Inc. Mr. Dill served as a member of the board of directors of Psychiatric Solutions, Inc., a behavioral health services company, from 2005 until 2010. Mr. Dill is a former chairman of the board for the Federation of American Hospitals ("***FAH***") and currently serves as a member of the FAH's board and Executive Committee. He is also chair of the board of directors for the Nashville Health Care Council, serves as a director on the boards of R1 RCM and the American Heart Association's Greater Southeast Affiliate and is a member of the board of trustees for the Murray State University Foundation and the Montgomery Bell Academy.

Michael S. Coggin became our Executive Vice President and Chief Financial Officer upon consummation of the Lifepoint/RCCH Merger. Prior to the consummation of the Lifepoint/RCCH Merger, Mr. Coggin served in various roles at Legacy Lifepoint as Executive Vice President, Chief Financial Officer and Chief Accounting Officer, since September 2016. From December 2008 until September 2016, Mr. Coggin served as Senior Vice President and Chief Accounting Officer of Legacy Lifepoint. From September 2007 until December 2008, Mr. Coggin served as chief financial officer of Specialty Care Services Group, a multi-service line healthcare provider primarily focused on providing perfusion and auto-transfusion services to hospitals. Mr. Coggin was a senior vice president in the finance, accounting and internal audit groups of Renal Care Group, Inc. from April 2004 until its acquisition by Fresenius Medical Care AG & Co. KGaA in March 2006. Following the acquisition, Mr. Coggin provided finance and accounting oversight for business units within the East Division of Fresenius. Prior to that time, Mr. Coggin was an audit manager at KPMG Peat Marwick in Nashville, Tennessee.

Jennifer C. Peters became our Executive Vice President and General Counsel upon consummation of the Lifepoint/RCCH Merger. Prior to the consummation of the Lifepoint/RCCH Merger, Ms. Peters served as Legacy Lifepoint's General Counsel since April 2017 and Corporate Secretary since June 2017. Prior to that, Ms. Peters served as senior vice president and chief operations counsel of Legacy Lifepoint, where she was responsible for overseeing the Company's operations lawyers and contract management team to ensure consistent legal guidance across all operational units. Prior to joining Legacy Lifepoint in November 2013, Ms. Peters served as general counsel, secretary and chief compliance officer for Simplex Healthcare from October 2010 through November 2013. Ms. Peters has also served as vice president and associate general counsel at Community Health Systems. In addition, Ms. Peters has experience as a hospital administrator.

Terry W. "Sonny" Terrill, Jr. joined the Company in April 2019 as Executive Vice President, Human Resources. Mr. Terrill is responsible for providing leadership in developing and executing human resources strategies in support of the overall business plan and strategic direction of the organization. Mr. Terrill has three decades of HR experience, including executive coaching, full-cycle talent management and management of large-scale system and organizational integration. Before joining the Company, he served in a number of leadership roles, most recently as executive vice president, chief human resources officer for BrightSpring Health from August 2017 to March 2019 and human resources officer for CIGNA- HealthSpring from May 2005 to August 2017. He is also a Six Sigma Black Belt.

Jason Zachariah was promoted to Executive Vice President, Chief Operating Officer in June 2022. Prior to his current role, Mr. Zachariah served as President, Integrated Solutions upon consummation of the Kindred Transaction in December 2021. Before joining Lifepoint, he served as president and chief operating officer of Kindred, where he led the company's hospital division, rehabilitation services and behavioral health operations until consummation of the Kindred Transaction. Prior to that, he served as president of Kindred's rehabilitation services and in various roles in the company's hospital division, including chief operating officer and executive director for the division's California/Arizona district. From 2003 until Mr. Zachariah joined Kindred, he served as a Senior Sales Representative at GlaxoSmithKline Pharma GmbH.

Aaron Lewis was promoted to Executive Vice President, Growth and Integrated Solutions in June 2022. Prior to his current role, Mr. Lewis served as Senior Vice President, Care Continuum and Business Transformation, and previously served the Company as Senior Vice President, Physician Enterprise and Strategic Growth. Before joining Lifepoint Health, Mr. Lewis served in multiple roles for RCCH HealthCare Partners, including Senior Vice President of Strategic Growth and Vice President, Operations and Strategic Alignments. Prior to his RCCH tenure, he held operational and development roles with Vanguard Health Systems, after beginning his career in investment banking for Merrill Lynch.

Norman Brownstein became our Director in April 2016. Mr. Brownstein is the founding member and chairman of the board of the law firm of Brownstein Hyatt Farber Schreck, LLP. Mr. Brownstein is nationally recognized for his extensive experience in real estate law, commercial transactions and public policy advocacy, which spans the economic spectrum, extending to telecommunications, financial services, agriculture, tax and healthcare interests. Mr. Brownstein's firm is one of the leading lobbying firms in the U.S. Mr. Brownstein serves on the board of directors of National Jewish Health and the Simon Wiesenthal Center, and during the past five years has also served as a director of Ardent Healthcare Services. Mr. Brownstein received a B.S. from the University of Colorado and a J.D. from the University of Colorado Law School.

Nell Buhlman became our Director in March 2022. Ms. Buhlman is the Chief Administrative Officer and Head of Strategy for Press Ganey Forsta, an international company that works with health systems to optimize the healthcare experience for patients, consumers, and staff. In her role, Nell has responsibility for enterprise growth and client strategy for provider, payer, life sciences and healthcare consumer solutions in the U.S. and abroad. Ms. Buhlman joined Press Ganey in 2010. Prior to the company's 2022 merger with Forsta, Ms. Buhlman served as Press Ganey's Chief Operating Officer, Chief Strategy Officer, Senior Vice President for Clinical Solutions, and Vice President for Product Strategy. Ms. Buhlman is a Board Member for the Hospital for Consumptives of Maryland (Eudowood Foundation), serves on the Parent Advisory Council for the Greater Baltimore Medical Center, and is an Executive in Residence for the Johns Hopkins Carey Business School. She also serves as a trustee for the WPW Foundation, a charitable organization that provides grants to nonprofits serving vulnerable women and children. Ms. Buhlman holds a Bachelor of Arts degree from Connecticut College and an MBA from Johns Hopkins Carey Business School.

Christine Cahill became our Director in March 2022. Ms. Cahill is a Principal in Apollo Global Management's Private Equity business, having joined in 2018. Prior to that time, Ms. Cahill was a member of the Investment Banking Division of Goldman Sachs. Ms. Cahill serves on the board of directors of Lune Holdings (parent of Kem One) and ScionHealth. Ms. Cahill graduated from Harvard University with a B.A. in Economics.

Christopher J. Christie became our Director in December 2018. Mr. Christie served two terms as Governor of New Jersey from 2010 to 2018. Prior to that, Mr. Christie served as U.S. Attorney for the District of New Jersey from 2002 to 2008. During his governorship, Mr. Christie chaired the President's Commission on Combating Drug Addiction and the Opioid Crisis in 2017. He currently serves as a legal and political commentator for ABC News. Mr. Christie is a graduate of the University of Delaware and Seton Hall University School of Law.

Maxwell David became our Director in December 2018. Mr. David is a Principal in Apollo Global Management's Private Equity business, having joined in 2014. Prior to that time, Mr. David was a member of the Investment Banking division of Bank of America Merrill Lynch. Mr. David serves on the board of directors of ScionHealth, 25m Health, CareerBuilder, and Newfi and previously served on the board of directors of AmeriHome. Mr. David graduated cum laude from Dartmouth College.

Holly McMullan became our Director in December 2018. She is the Global Head of Consultant Relations, Partner in the Client and Product Solutions (CPS) group at Apollo. Prior to joining Apollo in 2008, Ms. McMullan was Senior Vice President at Pequot Capital Management where she was responsible for U.S. sales coverage of institutions and consultants. Prior to Pequot, Ms. McMullan was with Guggenheim Partners, Bear Stearns and Robertson Opportunity Capital. She holds her MBA with a concentration in Finance from the McCombs School of Business at The University of Texas at Austin and a BA (honors) in International Business from Sheffield Hallam University, Sheffield, UK. She currently serves on the advisory boards of Capital Creek Partners, McCombs School of Business Advisory Council, New York for McCombs and the Hicks Muse Private Equity Research Center at The University of Texas at Austin.

Matthew H. Nord has been our Director since the consummation of Apollo's acquisition of RCCH in December 2015 and served as Chairman of the Board from December 2018 until September 2021. Mr. Nord is a Partner and Co-Head of Private Equity at Apollo, where he oversees the firm's private equity strategy and has led numerous investments across technology, healthcare and business services. Mr. Nord serves on Apollo's diversity, equity and inclusion committee and is a member of Apollo Women Empower (AWE). Mr. Nord is on the board of directors of TD Synnex, West Technology Group, ScionHealth and Tenneco. Prior to joining Apollo in 2003, Mr. Nord was a member of the Investment Banking division of Salomon Smith Barney Inc. Mr. Nord graduated summa cum laude from the University of Pennsylvania's Wharton School of Business with a BS in Economics. He also serves on the Montefiore Health System Board of Trustees, the Board of Advisors of the University of Pennsylvania's Stuart Weitzman School of Design and the Board of the Rock and Roll Hall of Fame Foundation.

Eric L. Press has been our Director since Apollo's acquisition of RCCH in December 2015. Mr. Press is a Partner at Apollo, having joined in 1998. In his time with Apollo, he has been involved in many of the firm's investments in basic industrials, metals, lodging/gaming/leisure and financial services. Prior to joining Apollo, Mr. Press worked at the law firm of Wachtell, Lipton, Rosen & Katz, specializing in mergers, acquisitions, restructurings and related financing transactions. Prior thereto, Mr. Press was a consultant with The Boston Consulting Group, a management consulting firm focused on corporate strategy. Mr. Press serves on the boards of directors of ADT Inc., Knight Health Holdings, LLC (d/b/a ScionHealth), and Apollo Commercial Real Estate Finance, Inc. He previously served on the boards of directors of Lottomatica S.p.A. (f/k/a Gamenet Group S.p.A.), Princimar Chemical Holdings, LLC, PlayAGS, Inc., Triton Maritime III Corp., Triton Maritime IV Corp, Rodeph Sholom School and Constellis Holdings, Inc. He graduated magna cum laude from Harvard College, with an A.B. in economics, and Yale Law School, where he was a Senior Editor of the Yale Law Journal.

Wendell Pritchett became our Director in September 2022. Dr. Pritchett serves as the James S. Riepe Presidential Professor of Law and Education at the University of Pennsylvania. He served as Provost of the University from 2017 to 2021 and as Interim President in 2022. Between 2009 and 2014, Dr. Pritchett served as Chancellor and Professor of Law and History at Rutgers University-Camden. Dr. Pritchett also sits on the Boards of the publicly traded companies Toll Brothers and Clarivate, as well as several nonprofit organizations, including College Unbound, the Philadelphia Foundation, Reinvestment Fund, and Public Health Management Corporation. He holds a B.A. in Political Science from Brown University, earned his J.D. from Yale Law School and his PhD from the University of Pennsylvania.

G. Rodney Wolford became a Director upon consummation of the RegionalCare/Capella Merger in April 2016. Mr. Wolford, beginning his career as a CPA, has over 40 years of wide-ranging experience in the healthcare industry, having served in leadership roles with healthcare providers, suppliers, consulting firms, associations and insurers. Among his executive positions, Mr. Wolford served as chief executive officer of Alliant Healthcare (now Norton Healthcare, Inc.) in Louisville, Kentucky, Sterling Diagnostic, a worldwide manufacturer of x-ray film, Forhealth Technologies, the inventor of the first robot dedicated to hospital IV production, and a senior executive of Blue Cross Tennessee. Mr. Wolford currently serves on the boards of Atlanta based D4C Dental Brands, Liberate Medical, Chairman of Parasight Systems and as a fund manager of Bluegrass Angel Venture Funds. During the past five years, Mr. Wolford has also served as a director of Haven Behavioral, Laboratory Supply Company and VetCor.

Code of Ethics

Our Board expects its members, as well as our officers and employees, to act ethically at all times and to acknowledge in writing their adherence to the policies comprising our Code of Conduct, which is known as "Common Ground," and, as applicable, our Code of Ethics for Senior Financial Officers and Chief Executive Officer.

Board Structure

The Board consists of 11 directors. The Board has the following standing committees: audit; compensation; nominating and governance; compliance; quality; and executive. In addition, the board of directors of the Parent company also has a compensation committee that administers equity-based compensation plans in which our managers, officers, employees, consultants and directors participate. Apollo has the power to control us and our affairs and policies, including the designation of a majority of the members of our Board and the appointment of management.

Committees of our Board of Directors

The Board has adopted written charters for each of the following standing committees:

Audit Committee

The current members of our audit committee are Messrs. Wolford and Pritchett. Ms. Buhlman serves as an interim member of our audit committee. Mr. Wolford is the interim chairman of our audit committee. The principal duties and responsibilities of our audit committee are to assist the Board in overseeing:

- the integrity of our financial statements;
- the independent auditor's qualifications, independence and performance;
- the performance of our internal audit function; and
- our compliance with certain legal, ethical and regulatory requirements.

The audit committee has the authority to conduct or authorize investigations into or studies of matters within its scope of responsibilities. It also has the authority to retain and determine funding for independent legal, accounting or other advisors (without seeking Board approval) as it determines necessary or appropriate to carry out its duties and responsibilities.

Our Board has determined that Mr. Wolford is an "audit committee financial expert" within the meaning of applicable SEC regulations.

Compensation Committee

The current members of our compensation committee are Messrs. Nord and Press. Mr. Press is the chair of our compensation committee. The principal duties and responsibilities of our compensation committee are as follows:

- approving the non-equity-based compensation of our officers, directors and key employees;
- administering our non-equity-based compensation plans; and
- making recommendations to the Parent for the equity-based compensation of the Parent and its subsidiaries' officers, directors, employees and other service providers.

Nominating and Governance Committee

The current members of our nominating and governance committee are Messrs. Christie and Press. Mr. Press is the chair of our nominating and governance committee. The principal duties and responsibilities of our nominating and governance committee are as follows:

- to assist the Board in identifying individuals qualified to serve as members of the Board and/or its committees; and
- other duties and responsibilities that our Board may delegate to the nominating and governance committee.

Compliance Committee

The current members of our compliance committee are Mr. Wolford and Ms. Buhlman. Mr. Wolford is the chair of our compliance committee. The compliance committee is responsible for overseeing our legal and regulatory compliance program, including certain healthcare and regulatory compliance matters that affect us and our business operations.

Quality Committee

The current members of our quality committee are Messrs. Brownstein, David, Dill, and Pritchett and Ms. McMullan. Mr. Dill is the chair of our quality committee. The quality committee is responsible for monitoring and evaluating the adequacy and effectiveness of our quality of care and patient safety programs and initiatives.

Executive Committee

The current members of our executive committee are Messrs. David, Nord and Press. Mr. Nord is the chair of our executive committee. The principal duties and responsibilities of our executive committee are as follows:

- to advise and counsel the Chief Executive Officer regarding company matters; and
- to take such actions as are necessary due to their urgent or highly confidential nature, or where convening the Board is impracticable, subject to certain limitations.

Item 11. ***Executive Compensation.***

The information that would be required to be disclosed under Part III, Item 11 of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 12. ***Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.***

The information that would be required to be disclosed under Part III, Item 12 of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 13. ***Certain Relationships and Related Transactions, and Director Independence*****.**

Executive Compensation

Employment Agreements

In connection with the consummation of the Lifepoint/RCCH Merger, we entered into an employment agreement with each of Messrs. Dill and Coggin and Ms. Peters. We later entered into an employment agreement with Mr. Terrill effective April 8, 2019. Following the consummation of the Kindred Transaction, we assumed an employment agreement with Mr. Zachariah. Each of the aforementioned employment agreements were amended and restated effective May 18, 2022. Mr. Zachariah's employment agreement was again amended and restated effective June 20, 2022, and we also entered into an employment agreement with Mr. Lewis effective June 20, 2022.

Each applicable executive's employment agreement contains an indefinite term of employment. Each employment agreement established the applicable executive's annual base salary at the time (the annual base salary in the employment agreements for each of Messrs. Dill, Coggin, Terrill, Zachariah and Lewis and Ms. Peters is currently set at $1,500,000, $700,000, $525,000, $850,000, $500,000 and $600,000 respectively), and his or her eligibility to receive an annual bonus with the target bonus for each fiscal year determined annually by our board of directors or our compensation committee. Pursuant to his or her respective employment agreement, Mr. Dill's target bonus is at least 150% of base salary, and each of Messrs. Coggin's, Zachariah's, Terrill's and Lewis' and Ms. Peters' target bonus is at least 100% of base salary with a maximum of 200% of base salary. The actual bonus payable to each applicable executive is based upon the level of achievement of annual Company and individual performance objectives, as determined by the board of directors or our compensation committee.

In the event of the executive's termination without cause (other than due to death or disability) or resignation for good reason, the executive shall be entitled to receive: (i) unpaid prior year's bonus; (ii) if the termination occurs after the second quarter of a fiscal year, a pro rata bonus for the year of termination based upon achievement of performance criteria; (iii) a severance payment equal to 1.5x (or, for Mr. Dill, 2x) the sum of the executive's annual base salary and target bonus, payable in substantially equal installments for 18 months (or, for Mr. Dill, 24 months) following termination; and (iv) up to 12 months of health benefits continuation; provided, however, that in the case of a termination without cause (other than due to death or disability) or a resignation for good reason following a change in control, Mr. Dill, Mr. Coggin and Ms. Peters shall receive a lump sum payment equal to 3x the sum of the executive's annual base salary and target bonus in lieu of the payment described in clause (iii) above and Messrs. Zachariah, Lewis and Terrill shall receive a lump sum payment equal to 1.5x the sum of the executive's annual base salary and target bonus in addition to the payment described in clause (iii) above.

Each applicable executive is subject to a (i) 12-month post-termination non-competition covenant relating to competitors of the Company, (ii) 12-month post-termination non-solicitation covenant in respect of our employees, consultants, clients, customers and similar business relationships of the Company and (iii) perpetual confidentiality and non-disparagement covenants.

Retention Bonus and Severance Payments

On June 26, 2022, we entered into a separation and consulting agreement with Victor Giovanetti, our former President of Hospital Operations. Pursuant to the terms of the agreement, Mr. Giovanetti received severance benefits equal to (i) $2,280,000, paid in substantially equal installments for an 18 month period and (ii) up to 24 months of health benefits continuation. Mr. Giovanetti also became eligible for an equity repurchase as described below in the section titled "Equity Repurchase." Finally, Mr. Giovanetti agreed to provide consulting services to the company until December 31, 2022, with a consulting fee based on an annual fee of $750,000. The separation and consulting agreement was amended and restated on June 28, 2022 to correct certain typographical errors in the original agreement.

Nonqualified Deferred Compensation

After freezing the Lifepoint Hospitals Deferred Compensation Plan and RCCH HealthCare Partners Deferred Compensation Plan at the end of 2020, the Company established a new nonqualified deferred compensation plan effective January 1, 2021 in which certain Company executives and employees participate. Also, certain former Kindred executives and employees, including Mr. Zachariah, who are now Company executives and employees, participate in a separate nonqualified deferred compensation plan that replicates the former Kindred Deferred Compensation Plan. Plan participants may defer a portion of their salary and bonuses. Currently, the Company does not make any matching or other contributions to the nonqualified deferred compensation plans. The timing and form of payments are based on the terms of the applicable plan and deferral elections made by participants.

Parent Capital Units and Profits Units

Certain of our and our affiliates' executives, employees, consultants, directors and other service providers have been granted profits units and/or purchased or otherwise acquired capital units in the Parent.

The profits units provide the recipients with the opportunity to share in our future appreciation, subject to vesting. In general, for grants to non-directors, 33.34% of the profits units vest in substantially equal installments on the last day of each of the first twenty (20) calendar quarters commencing on or after the applicable grant date and the remaining 66.66% of the profits units vest based on the achievement of certain investment returns to our Sponsor. The profits units we typically grant to directors on an annual basis generally vest on a time basis, on the date that is six months and one day from the date of grant. In addition, the time-vested profits units and the director profits units will vest in full on a sale of the Company.

The capital units and profits units are generally subject to the terms and condition set forth in the applicable award agreements or subscription agreements, as the case may be, and in the partnership agreement of the Parent, including, but not limited to, customary transfer restrictions, redemption rights, drag-along rights, tag-along rights, and preemptive rights.

Equity Repurchases

From time to time, the Parent repurchases previously issued profits units and capital units held by certain of our former and current service providers, including executive officers and directors. Additionally, transactions involving the Parent may impact the units held by such former and current service providers. Refer to Note 12 to our accompanying consolidated financial statements included elsewhere in this Report for a discussion of profits units issued by the Parent to our service providers and additional information regarding our accounting for stock-based compensation.

Director Retainers and Fees

Certain members of our Board of Directors are entitled to receive annual retainers and fees in accordance with our director compensation policy in connection with their service on our Board.

Management Agreement

In connection with the Lifepoint/RCCH Merger, we entered into a Management Consulting Agreement (as amended, the "***Management Agreement***") with an affiliate of our Sponsor relating to the provision of certain management consulting and advisory services. In exchange for the provision of such services, we currently pay a non-refundable quarterly management fee of approximately $2 million. The Management Agreement will terminate on the earlier of (i) the eighth anniversary of July 25, 2021, (ii) the consummation of any transaction or series of transactions, whether or not related, as a result of which New Holders (as defined in the Management Agreement) become the beneficial owner, directly or indirectly, of more than 90% of our equity and voting securities and (iii) such earlier date as is mutually agreed upon. Our payment obligations under the Management Agreement may be subject to deferral to the extent such obligations would otherwise violate any prohibitions or limitations under our then existing indebtedness. Furthermore, we may be required to reimburse such affiliate of our Sponsor for all out-of-pocket expenses, including legal fees and expenses, incurred by such affiliate and its affiliates and each of their representatives in the connection with the performance of its obligations under the Management Agreement or the Transaction Fee Agreement (as defined below), including expenses incurred in connection with the transactions contemplated by the agreement governing the Lifepoint/RCCH Merger (the "***Merger Agreement***") and any Underwritten Offering or Change of Control (as defined in the Merger Agreement).

Transaction Fee Agreement

In connection with the Lifepoint/RCCH Merger, we entered into a transaction fee agreement (as amended, the "***Transaction Fee Agreement***") with an affiliate of our Sponsor relating to the provision of certain preparation services in support of the Lifepoint/RCCH Merger. The Transaction Fee Agreement will terminate automatically upon the termination of the Management Agreement. As consideration for these transaction preparation services, we paid a nonrefundable fee of $55 million in full to an affiliate of our Sponsor upon the closing of the Lifepoint/RCCH Merger. In addition, if we, or certain of our parent entities or controlled affiliates, consummate an acquisition (including of assets or equity interests) of any business or entity, we are also required to pay to an affiliate of our Sponsor a success fee equal to 1% of the aggregate enterprise value (i) paid or provided by or to the Company Group (as defined in the Transaction Fee Agreement) or us or (ii) otherwise indicated by such acquisition. Furthermore, we may be required to reimburse such affiliate of our Sponsor for all out-of-pocket expenses, including legal fees and expenses, incurred by such affiliate and its affiliates and each of their representatives in the connection with the performance of its obligations under the Transaction Fee Agreement, including expenses incurred in connection with the transactions contemplated by the Merger Agreement.

Participation of Apollo Global Securities, LLC

Apollo Global Securities, LLC is an affiliate of our Sponsor and received a portion of the gross spread as an initial purchaser in the sale of the Notes. Apollo Global Securities, LLC or one of its affiliates also participated as an arranger in respect of the Term Loan Facility and the ABL Facility, for which it received customary fees.

Transition Services Agreements and Other Agreements with ScionHealth

In connection with the Kindred Transaction, we have entered into a number of transition services agreements and other ancillary agreements with ScionHealth and its subsidiaries. For the year ended December 31, 2022, in connection with the TSAs, we were reimbursed by ScionHealth for certain costs incurred on their behalf of $61 million, and paid ScionHealth $3 million for certain costs incurred on our behalf. In addition, we and ScionHealth are party to a number of commercial services agreements, pursuant to which we provide ScionHealth with therapy services, rehabilitation unit and behavioral health unit management, consulting and development services, among other commercial services.

On January 20, 2023, ScionHealth acquired Cornerstone Healthcare Group Holding, Inc., a Delaware corporation ("***Cornerstone***"), which operates 15 specialty hospitals, eight senior living locations, and Cornerstone Behavioral Health El Dorado ("***El Dorado***") (the "***Cornerstone Transaction***"). Immediately following ScionHealth's acquisition of Cornerstone on January 20, 2023, we paid $35 million in cash to acquire El Dorado, a 54 bed behavioral health facility located in Tucson, Arizona, from ScionHealth (the "***El Dorado Transaction***").

In connection with the Cornerstone Transaction and the El Dorado Transaction, we entered into a number of transition services agreements and other ancillary agreements with ScionHealth and its subsidiaries pursuant to which (i) we provide certain transition services to ScionHealth to support the businesses acquired by ScionHealth in connection with the Cornerstone Transaction and (ii) ScionHealth provides certain transition services to us to support El Dorado, including leasing certain employees to us through the first quarter of 2023.

Investments Related to Lifepoint Forward Innovation Strategy

In connection with our Lifepoint Forward innovation strategy, we have made investments of cash and contributions of existing investments and securities into certain unconsolidated but affiliated entities owned by us, Parent, ScionHealth and other affiliated entities (collectively, "***Forward Health Ventures***"). Forward Health Ventures, in turn makes targeted and strategic investments in new and existing early-stage enterprises primarily focused on developing meaningful solutions to enhance quality, increase access to care, and improve value across our enterprise, including a significant focus on digital health capabilities that span the healthcare continuum. In exchange for our investments of cash and contributions of existing investments and securities, Forward Health Ventures has issued to us noncontrolling equity interests and perpetual cumulative preferred instruments.

At December 31, 2022, in the aggregate, our cost method investment in Forward Health Ventures totaled $53 million. In addition to our cost method investment in Forward Health Ventures, we also have entered into management and administrative services arrangements with Forward Health Ventures and commercial arrangements with certain underlying early-stage enterprises, including pilot and services agreements and a revolving credit facility that we provide to one of these enterprises. The revolving credit facility provides for loans up to approximately $8 million, has a 5-year maturity (or earlier upon our demand) and bears interest at 9.00%. At December 31, 2022, $6 million was drawn and outstanding.

Item 14. *Principal Accounting Fees and Services*.

The Audit Committee has appointed Ernst & Young LLP as our independent registered public accounting firm. Services provided to us by Ernst & Young LLP in fiscal 2022 are described below.

Audit Fees. The aggregate audit fees billed by Ernst & Young LLP for professional services rendered for the audit of our annual consolidated financial statements and services that are normally provided by the independent registered public accounting firm in connection with statutory and regulatory filings totaled approximately $4 million for each of the years 2022 and 2021.

Audit-Related Fees. The aggregate fees billed by Ernst & Young LLP for assurance and related services other than those described under "Audit Fees" were nominal for 2022 and $2 million for 2021.

Tax Fees. The aggregate fees billed by Ernst & Young LLP for professional services rendered for tax compliance, tax advice and tax planning were approximately $1 million for each of the years 2022 and 2021.

All Other Fees. There were no fees billed by Ernst & Young LLP for products or services other than those described above in 2022 or 2021.

PART IV

Item 15. ***Exhibits, Financial Statement Schedules*.**

(a) The following documents are filed as part of this Report:

1. *Consolidated Financial Statements*:

2. *Financial Statement Schedule*: All schedules for which provision is made in the applicable accounting regulations of the SEC are omitted because they either are not required under the related instructions, are inapplicable, or the required information is shown in the consolidated financial statements or notes thereto.

3. *Exhibits*: The exhibits required by Item 601 of Regulation S-K that would be disclosed under Part IV, Item 15 of an annual report on Form 10-K filed with the SEC have been omitted as permitted pursuant to Section 4.02(a) of the Indentures.

Report of Independent Auditors

Board of Directors and Shareholders of
Lifepoint Health, Inc.

Opinion

We have audited the consolidated financial statements of Lifepoint Health, Inc., which comprise the consolidated balance sheets as of December 31, 2022 and 2021, and the related consolidated statements of operations, comprehensive (loss) income, equity and cash flows for each of the three years in the period ended December 31, 2022, and the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company at December 31, 2022 and 2021, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2022 in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error. In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements. In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Other Information

Management is responsible for the other information. The other information comprises the financial and nonfinancial information included in the annual report but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

Note 1. Organization and Summary of Significant Accounting Policies

Organization

Lifepoint Health, Inc. ("Lifepoint" or the "Company"), a Delaware corporation, acting through its subsidiaries, is a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. The Company generates revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network, which at December 31, 2022 was comprised of 62 community hospital campuses, 31 inpatient rehabilitation facilities ("IRFs"), three behavioral health facilities and additional sites of care that include acute rehabilitation units ("ARUs"), outpatient centers and post-acute care facilities. At December 31, 2022, on a consolidated basis, the Company operated 96 healthcare facilities in 28 states throughout the United States ("U.S.") with approximately 10,000 licensed beds and approximately 50,000 dedicated employees.

Unless otherwise indicated or the context otherwise requires, references throughout these notes to the consolidated financial statements to the "Company" or "Lifepoint" refer to Lifepoint Health, Inc., and each of its consolidated subsidiaries. References in this Report to the "Sponsor" refer to certain funds that are affiliates of the Company (the "Apollo Funds") that are ultimately controlled and/or managed by certain affiliates of Apollo Management Holdings, L.P. ("Apollo Management" and, when acting on behalf of the Apollo Funds, "Apollo"), which is an affiliate of Apollo Global Management, Inc.

Principles of Consolidation

The accompanying consolidated financial statements include the accounts of the Company and all subsidiaries and entities controlled by the Company through majority voting control and variable interest entities which the Company is the primary beneficiary. All significant intercompany accounts and transactions within the Company have been eliminated in consolidation. Noncontrolling interests in non-wholly-owned consolidated subsidiaries of the Company are presented as noncontrolling interests and redeemable noncontrolling interests and distinguish between the interests of the Company and the interests of the noncontrolling owners. Net income attributable to noncontrolling interests and redeemable noncontrolling interests represents the amounts attributable to the noncontrolling interests for each of the applicable periods presented. Investments in entities the Company does not control but does have a substantial ownership interest and can exercise significant influence are accounted for using the equity method.

The Company's financial statements have been presented on the basis of push down accounting in accordance with Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") No. 805-50-S99. Under the push down basis of accounting, certain transactions incurred by the parent company which would otherwise be accounted for in the accounts of the parent are "pushed down" and recorded on the financial statements of the subsidiary. Accordingly, certain items resulting from the acquisition by Apollo have been recorded on the financial statements of the Company.

Use of Estimates

The preparation of financial statements in conformity with U.S. generally accepted accounting principles ("GAAP") requires management to make estimates and assumptions that affect the amounts reported in the Company's accompanying consolidated financial statements and notes to the consolidated financial statements. Actual results could differ from those estimates.

Revenue Recognition and Accounts Receivable

Overview

The Company recognizes revenues in the period in which performance obligations are satisfied. Generally, the Company bills patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. The Company's ability to collect outstanding receivables is critical to its results of operations and cash flows. Amounts the Company receives for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, health maintenance organizations ("HMOs"), preferred provider organizations ("PPOs") and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in the Company's financial statements are recorded at the net consideration to which the Company expects to be entitled to receive in exchange for providing patient care.

The majority of the Company's performance obligations are satisfied over time for the delivery of patient care in both outpatient and inpatient settings. Revenue for performance obligations satisfied over time is recognized based on actual charges incurred in relation to total expected charges for services anticipated to be provided. The Company believes that this method provides a faithful depiction of the transfer of services over the term of the performance obligation based on the remaining services needed to satisfy the obligation. Generally, unsatisfied or partially unsatisfied performance obligations at the end of the reporting period are related to patients admitted to the Company's hospitals that have not yet been discharged. The performance obligations for these patients are typically satisfied when the patients are discharged, which generally occurs within a matter of days of admission. Patients are generally billed when discharged, though they may be billed on an interim basis for longer stays. Accordingly, because all of the Company's performance obligations are part of a contract that is expected to have a duration of one year or less, the Company has elected to apply the exemption provided by ASC 606, "Revenue from Contracts with Customers" ("ASC 606") to not disclose the aggregate amount of the transaction price allocated to performance obligations that are unsatisfied or partially unsatisfied as of period end.

Subsequent adjustments that are determined to be the result of an adverse change in the patient's or the payer's ability to pay are recognized as bad debt expense. With the adoption of ASC 606, bad debt expense is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations, instead of separately as a deduction to arrive at revenue. Bad debt expense for the years ended December 31, 2022, 2021 and 2020 was not material for the Company.

Contractual Discounts

The Company derives a significant portion of its revenues from Medicare, Medicaid and other payers that receive discounts from the Company's established billing rates. The Company must estimate the total amount of these discounts to prepare its financial statements. The Medicare and Medicaid regulations and various managed care contracts under which these discounts must be calculated are complex and are subject to interpretation and adjustment. The Company estimates contractual discounts on a payer-specific basis given its interpretation of the applicable regulations or contract terms. These interpretations sometimes result in payments that differ from the Company's estimates. Additionally, updated regulations and contract renegotiations occur frequently, necessitating regular review and assessment of the estimation process by management. Subsequent changes in estimates for contractual discounts are reflected as an adjustment to revenues in the period of the change. Medicare, Medicaid and other discounted payer accounts receivables are written off after they have been final settled with the payer.

Kentucky Hospital Rate Improvement Program

The Commonwealth of Kentucky has implemented a Medicaid Hospital Rate Improvement Program ("KY HRIP"), which provides supplemental Medicaid payments to all Kentucky hospitals, other than university hospitals and state mental hospitals, and is intended to reduce the gap between the Kentucky Medicaid program's regular inpatient Medicaid payments and each hospital's Medicare allowable costs. During the first quarter of 2021, CMS and the Commonwealth of Kentucky approved a modification to the KY HRIP, which increased the inpatient hospital reimbursement rate from a contracted managed care rate up to a percentage of the average commercial rate. This modification was applied retrospectively to the beginning of the KY HRIP fiscal year, which commenced on July 1, 2020. As a result of this modification, the Company recognized additional revenues of $113 million in its consolidated statement of operations for the year ended December 31, 2021, of which $33 million is related to the period from July 1, 2020 to December 31, 2020. Additionally, the Company recognized additional provider taxes of $15 million for the year ended December 31, 2021, included under the caption "Other operating expenses, net" in the accompanying consolidated statement of operations, of which $5 million is related to the period from July 1, 2020 to December 31, 2020.

Cost Report Settlements

Cost report settlements under reimbursement agreements with Medicare, Medicaid and certain other payers for retroactive adjustments due to audits, reviews or investigations are considered variable consideration and are included in the determination of the estimated transaction price for providing patient care. These settlements are estimated based on the payment terms of the reimbursement agreement with the payer, correspondence from the payer, and the Company's historical experience. Estimated settlements are adjusted in future periods as final settlements are determined. There is a reasonable possibility that recorded estimates will change by a material amount in the near term. For the years ended December 31, 2022, 2021 and 2020, the net adjustments to estimated cost report settlements and other reimbursement adjustments resulted in an increase to revenues of $32 million, $62 million and $34 million, respectively.

The net cost report settlements due to the Company were $3 million and nominal at December 31, 2022 and 2021, respectively, and are included under the caption "Accounts receivable" on the accompanying consolidated balance sheets. The Company's management believes that adequate provisions have been made for adjustments that may result from final determination of amounts earned under these programs consistent with the constraints that are required by ASC 606.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. The Company evaluates these patients, after the patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. The Company estimates the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that the Company utilizes include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that the Company expects to collect. Because the Company provides care to patients regardless of their ability to pay, the Company has determined that the differences between the amounts it bills based on gross or discounted charges and the amounts the Company expects to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and the Company accounts for this variable consideration in accordance with the provisions of ASC 606. Self-pay accounts receivable are written off after collection efforts have been followed in accordance with the Company's policies.

Charity Care

The Company provides care without charge to certain patients that qualify under the local charity care policy of each of its hospitals. For the years ended December 31, 2022, 2021 and 2020, the Company estimates that its costs of care provided under its charity care programs approximated $18 million, $23 million and $27 million, respectively. The Company does not report a charity care patient's charges in revenues or in the provision for doubtful accounts as it is the Company's policy not to pursue collection of amounts related to these patients, and therefore contracts with these patients do not exist.

The Company's management estimates its costs of care provided under its charity care programs utilizing a calculated ratio of costs to gross charges multiplied by the Company's gross charity care charges provided. The Company's gross charity care charges include only services provided to patients who are unable to pay and qualify under the Company's local charity care policies. To the extent the Company receives reimbursement through the various governmental assistance programs in which it participates to subsidize its care of indigent patients, the Company does not include these patients' charges in its cost of care provided under its charity care program.

Financing Component

The Company has elected to apply the practical expedient permitted under ASC 606 and does not adjust the estimated amount of consideration from patients and third-party payers for the effects of a significant financing component due to the Company's expectation that the period between the time the service is provided to a patient and the time that the patient or a third-party payer pays for that service will be one year or less.

Rental Income

The Company leases certain real estate assets it owns to unrelated third parties, primarily medical office buildings to non-employed physicians. The Company recognizes rental income for these operating lease arrangements in which the Company is the lessor on a straight-line basis over the lease term in accordance with ASC 842, "Leases" ("ASC 842").

Concentration of Revenues

The Company's revenues by payer and approximate percentages of revenues were as follows for the years ended December 31, 2022, 2021 and 2020 (dollars in millions):

	2022		2021		2020	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Medicare	$ 3,227	40.2 %	$ 3,368	37.7 %	$ 3,134	38.6 %
Medicaid	1,353	16.9	1,645	18.4	1,392	17.1
HMOs, PPOs and other private insurers	3,030	37.8	3,691	41.3	3,382	41.6
Self-pay	57	0.7	55	0.6	55	0.7
Other (a)	338	4.2	156	1.8	137	1.7
Revenue from contracts with customers	8,005	99.8	8,915	99.8	8,100	99.7
Rental income	15	0.2	22	0.2	22	0.3
Revenues	$ 8,020	100.0 %	$ 8,937	100.0 %	$ 8,122	100.0 %

(a) Includes revenues from managed ARUs and ancillary goods and services.

During the years ended December 31, 2022, 2021 and 2020, approximately 57.1%, 56.1% and 55.7%, respectively, of the Company's revenues related to patients participating in the Medicare and Medicaid programs, collectively. The Company's management recognizes that revenues and receivables from government agencies are significant to the Company's operations, but it does not believe that there are significant credit risks associated with these government agencies.

Any changes in the current demographic, economic, competitive or regulatory conditions, or to Medicaid programs could have an adverse effect on the Company's revenues or results of operations. The Company's management does not believe that there are any other significant concentrations of revenues from any particular payer or geographic area that would subject the Company to any significant credit risks in the collection of its accounts receivable.

The Company's revenues by primary service type and approximate percentages of revenues were as follows for the years ended December 31, 2022, 2021 and 2020 (dollars in millions):

	2022		2021		2020	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
Inpatient services	$ 3,474	43.3 %	$ 3,525	39.4 %	$ 3,379	41.6 %
Outpatient services	4,193	52.3	5,234	58.6	4,584	56.4
Non-patient (a)	353	4.4	178	2.0	159	2.0
Revenues	$ 8,020	100.0 %	$ 8,937	100.0 %	$ 8,122	100.0 %

(a) Includes revenues from managed ARUs and ancillary goods and services.

General and Administrative Costs

The majority of the Company's operating expenses are "cost of revenue" items. Operating costs that could be classified as "general and administrative" by the Company would include its corporate overhead costs, which were $236 million, $213 million and $181 million for the years ended December 31, 2022, 2021 and 2020, respectively, excluding depreciation and amortization, net income and losses associated with non-consolidated equity investments, debt transaction costs, certain transaction and advisory costs recognized in connection with the Company's business development activities, and accelerated stock-based compensation expense recognized during the year ended December 31, 2021 in connection with a transaction involving the Company's indirect parent, DSB Parent, L.P., a Delaware limited partnership (the "Parent"). Refer to Note 12 for further discussion of the Company's accounting for the stock-based compensation.

Impact of COVID-19 and the CARES Act

Impact of COVID-19

During March 2020, the global COVID-19 pandemic began to significantly affect the Company's facilities, employees, patients, communities, business operations and financial performance, as well as the U.S. economy and financial markets, as a whole. More than three years into the pandemic, the Company continues to be deeply committed to protecting the health of its communities and continues to respond to the evolving COVID-19 situation across the country. Importantly, the Company is taking every precaution to ensure it can continue providing quality care and safeguard the health and well-being of patients, employees, providers, volunteers and visitors in each community it serves. The national footprint of the Company's health system, along with its Health Support Center, has enabled the Company to support its communities during this challenging time.

CARES Act Overview

The Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act") was signed into law on March 27, 2020. Among other things, the CARES Act contains a number of provisions that are intended to assist healthcare providers as they combat the effects of the COVID-19 pandemic. Those provisions include, among others:

- the temporary suspension of Medicare sequestration from March 1, 2020, to December 31, 2020;
- the delay of the planned reductions to the Medicaid disproportionate share hospital ("DSH") payments program until October 1, 2023;
- an appropriation of $180 million to Health Resources and Services Administration's Federal Office of Rural Health Policy that will be awarded to small rural hospitals by the states through the Small Rural Hospital Improvement Program;
- an appropriation of $250 million to the Hospital Preparedness Program; and
- an appropriation of $100 billion to the Public Health and Social Services Emergency Fund (the "Emergency Fund") for a new program to reimburse, through grants or other mechanisms, hospitals, healthcare providers and other approved entities for COVID-19-related expenses or lost revenues.

The Paycheck Protection Program and Health Care Enhancement Act was enacted on April 24, 2020, which, among other things, provides an additional allocation of $75 billion to the Emergency Fund and an allocation of $25 billion for COVID-19 testing.

On December 21, 2020, Congress adopted the Consolidated Appropriations Act, 2021 (the "CAA"), which provides an additional $900 billion in COVID-19 relief, including an additional allocation of $3 billion to the Emergency Fund. In addition, the CAA, among other things, delays the planned reductions to the Medicaid DSH payments program through federal fiscal year ("FFY") 2023, adds additional reductions to the Medicaid DSH payments program in FFYs 2026 and 2027, provided for a 3.75% increase in the Medicare Physician Fee Schedule ("PFS") rates in calendar year ("CY") 2021 and allocates $30 billion for the purchase and administration of COVID-19 vaccines and related therapeutics. In addition, the CAA extended the temporary suspension of Medicare sequestration through March 31, 2021. The temporary suspension was subsequently extended through December 31, 2022, by HR 1868, which, to offset the cost of the suspension, extended Medicare sequestration through 2030. The Protecting Medicare and American Farmers from Sequester Cuts Act (the "Sequester Cuts Act") further extended the temporary suspension of Medicare sequestration through March 31, 2022, and reduced the sequestration cuts for the period of April 1, 2022, through June 30, 2022, to 1%. The Sequester Cuts Act also delayed application of 4% cuts to Medicare and other federal programs resulting from the requirements of the Statutory Pay-As-You-Go-Act of 2010 (the "PAYGO Act") that were scheduled to go into effect in CY 2022 until CY 2023. On December 23, 2022, Congress adopted the Consolidated Appropriations Act, 2023 (the "CAA23"), which reduces the Medicare sequestration cuts through CY 2024, and extends Medicare sequestration through 2032. The CAA23 also delays application of 4% cuts to Medicare and other federal programs mandated by the PAYGO Act that were scheduled to go into effect in CY 2023 and CY 2024 until CY 2025.

Stimulus Payments

The Emergency Fund distributed $50 billion to hospitals based on their 2018 net patient revenue. Additionally, since that time, the Emergency Fund has distributed more than $80 billion to a number of different types of healthcare providers, including participants in state Medicaid/CHIP programs, providers in areas particularly impacted by the COVID-19 outbreak, rural providers (including hospitals and rural health clinics), skilled nursing facilities, dentists, providers of services with lower shares of Medicare reimbursement or who predominantly serve Medicaid beneficiaries, and providers requesting reimbursement for the treatment of uninsured patients.

Payments made by the Emergency Fund to healthcare providers are not loans, and, as a result, they do not need to be repaid. However, healthcare providers must agree to and meet the terms and conditions that are associated with the payments, which include, among other things, filing attestations acknowledging receipt of payments, accepting in-network amounts for presumptive or actual out-of-network COVID-19 patients, not using the payments received from the Emergency Fund to reimburse expenses or losses that other sources are obligated to reimburse, and submitting such reports as may be required by HHS regarding the provider's compliance with the terms and conditions of the Emergency Fund. Healthcare providers that received more than $10,000 from the Emergency Fund between April 10, 2020 through June 30, 2020 (the "First Payment Received Period") were required to submit a report on their use of those funds no later than September 30, 2021. The Company successfully submitted the required reports for all of its providers that received and retained payments from the Emergency Fund during First Payment Received Period prior to the deadline. However, the Company will be required to submit additional reports in the future for payments that were received and retained by the Company's providers from the Emergency Fund after the end of the First Payment Received Period. The reporting requirements and guidance from HHS related to the Emergency Fund have been subject to frequent clarifications and revision, and there can be no assurance that the Company will not be required to submit additional reports or provide additional information related to the payments it has received from the Emergency Fund in the future. In addition, HHS has indicated that it will be closely monitoring the payments that are made to providers through the Emergency Fund, and that HHS, along with the Office of Inspector General of HHS (the "OIG"), will be auditing providers to ensure that recipients comply with the terms and conditions that are associated with the Emergency Fund and other COVID-19 relief programs.

The Company has accounted for the stimulus payments received as a government grant related to income in a manner consistent with International Accounting Standards 20, "Accounting for Government Grants and Disclosure of Government Assistance" ("IAS 20"). In accordance with IAS 20, government grants are recognized either as other income or a reduction to a related expense when there is reasonable assurance that the grant will be received, and the entity will comply with any conditions attached to the grant.

For the years ended December 31, 2022, 2021 and 2020, the Company recognized $14 million, $17 million and $646 million, respectively, of stimulus payments as other income under the caption "Government stimulus income" in the accompanying consolidated statements of operations.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, HHS temporarily expanded the Centers for Medicare and Medicaid Services ("CMS") Accelerated and Advance Payment Program to a broad group of Medicare Part A and Part B providers. Under the expanded CMS Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period. The repayment of these accelerated/advance payments did not begin until one year after the date of the provider's or supplier's receipt of the payment, which means repayment of these amounts did not commence until the second quarter of 2021. Under the applicable repayment terms, the amounts previously advanced to the provider or supplier are automatically recouped from the provider's or supplier's new Medicare claims at a rate of 25% for a period of 11 months. After the end of that 11-month period, the amounts previously advanced to the provider or supplier will be automatically recouped from the provider's or supplier's new Medicare claims at a rate of 50% for a period of six months. At the end of the 17-month recoupment period, a letter requesting repayment of any remaining balance will be issued, and the provider or supplier will have 30 days from the date of the letter to repay the balance in full. If the remaining balance is not repaid after 30 days, the unpaid balance will accrue interest at a rate of 4% from the date of the demand letter until the balance has been repaid in full.

The Company received a total of $991 million of Medicare advance payments under the CMS Accelerated and Advance Payment Program during the year ended December 31, 2020. During the year ended December 31, 2021, the Company fully repaid all Medicare advance payments and the Company does not anticipate receiving any additional funds from the CMS Accelerated and Advance Payment Program.

CARES Act Tax Provisions

The CARES Act also provided for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, the Company deferred cash payments of approximately $84 million related to Social Security payroll tax payments. During the year ended December 31, 2021, the Company fully repaid all previously deferred Social Security payroll taxes.

The federal income tax changes brought about by the CARES Act are complex and further guidance is expected. The Company may change its provision for income taxes and its deferred income taxes as its understanding of the CARES Act tax provisions evolves due to additional U.S. Department of Treasury guidance. Any such adjustments could materially impact the Company's provision for income taxes and, as a result, its financial results in the relevant periods.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash on hand and short-term investments with original maturities of three months or less. The Company places its cash in financial institutions that are federally insured in limited amounts.

Inventories

Inventories of supplies are stated at the lower of cost (first-in, first-out) or market and consist of purchased items. Inventories acquired in connection with business combinations are recorded at fair value which approximates replacement cost. Inventory items are primarily operating supplies used in the direct or indirect treatment of patients.

Investments

The Company accounts for its investments in entities in which the Company does not control under either the cost method or the equity method of accounting in accordance with ASC 321 "Investments – Equity Securities" ("ASC 321") or ASC 323, "Investments – Equity Method and Joint Ventures" ("ASC 323"), respectively. The Company does not consolidate its cost and equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses or evaluates them for impairment and observable price changes. Refer to Note 8 for further discussion of the Company's investments.

Property and Equipment

Purchases of property and equipment are recorded at cost. Property and equipment acquired in connection with business combinations are recorded at estimated fair value in accordance with the acquisition method of accounting as prescribed in ASC 805, "Business Combinations" ("ASC 805"). Routine maintenance and repairs are charged to expense as incurred. Expenditures that increase capacities or extend useful lives are capitalized. Fully depreciated assets are retained in property and equipment accounts until they are disposed. The Company capitalizes interest on funds used to pay for the construction of major capital additions and such interest is included in the cost of each capital addition.

The following table provides information regarding the Company's property and equipment included in the accompanying consolidated balance sheets as of December 31, 2022 and 2021 (in millions):

	2022	2021
Land	$ 180	$ 179
Buildings and improvements	2,376	2,357
Equipment	1,751	1,617
Construction in progress	148	162
Property and equipment, at cost	4,455	4,315
Accumulated depreciation	(1,339)	(1,051)
Property and equipment, net of accumulated depreciation	$ 3,116	$ 3,264

Depreciation is computed by applying the straight-line method over the estimated useful lives of buildings, improvements and equipment. Assets under capital and finance leases are generally amortized using the straight-line method over the shorter of the estimated useful life of the assets or life of the lease term, excluding any lease renewals, unless the lease renewals are reasonably assured. Capitalized internal-use software costs are amortized over their expected useful life, which is generally four years. Useful lives are as follows:

	Years		
Buildings and improvements (including those under finance leases)	3	-	40
Equipment	2	-	15
Equipment under finance leases	3	-	6

Depreciation expense (including amortization of finance lease obligations) totaled $323 million, $344 million and $376 million for the years ended December 31, 2022, 2021 and 2020, respectively.

Whenever events or changes in circumstances indicate that the carrying values of certain long-lived assets may be impaired, the Company projects the undiscounted cash flows expected to be generated by these assets. If the projections indicate that the reported amounts are not expected to be recovered, such amounts are reduced to their estimated fair value based on a quoted market price, if available, or an estimate based on valuation techniques available in the circumstances. There were no long-lived asset impairments recorded for the years ended December 31, 2022, 2021 and 2020.

Goodwill and Intangible Assets

The Company accounts for its acquisitions in accordance with ASC 805 using the acquisition method of accounting. Goodwill represents the excess of the cost of an acquired entity over the net amounts assigned to assets acquired and liabilities assumed. In accordance with ASC 350, Intangibles – Goodwill and Other ("ASC 350"), goodwill and intangible assets with indefinite lives are reviewed by the Company annually for impairment on October 1. Prior to the Kindred Transaction, the Company historically determined that its consolidated business comprised a single reporting unit for goodwill impairment testing purposes. Due to the significance of the Kindred Transaction and the impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280, "Segment Reporting" ("ASC 280") and ASC 350 during 2022 and determined that the Company is now comprised of two distinct reporting units (i) acute hospital operations and (ii) rehabilitation hospital operations.

For the annual impairment evaluation, the Company estimates fair values of its reporting units utilizing both a discounted cash flow ("DCF") analysis and a guideline public company ("GPC") analysis considering observable market data of the Company's industry peers. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates, profitability and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing the Company's assumptions. The cash flows employed in the DCF analysis are based on the Company's most recent financial budgets and business plans and, when applicable, various growth rates and profitability for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the reporting unit.

The Company's intangible assets primarily relate to contract-based physician minimum revenue guarantees; certificates of need and certificates of need exemptions; and licenses, provider numbers, accreditations and other. Contract-based physician minimum revenue guarantees are amortized over the terms of the agreements. The certificates of need, certificates of need exemptions, licenses, provider numbers, accreditations and other have been determined to have indefinite lives and, accordingly, are not amortized. Refer to Note 4 for further discussion of the Company's goodwill and intangible assets.

Income Taxes

The Company accounts for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in the income tax provision in the period that includes the enactment date. The Company assesses the likelihood that deferred tax assets will be recovered from future taxable income. To the extent the Company believes that recovery is not likely, a valuation allowance is established. The establishment or increase in a valuation allowance is included as an expense within the provision for income taxes in the consolidated statements of operations. The Company classifies interest and penalties related to its tax positions as a component of income tax expense. Refer to Note 5 for further discussion of the Company's accounting for income taxes.

Reserves for Self-Insurance Claims

Given the nature of the Company's operating environment, the Company is subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, the Company maintains insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("SIR") and deductible levels**.** At December 31, 2022, the Company's SIR for professional liability claims is $15 million per claim at the majority of its acute care hospitals. Additionally, the Company participates in state-specific professional liability programs in Indiana, New Mexico and Pennsylvania. The Company has a $25,000 deductible for professional liability at each of its IRFs and behavioral health hospitals. At December 31, 2022, the Company's deductible for workers' compensation claims at each of its acute care and behavioral health hospitals was $1 million per claim in all states in which it operates except for Montana and Washington. The Company participates in state-specific programs for its workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at IRFs. The Company's SIR and deductible levels are evaluated annually as a part of the Company's insurance program's renewal process.

The Company's reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. The Company's expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of the Company's self-insured retention and deductible levels; and interest expense related to the discounted portion of the liability. The Company's expense for self-insurance and deductible claims was approximately $69 million, $86 million and $85 million for the years ended December 31, 2022, 2021 and 2020, respectively.

The Company's reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. These reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. The Company's reserves for self-insured claims have been discounted to their present value using a discount rate of 1.8% at December 31, 2022, 1.6% at December 31, 2021, and 1.7% at December 31, 2020. The Company's management selects a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Accordingly, the Company's reserves for self-insured claims, comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period, include both a current and long-term component. The current portion of the Company's reserves for self-insured claims is included under the caption "Other current liabilities" and the long-term portion is included under the caption "Other long-term liabilities" in the accompanying consolidated balance sheets.

The following table provides information regarding the classification of the Company's reserves for self-insured claims at December 31, 2022 and 2021 (in millions):

	2022	2021
Current portion	$ 74	$ 79
Long-term portion	219	216
	$ 293	$ 295

The following table presents the changes in our reserves for self-insured claims for the years ended December 31, 2022 and 2021 (in millions):

	2022	2021
Reserve at the beginning of the period	$ 295	$ 287
Increase for the provision of current year claims	65	72
Increase for the provision of prior year claims	5	13
Payments related to current year claims	(3)	(5)
Payments related to prior year claims	(72)	(72)
Provision for the change in discount rate	(1)	1
Non-cash change in reserve for claims in excess of SIR levels	2	(5)
Liabilities assumed in connection with the Kindred Transaction	2	4
Reserve at the end of the period	$ 293	$ 295

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of the Company's quarterly and semi-annual actuarial calculations resulted in changes to its reserves for self-insured claims for prior years. As a result, the Company's related self-insured claims expense increased by $5 million and $13 million for the years ended December 31, 2022 and 2021, respectively.

Point of Life Indemnity, Ltd.

The Company operates, with approval from the Cayman Islands Monetary Authority, a captive insurance company under the name Point of Life Indemnity, Ltd. Through this wholly-owned subsidiary of the Company, the captive insurance company issues malpractice indemnity policies to certain subsidiaries employing physicians and advanced practice providers and contracting with physicians. Fees charged to these subsidiaries are eliminated in consolidation. Reserves for the Company's estimate of the related outstanding claims, including incurred but not reported losses, are actuarially determined and are included as a component of the Company's reserves for professional liability self-insurance claims.

Self-Insured Medical Benefits

The Company is self-insured for substantially all of the eligible medical plan claims of its employees. The reserve for medical benefits primarily reflects the current estimate of incurred but not reported losses based upon an annual actuarial calculation as of the balance sheet date. The undiscounted reserve for self-insured medical benefits was $50 million and $46 million at December 31, 2022 and 2021, respectively, and is included in the Company's accompanying consolidated balance sheets under the caption "Other current liabilities".

Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to the Company. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues, and expenses at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes as a separate component of earnings that portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company. Refer to Note 9 for further discussion of the Company's noncontrolling interests and redeemable noncontrolling interests.

Variable Interest Entities

The Company follows the provisions of ASC 810, "Consolidation" for determining whether an entity is a variable interest entity ("VIE"). In order to determine if the Company is a primary beneficiary of a VIE for financial reporting purposes, it must consider whether it has the power to direct activities of the VIE that most significantly impact the performance of the VIE and whether the Company has the obligation to absorb losses or the right to receive returns that are significant to the VIE. The Company consolidates a VIE when it is the primary beneficiary.

As of December 31, 2022, the Company consolidated 22 acute care hospitals and 31 IRFs that are subject to joint venture agreements. Under GAAP, the Company determined that six of its acute care hospitals and 28 of its IRF joint ventures qualify as VIEs, and furthermore, the Company concluded that it is the primary beneficiary in all of the VIEs. The Company holds an ownership interest and acts as manager in each of the partnerships. Through the management services agreement, the Company is delegated necessary responsibilities to provide management services, administrative services and direction of the day-to-day operations. Based upon the Company's assessment of the most significant activities of its acute care hospitals and IRFs, the Company, as manager, has the ability to direct the majority of those activities in all such joint ventures which qualify as VIEs.

The analysis upon which the consolidation determination rests can be complex, can involve uncertainties, and requires judgment on various matters, some of which could be subject to different interpretations.

The Company's consolidated VIEs comprised approximately $1,361 million, or 12.9%, of the Company's total assets and $595 million, or 6.6%, of the Company's total liabilities as of December 31, 2022.

Stock-Based Compensation

The Company's Parent has issued profits units (the "Units") to certain employees, directors, consultants and other service providers under the terms and conditions of the Third Amended and Restated Limited Partnership Agreement of the Parent dated May 27, 2022 (as amended, the "Parent Partnership Agreement") and forms of award agreements. The Company accounted for these stock-based awards in accordance with the provisions of ASC 718, "Compensation – Stock Compensation" ("ASC 718"). In accordance with ASC 718, the Company recognized compensation expense based on the estimated grant date fair value of each stock-based award. The Company recognizes forfeitures of Units as they occur. Refer to Note 12 for further discussion of the Company's accounting for the Units.

Defined Benefit Pension Plans

The Company maintains certain assets and assumed certain liabilities associated with two separate defined benefit pension plans covering certain employees at two of its facilities. The Company accounts for its defined benefit pension plans in accordance with ASC 715, "Compensation – Defined Benefit Plans" ("ASC 715"). In accordance with ASC 715, the Company recognizes the unfunded liability of its defined benefit pension plans in the Company's consolidated balance sheets and unrecognized gains (losses) and prior service credits (costs) as changes in other comprehensive income (loss). The measurement date of the defined benefit pension plans' assets and liabilities coincides with the Company's year-end. The Company's pension benefit obligations are measured using actuarial calculations that incorporate discount rates, rate of compensation increases, when applicable, expected long-term returns on plan assets and consider expected age of retirement and mortality. Refer to Note 11 for further discussion of the Company's defined benefit pension plans.

Defined Contribution Plans

During the year ended December 31, 2022, the Company maintained a defined contribution retirement plan covering a majority of its employees. This defined contribution retirement plan contains discretionary matching contribution formulas, as well as definite contribution formulas for employees at certain facilities. Refer to Note 11 for further discussion of the Company's defined contribution plan.

Reclassifications

Certain reclassifications have been made to the prior years to conform to current year presentation. These reclassifications had no effect on results of operations, financial position or cash flows as previously reported.

Note 2. Business Development Update

Springstone Transaction

On August 26, 2022, the Company entered into a definitive agreement with (i) entities affiliated with Medical Properties Trust, Inc. ("MPT") and (ii) BH EIK Management, LP, a management company owned by certain members of the executive leadership team ("Springstone Management") of Springstone Health Opco, LLC ("Springstone"), to acquire a majority ownership interest in Springstone from Springstone Management and to acquire a promissory note issued by Springstone to an affiliate of MPT (the "Springstone Transaction"). Springstone is a national behavioral health provider with 18 behavioral health hospitals and 35 outpatient locations across nine states. Pursuant to the Springstone Transaction, MPT will continue to own the majority of Springstone's real estate locations, subject to an amended and restated master lease between affiliates of MPT and Springstone (the "Springstone Master Lease"), and retain a noncontrolling interest in Springstone, subject to a put/call agreement.

The Springstone Transaction was consummated on February 7, 2023, upon which certain of the Company's subsidiaries entered into the Springstone Master Lease, and the Company funded $230 million in cash to complete the transaction. Refer to Note 7 for further discussion of the Springstone Master Lease.

Cornerstone Behavioral Health El Dorado

On January 20, 2023, a subsidiary of Knight Health Holdings LLC (d/b/a ScionHealth), a Delaware limited liability company ("ScionHealth"), acquired Cornerstone Healthcare Group Holding, Inc., a Delaware corporation ("Cornerstone"), which operates 15 specialty hospitals, eight senior living locations, and Cornerstone Behavioral Health El Dorado ("El Dorado") (the "Cornerstone Transaction"). Immediately following ScionHealth's acquisition of Cornerstone on January 20, 2023, the Company paid $35 million in cash to acquire El Dorado, a 54 bed behavioral health facility located in Tucson, Arizona, from ScionHealth (the "El Dorado Transaction"). The Company will account for the acquisition of El Dorado in accordance with ASC Subtopic 805-50 "Related Issues" ("ASC 805-50") as a transaction between entities under common control.

In connection with the Cornerstone Transaction and the El Dorado Transaction, the Company entered into a number of transition services agreements and other ancillary agreements with ScionHealth and its subsidiaries pursuant to which (i) the Company provides certain transition services to ScionHealth to support the businesses acquired by ScionHealth in connection with the Cornerstone Transaction and (ii) ScionHealth provides certain transition services to the Company to support El Dorado, including leasing certain employees to the Company through the first quarter of 2023.

Everest Rehabilitation

On January 24, 2023, a wholly-owned, indirect subsidiary of the Company, entered into a definitive agreement with entities affiliated with Everest Rehabilitation Hospitals, LLC, ("Everest"), to acquire four IRFs (the "Operational IRFs") located in Arkansas, Texas, and Ohio (the "Operational IRF Transaction") for an aggregate purchase price of approximately $38 million. The closing of the Operational IRF Transaction was consummated on March 1, 2023. Additionally, in connection with the closing of the Operational IRF Transaction, certain of the Company's affiliated entities entered into a definitive agreement with entities affiliated with Everest to acquire six IRFs that Everest is currently developing in Texas and Florida (the "Developing IRFs") for an aggregate purchase price of approximately $60 million. The Company anticipates closing the acquisition of the Developing IRFs on a rolling basis beginning in the third or fourth quarter of 2023.

De Novo IRF Openings

The Company commenced the operations of four de novo IRFs during 2022. Refer to the table below for additional details.

Facility Name	Location	Opening Date	Licensed Beds
Dignity Health East Valley Rehabilitation Hospital - Gilbert	Gilbert, Arizona	December 21, 2022	40
Mercy Rehabilitation Hospital South	St. Louis, Missouri	December 6, 2022	50
Saint Thomas Rehabilitation Hospital (a)	Nashville, Tennessee	June 14, 2022	40
Tampa Rehabilitation Hospital	Tampa, Florida	May 17, 2022	80

(a) The Company holds a noncontrolling ownership interest in Saint Thomas Rehabilitation Hospital and has accounted for it as an equity investment in accordance with ASC 323.

Kindred Transaction

On June 18, 2021, the Company entered into a securities purchase agreement (the "Kindred Purchase Agreement") for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred Healthcare, LLC ("Kindred"), a leading specialty hospital company that operates facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. Upon the closing of the Kindred Transaction, as described below, the Company and Kindred established a new healthcare company operating under the name ScionHealth, which is separate from Lifepoint.

On December 23, 2021, the Company, Kentucky Hospital Holdings JV, LP ("Knight"), the indirect parent of Kindred, ScionHealth, and certain of their respective affiliates entered into reorganization agreements (the "Reorganization Agreements") that, among other things, provided for (i) the separation of the IRF, behavioral health, contract rehabilitation service and certain support center businesses (collectively, the "Knight Transferred Business") from the businesses of Knight and its subsidiaries, (ii) the separation of the equity and assets comprising 18 select acute care hospitals of the Company (the "Artemis Business") from the business of the Company and its subsidiaries, (iii) the transfer of the Knight Transferred Business to the Company, (iv) the transfer of the Artemis Business to Knight, (v) the acquisition by the Company of Class B Units of ScionHealth, with an aggregate value of $350 million, and (vi) reciprocal indemnification obligations with respect to the businesses transferred, in each case of clauses (i) through (vi), pursuant to the reorganization, separation and distribution steps described therein, including the assignment by Knight Health LLC, a Delaware limited liability company formed at the direction of certain affiliates of the Company, of certain rights and obligations under the Kindred Purchase Agreement, including any post-closing purchase price adjustments (the "Reorganization"). The Class B Units of ScionHealth acquired by the Company are perpetual non-convertible non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends.

On December 23, 2021, concurrently with the consummation of the Reorganization, the Kindred Transaction was consummated. Pursuant to the consummation of the Kindred Transaction and the Reorganization, (i) ScionHealth indirectly holds all of the transferred interests in the Artemis Business, (ii) ScionHealth directly holds all of the issued and outstanding limited partnership interests in Knight, (iii) Kentucky Hospital Holdings JV GP LLC, a Delaware limited liability company and direct subsidiary of ScionHealth, holds all of the issued and outstanding general partnership interests in Knight, and (iv) the Company holds all of the transferred interests in the Knight Transferred Business and the Class B Units of ScionHealth described above. The Company refers to the foregoing transactions as the "Kindred Transaction".

Transition Services Agreements

In connection with the Kindred Transaction, the Company entered into a number of transition services agreements ("TSAs") and other ancillary agreements with ScionHealth and its subsidiaries For the year ended December 31, 2022, in connection with the TSAs, the Company was reimbursed by ScionHealth for certain costs incurred on their behalf of $61 million, and paid ScionHealth $3 million for certain costs incurred on the Company's behalf.

Additionally, the Company and ScionHealth are party to a number of commercial services agreements, pursuant to which the Company provides ScionHealth with therapy services, rehabilitation unit and behavioral health unit management, consulting and development services, among other commercial services. For the year ended December 31, 2022, the Company recorded revenues related to these commercial services agreements of $55 million.

Lastly, given the recency of the Kindred Transaction and the ongoing integration efforts between the Company and ScionHealth, the Company may, from time to time, have a net receivable/payable recorded from/to ScionHealth with respect to net working capital and TSAs. The Company had a net receivable of $84 million and $9 million, respectively, recorded under the caption "Other current assets" in its accompanying consolidated balance sheet at December 31, 2022 and 2021.

Accounting for the Kindred Transaction

The Company accounted for the Kindred Transaction in accordance with ASC 805-50 as a transaction between entities under common control. In accordance with ASC 805-50, the Company recognized the assets and liabilities transferred in connection with the Kindred Transaction at the common parent's historical cost basis as of December 23, 2021. In accordance with ASC 805-50, combinations of entities under common control requires retrospective adjustment of comparative period financial information for the periods in which the entities were under common control. The Company and the Knight Transferred Business were under common control beginning December 23, 2021, and therefore, the Company has not retrospectively adjusted its previously issued financial statements.

The following tables summarize the impact of the net asset transfers in connection with the Kindred Transaction and the finalized purchase price allocation (in millions):

Net assets transferred from ScionHealth to Lifepoint	$ 1,031
Net assets transferred from Lifepoint to ScionHealth	(404)
Cash transferred to ScionHealth from Lifepoint	(929)
Class B Units of ScionHealth transferred to Lifepoint	350
Net equity adjustments related to common control transactions	$ 48

	From ScionHealth To Lifepoint	From Lifepoint To ScionHealth
Current assets	$ 198	$ (271)
Property and equipment, net	153	(501)
Other long-term assets	475	(30)
Goodwill and intangible assets	1,095	(121)
Current liabilities	(123)	118
Long-term liabilities	(473)	378
Noncontrolling interests and redeemable noncontrolling interests	(294)	23
Net assets transferred to (from) Lifepoint	$ 1,031	$ (404)

Transaction-Related Costs

During the years ended December 31, 2022, 2021 and 2020, the Company recognized transaction-related costs of $46 million, $86 million and $132 million, respectively. The transaction-related costs recognized during the years ended December 31, 2022 and 2021 were primarily related to the Kindred Transaction, Springstone Transaction and other business development activities. The transaction-related costs recognized during the year ended December 31, 2020 were primarily related to debt refinancing activities which are discussed further in Note 3.

Additional Divestitures

Colorado Plains Medical Center and Western Plains Medical Complex

Effective May 1, 2022, the Company sold Colorado Plains Medical Center ("Colorado Plains"), a 50 bed acute care facility located in Fort Morgan, Colorado, and Western Plains Medical Complex ("Western Plains"), a 99 bed acute care facility located in Dodge City, Kansas, to an unrelated third party. The Company received cash proceeds from the Colorado Plains and Western Plains transaction of $135 million, including net working capital, of which $63 million was utilized to settle a finance lease obligation related to Western Plains.

In connection with the sale of Colorado Plains and Western Plains, the Company recognized a net gain of $12 million, which is included under the caption "Other non-operating (gains) losses, net" in the accompanying consolidated statements of operations for the year ended December 31, 2022. The net gain on sale is primarily attributable to transaction proceeds in excess of the book values of the net assets associated with Colorado Plains and Western Plains, partially offset by losses associated with the write-off of allocated goodwill and the termination of a finance lease obligation related to Western Plains.

Providence Health and KershawHealth

Effective August 1, 2021, the Company sold Providence Health, comprised of two hospital campuses located in Columbia, South Carolina, and KershawHealth, located in Camden, South Carolina, to an unrelated third party. The Company received cash proceeds from the transaction of $86 million, including net working capital, a portion of which was utilized to settle a $28 million finance lease obligation related to KershawHealth. Refer to Note 7 for additional information regarding the Company's accounting for leases.

In connection with the divestiture of Providence Health and KershawHealth, the Company recognized a net impairment loss of $42 million during the year ended December 31, 2021, which is included under the caption "Other non-operating (gains) losses, net" in the accompanying consolidated statement of operations for the year ended December 31, 2021. The net impairment loss is primarily attributable to the write-down of property and equipment and allocated goodwill to their estimated fair values, as well as the termination of a finance lease obligation related to KershawHealth.

Capital Medical Center

On December 23, 2020, the Company entered into a definitive agreement with an unrelated third party to sell its majority ownership interest in Capital Medical Center, located in Olympia, Washington. Effective April 1, 2021, the Company sold its ownership interest in Capital Medical Center for cash proceeds of $38 million, including net working capital, in addition to the purchaser's assumption of certain finance lease obligations.

In connection with the Company's divestiture of Capital Medical Center, the Company recognized a net gain on sale of $24 million during the year ended December 31, 2021, which is included under the caption "Other non-operating (gains) losses, net" in the accompanying consolidated statement of operations for the year ended December 31, 2021. The net gain on sale is primarily attributable to the purchaser's assumption of certain finance lease obligations and liabilities, partially offset by the write-off of property and equipment, allocated goodwill, and certain other assets.

Note 3. Long-Term Debt

The Company's long-term debt, including current portions and finance lease obligations, consisted of the following at December 31, 2022 and 2021 (in millions):

	2022	2021
ABL Facility	$ -	$ -
Term Loan Facility	3,215	3,215
6.75% Secured Notes	600	600
4.375% Secured Notes	600	600
9.75% Unsecured Notes	1,270	1,425
5.375% Unsecured Notes	500	500
Unamortized debt issuance costs and premium	(100)	(128)
Finance lease obligations	809	911
Total debt	$ 6,894	$ 7,123

Maturities of the Company's long-term debt outstanding at December 31, 2022, excluding finance lease obligations and unamortized debt issuance costs, are as follows for the years indicated (in millions):

2023	$ -
2024	-
2025	3,815
2026	1,270
2027	600
Thereafter	500
	$ 6,185

ABL Facility

General

Effective November 16, 2018, the Company entered into a senior secured asset-based revolving credit facility (as amended from time to time the "ABL Facility") in an aggregate principal amount of $800 million with a maturity of five years. The ABL Facility also includes both a letter of credit sub-facility and a swingline loan sub-facility. In addition, the Company may request one or more incremental revolving commitments in an aggregate principal amount up to the greater of (x) the greater of (i) $255 million and (ii) 0.23 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, and (y) the amount by which the borrowing base exceeds the aggregate commitments under the ABL Facility, subject to certain conditions and receipt of commitments by existing or additional lenders.

On April 13, 2020, the Company entered into an amendment to the ABL Facility that provided for an $80 million last-out term loan with a maturity of 364 days, which was incremental to the $800 revolving commitment under the ABL Facility. Such term loan was drawn at closing and then subsequently repaid in full on December 14, 2020, which effectively terminated such term loan.

As of December 31, 2022, the Company had no borrowings outstanding under the ABL Facility and approximately $53 million in letters of credit outstanding primarily related to the self-insured retention level of its general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements. Amounts available for borrowing under the ABL Facility were approximately $573 million as of December 31, 2022.

On January 27, 2023, the Company entered into an Incremental Assumption and Amendment Agreement No. 2 with certain of the Company's subsidiaries, DSB Acquisition LLC, a Delaware limited liability company ("Holdings"), the lenders party thereto and Citibank, N.A., as administrative agent, which amended and restated the ABL Facility. The amended and restated ABL Facility has a stated maturity of five years; provided, that if more than $200 million aggregate principal amount of the Notes (as defined below) or the Term Loan Facility remain outstanding 91 days before the stated maturity thereof, then the amended and restated ABL Facility will mature and the commitments under the facility will terminate on such date. The amended and restated ABL Facility continues to provide revolving availability of $800 million, with a $150 million letter of credit sub-facility and a $40 million swingline sub-facility, and the Company continues to have the right to request one or more incremental revolving commitments as provided in the ABL Facility. Availability under the amended and restated ABL Facility continues to be subject to a borrowing base that is based on a specified percentage of eligible accounts receivable. Borrowings under the amended and restated ABL Facility continue to be subject to the satisfaction of customary conditions, including the absence of a default and the accuracy of representations and warranties.

On February 6, 2023, the Company borrowed $250 million under the ABL Facility in order to fund the Springstone Transaction, El Dorado Transaction and Everest Operational IRF Transaction as discussed further in Note 2.

Collateral and Guarantors

The obligations under the ABL Facility are guaranteed by Holdings, on a limited recourse basis and each of the direct and indirect material, wholly-owned domestic subsidiaries of the Company that guaranteed the obligations under the ABL Facility. The obligations are secured by a pledge of the capital stock of the Company and substantially all of their assets and those of each subsidiary guarantor subject to certain exceptions. Such security interests consist of a first-priority lien with respect to "ABL Priority Collateral" (which generally includes most accounts receivable and certain related assets of the Company and the subsidiary guarantors) and a second-priority lien with respect to the "Non-ABL Priority Collateral" (which generally includes most inventory and fixed assets, equity interests and intellectual property of the Company and the subsidiary guarantors). Additionally, certain of the Company's restricted subsidiaries that are not guarantors will pledge certain of their assets (the "Credit Support Party Collateral") on a first-priority basis, as further security of the obligations under the ABL Facility. The Credit Support Party Collateral will secure only the obligations under the ABL Facility.

Interest Rates and Fees

Prior to the amendment and restatement effective January 27, 2023, borrowings under the ABL Facility bore interest at a rate equal to, at the Company's option, either (a) a London Interbank Offered Rate ("LIBOR") rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an initial applicable margin of 1.75% for LIBOR loans and 0.75% for base rate loans. The applicable margin for borrowings was subject to step-downs based on average availability thresholds.

Effective January 27, 2023, borrowings under the ABL Facility will bear interest at a rate equal to, at the Company's option, either (a) an adjusted term Secured Overnight Financing Rate ("SOFR") for the interest period in effect, subject to a floor of 0.00%, or (b) a base rate determined by the highest of (i) the prime rate in effect, (ii) the federal funds effective rate plus 0.50% and (iii) an adjusted term SOFR with an interest period of one month plus 1.00%, subject to a floor of 1.00%, in each case plus an applicable margin of 1.75% for adjusted term SOFR loans and 0.75% for base rate loans. The applicable margin for borrowings will be subject to step-downs based on average availability thresholds.

The Company is required to pay a commitment fee under the ABL Facility in respect of the unutilized commitments at an initial rate equal to 0.375% per annum. The commitment fee may be subject to one step-down based on the average daily utilization under the ABL Facility. The Company will also be required to pay customary agency fees as well as letter of credit participation fees.

Restrictive Covenants and Other Matters

The ABL Facility contains certain customary affirmative covenants and events of default. The negative covenants in the ABL Facility include, among other things, limitations (none of which are absolute) on the Company and its subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates, enter into sale-leaseback transactions, change their lines of business, restrict dividends from their subsidiaries or restrict liens, change their fiscal year, and modify the terms of certain debt.

The ABL Facility requires that the Company and its restricted subsidiaries maintain a minimum fixed charge coverage ratio of not less than 1.00 to 1.00 at any time when availability is less than an agreed amount.

The ABL Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the ABL Facility are entitled to take various actions, including the acceleration of amounts due under the ABL Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the ABL Facility.

Term Loan Facility

General

Effective November 16, 2018, the Company entered into the Term Loan Facility, which is a senior secured term loan credit facility in an aggregate principal amount of $3,550 million with a maturity of seven years. In addition, the Company may request one or more incremental commitments in an aggregate principal amount up to the sum of (x) the greater of (i) $800 million and (ii) 0.75 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, plus additional amounts subject to certain agreed leverage requirements, certain other conditions and receipt of commitments by existing or additional lenders.

On January 21, 2020, the Company amended its Term Loan Facility to, among other things, reduce the applicable interest rate margin for the term loans by 0.75% to 3.75% with respect to LIBOR-based loans and 2.75% with respect to base rate loans.

On January 23, 2020, the Company made a prepayment of $400 million of term loans outstanding under the Term Loan Facility with a portion of the net proceeds from the sale-leaseback transaction with MPT completed effective December 17, 2019 (the "2019 Sale Leaseback Transaction"), which is discussed further in Note 7. After giving effect to the prepayment, the Company had prepaid all remaining quarterly amortization payments in respect of the Term Loan Facility.

On February 24, 2020, the Company closed the issuance of $600 million of incremental term loans (the "Incremental Term Loan") under the Term Loan Facility. The Incremental Term Loan bears interest at a rate equal to, at its option, (a) a LIBOR rate plus an applicable margin of 3.75% or (b) a base rate plus an applicable margin of 2.75%. There are no scheduled amortization payments required on the Incremental Term Loan prior to maturity. The net proceeds from the Incremental Term Loan, together with the net proceeds from the 4.375% Secured Notes and cash on hand, was used to fund the settlement of the tender offer, the redemption of the Company's 8.25% Senior Secured Notes due 2023 (the "8.25% Secured Notes") and the redemption of the Company's 11.5% Senior Notes due 2024 (the "11.5% Unsecured Notes") and to pay certain fees in connection with the refinancing transactions described herein.

On December 4, 2020, the Company made an optional prepayment of $500 million of term loans outstanding under the Term Loan Facility with the net proceeds from the offering of $500 million in aggregate principal amount of 5.375% Senior Notes due 2029 (the "5.375% Unsecured Notes"), together with cash on hand.

Collateral and Guarantors

All obligations under the Term Loan Facility are unconditionally guaranteed by Holdings on a limited recourse basis and each of the existing and future direct and indirect material, wholly-owned domestic subsidiaries of the Company, subject to certain exceptions. The obligations under the Term Loan Facility are secured by a pledge of the capital stock of the Company and substantially all of its assets and those of each subsidiary guarantor, including a pledge of the capital stock of all entities directly held by the Company (including Legacy Lifepoint) and each subsidiary guarantor (which pledge is limited to 65% of the voting capital stock of first-tier foreign subsidiaries), in each case subject to certain exceptions. Such security interests consist of a first-priority lien with respect to the Non-ABL Priority Collateral and a second-priority lien with respect to the ABL Priority Collateral.

Interest Rates

Borrowings under the Term Loan Facility bear interest at a rate equal to, at the Company's option, either (a) a LIBOR rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an applicable margin of 3.75% for LIBOR loans and 2.75% for base rate loans.

Restrictive Covenants and Other Matters

The Term Loan Facility contains certain customary affirmative covenants and events of default. The negative covenants in the Term Loan Facility include, among other things, limitations (none of which are absolute) on the Company and its subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates enter into sale-leaseback transactions, change their lines of business, restrict dividends from subsidiaries or restrict liens, change their fiscal year and modify the terms of certain debt or organizational agreements.

The Term Loan Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the Term Loan Facility are entitled to take various actions, including the acceleration of amounts due under the Term Loan Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the Term Loan Facility.

6.75% Secured Notes

On April 13, 2020, the Company completed the offering of $600 million in aggregate principal amount of 6.750% Senior Secured Notes due 2025 (the "6.75% Secured Notes"). The 6.75% Secured Notes will mature on April 15, 2025. Interest on the 6.75% Secured Notes will accrue at 6.75% per annum and will be paid semi-annually, in arrears, on April 15 and October 15 of each year, beginning October 15, 2020. The net proceeds from the offering were used for general corporate purposes.

The Company's obligations under the 6.75% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility and the 4.375% Senior Secured Notes due 2027 (the "4.375% Secured Notes"). The 6.75% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 6.75% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

The Company may redeem the 6.75% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the 6.75% Secured Notes Indenture.

The 6.75% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 6.75% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 6.75% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 6.75% Secured Notes Indenture also provides for customary events of default.

4.375% Secured Notes

On February 13, 2020, the Company completed the offering of $600 million in aggregate principal amount of its 4.375% Secured Notes. The 4.375% Secured Notes will mature on February 15, 2027. Interest on the 4.375% Secured Notes will accrue at 4.375% per annum and will be paid semi-annually, in arrears, on February 15 and August 15 of each year, beginning August 15, 2020. The net proceeds from the offering, together with the net proceeds from the Incremental Term Loan and cash on hand, were used to fund the settlement of the tender offer, the 8.25% Notes Redemption (as defined herein) and the 11.5% Notes Redemption (as defined herein) and to pay certain fees in connection with the refinancing transactions described herein.

The Company's obligations under the 4.375% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility. The 4.375% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 4.375% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to February 15, 2022, the Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 4.375% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to February 15, 2022, the Company may also redeem up to 40% of the original aggregate principal amount of the 4.375% Secured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 104.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 4.375% Secured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after February 15, 2022, the Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of February 13, 2020 (as amended or supplemented from time to time, the "4.375% Secured Notes Indenture").

The 4.375% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 4.375% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 4.375% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 4.375% Secured Notes Indenture also provides for customary events of default.

9.75% Unsecured Notes

On November 16, 2018, the Company issued $1,425 million aggregate principal amount of 9.750% Senior Notes due 2026 (the "9.75% Unsecured Notes", and, together with the 5.375% Unsecured Notes, 6.75% Secured Notes and the 4.375% Secured Notes, the "Notes"). The 9.75% Unsecured Notes will mature on December 1, 2026. Interest on the 9.75% Unsecured Notes accrues at 9.750% per annum and will be paid semi-annually, in arrears, on June 1 and December 1 of each year, beginning June 1, 2019.

The Company's obligations under the 9.75% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 9.75% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

The Company may redeem the 9.75% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the 9.75% Unsecured Notes Indenture.

The 9.75% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 9.75% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 9.75% Unsecured Notes Indenture also provides for customary events of default.

5.375% Unsecured Notes

On December 4, 2020, the Company completed the offering of the 5.375% Unsecured Notes. The 5.375% Unsecured Notes will mature on January 15, 2029. Interest on the 5.375% Unsecured Notes will accrue at 5.375% per annum and will be paid semi-annually, in arrears, on January 15 and July 15 of each year, beginning July 15, 2021. The net proceeds of the offering, together with cash on hand, were used to prepay $500 million of the total aggregate principal amount outstanding under the Term Loan Facility and to pay related fees and expenses in connection with the offering.

The Company's obligations under the 5.375% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 5.375% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

Prior to January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 5.375% Unsecured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to December 4, 2023, the Company may also redeem up to 40% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 105.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in the Indenture, dated as of December 4, 2020 (the "5.375% Unsecured Notes Indenture").

The 5.375% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 5.375% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 5.375% Unsecured Notes Indenture also provides for customary events of default.

Notes Repurchase Program

On June 3, 2022, the Executive Committee of the Board of Directors of the Company authorized the repurchase of up to $200 million aggregate principal amount of the Notes (the "Notes Repurchase Program"). During the year ended December 31, 2022, the Company repurchased $155 million aggregate principal amount of its 9.75% Unsecured Notes for an aggregate repurchase price of $144 million in connection with the Notes Repurchase Program. As of December 31, 2022, the Company had remaining authority to repurchase up to an additional $45 million aggregate principal amount of the Notes in accordance with the Notes Repurchase Program. Future repurchases, if any, under the Notes Repurchase Program will depend on a number of factors, including but not limited to market conditions.

Tender Offer, Redemption and Discharge of 8.25% Secured Notes and 11.5% Unsecured Notes

On February 7, 2020, the Company commenced a tender offer and consent solicitation (the "tender offer") to purchase any and all of its outstanding (i) 8.25% Secured Notes issued pursuant to the indenture, dated as of April 29, 2016, among the Company, the guarantors party thereto and Wilmington Trust, National Association, as trustee (as amended, supplemented or otherwise modified, the "8.25% Secured Notes Indenture") and (ii) 11.5% Unsecured Notes issued pursuant to the indenture, dated as of April 29, 2016, among the Company, the guarantors party thereto and Wilmington Trust, National Association, as trustee (as amended, supplemented or otherwise modified, the "11.5% Unsecured Notes Indenture"). The early tender deadline for the tender offer was February 21, 2020, and the expiration date for the tender offer was March 6, 2020.

Upon expiration of the early tender deadline, on February 24, 2020, the Company accepted and purchased (i) $623 million of the aggregate principal amount of the 8.25% Secured Notes that were validly tendered for total consideration of $1,052.50 per $1,000 principal amount, plus accrued and unpaid interest thereon, and (ii) $84 million of the aggregate principal amount of the 11.5% Unsecured Notes that were validly tendered for a total consideration of $1,072.50 per $1,000 principal amount, plus accrued and unpaid interest thereon. Following the expiration of the tender offer, on March 9, 2020, the Company accepted and purchased an additional $0.2 million of the aggregate principal amount of the 8.25% Secured Notes that were validly tendered after the early tender deadline for a tender consideration of $1,022.50 per $1,000 principal amount, plus accrued and unpaid interest thereon. No additional 11.5% Unsecured Notes were tendered after the early tender deadline.

On March 9, 2020, (i) pursuant to the 8.25% Secured Notes Indenture, the Company provided notice to the holders that it had elected to redeem any and all of the 8.25% Secured Notes that remain outstanding after giving effect to the tender offer at a redemption price of 104.125%, plus accrued and unpaid interest thereon, on May 1, 2020 (the "8.25% Notes Redemption") and (ii) pursuant to the 11.5% Unsecured Notes Indenture, the Company provided notice to the holders that it had elected to redeem any and all of the 11.5% Unsecured Notes that remain outstanding after giving effect to the tender offer at a redemption price of 105.750%, plus accrued and unpaid interest thereon, on May 1, 2020 (the "11.5% Notes Redemption"). Concurrently with the delivery of the notices of redemption, on March 9, 2020, the Company (i) irrevocably deposited with the trustee for the 8.25% Secured Notes approximately $192 million, which was the amount sufficient to fund the 8.25% Notes Redemption and to satisfy and discharge the Company's obligations under the 8.25% Secured Notes and the 8.25% Secured Notes Indenture, and (ii) irrevocably deposited with the trustee for the 11.5% Unsecured Notes approximately $297 million, which was the amount sufficient to fund the 11.5% Notes Redemption and to satisfy and discharge the Company's obligations under the 11.5% Unsecured Notes and the 11.5% Unsecured Notes Indenture.

Debt Transaction Costs

The Company recognized $115 million of debt transaction costs associated with the various debt financing activities completed during 2020, which are included under the caption "Transaction-related costs" in the Company's accompanying consolidated statement of operations for the year ended December 31, 2020. These debt transaction costs were comprised of $61 million of early termination premiums associated with the tender offer, 8.25% Notes Redemption and 11.5% Notes Redemption, the write-off of $47 million of previously capitalized debt issuance costs associated with the Term Loan Facility, the 8.25% Secured Notes and the 11.5% Unsecured Notes and $7 million of other miscellaneous legal and financing costs.

Finance Lease Obligations

Refer to Note 7 for discussion of the Company's finance lease obligations.

Interest Rate Swap Agreement

On December 21, 2018, the Company entered into an interest rate swap agreement with Citibank, N.A. as counterparty (the "Interest Rate Swap") whereby the Company paid a fixed rate of 2.63% on a notional amount of $1,100 million and received one-month LIBOR. The Interest Rate Swap became effective on February 19, 2019 and terminated on February 19, 2022. Refer to Note 10 for additional information regarding the Company's accounting for its Interest Rate Swap.

Note 4. Goodwill and Intangible Assets

Goodwill

The following table presents the changes in the carrying amount of goodwill for the years ended December 31, 2022 and 2021 (in millions):

Balance at January 1, 2021	$	2,919
Net goodwill impact related to the Kindred Transaction		1,013
Write-off allocation related to 2021 divestitures		(18)
Balance at December 31, 2021		3,914
Additions related to acquisitions		16
Finalization of the purchase price allocation for the Kindred Transaction		(74)
Write-off allocation related to 2022 divestitures		(45)
Balance at December 31, 2022	$	3,811

Prior to the Kindred Transaction, the Company historically determined that its consolidated business comprised a single reporting unit for goodwill impairment testing purposes. Due to the significance of the Kindred Transaction and the impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280, "Segment Reporting" ("ASC 280") and ASC 350 during 2022 and determined that the Company is now comprised of two distinct reporting units (i) acute hospital operations and (ii) rehabilitation hospital operations. For the annual impairment evaluation, the Company estimates fair values of its reporting units utilizing both a DCF analysis and a GPC analysis. The Company did not recognize any goodwill impairment charges during the years ended December 31, 2022, 2021 and 2020.

Intangible Assets

The following table provides information regarding the Company's intangible assets included in the accompanying consolidated balance sheets as of December 31, 2022 and 2021 (in millions):

	2022	2021
Amortizable intangible assets:		
Physician minimum revenue guarantees and other		
Gross carrying amount	$ 21	$ 24
Accumulated amortization	(12)	(13)
Net total	9	11
Indefinite-lived intangible assets:		
Certificates of need and certificates of need exemptions	26	28
Licenses, provider numbers, accreditations and other	48	46
Net total	74	74
Total intangible assets:		
Gross carrying amount	95	98
Accumulated amortization	(12)	(13)
Net total	$ 83	$ 85

Physician Minimum Revenue Guarantees

The Company has committed to provide certain financial assistance pursuant to recruiting agreements, or "physician minimum revenue guarantees," with various physicians practicing in the communities it serves. In consideration for a physician relocating to one of its communities and agreeing to engage in private practice for the benefit of the respective community, the Company may advance certain amounts of money to a physician to assist in establishing his or her practice.

The Company accounts for its physician minimum revenue guarantees in accordance with the provisions of ASC 460, "Guarantees" ("ASC 460"). In accordance with ASC 460, the Company records a contract-based intangible asset and a related guarantee liability for new physician minimum revenue guarantees. The contract-based intangible asset is amortized as a component of other operating expenses, in the accompanying consolidated statements of operations, over the period of the physician contract, which typically ranges from four to five years.

Certificates of Need and Certificates of Need Exemptions

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and certain equipment at the Company's facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of new services. The Company has acquired facilities in certain states that have adopted certificate of need laws. The Company has determined that these intangible assets have an indefinite useful life.

Licenses, Provider Numbers, Accreditations and Other

To operate hospitals, the Company must obtain certain licenses, provider numbers and accreditations from federal, state and other accrediting agencies. The Company has acquired facilities in certain jurisdictions that require licenses, provider numbers and accreditations.

Kindred Transaction

In connection with the Kindred Transaction, indefinite-lived intangible assets comprised of certificates of need and licenses totaling $42 million were transferred from ScionHealth to the Company, and indefinite-lived intangible assets comprised of certificates of need and provider numbers totaling $6 million were transferred from the Company to ScionHealth.

Amortization Expense

Amortization expense for the Company's intangible assets during the years ended December 31, 2022, 2021 and 2020 was $5 million, $8 million and $9 million, respectively.

Total estimated amortization expense for the Company's intangible assets during the next five years are as follows (in millions):

2023	$ 4
2024	2
2025	2
2026	1
	$ 9

Note 5. Income Taxes

The Company recognized a provision for income taxes of $100 million for the year ended December 31, 2022, and a benefit from income taxes of $27 million and $64 million for the years ended December 31, 2021 and 2020, respectively. The provision for income taxes recognized for the year ended December 31, 2022 is primarily a result of an increase in the valuation allowance for certain deferred tax assets due to the limitation on the deductibility of interest expense under Section 163(j) of the Code (and the regulations thereunder) and write-offs of goodwill associated with divestitures. The benefit from income taxes recognized for the year ended December 31, 2021 is primarily a result of a reduction in the valuation allowance for certain deferred tax assets, partially offset by limitations on the tax deductibility of interest expense (back to its previous limitation of 30% of adjusted taxable income), stock-based compensation expense, write-offs of goodwill associated with divestitures, and certain transaction and advisory costs recognized during the year ended December 31, 2021.

The provision for (benefit from) income taxes for the years ended December 31, 2022, 2021 and 2020 consisted of the following (in millions):

	2022	2021	2020
Current:			
Federal	$ 56	$ 46	$ (73)
State	5	5	8
	61	51	(65)
Deferred:			
Federal	(70)	23	99
State	1	(7)	38
	(69)	16	137
Change in valuation allowance	108	(94)	(136)
Total	$ 100	$ (27)	$ (64)

The following table reconciles the differences between the statutory federal income tax rate to the Company's effective tax rate on net (loss) income before income taxes and including net income attributable to noncontrolling interests and redeemable noncontrolling interests for the years ended December 31, 2022, 2021 and 2020:

	2022	2021	2020
Federal statutory rate	21.0 %	21.0 %	21.0 %
State income taxes, net of federal income tax benefits	5.6	(2.6)	3.8
Change in valuation allowance	(102.6)	(83.3)	(56.5)
Tax effect of goodwill write-offs and impairments	(8.7)	9.9	0.2
Noncontrolling interests and redeemable noncontrolling interests	12.8	-	(1.9)
State net operating loss carryforward expirations, refunds and rate and state apportionment changes	(11.2)	-	10.4
Taxes payable and deferred tax liability adjustments	(10.7)	-	-
Rate benefit from federal net operating loss carryback to 35% year	-	-	(3.8)
Nondeductible acquisition and merger-related costs	-	30.2	-
Other nondeductible expenses and other items	(1.3)	1.1	0.4
Effective income tax rate	(95.1) %	(23.7) %	(26.4) %

Deferred income taxes result from temporary differences in the recognition of assets, liabilities, revenues and expenses for financial accounting and tax purposes. Sources of these differences and the related tax effects were as follows as of December 31, 2022 and 2021 (in millions):

	2022	2021
Deferred income tax liabilities:		
Depreciation and amortization	$ (98)	$ (130)
Right-of-use operating lease assets	(24)	(61)
Tax deductible goodwill	(28)	(26)
Investments in partnerships	(46)	(123)
Other	(6)	(6)
Total deferred income tax liabilities	(202)	(346)
Deferred income tax assets:		
Provision for doubtful accounts	43	34
Employee compensation	40	51
Net operating loss carryforwards	115	109
Insurance reserves	76	76
Section 163(j) interest expense carryforward	118	47
Investments in partnerships	1	36
Right-of-use operating lease obligations	24	62
Deferred loss on sale of facilities	21	37
Other	50	52
Total deferred income tax assets	488	504
Valuation allowance	(305)	(197)
Net deferred income tax assets	183	307
Deferred income taxes	$ (19)	$ (39)

Noncurrent deferred income tax liabilities totaled $19 million and $39 million at December 31, 2022 and 2021, respectively, and are included under the caption "Other long-term liabilities" on the accompanying consolidated balance sheets. During the year ended December 31, 2022, the Company finalized its accounting for the Kindred Transaction in accordance with ASC 805-50. The Company reduced its deferred income tax liabilities associated with investments in partnerships as of the December 23, 2021 transaction date, by $58 million, with a corresponding reduction to consolidated goodwill of $58 million.

As of December 31, 2022, the Company had federal net operating loss carryforwards ("NOLs") of approximately $106 million with an indefinite carryforward period and subject to annual usage limitations under Section 382 of the Code. In addition, the Company had state and local NOLs of approximately $2 billion that expire at various dates between 2023 and 2042 or have an indefinite carryforward period.

The Company has established a valuation allowance for deferred tax assets at December 31, 2022 and 2021, due to the uncertainty of realizing these assets in the future. During the year ended December 31, 2022, the Company increased its valuation allowance by $108 million primarily because of the limitation on the deductibility of interest expense under Section 163(j) of the Code. During the year ended December 31, 2021, the Company reduced its valuation allowance by $163 million as a result of the transfers and utilization of certain net deferred tax assets and liabilities between the Company and ScionHealth.

The Company made federal income tax payments of $20 million, $50 million, and $33 million for the years ended December 31, 2022, 2021 and 2020, respectively. A net refund of federal income taxes previously paid by Legacy Lifepoint for the tax year ended December 31, 2013, in the amount of $23 million was received during the year ended December 31, 2021 related to the carryback of the final Legacy Lifepoint federal NOL generated for the year ended November 16, 2018, to the tax year ended December 31, 2013. The 2017 tax year refund resulted from an automatic accounting method change, for tax purposes, related to income recognition made by Legacy Lifepoint. The Company made net state and local income tax payments in the amount of $8 million, $17 million, and $5 million for the years ended December 31, 2022, 2021 and 2020, respectively.

The Company's policy is to accrue interest and penalties related to potential underpayment of income taxes within the provision for income taxes. Interest is computed on the difference between the Company's uncertain tax benefit positions and the amount deducted or expected to be deducted in our income tax returns. During the year ended December 31, 2022, the Company increased taxes payable by $6 million for an uncertain tax benefit position associated with prior years.

The Company files a consolidated U.S. federal income tax return, as well as income tax returns in various state jurisdictions. All of the Company's tax years are subject to examination by the Internal Revenue Service and various state taxing authorities.

Note 6. Other Current Liabilities

The following table provides information regarding the Company's other current liabilities, which are included in the accompanying consolidated balance sheets at December 31, 2022 and 2021 (in millions):

	2022	2021
Accrued interest	$ 86	$ 44
Current portion of self-insurance reserves	74	79
Current portion of right-of-use operating lease obligations	71	61
Self-insured medical benefits liabilities	50	46
Medicaid supplemental payment program provider taxes	25	23
Accrued property taxes	24	23
Accrued expenses and other	215	245
	$ 545	$ 521

Note 7. Leases

Summary

The Company leases real property and equipment under finance and operating leases. The leases expire at various times and have various renewal options. For leases with terms greater than 12 months, the Company records the related assets and obligations at the present value of lease payments over the term. Interest rates used in computing the present value of the lease payments are based on the Company's incremental borrowing rate at the inception of the lease. The Company's lease agreements generally require the Company to pay maintenance, repairs, taxes and insurance costs.

The following table presents certain information related to the Company's lease assets and liabilities at December 31, 2022 and 2021 (dollars in millions):

	Balance Sheet Classification	2022	2021
Assets:			
Finance leases	Property and equipment, net	$ 514	$ 635
Operating leases	Other long-term assets	638	609
Total lease assets		$ 1,152	$ 1,244
Liabilities:			
Current:			
Finance leases	Current maturities of long-term debt	$ 29	$ 106
Operating leases	Other current liabilities	71	61
Long-term:			
Finance leases	Long-term debt, net	780	805
Operating leases	Other long-term liabilities	572	546
Total lease liabilities		$ 1,452	$ 1,518
Weighted-average remaining term (in years):			
Finance leases		17.0	13.2
Operating leases		9.7	10.1
Weighted-average discount rate:			
Finance leases		9.6 %	6.4 %
Operating leases		7.6 %	7.3 %

The following table presents certain information related to finance and operating lease expense for the years ended December 31, 2022, 2021 and 2020 (in millions):

	Statement of Operations Classification	2022	2021	2020
Finance lease expense:				
Amortization related to lease assets	Depreciation and amortization	$ 44	$ 44	$ 47
Interest related to lease liabilities	Interest expense, net	49	82	91
Operating lease expense	Other operating expenses, net	114	76	86
Short-term, variable and other lease expense	Other operating expenses, net	42	45	47
Total lease expense		$ 249	$ 247	$ 271

The following table presents supplemental cash flow information related to finance and operating leases for the years ended December 31, 2022, 2021 and 2020 (in millions):

	2022	2021	2020
Operating cash flows related to operating leases	$ 149	$ 118	$ 128
Operating cash flows related to finance leases	$ 53	$ 79	$ 82
Financing cash flows related to finance leases	$ 34	$ 29	$ 20

The following table reconciles the undiscounted cash flows to the finance and operating lease obligations included in the consolidated balance sheet at December 31, 2022 (in millions):

	Finance Leases	Operating Leases
2023	$ 87	$ 116
2024	87	104
2025	87	98
2026	82	90
2027	72	81
Thereafter	993	444
Total minimum lease payments	1,408	933
Less: Amounts attributable to interest	(1,068)	(290)
Present value of minimum lease payments	340	643
Non-cash portions of finance lease obligations	469	-
Less: Current portions of lease obligations	(29)	(71)
Long-term portion of lease obligations	$ 780	$ 572

Kindred Transaction

In connection with the Kindred Transaction, effective December 23, 2021, right-of-use operating lease assets and liabilities of $439 million and $435 million, respectively, were transferred from ScionHealth to the Company, and right-of-use operating lease assets and liabilities of $21 million and $22 million, respectively, were transferred from the Company to ScionHealth. Additionally, the Company transferred finance lease obligations with a carrying value of $332 million to ScionHealth.

MPT Lease Modifications

On August 1, 2021, the Company sold KershawHealth, which was subject to the Amended and Restated Master Lease Agreement with certain affiliates of MPT, dated March 21, 2016 (the "Capella Master Lease") and paid $28 million to MPT to terminate its lease obligation associated with KershawHealth. The removal of KershawHealth from the Capella Master Lease triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the reclassification of right-of-use operating lease assets and obligations of $98 million and $106 million, respectively, related to certain other properties subject to the Capella Master Lease, to property and equipment and finance lease obligations of $129 million and $137 million, respectively.

Effective December 23, 2021, the Company terminated the Capella Master Lease, the Amended and Restated Hot Springs Master Lease Agreement with certain affiliates of MPT dated March 21, 2016 (the "Hot Springs Lease") and the Master Lease Agreement with certain affiliates of MPT dated December 17, 2019 (the "2019 Master Lease"), and certain subsidiaries of the Company entered into a new master lease agreement with certain affiliates of MPT, dated December 23, 2021, with respect to ten of the Company's facilities (the "2021 Master Lease"). The entry into the 2021 Master Lease triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the reclassification of right-of-use operating lease assets and obligations of $61 million and $66 million, respectively, to property and equipment and finance lease obligations of $41 million and $46 million, respectively. All of the facilities subject to the 2021 Master Lease are accounted for as finance leases as of December 31, 2022.

Effective May 1, 2022, the Company sold Western Plains, which was subject to the 2021 Master Lease. In connection therewith, the 2021 Master Lease was amended. The purchase of Western Plains from MPT triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the derecognition of a $33 million finance lease obligation related to Western Plains, and the recognition of additional property assets and finance lease obligations of $6 million related to certain other properties subject to the 2021 Master Lease.

Effective December 13, 2022, the 2021 Master Lease was amended to, among other things, provide for a five-year extension and amendment of certain financial covenants. Additionally, as a result of increases in the discount rates associated with the 2021 Master Lease, the Company's finance lease obligations include a non-cash end-of-term deferred gain of $462 million.

Lease Covenants

Certain of the Company's lease agreements, including the 2021 Master Lease and the Springstone Master Lease, contain financial covenants, including required minimum lease coverage and fixed charge coverage ratios. The Company's lease agreements generally include non-financial covenants, which may include those requiring the Company to maintain licenses necessary for operation of a facility or required for certification under Medicare or Medicaid. The failure to comply with or obtain a waiver of such covenants or otherwise cure such non-compliance could result in an event of default under the applicable lease. Certain of the Company's lease agreements, including the 2021 Master Lease and the Springstone Master Lease, are structured as master leases under which certain defaults related to one facility may result in a default on the entire portfolio subject to the applicable master lease agreement.

Note 8. Investments and Notes Receivable

Investments

The Company accounts for its investments in entities in which the Company does not control under either the cost method or the equity method of accounting in accordance with ASC 321 or ASC 323, respectively. The Company does not consolidate its cost and equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses during the period or evaluates them for impairment and observable price changes. Investment income is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations.

The following table presents the changes in the Company's investments during the years ended December 31, 2022 and 2021 (in millions):

Balance at January 1, 2021	$	256
Income		83
Contributions		7
Distributions and other		(61)
ScionHealth Class B Units		350
Other investments recognized in connection with the Kindred Transaction		20
Balance at December 31, 2021		655
Income [(a)]		102
Contributions		26
Distributions and other [(a)]		(99)
Balance at December 31, 2022	$	684

(a) Includes a gain of approximately $60 million recognized in connection with the receipt of a dividend associated with a cost method investment.

ScionHealth Class B Units

In connection with the Kindred Transaction, Lifepoint acquired Class B Units in ScionHealth (the "Class B Units") with an aggregate initial value of $350 million. The Class B Units in ScionHealth, a privately held company, do not have a readily determinable fair value, and therefore, the Company has accounted for the Class B Units using the measurement alternative in accordance with ASC 321. The Company's investment in the Class B Units was recorded at $350 million and is included under the caption "Investments" in the accompanying consolidated balance sheets at December 31, 2022 and 2021. The Company noted no observable price changes or transactions between the date of acquisition and December 31, 2022. The Class B Units are perpetual non-convertible, non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends.

Investments Related to Lifepoint Forward Innovation Strategy

In connection with the Lifepoint Forward innovation strategy, the Company made investments of cash and contributions of existing investments and securities into certain unconsolidated but affiliated entities owned by the Company, Parent, ScionHealth and other affiliated entities (collectively, "Forward Health Ventures"). Forward Health Ventures, in turn, makes targeted and strategic investments in new and existing early-stage enterprises primarily focused on developing meaningful solutions to enhance quality, increase access to care, and improve value across our enterprise, including a significant focus on digital health capabilities that span the healthcare continuum. In exchange for the Company's investments of cash and contributions of existing investments and securities, Forward Health Ventures has issued to Lifepoint noncontrolling equity interests and perpetual cumulative preferred instruments. At December 31, 2022 and 2021, in the aggregate, the Company's cost method investment in Forward Health Ventures totaled $53 million and $31 million, respectively. In addition to the cost method investment in Forward Health Ventures, the Company also entered into management and administrative services arrangements with Forward Health Ventures and commercial arrangements with certain underlying early-stage enterprises, including pilot and services agreements and a revolving credit facility that the Company provides to one of these enterprises. The revolving credit facility provides for loans up to approximately $8 million, has a 5-year maturity (or earlier upon our demand) and bears interest at 9.00%. At December 31, 2022, $6 million was drawn and outstanding.

Notes Receivable

On March 10, 2022, certain of the Company's subsidiaries invested approximately $47 million for an aggregate $50 million principal amount of ScionHealth's senior secured term loan (the "Term Loan Note Receivable"). The Term Loan Note Receivable matures on December 23, 2028 and bears interest at a rate equal to, at ScionHealth's option, (a) a eurocurrency rate plus an applicable margin of 5.25% or (b) a base rate plus an applicable margin of 4.25%. The Company has accounted for the Term Loan Note Receivable in accordance with ASC 310, "Receivables". At December 31, 2022, the Term Loan Note Receivable had a carrying value of approximately $46 million and is included under the caption "Other long-term assets" on the Company's accompanying consolidated balance sheet.

Note 9. Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to a parent. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues and expenses of consolidated subsidiaries at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes the portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company as a separate component within equity and earnings.

The following table presents the changes in the Company's noncontrolling interests during the years ended December 31, 2022 and 2021 (in millions):

Balance at January 1, 2021	$	32
Net income attributable to noncontrolling interests		5
Cash distributions		(3)
Noncontrolling interests recognized in connection with the Kindred Transaction		317
Balance at December 31, 2021		351
Net income attributable to noncontrolling interests		65
Cash distributions, net of contributions		(84)
Finalization of the purchase price allocations for the Kindred Transaction		(24)
Non-cash contributions from joint venture partners		17
Balance at December 31, 2022	$	325

Redeemable Noncontrolling Interests

Certain of the Company's noncontrolling interests include redemption features that cause these interests not to meet the requirements for classification as equity in accordance with ASC 480-10-S99-3, "Distinguishing Liabilities from Equity." Redemption features related to these interests could require the Company to deliver cash, if exercised. Accordingly, these redeemable noncontrolling interests are classified in the mezzanine section of the Company's accompanying consolidated balance sheets under the caption "Redeemable noncontrolling interests." Changes in the fair value of the Company's redeemable noncontrolling interests are recognized as adjustments to consolidated stockholders' equity.

The following table presents the changes in the Company's redeemable noncontrolling interests during the years ended December 31, 2022 and 2021 (in millions):

Balance at January 1, 2021	$	181
Net income attributable to redeemable noncontrolling interests		4
Distributions and repurchases		(23)
Redeemable noncontrolling interests transferred in connection with the Kindred Transaction		(23)
Balance at December 31, 2021		139
Net income attributable to redeemable noncontrolling interests		1
Sale of redeemable noncontrolling interest units		5
Distributions and repurchases		(5)
Fair value adjustments		3
Balance at December 31, 2022	$	143

Note 10. Fair Value of Financial Instruments

Fair Value Hierarchy

Fair value is a market-based measurement, not an entity-specific measurement. Therefore, a fair value measurement should be determined based on the assumptions that market participants would use in pricing the asset or liability. As a basis for considering market participant assumptions in fair value measurements, the Company utilizes the fair value hierarchy pursuant to ASC 820, "Fair Value Measurements and Disclosures" ("ASC 820") that distinguishes between market participant assumptions based on market data obtained from sources independent of the reporting entity (observable inputs that are classified within Levels 1 and 2 of the hierarchy) and the reporting entity's own assumption about market participant assumptions (unobservable inputs classified within Level 3 of the hierarchy).

The inputs used to measure fair value are classified into the following fair value hierarchy:

Level 1: Quoted market prices in active markets for identical assets or liabilities.
Level 2: Observable market-based inputs or unobservable inputs that are corroborated by market data.
Level 3: Unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Level 3 includes values determined using pricing models, discounted cash flow methodologies, or similar techniques reflecting the Company's own assumptions.

In instances where the determination of the fair value hierarchy measurement is based on inputs from different levels of the fair value hierarchy, the level in the fair value hierarchy within which the entire fair value measurement falls is based on the lowest level input that is significant to the fair value measurement in its entirety. The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment of factors specific to the asset or liability.

Cash and Cash Equivalents, Accounts Receivable, Accounts Payable and Other Current Liabilities

The carrying amounts reported in the accompanying consolidated balance sheets for cash and cash equivalents, accounts receivable, accounts payable and other current liabilities approximate fair value because of the short-term nature of these instruments.

Long-Term Debt

The carrying amounts and fair values of the Company's ABL Facility, Term Loan Facility, 6.75% Secured Notes, 4.375% Secured Notes, 9.75% Unsecured Notes and 5.375% Unsecured Notes, excluding unamortized debt issuance costs, as of December 31, 2022 and December 31, 2021 were as follows (in millions):

	Carrying Amount		Fair Value	
	December 31, 2022	December 31, 2021	December 31, 2022	December 31, 2021
ABL Facility	$ -	$ -	$ -	$ -
Term Loan Facility	$ 3,215	$ 3,215	$ 3,014	$ 3,211
6.75% Secured Notes	$ 600	$ 600	$ 563	$ 626
4.375% Secured Notes	$ 600	$ 600	$ 506	$ 603
9.75% Unsecured Notes	$ 1,270	$ 1,425	$ 1,024	$ 1,500
5.375% Unsecured Notes	$ 500	$ 500	$ 281	$ 493

The fair values of the Company's long-term debt instruments were estimated based on the average bid and ask price as determined using published rates and categorized as Level 2 within the fair value hierarchy in accordance with ASC 820.

Interest Rate Swap

The Company measured its Interest Rate Swap at fair value on a recurring basis. The fair value of the Company's Interest Rate Swap is based on quotes from its counterparty. The Company considers those inputs to be Level 2 in the fair value hierarchy. At December 31, 2021 the fair value of the Company's Interest Rate Swap was a total liability of $4 million. At December 31, 2021, the total liability is included under the caption "Other current liabilities" in the Company's accompanying consolidated balance sheet.

The Company has not designated its Interest Rate Swap as a cash flow hedge in accordance with ASC 815, "Derivatives and Hedging." Accordingly, all changes in the fair value of the Company's Interest Rate Swap were recognized through interest expense in its statements of operations. The Company recognized non-cash interest income of $4 million and $27 million during the years ended December 31, 2022 and 2021, respectively, compared to non-cash interest expense of $7 million during the year ended December 31, 2020 related to changes in the fair value of its Interest Rate Swap. The Interest Rate Swap terminated on February 19, 2022.

Financial Liabilities

The Company has a contingent consideration liability payable to the former owners of Canyon Vista Medical Center ("Canyon Vista") that represents the Level 3 estimated fair value of the contingent consideration using unobservable inputs and assumptions available to the Company. The key assumptions used in estimating the fair value of the Canyon Vista contingent consideration liability are the range of probabilities that the payments will be earned by the seller and a discount rate adjusted for the Company's credit risk.

At December 31, 2022 and 2021, the Canyon Vista contingent consideration liability was recorded at an estimated fair value of $12 million and $19 million, respectively, of which $1 million and $2 million is included under the caption "Other current liabilities" at December 31, 2022 and 2021, respectively, and $11 million and $17 million, respectively, is included under the caption "Other long-term liabilities" in the Company's accompanying consolidated balance sheets. For the years ended December 31, 2022 and 2020, the Company recognized a non-cash gain and non-cash charge of $4 million and $5 million, respectively, related to the change in the estimated fair value of the Canyon Vista contingent consideration liability, which is included under the caption "Other non-operating losses, net" on the accompanying consolidated statement of operations.

Note 11. Employee Benefit Plans

Defined Benefit Pension Plans

The Company maintains certain assets and assumed certain liabilities associated with two separate defined benefit pension plans (i) associated with certain employees of Marquette General Hospital covered by a collective bargaining agreement (the "Marquette Pension Plan") and (ii) associated with certain non-union employees of Bell Hospital (the "Bell Pension Plan" and, collectively with the Marquette Pension Plan, the "Pension Plans"). Both Pension Plans are closed to new participants. Participants in the Marquette Pension Plan are required to make annual contributions totaling 6% of annual compensation to the Marquette Pension Plan to continue accruing benefits. Participants in the Bell Pension Plan no longer accrue benefits. The Company makes contributions to the Pension Plans sufficient to meet its minimum funding requirements as prescribed by the Employee Retirement Income Security Act of 1974, as amended.

Status and Expense

The following table presents the changes in the benefit obligations and plan assets of the Pension Plans during the years ended December 31, 2022 and 2021 and the unfunded liability of the Pension Plans at December 31, 2022 and 2021 (in millions):

	2022	2021
Change in benefit obligations:		
Benefit obligations at beginning of year	$ 73	$ 77
Service costs	1	1
Interest costs	2	2
Actuarial gains	(19)	(4)
Benefits paid	(2)	(3)
Benefit obligations at end of year	55	73
Change in plan assets:		
Fair value of plan assets at beginning of year	59	54
Actual (loss) return on plan assets	(11)	5
Employer contributions	1	2
Benefits and expenses paid	(2)	(2)
Fair value of plan assets at end of year	47	59
Unfunded pension benefit obligations	$ 8	$ 14

The Company recognizes changes in the funded status of the Pension Plans as a direct increase or decrease to stockholders' equity through accumulated other comprehensive income (loss). For the years ended December 31, 2022 and 2021, the Company recognized comprehensive gains of $4 million and $6 million, respectively, as an increase in equity. These adjustments were primarily related to changes in the Company's unfunded pension liability due to changes in the discount rates and mortality assumptions used to measure the projected benefit obligation.

The following table summarizes the weighted-average assumptions used by the Company to determine its benefit obligations as of December 31, 2022 and 2021 (in millions):

	2022	2021
Discount rate	5.1 %	2.8 %
Rate of compensation increases, when applicable	3.0 %	3.0 %

Plan Assets

At December 31, 2022, the Pension Plans' investments include a balance of mutual funds and money market funds in order to achieve an overall rate of return that minimizes the need for additional employer contributions. The Company measures the fair value of its Pension Plans' assets in accordance with ASC 820. The Pension Plans' investments in mutual funds are valued at the net asset value ("NAV") of shares reported in the active market in which the funds are traded. Because quoted prices are available for mutual funds and the markets in which they are traded are generally considered active, the Company has classified each of them as a Level 1 investment. The Pension Plans' investments in money market funds are valued at quoted prices in markets that are not active by a combination of inputs, including but not limited to dealer quotes who are market makers in the underlying funds and other directly and indirectly observable inputs. Because the inputs used to value money market funds are either directly or indirectly observable, but are not quoted prices in active markets, the Company has classified these assets as Level 2 investments. The Pension Plans' investments in pooled, common and collective funds are valued at the NAV of shares owned based on the readily determinable quoted market price that each fund publishes at the end of each day. While the underlying assets are actively traded on an exchange, the pooled, common and collective funds are not and, therefore, the Company has classified these assets as Level 2 investments.

The following table summarizes the assets of the Pension Plans, measured at fair value as of December 31, 2022 and 2021, by major asset category and aggregated by level within the fair value hierarchy (in millions):

	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
December 31, 2022:				
Mutual funds	$ 32	32	-	-
Money market funds	1	-	1	-
Pooled, Common and Collective Funds	14	-	14	-
Total	$ 47	$ 32	$ 15	$ -
December 31, 2021:				
Mutual funds	$ 39	$ 39	-	-
Money market funds	2	-	2	-
Pooled, Common and Collective Funds	18	-	18	-
Total	$ 59	$ 39	$ 20	$ -

The Company does not expect to contribute to the Pension Plans during the year ended December 31, 2023. Additionally, the Company expects to make future benefit payments from the Pension Plans as follows for the years indicated (in millions):

2023	$ 3
2024	3
2025	3
2026	3
2027	4
Five years thereafter	19
	$ 35

Multiemployer Pension Plan

The Company has the obligation to contribute to a multiemployer pension plan on behalf of certain employees covered by collective bargaining agreements, in accordance with the terms of such collective bargaining agreements. The Company's contributions to the multiemployer pension plan are determined based on the terms of the applicable collective bargaining agreements. Multiemployer plans are different from single-employer plans because assets contributed to the multiemployer plan by one employer may be used to provide benefits to employees of other participating employers. Also, if a participating employer stops contributing to the plan, the unfunded obligations of the plan may be borne by the remaining participating employers. If the Company stops participating in the multiemployer plan, the Company may be required to pay a withdrawal liability based on its portion of the unfunded status of the plan. Currently, the Company does not anticipate ending its participation in this plan.

Defined Contribution Plans

During the year ended December 31, 2022, the Company maintained a defined contribution retirement plan covering a majority of its employees. This defined contribution plans contains discretionary matching contribution formulas and definite non-elective contribution formulas for employees at certain facilities. The Company's expense related to its defined contribution plans was $28 million, $30 million and $31 million for the years ended December 31, 2022, 2021 and 2020, respectively.

Deferred Compensation Plans

The Company maintains supplemental deferred compensation plans with respect to certain of its employees and affiliated physicians. As of December 31, 2022 and 2021, the assets associated with these deferred compensation plans were $45 million and $64 million, respectively, and the liabilities were $56 million and $68 million, respectively. These amounts are included under the captions "Other long-term assets" and "Other long-term liabilities", respectively, on the accompanying consolidated balance sheets at December 31, 2022 and 2021.

Note 12. Stock-Based Compensation

The Parent is authorized to issue profits units (the "Units") to employees, executives, directors, and other service providers of the Company, under the terms and conditions of the Parent Partnership Agreement. The Company has determined that the Units are a substantive class of members' equity for accounting purposes because the Units are legal equity of the Parent, they have participation features, including distribution and liquidation rights, which allow them to participate in the residual returns of the Parent and vested interests are retained upon termination, subject to certain repurchase rights. As a result, these awards are accounted for under ASC 718, "Compensation – Stock Compensation" ("ASC 718").

In June 2021, certain affiliates of the Parent completed the sale of the Parent, including the Company and its subsidiaries, to other affiliates of the Parent (the "Parent Transaction"). Following the Parent Transaction, the Company continues to be owned by affiliates of the Parent and the transaction had no business or operational impact on the Company. However, in connection with the Parent Transaction, all unvested and outstanding Units held by certain current employees, executives, and directors of the Company became vested. The Company has accounted for this event as a modification in accordance with ASC 718 and recognized additional stock-based compensation expense of $112 million during the nine months ended September 30, 2021 related to the modification and accelerated vesting of such Units. Additionally, for the nine months ended September 30, 2021, the Company made cash distributions to the Parent of $93 million to partially fund the Parent's repurchase of certain previously issued Units and capital units, primarily held by certain former employees, as well as certain current employees, executives, and directors of the Company.

Following the Parent Transaction, on June 25, 2021, an aggregate of 20,775,000 Units were granted to certain executives and employees of the Company under the Parent Partnership Agreement and a newly adopted equity incentive plan and an additional 1,000,000 Units were granted on September 28, 2021. Approximately 2,800,000 units were granted in 2022 to certain executives, directors, and certain of our employees and our affiliates' employees.

Service Units

Service Units have been granted to certain members of the board of directors and Tranche A Units have been granted to certain of our employees and executives and certain of our affiliates' employees. Units that have been granted to members of the board of directors vest on a time-basis only, on the date that is the earliest of (i) six months and one day following grant date or (ii) the date of the applicable director's termination of service due to death, disability or as a result of the director's removal from the board of directors other than for cause. Tranche A Units granted to certain employees and executives vest in equal installments on the last day of each of the first twenty calendar quarters that commence on or after the grant date. Service Units and Tranche A Units will automatically vest upon the sale of the Company. In the event of an initial public offering, all unvested Service Units and Tranche A Units will remain outstanding and continue to vest based on the stated vesting pattern. Unvested Service Units and Tranche A Units are forfeited upon a holder's termination of service.

Service Units and Tranche A Units are accounted for as equity awards and related compensation expense is recognized ratably over the vesting period. As of December 31, 2022, Service Units had unrecognized compensation expense of $17 million. The expense is expected to be recognized over a weighted-average period of 1.9 years from December 31, 2022.

Performance Units

Performance Units, which have been granted as Tranche B Units and Tranche C Units, will vest based upon equity holders of the Parent realizing certain targeted multiples of invested capital ("MOIC thresholds"). Performance Units are accounted for as equity awards with expense recognition occurring upon the realization of the stated MOIC thresholds due to a liquidity event. Unvested Units that do not vest on termination are forfeited upon such termination, subject to certain conditions.

The following table summarizes the Company's total stock-based compensation expense for the years ended December 31, 2022, 2021 and 2020 (in millions):

	2022	2021	2020
Service Units	$ 5	$ 30	$ 2
Performance Units	-	87	-
	5	117	2
Modification expense for awards classified as a liability	-	-	3
Total stock-based compensation expense	$ 5	$ 117	$ 5

Valuation Assumptions

The fair value of all Units was determined using a Monte Carlo simulation framework. The following table shows the weighted average assumptions used by the Company to develop the fair value estimates and the resulting estimates of weighted-average fair value per Unit granted during the years ended December 31, 2022, 2021 and 2020:

	2022	2021	2020
Common equity value of the Company (in millions)	$ 3,600	$ 3,600	$ 1,999
Expected volatility	63.1 %	63.1 %	48.0 %
Risk-free interest rate	0.92 %	0.92 %	0.60 %
Expected dividends	-	-	-
Average expected term (years)	5.0	5.0	3.7

Units Activity

The following represents the activity of the Units for the years ended December 31, 2022, 2021 and 2020:

	Service Units		Performance Units			
	Tranche A and Units to the Board	Weighted Average Grant Date Fair Value per Unit	Tranche B	Weighted Average Grant Date Fair Value per Unit	Tranche C	Weighted Average Grant Date Fair Value per Unit
Unvested at January 1, 2020	6,727,380	$ 1.19	10,315,890	$ 0.68	5,607,945	$ 0.53
Granted	2,197,487	1.08	2,103,320	1.08	1,051,660	1.08
Vested	(2,217,947)	1.10	-	-	-	-
Forfeited	(75,100)	1.19	(110,000)	0.74	(55,000)	0.60
Unvested at December 31, 2020	6,631,820	1.19	12,309,210	0.75	6,604,605	0.61
Granted	7,329,723	3.51	7,258,331	2.39	7,258,316	2.04
Vested	(7,381,809)	1.41	(12,221,590)	0.75	(6,560,795)	0.61
Forfeited	(30,529)	1.18	(87,620)	0.58	(43,810)	0.38
Unvested at December 31, 2021	6,549,205	3.53	7,258,331	2.39	7,258,316	2.04
Granted	971,400	3.53	916,667	2.39	916,672	2.04
Vested	(1,504,327)	3.53	-	2.39	-	2.04
Forfeited	(953,753)	3.53	(1,118,333)	2.39	(1,118,330)	2.04
Unvested at December 31, 2022	5,062,525	$ 3.53	7,056,665	$ 2.39	7,056,658	$ 2.04

Note 13. Commitments and Contingencies

Capital Expenditure Commitments

The Company is reconfiguring some of its facilities to more effectively accommodate patient services and to provide for a greater variety of services. The Company has incurred approximately $148 million in costs related to uncompleted projects as of December 31, 2022, which is included under the caption “Property and equipment, at cost” in the Company’s accompanying consolidated balance sheet. At December 31, 2022, these uncompleted projects had an estimated cost to complete of approximately $163 million. The estimated timeframe for completion of these projects generally ranges from less than one year up to two years. Additionally, the Company is subject to annual capital expenditure commitments in connection with several of its facilities. At December 31, 2022, the Company estimated its total remaining capital expenditure commitments to be approximately $573 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues at the applicable facility.

Legal Proceedings and General Liability Claims

Healthcare facilities, including the Company and its facilities, are, from time to time, subject to claims and suits arising in the ordinary course of business, including claims for damages for personal injuries, medical malpractice, breach of contracts, wrongful restriction of or interference with physicians’ staff privileges and employment related claims. In certain of these actions, plaintiffs request payment for damages, including punitive damages that may not be covered by insurance.

In addition, the Company is subject to the regulation and oversight of various state and federal governmental agencies. Further, under the False Claims Act, private parties have the right to bring qui tam, or “whistleblower,” suits against healthcare facilities that submit false claims for payments to, or improperly retain identified overpayments from, governmental payers. Some states have adopted similar state whistleblower and false claims provisions. These qui tam or “whistleblower” actions initiated under the civil False Claims Act may be pending but placed under seal by the court to comply with the False Claims Act’s requirements for filing such suits. As a result, they could be proceeding without the Company’s knowledge. If a provider is found to be liable under the False Claims Act, the provider may be required to pay up to three times the actual damages sustained by the government plus substantial civil monetary penalties that are subject to annual adjustment for inflation for each separate false claim.

Although the healthcare industry has seen numerous ongoing investigations related to compliance and billing practices, hospitals, in particular, continue to be a primary enforcement target for the OIG, the Department of Justice ("DOJ") and other governmental agencies and fraud and abuse programs. Certain of the Company's individual facilities have received, and from time to time, other facilities may receive, inquiries or subpoenas from Medicare Administrative Contractors, and federal and state agencies. Any proceedings against the Company may involve potentially substantial amounts as well as the possibility of civil, criminal, or administrative fines, penalties, or other sanctions, which could be material. Settlements of suits involving Medicare and Medicaid issues routinely require both monetary payments as well as corporate integrity agreements. Depending on whether the underlying conduct in these or future inquiries or investigations could be considered systemic, their resolution could have a material adverse effect on the Company's financial position, results of operations and liquidity.

The Company does not control and cannot predict with certainty the progress or final outcome of discussions with government agencies, investigations and legal proceedings against the Company. Therefore, the final amounts paid to resolve such matters, claims and obligations could be material and could materially differ from amounts currently recorded, if any. Any such changes in the Company's estimates or any adverse judgments could materially adversely impact the Company's future results of operations and cash flows.

The Company accrues an estimate for a contingent liability when losses are both probable and reasonably estimable. The Company reviews its accruals each quarter and adjusts them to reflect the impact of developments, advice of legal counsel and other information pertaining to a particular matter.

Note 14. Subsequent Events

In accordance with the provisions of ASC 855, "Subsequent Events," the Company evaluated all material events subsequent to the balance sheet date through March 2, 2023, the date of issuance, for events requiring disclosure or recognition in the Company's consolidated financial statements. There were no subsequent events requiring disclosure or recognition in the Company's consolidated financial statements other than those included elsewhere in the notes to these consolidated financial statements.

TABLE OF CONTENTS

DISCLOSURE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report for the fiscal year ended December 31, 2023 (this "***Report***") contains forward-looking statements that involve risks and uncertainties. Forward-looking statements include any statements that address future results or occurrences. In some cases, you can identify forward-looking statements by terminology such as: "may," "might," "will," "would," "should," "could" or the negatives thereof. Generally, the words "anticipate," "believe," "continue," "expect," "intend," "estimate," "project," "plan" and similar expressions identify forward-looking statements. In particular, statements about our expectations, beliefs, plans, objectives, assumptions or future events or performance contained elsewhere in this Report are forward-looking statements. These forward-looking statements include statements that are not historical facts, including statements concerning our possible or assumed future actions and business strategies. We have based these forward-looking statements on our current expectations, assumptions, estimates and projections. While we believe these expectations, assumptions, estimates and projections are reasonable, such forward-looking statements are only predictions and involve known and unknown risks, uncertainties and other factors, many of which are outside of our control, which could cause our actual results, performance or achievements to differ materially from any results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following:

- changes in industry and general economic trends nationally and regionally in our facilities' markets, including negative macroeconomic conditions, high interest rates, general inflationary pressures, disruptions to global supply networks, geopolitical conflict and an ongoing challenging labor market;
- the potential impact on us of financial and capital market instability and/or disruptions to the banking system due to bank failures and other factors, including any potential impact on our ability to access and or obtain the return of cash and cash equivalents, and/or our ability to access credit, liquidity and capital market sources on acceptable terms or at all;
- uncertainty about the effect that recent acquisitions or joint ventures may have on our business, financial condition, results of operations, employees, patients, local communities, business relationships and other parties, and the possibility that the anticipated benefits from recent acquisitions or joint ventures will not be realized within the timeframe expected or at all;
- uncertainty about the effect that integrating acquired facilities, including the effect that our expansion and diversification into new services and segments may continue to have on our employees, patients, local communities, business relationships and other parties;
- our ability to execute our acquisition strategy, including acquisitions of facilities on favorable terms, capital improvements to acquired facilities, and healthcare delivery network diversification;
- our ability to successfully complete asset sales and divestitures on favorable terms;
- the potential for material obligations if we acquire facilities with unknown or contingent liabilities;
- the decline of future patient volumes and related revenues, including shifts from in-person patient services to telehealth services;
- supply shortages, workforce disruptions or shortages and increased costs of providing care to our patients, including increased equipment, staffing and supply expenses;
- the emergence of, and effects related to, pandemics, epidemics and highly contagious infectious diseases, including the impact of any developments related to novel coronavirus ("***COVID-19***") on our business, financial condition, results of operations or cash flow;
- payment changes, including policy considerations and changes resulting from federal and state budgetary restrictions as a result of reductions in government spending, government shutdowns or otherwise;
- impact from or likelihood of the repeal of, or material modification to, the Patient Protection and Affordable Care Act, as amended by the Health Care and Education Reconciliation Act of 2010 (collectively, the "***Affordable Care Act***"), as a result of court or legislative action;
- impact from changes to or limitations on Medicaid supplemental payment programs;
- our compliance with new and existing laws and regulations, as well as costs and benefits associated with compliance;
- any potential action brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the "qui tam" or "whistleblower" provisions of the federal False Claims Act (the "***False Claims Act***");
- impact from the changes in payer mix marked by a shift of patients from private insurance to Medicare and Medicaid programs;
- claims and legal actions relating to professional liabilities and other litigation risks;
- delayed payments and repayments resulting from reviews of claims to Medicare and Medicaid for our services;
- impact of controls imposed by payers designed to reduce inpatient services;
- risks associated with outsourcing functions to third parties;
- our relationships with our joint venture partners;
- changes in physician employment regulations;
- increases in the amount and risk of collectability of patient accounts receivable, particularly in connection with the increasing number of underinsured and uninsured patients;
- our need to make investments continually in our processes and information systems to protect the privacy of patients, employees and other persons and reduce the risk of successful cybersecurity attacks;
- damage to our reputation, regulatory penalties, legal claims and liability under state and federal laws that we could suffer upon any cybersecurity or privacy breaches;
- our ability to adapt to changes in medical and other technology;

- potential increased expenses and uncertainties related to anticipated capital expenditures, including routine projects, investments in information systems and capital projects related to acquisitions, construction of new facilities and construction projects and the expectation that capital commitments could be a component of future acquisitions;
- effects of competition in a facility's market and in the healthcare industry generally;
- recruitment and retention of senior executives, qualified management, experienced physicians and nurses, and other healthcare professionals;
- effects of union organizing activities;
- potential recoupment of previously recognized income from electronic health record ("***EHR***") incentive programs;
- changes or delays in timeframes for completion of capital projects;
- changes in depreciation and amortization expenses;
- accounting estimates and the impact of accounting methodologies and new accounting pronouncements;
- consolidation of commercial insurance companies and patient shifts to lower cost healthcare plans, including association health plans and short-term limited duration health insurance plans, which generally provide lower payment for services rendered;
- participation in the healthcare insurance exchanges (the "***Exchanges***") and the impact of increasing enrollment by patients in insurance plans with narrow networks, tiered networks, high deductibles or high co-payments;
- governmental or third-party investigations, legal actions and voluntary self-disclosures relating to overpayments or other regulatory compliance matters;
- the ability of our local management teams to identify and meet the needs of our patients, medical staffs and their communities;
- the efforts of insurers, healthcare providers and others to contain healthcare costs;
- our ability to obtain adequate levels of general and professional liability insurance;
- the impact of climate change, extreme weather conditions, natural disasters such as hurricanes and earthquakes, hostilities or acts of terrorism and other criminal activities;
- our ability to implement initiatives promoting cost reductions and operational efficiencies;
- the impact of our existing indebtedness and possible refinancing or future indebtedness that may be incurred; and
- other factors referenced under the caption "Risk Factors" in this Report.

Given these uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements. We disclaim any obligation to update any such factors or to announce the result of any revisions to any of the forward-looking statements contained herein to reflect future results, events or developments.

Statements in this Report are made as of the date hereof unless stated otherwise. New factors emerge from time to time, and it is not possible to predict all such factors.

EXPLANATORY INFORMATION REGARDING THIS REPORT

This Report has been prepared in accordance with the obligations of the Company (as defined in this Report) under (i) Section 4.02 of each of the Indentures (collectively, the "***Indentures***") among the Company, as issuer, each of the subsidiary guarantors party thereto and Wilmington Trust, National Association, as trustee ("***Wilmington Trust***"): (A) dated as of February 13, 2020 relating to the Company's 4.375% Senior Secured Notes due 2027 (the "***4.375% Secured Notes***," and such Indenture, as amended or supplemented from time to time, the "***4.375% Secured Notes Indenture***"); (B) dated as of August 14, 2023 relating to the Company's 9.875% Senior Secured Notes due 2030 (the "***9.875% Secured Notes***," and such Indenture, as amended or supplemented from time to time, the "***9.875% Secured Notes Indenture***"); (C) dated as of October 10, 2023 relating to the Company's 11.00% Senior Secured Notes due 2030 (the "***11.0% Secured Notes***," and such Indenture, as amended or supplemented from time to time, the "***11.0% Secured Notes Indenture"***); (D) dated as of November 16, 2018 relating to the Company's 9.750% Senior Notes due 2026 (the "***9.75% Unsecured Notes***," and such Indenture, as amended or supplemented from time to time, the "***9.75% Unsecured Notes Indenture***"); and (E) dated as of December 4, 2020 relating to the Company's 5.375% Senior Notes due 2029 (the "***5.375% Unsecured Notes***," and together with the 4.375% Secured Notes, the 9.875% Secured Notes, the 11.0% Secured Notes, and the 9.75% Unsecured Notes, the "***Notes***" and such Indenture, as amended or supplemented from time to time, the "***5.375% Unsecured Notes Indenture***,"); (ii) Section 5.04 of the Asset-Based Revolving Credit Agreement, dated as of November 16, 2018 (as amended or supplemented from time to time, the "***ABL Agreement***" and the revolving facility provided thereunder, as amended, amended and restated, supplemented or otherwise modified from time to time, the "***ABL Facility***"), among the Company, as lead borrower, DSB Acquisition LLC, a Delaware limited liability company ("***Holdings***"), the lenders party thereto from time to time and Citibank, N.A., as administrative agent and collateral agent; and (iii) Section 5.04 of the Amended and Restated First Lien Credit Agreement, dated as of November 16, 2018 (as amended, or supplemented from time to time, the "***Term Loan Agreement***", the term loan facility provided thereunder, the "***Term Loan Facility***," and the Term Loan Agreement together with the ABL Agreement, the "***Credit Agreements***"), among the Company, as lead borrower, Holdings, the lenders party thereto and Citibank, N.A., as administrative agent and collateral agent. This Report has been prepared in all material respects in accordance with the rules and regulations of the Securities and Exchange Commission (the "***SEC***") applicable to an Annual Report on Form 10-K for the fiscal year ended December 31, 2023, except to the extent exceptions, exclusions and other differences in presentation are permitted to be excluded by the Indentures and the Credit Agreements.

USE OF NON-GAAP FINANCIAL INFORMATION

In this Report, we have provided same-facility information for the three months and years ended December 31, 2023 and 2022, and EBITDA and Adjusted EBITDA (each as defined in this Report) for the three months ended December 31, 2023 and 2022 and the twelve months ended December 31, 2023 and September 30, 2023 (collectively, the "***Non-GAAP Measures***") because we believe they provide the holders of our Notes (the "***Holders***") and the lenders under our Credit Agreements ("***Lenders***") with additional information to measure our performance and evaluate our ability to service our indebtedness. We believe that the presentation of Non-GAAP Measures is appropriate to provide additional information to the Holders and Lenders about certain material non-cash items and about unusual items that we do not expect to continue or to continue at the same level in the future as well as other items. Further, we believe the Non-GAAP Measures provide a meaningful measure of operating profitability because we use them for evaluating our business performance and understanding certain significant items.

The Non-GAAP Measures are not presentations made in accordance with United States ("***U.S.***") generally accepted accounting principles ("***GAAP***"), and our Non-GAAP Measures may not be comparable to similarly titled measures of other companies because such measures may include or exclude other specified items. The Non-GAAP Measures should not be considered as alternatives to operating income or any other performance measures derived in accordance with GAAP as measures of operating performance or cash flows as measures of liquidity. The Non-GAAP Measures have important limitations as analytical tools, and you should not consider them in isolation or as substitutes for analysis of our results as reported under GAAP. Because of these limitations, we rely primarily on our GAAP results and use the Non-GAAP Measures only as a supplement. Refer to Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operations" for a description of the calculation and limitations of these measures.

DOCUMENT SUMMARIES AND REQUESTS

This Report contains summaries believed to be accurate with respect to certain documents, but reference is made to the actual documents for complete information. All such summaries, which do not purport to be complete, are qualified in their entirety by such reference. Copies of the documents referred to herein will be made available without cost to Holders and Lenders by making a written or oral request to us. Any such request may be made to us at the following address and telephone number:

FISCAL YEAR

All references to "fiscal year" are to the twelve months ended December 31 of the year referenced.

OTHER ITEMS

Lifepoint Health, Inc., a Delaware corporation, along with each of its consolidated subsidiaries, is referred to herein as the "***Company***," "***Lifepoint***," "***we***," "***our***," and "***us***," in each case, unless the context otherwise requires.

References in this Report to the "***Sponsor***" refer to certain funds that are affiliates of the Company (the "***Apollo Funds***") that are ultimately controlled and/or managed by certain affiliates of Apollo Management Holdings, L.P. ("***Apollo Management***" and, when acting on behalf of the Apollo Funds, "***Apollo***"), which is an affiliate of Apollo Global Management, Inc.

PART I

Item 1. *Business*.

Our Company

We are a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. We generate revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network, which at December 31, 2023 was comprised of 60 community hospital campuses, 39 inpatient rehabilitation facilities ("***IRFs***"), 23 behavioral health facilities ("***BHFs***") and additional sites of care that include acute rehabilitation units ("***ARUs***"), outpatient centers and post-acute care facilities. As of December 31, 2023, we operated 122 healthcare facilities in 31 states throughout the U.S. with approximately 12,000 licensed beds and approximately 50,000 dedicated employees.

We seek to fulfill our mission of *Making Communities Healthier*® and strive to create places where people choose to come for healthcare, physicians and providers want to practice and employees want to work. Additionally, we are committed to upholding our core values, which are champion patient care; do the right thing; embrace individuality; act with kindness; and make a difference together. Together, our shared mission, vision and values guide our work and unite our employees across our organization.

Our Business Strategy

The key elements of our business strategy include:

- *Commitment to the Delivery of Exceptional Quality Patient Care*. Providing high quality patient care is essential to our mission and will always be our top priority across all business units. We believe our quality efforts are central to creating places where people choose to come for healthcare, physicians and providers want to practice and employees want to work. Our National Quality Program provides a structured, evidence-based approach to enhancing quality and patient safety and is nationally renowned. Several factors contribute to providing high quality patient care, including leadership and accountability at all levels of our organization, aligning ourselves with talented physicians and medical staff who share our commitment to quality, and providing a clinical environment that is satisfactory to our patients, physicians and employees. We continually strive to improve physician and employee satisfaction, which we believe is critical to delivering quality patient care. We also partner with academic medical centers, regional health systems and specialty providers to better serve the needs of our communities. In addition, demonstrating our results in delivering high quality patient care is increasingly vital to achieving our operating and financial success, including with governmental and commercial payers.

- *Continue to Grow in Existing Markets by Expanding Services and Access Points to Care*. We regularly conduct in-depth strategic reviews of the major service lines offered at each of our facilities and evaluate additional services through which we could better serve our communities and grow in our markets. We leverage our market-specific knowledge together with input and guidance from our local physician and community leaders to prioritize the healthcare services our communities are seeking. Focus areas include: expansion of specialty service lines to meet unserved or underserved patient needs; expansion of access points to care, including outpatient, ancillary, retail and virtual health services; and investment in technology and equipment. We invest strategically in our markets in order to increase the quality and scope of services we provide, meet the needs of our communities and maintain our strong reputation as the healthcare provider of choice. This, in turn, helps us to continue recruiting physicians and growing the revenue of our facilities. We are also focused on leveraging our rehabilitation and behavioral health capabilities to bring much-needed services to our existing acute facilities.

- *Continue to Expand Our Rehabilitation and Behavioral Health Joint Venture De Novo Pipeline*. We have a deep pipeline of de novo rehabilitation and behavioral health opportunities in development and under construction through which we expect to drive meaningful growth in new and existing markets across the country over the coming years. With respect to inpatient rehabilitation, as of December 31, 2023, we have 10 facilities under construction, 12 facilities under definitive agreement and 11 facilities with signed letters of intent ("***LOIs***"), or 33 total de novo facilities. With respect to behavioral health, as of December 31, 2023, we have two facilities under construction, four facilities under definitive agreement and 13 facilities with signed LOIs, or 19 total de novo facilities. We can make no assurance that we and/or our joint venture partners will acquire any of the facilities that are currently subject to a LOI or definitive agreement or what the timing of any such acquisition will be. We continue to expand this pipeline, including through opportunistic acquisitions, such as the Everest Operational IRF Transaction (as defined in this Report). We believe growth through this de novo pipeline model is highly attractive, given the limited capital requirements and the alignment of our and our joint venture partners' interests.

- *Continue to Recruit and Retain Leading Physicians and Nurses.* Our physician and nurse engagement strategies drive our ability to enhance and expand our services to meet the healthcare needs of our communities. We have a comprehensive recruiting program that is directed by experienced departments at our Health Support Center ("***HSC***") and is supported at the local level by our hospital system chief executive officers and Boards of Trustees. We supplement our local teams with experienced specialists at our HSC and several third-party recruiting firms to assist us in identifying candidates that match the profile of our needs. We believe our physicians and nurses are attracted to our facilities because of several factors, including our commitment to quality care, our focus on employing and developing high quality support staff, and our integration into, and support of, the communities we serve. In addition, we maintain a flexible approach to aligning our goals with our physician partners, including our willingness to recruit physicians through multi-year employment and/or income guarantee arrangements. During 2023, we recruited 194 net new physicians and advance practice providers to our same-facility acute care hospital communities in primary care and specialty areas, compared to 22 net new physicians in the prior year. Additionally, we increased the number of employed nurses available at the bedside in our same-facility acute care hospital portfolio by 536 nurses during 2023.

- *Continue to Focus on Operational Efficiency*. We strive to improve our operating performance by making our administrative support functions as effective and efficient as possible in order to enable our healthcare providers to focus on patient care. We are currently focused on the implementation of a comprehensive shared services program within our Enterprise Business Services team, further centralizing key nonclinical administrative processes, such as finance, human resources, supply chain and marketing, in order to most effectively and efficiently deploy these services to support healthcare providers in our markets. As part of our comprehensive shared services program, we have invested in an enterprise resource planning ("***ERP***") technology solution. We believe this model is the most cost-effective and efficient approach to managing our non-clinical business functions across multi-facility enterprises. We have begun development and testing of our ERP, which will continue throughout 2024, with deployment expected to begin in waves in 2025.

- *Attracting and Retaining Experienced Executive Management and Leadership Teams.* Our executive management team has an average of more than 20 years of healthcare industry experience with a proven record of achieving strong operating and quality results. The executive management team is highly respected in the healthcare industry and has significant experience in managing and acquiring hospitals. Our executive management team is led by David Dill, who serves as our Chairman and Chief Executive Officer. Mr. Dill has more than 20 years of operational and financial leadership experience in the healthcare industry.

Our Competitive Strengths

We believe the following factors allow us to deliver on our mission and business strategies successfully:

- *Scaled, Diversified Healthcare Platform.* Lifepoint is a scaled, national platform, with more than 300 sites of care spread across 31 states as of December 31, 2023. Our scale enables us to develop and deploy shared national capabilities – across workforce development, physician recruiting, and technology, to name a few – into our markets to improve our local teams' ability to care for their communities. We also see benefits of our scale in our national sourcing and procurement platform. Lifepoint's diversification limits business concentration with any particular state, payer or service line. Lifepoint's five largest states constitute less than 50% of revenue for the year ended December 31, 2023, with the largest state constituting approximately 13% of revenue for the year ended December 31, 2023. Lifepoint's payer mix is diversified, with limited self-pay and minimal reliance on a single state Medicaid program or a single commercial payer. Lifepoint's service line mix is highly complementary, with a focus on high-acuity and complexity, with the largest service line comprising only approximately 30% of revenue for the year ended December 31, 2023. This diversification helps insulate Lifepoint from changes in reimbursement rates or policies related to a particular state, payer or service line.

- *Leading Acute Care Business.* We believe that Lifepoint's acute care business has a strong foundation of high quality and stable markets. Lifepoint has #1 market share in the majority of our acute care markets as of December 31, 2023, and is one of the largest employers and taxpayers in each of our communities. This high community relevance results in strong payer relations and helps facilitate physician and staff recruiting. Beyond our hospital campuses, Lifepoint operates comprehensive healthcare networks in our communities that span the entire continuum of care, including primary care and specialist physician practices, imaging centers, urgent care centers, cancer centers, freestanding emergency departments and ambulatory surgery centers. A critical component of these networks is our physician / employed provider enterprise, which includes approximately 3,000 providers across primary and specialty care. These employed providers and healthcare networks are highly complementary with our core inpatient facilities, supporting volume growth and ultimately, we believe, improving patient outcomes.

- *Established Rehab Business with Differentiated Growth Outlook.* Following the acquisition of Kindred Healthcare, LLC's ("***Kindred***") IRF and ARU portfolio, we are one of the largest providers of inpatient rehabilitation services in the nation as of December 31, 2023, delivering care to those who have experienced a loss of function from an injury or illness. The Health Resources and Services Administration of the U.S. Department of Health and Human Services ("***HHS***") ranked 10 of our IRFs in the top 10% in the nation and Newsweek ranked five of our IRFs as first in their state with regard to quality and outcomes in 2023. We largely operate these facilities as joint ventures with some of the country's largest health systems, including Ascension, Tampa General Hospital and Penn Medicine, among others. Lifepoint has longstanding and strong relationships with these partners, who value our industry-leading clinical performance and rehabilitation expertise. We maintain a deep pipeline of de novo joint venture partnership opportunities intended to bolster our growth, including, as of December 31, 2023, 10 facilities under construction, 12 facilities under definitive agreement and 11 facilities with signed LOIs. We believe our strong track record in de novo joint venture partnerships and the strong value proposition that we bring our partners position us well to continue to expand our rehabilitation services business over the coming years.

- *Growing Behavioral Business.* In our behavioral health business, following the Kindred Transaction and the Springstone Transaction (each as defined in this Report), Lifepoint is now a leading national provider of inpatient behavioral health services as well as various outpatient programs and services. We recognize that there is a widespread and critical need for expanding access to behavioral health services and believe that our platform is well-positioned to bring more of such services to both new communities as well as Lifepoint's existing communities. We believe we are well positioned to grow our behavioral health business given the expertise we have inherited from Springstone (as defined in this Report), as well as our strong track record in our rehabilitation joint venture partnerships with leading health systems that provides a "playbook" for growth in behavioral health as well. As of December 31, 2023, our behavioral health de novo joint venture partnership pipeline includes two facilities under construction, four facilities under definitive agreement and 13 facilities with signed LOIs.

- *Lifepoint Forward Innovation Strategy and AdvantagePoint Clinically Integrated Network.* Through our innovation strategy, Lifepoint Forward, we are developing meaningful solutions leveraging technology to enhance patient care quality, increase access to care, and improve efficiency across the Lifepoint footprint and communities across the country. This includes a significant focus on digital health capabilities that span the healthcare continuum. For example, we have implemented new technologies for on-demand telehealth services, artificial intelligence functionality, online scheduling for in-person and telehealth visits, virtual check-in and waiting room options, remote patient monitoring, data interoperability and advanced analytics of medical records, and computational linguistics designed to identify at-risk patients. We have also augmented our innovation strategy through our venture incubation studio, 25m Health, a partnership with venture capital firm 25madison focused on investing in and incubating growth companies with innovative solutions to help improve care in Lifepoint's markets. Additionally, through our clinically integrated network, AdvantagePoint Health, we provided quality-driven, value-based care to approximately 230,000 patients as of December 31, 2023. AdvantagePoint improves quality by aligning providers across the continuum of care and enhances coordination to ensure delivery of the right care for patients, in the right setting, and with the right resources.

Recent Updates to Our Business

Kindred Transaction

On June 18, 2021, we entered into a securities purchase agreement (the "***Kindred Purchase Agreement***") for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred, a leading specialty hospital company that operated facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. Upon the closing of the Kindred Transaction, as described below, the Company and Kindred established a new healthcare company operating under the name ScionHealth, which is separate from Lifepoint.

On December 23, 2021, the Company, Kentucky Hospital Holdings JV, LP ("***Knight***"), the indirect parent of Kindred, Knight Health Holdings LLC (d/b/a ScionHealth), a Delaware limited liability company and direct parent of Knight ("***ScionHealth***"), and certain of their respective affiliates entered into reorganization agreements that, among other things, provided for (i) the separation of the IRF, behavioral health, contract rehabilitation service and certain support center businesses (collectively, the "***Knight Transferred Business***") from the businesses of Knight and its subsidiaries, (ii) the separation of the equity and assets comprising 18 select acute care hospitals of the Company (the "***Artemis Business***") from the business of the Company and its subsidiaries, (iii) the transfer of the Knight Transferred Business to the Company, (iv) the transfer of the Artemis Business to Knight, (v) the acquisition by the Company of Class B Units of ScionHealth (the "***Class B Units***"), with an aggregate value of $350 million, and (vi) reciprocal indemnification obligations with respect to the businesses transferred, in each case of clauses (i) through (vi), pursuant to the reorganization, separation and distribution steps described therein, including the assignment by Knight Health, LLC, a Delaware limited liability company formed at the direction of certain affiliates of the Company, of certain rights and obligations under the Kindred Purchase Agreement, including any post-closing purchase price adjustments (the "***Reorganization***"). The Class B Units acquired by the Company are perpetual non-convertible non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends.

On December 23, 2021, concurrently with the consummation of the Reorganization, the Kindred Transaction was consummated. Pursuant to the consummation of the Kindred Transaction and the Reorganization, (i) ScionHealth indirectly holds all of the transferred interests in the Artemis Business, (ii) ScionHealth directly holds all of the issued and outstanding limited partnership interests in Knight, (iii) Kentucky Hospital Holdings JV GP LLC, a Delaware limited liability company and direct subsidiary of ScionHealth, holds all of the issued and outstanding general partnership interests in Knight, and (iv) the Company holds all of the transferred interests in the Knight Transferred Business and the Class B Units. We refer to the foregoing transactions as the "***Kindred Transaction***."

Our acquisition of Kindred's inpatient rehabilitation and contract rehabilitation service business (including 28 IRFs with 1,447 beds), behavioral health business (including two BHFs with 96 beds), and certain support center businesses transformed us into a more diversified healthcare platform, well-positioned to advance healthcare delivery in communities across the country.

Rehabilitation Expansion

We have continued to expand our rehabilitation business since closing the Kindred Transaction. During 2023, we acquired five operational IRFs with 180 total beds in Arkansas, Texas, and Ohio from Everest Rehabilitation Hospitals, LLC ("***Everest***") and entered into a definitive agreement to acquire five additional IRFs under development by Everest, which are anticipated to close on a rolling basis beginning in the second quarter of 2024. Further, during the two years ended December 31, 2023, our consolidated joint ventures have opened six de novo IRFs with approximately 300 beds. As of December 31, 2023, our consolidated inpatient rehabilitation operations include 39 IRFs with approximately 1,900 beds across 19 states. For additional information regarding the foregoing transactions, refer to Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Behavioral Health Expansion

On August 26, 2022, we entered into a definitive agreement with (i) entities affiliated with Medical Properties Trust, Inc. ("***MPT***") and (ii) BH EIK Management, LP, a management company owned by certain members of the executive leadership team ("***Springstone Management***") of Springstone Health Opco, LLC ("***Springstone***"), for an affiliate of the Company (the "***Lifepoint Member***") to acquire a majority ownership interest in Springstone from Springstone Management and to acquire a promissory note issued by Springstone to an affiliate of MPT (the "***Springstone Transaction***"). Springstone was a national behavioral health provider with 18 BHFs and 37 outpatient locations across nine states. Pursuant to the Springstone Transaction, MPT will continue to own the majority of Springstone's real estate locations, subject to an amended and restated master lease between affiliates of MPT and Springstone (the "***Springstone Master Lease***"), and an affiliate of MPT ("***MPT DS***") retained a noncontrolling interest in Springstone, subject to a put/call agreement (the "***Put/Call Agreement***"). The Springstone Transaction was consummated on February 7, 2023, upon which certain of our subsidiaries entered into the Springstone Master Lease, and we funded $229 million in cash to complete the transaction. On January 25, 2024, MPT DS delivered to the Lifepoint Member a put option notice pursuant to the Put/Call Agreement, notifying the Lifepoint Member of its exercise of the put right under the Put/Call Agreement. In accordance with the Put/Call Agreement, the Lifepoint Member is obligated to acquire all of the equity interests of Springstone owned by MPT DS. We expect to close on the purchase of MPT DS's equity interest in Springstone during the three months ended March 31, 2024 for a purchase price of approximately $12 million, following which we will own all of the outstanding equity interests of Springstone.

During fiscal 2023, we also acquired from ScionHealth Cornerstone Behavioral Health El Dorado ("***El Dorado***"), a 54-bed BHF located in Tucson, Arizona (the "***El Dorado Transaction***"), and one of our consolidated joint ventures opened Valley Springs Behavioral Health Hospital, a 150-bed BHF located in Holyoke, Massachusetts. Following these acquisitions, as of December 31, 2023, our consolidated behavioral health operations include 23 BHFs with approximately 1,700 beds across ten states. For additional information regarding the foregoing transactions, refer to Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Our Operations

Services

Our acute care business provides a broad range of medical and surgical services across inpatient and outpatient settings, including general surgery, internal medicine, diagnostic care, cardiology, radiology, oncology, orthopedics, women's services, neurology, rehabilitation services, pediatric services and emergency services. In some of our health systems, we offer specialized services such as open-heart surgery, skilled nursing, psychiatric care and neurosurgery. In many markets, we also provide outpatient services such as same day surgery, laboratory, x-ray, respiratory therapy, imaging, sports medicine and lithotripsy. Lifepoint's acute health systems provide care through a number of different touchpoints in our local markets, including hospitals, ambulatory surgery centers, urgent care centers, freestanding emergency rooms, and physician practices. Our acute health systems play a critical role in our communities, oftentimes serving as the main provider of healthcare and the largest employer in our communities.

Our rehabilitation business is a leading provider of inpatient rehabilitation services to those who have experienced a loss of function from an injury or illness. These services include physical and occupational therapy, rehabilitation nursing, speech-language pathology, internal medicine and medical subspeciality consultation, and nutritional services. This care is provided in our IRFs and ARUs in partnership with some of the nation's largest health systems.

Our behavioral health business provides inpatient behavioral health care in freestanding specialty hospitals as well as specialized units within community hospitals. We also administer other intensive outpatient programs throughout our footprint.

Management and Oversight

Our executive management team has extensive experience in operating a broad range of general as well as specialized healthcare services across a diversified healthcare delivery network and plays a vital role in the strategic planning for our facilities. Our local acute care hospital management teams are typically comprised of a CEO, chief operating officer, chief financial officer and a chief nursing officer, and our local IRF and BHF management teams are typically comprised of a CEO, controller, and chief nursing officer. Local management teams work with each hospital's Board of Trustees or governing board, and our HSC management teams, to develop annual operating plans setting forth growth strategies through the expansion of current services, implementation of new services and the recruitment and retention of physicians in each community, as well as plans to improve operating efficiencies and reduce costs. We believe that the ability of each of these local management teams to identify and meet the needs of patients, medical staffs and the community as a whole is critical to the success of these facilities. We base the compensation for each local management team in part on its ability to achieve the goals set forth in the annual operating plan, including quality of care, patient satisfaction and financial measures.

The Board of Trustees at each acute care hospital, consisting of local community leaders, members of the medical staff and the facility CEO, advises the local management teams and helps develop the strategic operating plan for their facility. In addition, it plays a key role in providing the patient care excellence that we demand. Members of each Board of Trustees are identified and recommended by our local management teams. The Boards of Trustees oversee policies concerning medical, professional and ethical practices, monitor these practices and ensure that they conform to our high standards. We maintain company-wide compliance and quality assurance programs and use patient care evaluations and other assessment methods to support and monitor quality of care standards and to meet accreditation and regulatory requirements.

The majority of our acute care hospitals have a physician engagement group or a physician leadership group comprised of key physicians and members of the facility's administrative team, and the majority of our IRFs have a similar medical executive committee. The mission of such groups is to provide ongoing dialogue between facility administration and members of the medical staff and community physicians primarily in the areas of operations, quality patient care, employee satisfaction and/or community relations.

We also provide support to the local management teams through our HSC resources in areas such as revenue cycle, business office, legal, managed care, clinical efficiency, physician services and other administrative functions. These resources allow for sharing best practices and standardization of policies and processes among all of our facilities.

Cost Management

We strive to improve our operating performance by making our revenue cycle processes more efficient, making an even higher level of purchases through our group purchasing organization, operating more efficiently and effectively, and working to appropriately standardize our policies, procedures and practices across all of our affiliated facilities. Additionally, we are currently focused on the implementation of a comprehensive shared services program within our Enterprise Business Services team, further centralizing key nonclinical administrative processes, such as finance, human resources, supply chain and marketing, in order to deploy these services to support our healthcare providers across our markets. We have begun development and testing of an ERP technology solution, which will continue throughout 2024, with deployment beginning in waves in 2025. We believe this model is the most cost-effective and efficient approach to managing these nonclinical business functions across multi-facility enterprises.

Attracting Patients

We believe that the most important factors influencing a patient's choice in where to receive healthcare services are the quality of care delivered by the facility, the overall reputation of the facility, the availability and expertise of physicians and nurses, and the location and convenience of the facility. Other factors that affect utilization include local demographics and population growth, local economic conditions and the facility's success in contracting with a wide range of local payers.

Outpatient Services

The healthcare industry continues to experience a shift from inpatient services to outpatient services as Medicare, Medicaid and managed care payers have sought to reduce costs by shifting lower-acuity cases to an outpatient setting. Advances in medical equipment technology and pharmacology also have supported the shift to outpatient utilization. However, we expect the decline in inpatient admission use rates to moderate over the long term as the baby boomer population reaches ages where inpatient admissions become more prevalent. We have responded to the shift to outpatient services through expanding service offerings and increasing the throughput and convenience of our emergency departments, outpatient surgery facilities and other ancillary units in our facilities.

Sources of Revenues

General

Our facilities generate revenues by providing healthcare services to our patients. Depending upon the patient's medical insurance coverage, we are paid for these services by governmental Medicare and Medicaid programs, commercial insurance, including health maintenance organizations ("***HMOs***"), preferred provider organizations ("***PPOs***") and plans offered through the Exchanges, private insurers, and directly by the patient. The amounts we are paid for providing healthcare services to our patients vary depending upon the payer. Governmental payers generally pay significantly less than the hospital's customary charges for the services provided. Insured patients are generally not responsible for any difference between customary hospital charges and the amounts received from commercial insurance payers. However, insured patients are responsible for payments not covered by insurance, such as exclusions, deductibles and co-payments.

Our revenues by payer and approximate percentages of revenues on a consolidated basis were as follows for the years ended December 31, 2023, 2022 and 2021:

	2023	2022	2021
	% of Revenues	% of Revenues	% of Revenues
Medicare	37.4 %	40.1 %	37.7 %
Medicaid	19.1	16.8	18.4
HMOs, PPOs and other private insurers	37.9	37.1	41.3
Self-pay	0.7	0.7	0.6
Other (a)	4.7	5.1	1.8
Revenue from contracts with customers	99.8	99.8	99.8
Rental income	0.2	0.2	0.2
Revenues	100.0 %	100.0 %	100.0 %

(a) Includes revenues from managed ARUs and ancillary goods and services.

Medicare

For the year ended December 31, 2023, approximately 37.4% of our revenues related to patients participating in the Medicare program. Medicare provides hospital and medical insurance benefits, regardless of income, to persons aged 65 and over, some disabled persons and persons with end-stage renal or Lou Gehrig's disease. All of our hospitals are currently certified as providers of Medicare services.

Over the years, the U.S. Congress ("***Congress***") and the Centers for Medicare and Medicaid Services ("***CMS***") have made several sweeping changes to the Medicare program and its reimbursement methodologies, including the numerous changes contained in the Affordable Care Act. Many of these changes have resulted in decreased reimbursement to healthcare providers. In addition, the Budget Control Act of 2011, which is intended to reduce the federal deficit, included, among other things, aggregate reduction of Medicare payments to providers that will remain in effect through 2032, with the exception of a temporary suspension from May 1, 2020 through March 31, 2022, unless additional action is taken by Congress. In addition, the American Rescue Plan Act of 2021 ("***ARP***") increased the federal budget deficit in a manner that triggers an additional sequestration mandated under the Pay As You Go Act of 2010; however, Congress has delayed implementation of this payment reduction until 2025. Additional reductions in Medicare reimbursement could result from changes to the Affordable Care Act, or as a result of the enactment of Medicare reform, deficit reduction or other legislation.

Medicare Inpatient Prospective Payment System

Under the Medicare program, hospitals are reimbursed for the costs of acute care inpatient stays under an inpatient prospective payment system (the "***IPPS***"). Under the IPPS, our hospitals are paid a prospectively determined amount for each hospital discharge that is based on the patient's diagnosis. Specifically, each discharge is assigned to a Medicare severity diagnosis related group ("***MS-DRG***"), which groups patients that have similar clinical conditions and that are expected to require a similar amount of hospital resources. Each MS-DRG is, in turn, assigned a relative weight that is prospectively set and that reflects the average amount of resources, as determined on a national basis, that are needed to treat a patient with that particular diagnosis, compared to the amount of hospital resources that are needed to treat the average Medicare inpatient stay. The IPPS payment for each discharge is based on two national base payment rates or standardized amounts, one that covers hospital operating expenses and another that covers hospital capital expenses. The base MS-DRG payment rate for operating expenses has two components, a labor share and a non-labor share. Although the labor share is adjusted by a wage index to reflect geographical differences in the cost of labor, the base MS-DRG payment rate does not consider the actual costs incurred by an individual hospital in providing a particular inpatient service. In addition to IPPS reimbursement, Medicare also makes supplemental payments known as outlier payments to compensate hospitals for cases involving extraordinarily high costs.

The base MS-DRG operating expense payment rate that is used by the Medicare program in the IPPS is adjusted by an update factor each federal fiscal year ("***FFY***"), which begins on October 1 (for example, FFY 2024 began on October 1, 2023). The index used to adjust the base MS-DRG payment rate, which is known as the "hospital market basket index," gives consideration to the inflation experienced by hospitals in purchasing goods and services. For FFYs 2024, 2023, and 2022, the hospital market basket index increased 3.3%, 4.1%, and 2.7%, respectively. Generally, however, the percentage increase in the MS-DRG payment rate has been lower than the projected increase in the cost of goods and services purchased by hospitals. In addition, as mandated by the Affordable Care Act, the market basket increase is reduced by a productivity adjustment equal to the Bureau of Labor Statistics' 10-year moving average of changes in annual economy-wide productivity. For FFYs 2024, 2023, and 2022, the productivity adjustment equated to a 0.2%, 0.3%, and 0.7% reduction in the market basket increase, respectively. As a result of these reductions and other changes implemented by CMS, the MS-DRG-rate increased by 3.1% for FFY 2024. Overall, CMS estimates that total Medicare spending on inpatient hospital services, including operating, capital, and new technology changes, would increase by $2.2 billion in FFY 2024.

CMS has implemented a number of programs and requirements that are intended to promote value-based purchasing and to link payments to quality and efficiency. For example, all acute care hospitals are required to participate in CMS' Hospital Inpatient Quality Reporting Program (the "***IQR Program***") in order to receive the full hospital market basket update. Acute care hospitals that do not participate in the IQR Program receive a 25% reduction in their IPPS annual payment update for the applicable FFY. Our acute care hospitals reported all quality measures required by CMS related to the IQR Program and nearly all will receive the full market basket update through FFY 2024. In addition, hospitals that are not meaningful EHR users are also subject to an additional 75% reduction of the hospital market basket increase.

In addition, the Affordable Care Act requires HHS to implement a value-based purchasing program for inpatient hospital services. This program rewards acute care hospitals based either on how well the hospitals perform on certain quality measures or how much the hospitals' performance improves on certain quality measures from their performance during a baseline period. As part of the program, the Affordable Care Act requires HHS to reduce inpatient hospital payments for all discharges by 2.0% each FFY. HHS pools the amount collected from these reductions to fund payments to reward hospitals that meet and exceed certain quality performance standards established by HHS. Under the program, each hospital's performance is evaluated during a specified performance period, and hospitals receive points on each of a number of pre-determined measures based on the higher of (i) their level of achievement relative to an established standard or (ii) their improvement in performance from their performance during a prior baseline period. Each hospital's combined scores on all the measures are translated into value-based incentive payments. Hospitals that receive higher total performance scores receive higher incentive payments than those that receive lower total performance scores. Because the Affordable Care Act provides that the funds pooled and otherwise set aside for the value-based purchasing program will be fully distributed, hospitals with high scores may receive greater reimbursement under the value-based purchasing program than they would have otherwise, and hospitals with low scores may receive reduced Medicare inpatient hospital payments.

Medicare also does not allow an inpatient hospital discharge to be assigned to a higher paying MS-DRG if certain designated hospital acquired conditions ("***HACs***") were not present on admission and the identified HAC is the only condition resulting in the assignment of the higher paying MS-DRG. In those situations, the case is paid as though the secondary diagnosis was not present. In addition, acute care hospitals that fall into the top 25.0% of national risk-adjusted HAC rates for all hospitals in the previous year receive a 1.0% reduction in their total Medicare payments.

Furthermore, inpatient payments are reduced pursuant to the Affordable Care Act if an acute care hospital experiences "excessive readmissions" within a 30-day period of discharge for certain conditions designated by CMS including heart attack, chronic obstructive pulmonary disease, heart failure, pneumonia, coronary artery bypass, and total hip arthroplasty. Hospitals with what HHS defines as "excessive readmissions" for these conditions will receive reduced payments for all inpatient discharges, not just discharges relating to the conditions subject to the excessive readmission standard. Each hospital's performance is publicly reported by HHS. HHS has the discretion to determine what "excessive readmissions" means, the amount of the payment reduction and other terms and conditions of this program. The basic maximum payment reduction amount is 3.0%. The 21st Century Cures Act (the "***Cures Act***") does, however, allow for an adjustment factor that would reduce the penalties imposed on hospitals, based on the portion of beneficiaries the hospitals serve that are eligible for both Medicare and Medicaid.

In response to the COVID-19 public health emergency, CMS announced that it would temporarily suppress, or not use, certain acute care hospital performance data that has been affected by COVID-19 in any of its hospital quality measurement and payment programs. In addition, for FFY 2023, all acute care hospitals received a neutral adjustment under the Medicare value-based purchasing program that is equal to the 2.0% that is withheld under the program.

Medicare Hospital Outpatient Prospective Payment System and Other Outpatient Services

CMS reimburses hospital outpatient services under the Medicare hospital outpatient prospective payment system ("***OPPS***"), and generally uses fee schedules to pay for durable medical equipment and physical, occupational and speech therapy, clinical diagnostic laboratory and independent diagnostic testing facility services. Under the OPPS, hospital outpatient services are classified into groups called ambulatory payment classifications ("***APCs***"). Services in each APC are clinically similar and are similar in terms of the resources they require. Depending on the services provided, a hospital may be paid for more than one APC for an encounter. CMS establishes a payment rate for each APC by multiplying the scaled relative weight for the APC by a conversion factor. The payment rate is further adjusted to reflect geographic wage differences. The APC conversion factor for calendar year ("***CY***") 2024 is $87.382 and the APC conversion factors for CYs 2023 and 2022 were $85.585 and $84.177, respectively, after the inclusion of the productivity adjustments and other reductions that were required by the Affordable Care Act. APC classifications and payment rates are reviewed and adjusted on an annual basis, and, historically, the rate of increase in payments for hospital outpatient services has been higher than the rate of increase in payments for inpatient services. To receive the full increase, acute care hospitals must satisfy the reporting requirements of the Hospital Outpatient Quality Reporting Program (the "***OQR Program***"). Hospitals that do not satisfy the reporting requirements of the OQR Program are subject to a reduction of 2.0% in their annual payment update under the OPPS. Our acute care hospitals reported all quality measures required by CMS related to the OQR Program and will receive the full market basket update through CY 2024.

Section 603 of the Bipartisan Budget Act of 2015 limits reimbursement for items and services that are furnished by certain off-campus outpatient provider-based departments ("***off-campus PBDs***") of hospitals. CMS included several provisions implementing Section 603 in the OPPS final rule for CY 2017. Under the final rule, CMS continues to make OPPS payments to off-campus PBDs that were billing Medicare as hospital departments under the OPPS prior to November 2, 2015 ("***grandfathered PBDs***"). However, grandfathered PBDs generally are not able to relocate, and CMS has indicated that it may adopt limitations on the expansion of the service lines provided at grandfathered PBDs in the future. In addition to grandfathered PBDs, CMS continues to reimburse all items and services that are furnished in a "dedicated emergency department" of a hospital, as such term is defined for the purposes of the Emergency Medical Treatment and Active Labor Act ("***EMTALA***"), regardless of whether the items and services are emergency items and services, and all items and services that are furnished in off-campus PBDs that are located within 250 yards of a remote location of a hospital, which is a facility that is either created or acquired by a hospital for the purpose of furnishing inpatient hospital services under the name, ownership, and financial and administrative control of the hospital, under the OPPS. All items and services not provided at a grandfathered or otherwise excepted off-campus PBD are generally paid by CMS under Medicare physician fee schedule ("***PFS***") rates that are approximately 40% of the applicable OPPS rate. In addition, in 2018, CMS issued a final rule that generally reimburses clinic visit services provided at all off-campus PBDs, including grandfathered PBDs, at a reduced Medicare PFS-equivalent payment rate. The payment reduction for clinic visit services provided at off-campus PBDs was to be phased in over a two year period beginning in FFY 2019.

In December 2018, a lawsuit was filed challenging the portion of CMS' final rule that reduced reimbursement for clinic visit services provided at grandfathered PBDs to the lower Medicare PFS-equivalent payment rate. On September 17, 2019, the U.S. District Court for the District of Columbia ruled that the reduction in reimbursement for clinic services provided at grandfathered PBDs exceeded CMS' statutory authority. As a result of the ruling, CMS paid claims for clinic visit services provided at grandfathered PBDs in CY 2019 at the full OPPS payment rate. However, in the OPPS final rule for CY 2020, CMS noted that the court's ruling only applied to clinic visit services provided in CY 2019, and, as a result, CMS moved forward with the planned phase-in of the second year of the clinic visit service payment reduction in CY 2020 while it appealed the court's decision. A new lawsuit was filed on January 13, 2020, challenging the continued phase-in of the reduction for CY 2020. On July 17, 2020, the U.S. Court of Appeals for the District of Columbia reversed the lower court's ruling regarding the CY 2019 reductions and upheld CMS' reimbursement reductions for clinic visit services provided at grandfathered PBDs. The ruling of the U.S. Court of Appeals for the District of Columbia was appealed to the U.S. Supreme Court, but the Supreme Court declined to hear the appeal. CMS has since reprocessed claims for clinic services provided at grandfathered PBDs in CY 2019 at the reduced payment rate. However, in an effort to maintain access to care in rural areas, CMS finalized a policy in its CY 2023 PFS final rule that exempts rural Sole Community Hospitals from its site-neutral payment policy for clinic visit services provided in excepted off-campus PBDs of these hospitals and pays for such clinic visits at the full OPPS payment rate.

In addition to those reimbursement reductions and in furtherance of its efforts to increase site neutrality in Medicare payments, CMS announced in the OPPS final rule for CY 2021 that it would eliminate the Medicare program's inpatient only procedure list over a three-year period, beginning with the removal of approximately 300 primarily musculoskeletal-related procedures, with the list being completely phased out by CY 2024. The elimination of the inpatient only procedure list would have made those procedures eligible to be paid by Medicare in the hospital outpatient setting when outpatient care was appropriate. However, in the OPPS final rule for CY 2022, CMS reversed course and reinstated the Medicare program's inpatient only procedure list. As a result, almost all of the procedures that had been removed from the Medicare inpatient only procedure list for CY 2021 have been added back to the list for CY 2022.

As part of the OPPS final rule for CY 2018, CMS also finalized a change to the payment rate for certain Medicare Part B drugs purchased by qualifying hospitals through the 340B Drug Pricing Program (the "***340B Program***"). The 340B Program allows certain non-profit and governmental hospitals and other healthcare providers to obtain substantial discounts on covered outpatient drugs (prescription drugs and biologics other than vaccines) from drug manufacturers. Under the final rule, CMS pays for separately reimbursable, non-pass through drugs and biologicals (other than vaccines) purchased through the 340B Program at the average sales price ("***ASP***") minus 22.5% rather than ASP plus 6%. CMS estimated that this change reduced Medicare payments for drugs and biologicals by $1.6 billion in CY 2018. To maintain budget neutrality, CMS implemented an offsetting increase in the conversion factor. As a result, OPPS reimbursement rates for non-drug items and services provided by all hospitals, including those not eligible to participate in the 340B Program, were increased in connection with the reduction to 340B Program payments. In the OPPS final rule for CY 2019, CMS expanded the 340B Program payment reductions to drugs that are obtained through the 340B Program and furnished by non-excepted, off-campus PBDs.

In September 2018, a lawsuit was filed challenging the authority of CMS to make the 340B Program payment reductions set forth in the OPPS final rule for CY 2018. On December 27, 2018, the U.S. District Court for the District of Columbia held that the payment reductions exceeded CMS' statutory authority and entered a permanent injunction against the reductions. However, because the 340B Program payment reductions were made in a budget-neutral manner and the savings derived from the reductions were used to increase reimbursement for all of the other items and services provided under the OPPS, the court ordered the parties to submit briefs as to how the issue should be remedied. The lawsuit was subsequently expanded to include the 340B Program payment reductions that were made in CY 2019, and an additional lawsuit has been filed against the 340B Program payment reductions being made by CMS in CY 2020. CMS appealed the District Court's rulings, and, on July 31, 2020, the U.S. Court of Appeals for the District of Columbia reversed the lower court's ruling and upheld CMS' 340B Program payment reductions. The ruling of the U.S. Court of Appeals for the District of Columbia was appealed to the U.S. Supreme Court, and on June 15, 2022, the U.S. Supreme Court unanimously rejected the decision of the U.S. Court of Appeals and held that CMS' 340B Program payment reductions exceeded HHS's statutory authority.

In light of the U.S. Supreme Court's decision, in its CY 2023 OPPS final rule, CMS agreed to increase the payment rate for 340B Program-acquired drugs and biologicals from the ASP minus 22.5% to ASP plus 6%, beginning after September 28, 2022, consistent with its policy for drugs not acquired through the 340B Program. CMS stated that it would implement a -3.09% reduction to the payment rates for non-drug services to achieve budget neutrality for the 340B drug payment rate change for CY 2023. CMS further noted in the CY 2023 OPPS final rule that it would address the remedy for 340B drug payments from 2018 through 2022 in future rulemaking prior to the CY 2024 OPPS proposed rule.

On November 2, 2023, CMS issued a final rule outlining its remedy for the 340B-acquired drug payment policy for CYs 2018-2022. In the final rule, CMS finalizes a policy to make an additional payment to affected providers for 340B-acquried drugs as a one-time lump sum payment. CMS estimates that OPPS 340B providers received $10.6 billion less in 340B drug payments than they would have without the 340B policy, $1.6 billion of which has already been recovered by 340B providers. CMS further estimates that hospitals were paid $7.8 billion more for non-drug items and services during this time period than they would have been paid in the absence of the 340B payment policy. Accordingly, in order to maintain budget neutrality, CMS is also finalizing a corresponding offset to future payments for non-drug items and services to all OPPS providers, except new providers, by reducing the OPPS conversion factor by 0.5% each year until the total offset is reached (approximately 16 years), starting in CY 2026. Our revenues will be adversely affected by the reduction in future OPPS payments.

Medicare Disproportionate Share Hospital Payments

Acute care hospitals may also qualify for Medicare disproportionate share hospital ("***DSH***") payments, if they treat a high percentage of low-income patients (as determined by a ratio involving Medicare and Medicaid patients eligible to receive Supplemental Security Income). DSH payments are determined annually based on certain statistical information specified by HHS and are paid as an addition to MS-DRG payments. The Affordable Care Act requires Medicare DSH payments to providers to be reduced by 75% beginning in FFY 2014, subject to adjustment if the Affordable Care Act does not decrease uncompensated care to the extent anticipated. The amount that is withheld is reduced by the percentage change in uninsured individuals under the age of 65, and then paid as additional payments to DSH hospitals based on the amount of uncompensated care provided by each hospital relative to the amount of uncompensated care provided by all hospitals receiving DSH payments during the applicable time period. The IPPS final rule for FFY 2024 established the uncompensated care amount which will be distributed to qualifying hospitals in FFY 2024 at approximately $6.7 billion, a decrease of approximately $957 million from FFY 2023.

Medicare Dependent and Low Volume Hospital Programs

On April 16, 2015, the Medicare Access and CHIP Reauthorization Act of 2015 ("***MACRA***") was enacted. Among other things, MACRA extended the Medicare dependent hospital program, which provides enhanced payment support for rural hospitals that have no more than 100 beds and at least 60% of their inpatient days or discharges covered by Medicare, and the Medicare low volume hospital program, which provides additional Medicare reimbursement for general acute care hospitals that are located a certain distance from another general acute care hospital and have less than a certain number of Medicare discharges each fiscal year, through September 30, 2017. The Bipartisan Budget Act of 2018 extended both of these programs through FFY 2022. The Consolidated Appropriations Act, 2023 (the "***CAA23***"), which was adopted December 23, 2022, further extended both of these programs through FFY 2024.

Rural Emergency Hospitals

Pursuant to the Consolidated Appropriations Act 2021 (the "***CAA***"), Congress established Rural Emergency Hospitals ("***REHs***") as a new provider type to address the growing concern over closures of rural hospitals. REHs provide emergency department services and observation care and, at the election of the REH, other services furnished on an outpatient basis, but do not provide acute care inpatient services (other than post-hospital extended care services furnished in a distinct part unit licensed as a skilled nursing facility). To qualify as an REH, a facility must, as of December 27, 2020 (the enactment date of the CAA), have been a critical access hospital or a rural hospital with not more than 50 beds. Effective January 1, 2023, REHs that participate in Medicare will be paid for all "covered outpatient services" at a rate that is equal to the OPPS payment rate for the equivalent covered outpatient department service, increased by 5% to reflect the higher costs incurred by such hospitals. REHs will also receive a monthly facility payment, equal to $276,233 for CY 2024 (with the sequestration amount deducted), which amount will increase in subsequent years by the hospital market basket percentage increase. In the CY 2023 OPPS final rule, CMS finalized its policies relating to payment, provider enrollment and quality reporting for REHs, in addition to the conditions of participation that REHs must meet in order to participate in the Medicare and Medicaid programs.

Medicare Inpatient Rehabilitation Facility Prospective Payment System

Under the Medicare program, IRFs and ARUs in acute care hospitals meeting certain criteria established by CMS are reimbursed under the Medicare inpatient rehabilitation facility prospective payment system ("***IRF-PPS***"). Payments under the IRF-PPS are made on a per-discharge basis and cover the inpatient operating and capital costs of furnishing covered rehabilitation services (that is, routine, ancillary, and capital costs) and, for teaching institutions, are adjusted to include reimbursement for graduate medical education costs. Under the IRF-PPS, patients are classified into case mix groups that reflect the relative resource intensity typically associated with the patient's clinical condition. IRFs and ARUs reimbursed under the IRF-PPS are paid a predetermined amount per discharge that reflects the patient's case mix group that is adjusted for facility-specific factors, such as area wage levels, proportion of low-income patients, and location in a rural area. Each FFY, payment rates under the IRF-PPS are updated using a market basket index, which is reduced by a productivity adjustment. For FFY 2024, CMS increased IRF-PPS payment rates by 3.4% based on a IRF market basket update of 3.6% minus a productivity adjustment of 0.2%. To receive the full increase, IRFs and ARUs must satisfy the reporting requirements of the Inpatient Rehabilitation Facility Quality Reporting Program (the "***IRF QRP***"). IRFs and ARUs that do not satisfy the reporting requirements of the IRF QRP are subject to a reduction of 2.0% in their annual payment update under the IRF-PPS. All but five of our IRFs and ARUs reported all quality measures required by CMS related to the IRF QRP and will receive the full market basket update for FFY 2024. In addition to the base payment rate increase, CMS increased outlier payments for IRFs by 0.6% in FFY 2024. CMS estimates that overall IRF payments for FFY 2024 will increase by $355 million compared to FFY 2023 IRF-PPS payments.

In order to qualify for reimbursement under the IRF-PPS, at least 60% of an IRF's or ARU's inpatients during the most recent 12-month CMS-defined review period must have required intensive rehabilitation services for one or more of 13 specified conditions. IRFs and ARUs must also meet additional coverage criteria, including patient selection and care requirements relating to pre-admission screenings, ongoing coordination of care and involvement of rehabilitation physicians. An IRF or ARU that fails to meet the 60% threshold, or other criteria to be reimbursed under the IRF-PPS, will be paid under either the Medicare IPPS or OPPS, which generally provide for lower payment amounts.

Medicare Inpatient Psychiatric Facility Prospective Payment System

Under the Medicare program, inpatient psychiatric facilities ("***IPFs***"), which include freestanding psychiatric hospitals and inpatient psychiatric units in acute care hospitals that meet certain criteria established by CMS are reimbursed under the Medicare inpatient psychiatric facility prospective payment system ("***IPF-PPS***"). Under the IPF-PPS, IPFs receive predetermined per diem rates based primarily on the patient's condition (age, diagnosis, comorbidities), length of stay, and the location of the IPF. Payment rates are intended to cover all routine, ancillary, and capital costs of furnishing covered inpatient psychiatric services, including adjustments for teaching hospitals and IPFs with qualifying emergency departments. The IPF-PPS has additional payment policies for outlier cases, interrupted stays, and a per treatment payment for patients who undergo electroconvulsive therapy. Each FFY, payment rates under the IPF-PPS are updated using a market basket index, which is reduced by a productivity adjustment. For FFY 2024, CMS increased the IPF-PPS base payment rate by 3.3% (to $895.63 per day) based on a IPF market basket update of 3.5% minus a productivity adjustment of 0.2%. In addition to the base payment rate increase, CMS decreased outlier payments to IPFs by 0.9% in FFY 2024. Due to rounding, the 3.3% increase to payment rates and the 0.9% decrease due to outlier payment changes result in a 2.3% overall increase in IPF payments. To receive the full increase, IPFs must satisfy the reporting requirements of the Inpatient Psychiatric Facility Quality Reporting Program (the "***IPF QRP***"). IPFs that do not satisfy the reporting requirements of the IPF QRP are subject to a reduction of 2.0% in their annual payment update under the IPF-PPS. All but seven of our IPFs reported all quality measures required by CMS related to the IPF QRP and will receive the full market basket update for FFY 2024. CMS estimates that overall IPF payments for FFY 2024 will increase by $70 million compared to FFY 2023 IPF-PPS payments.

In order to qualify for reimbursement under the IPF-PPS, IPFs must meet certain classification and coverage criteria, including being primarily engaged in providing psychiatric services for the diagnosis and treatment of mentally ill persons by, or under the supervision of, a physician, in addition to special staffing and medical record retention requirements. An IPF that fails to meet the criteria to be reimbursed under the IPF-PPS will be paid under either the Medicare IPPS or OPPS, which generally provide for lower payment amounts.

Cost Reports

Facilities participating in the Medicare and some Medicaid programs, whether paid on a reasonable cost basis or under a prospective payment system, are required to meet certain financial reporting requirements. Federal and, where applicable, state regulations require submission of annual cost reports identifying medical costs and expenses associated with the services provided by each facility to Medicare and Medicaid recipients.

Annual cost reports required under the Medicare and some Medicaid programs are subject to routine governmental audits. These audits may result in adjustments to the amounts ultimately determined to be payable to us under these reimbursement programs. Finalization of these audits often takes several years. Providers may appeal any final determination made in connection with an audit, and it is common to contest issues raised in audits of cost reports.

Medicare Bad Debt Reimbursement

Under Medicare, the costs attributable to the deductible and coinsurance amounts that remain unpaid by Medicare beneficiaries after reasonable collection efforts can be added to the Medicare share of allowable costs as cost reports are filed. Hospitals generally receive interim pass-through payments during the cost report year which were determined by the Medicare administrative contractor (*"**MAC**"*) from prior cost report filings.

The amounts uncollectible from specific beneficiaries are to be charged off as bad debts in the accounting period in which the accounts are deemed to be worthless. In some cases, an amount previously written off as a bad debt and allocated to the program may be recovered in a subsequent accounting period. In these cases, the recoveries must be used to reduce the cost of beneficiary services for the period in which the collection is made. In determining reasonable costs for hospitals, the amount of bad debts otherwise treated as allowable costs is reduced by 35%.

Medicare Physician Fee Schedule and other Medicare Part B Services

Professional medical services provided to Medicare beneficiaries by physicians, physician assistants, nurse practitioners, and certain other healthcare practitioners, outpatient physical, occupational, and speech therapy services, and telehealth services are reimbursed under the PFS. Under the PFS, CMS has assigned a national relative value unit ("***RVU***") to most medical procedures and services that reflects the various resources required by a physician or practitioner to provide the services relative to all other services. Each RVU is calculated based on a combination of work required in terms of time and intensity of effort for the service and the practice overhead and malpractice insurance expenses that are attributable to the service. These three elements are each modified by a geographic adjustment factor to account for local practice costs and are then aggregated. The aggregated amount is multiplied by a conversion factor to determine the payment rate for the service. The conversion factor is updated by CMS on an annual basis.

MACRA, which was adopted in 2015, significantly changed how CMS determines the annual updates to the PFS. Under MACRA, the PFS payment rates that were in effect when MACRA was enacted were extended through June 30, 2015, and then increased by 0.5% for the remainder of CY 2015. PFS payment rates were increased annually by an additional 0.5% for CYs 2016, 2017 and 2018 and, after the adoption of the Bipartisan Budget Act of 2018, were increased by 0.25% for CY 2019. PFS payment rates are scheduled to remain at their CY 2019 levels through CY 2025**.** The PFS conversion factor for CY 2024 is set at $32.74, which is a decrease of $1.15 (or 3.4%) from the CY 2023 PFS conversion factor of $33.89.

In addition to revising the methodology that is used to update payments that are made under the PFS, MACRA also established a Quality Payment Program ("***QPP***") for incentivizing physician and practitioner care that meets certain value, quality, cost, and performance criteria. Beginning in CY 2019, amounts paid to physicians and practitioners under the PFS are subject to adjustment through the QPP and participation in either the Merit-Based Incentive Payment System ("***MIPS***") or an Advanced Alternative Payment Model ("***APM***") program. Beginning with the 2023 performance year, physicians and practitioners will have the opportunity to participate in a new reporting option known as MIPS Value Pathways ("***MVPs***"). Physicians participate in "traditional" MIPS unless they are participants of specific forms of APM, report MVPs (beginning with performance year 2023), are newly enrolled in Medicare, or see a low volume of Medicare patients. Groups or eligible clinicians who choose not to participate and fall within specified circumstances may request an exception through a hardship application and incur no MIPS impact on Medicare payments. CMS also permits hardship applications, including, in 2020, 2021, and 2022 hardships based on circumstances arising from COVID related operational issues, through which clinicians can request reweighing of any or all performance categories if they encounter an extreme and uncontrollable circumstance or a public health emergency.

Physicians and practitioners who participate in the MIPS program, which essentially consolidated the prior Physician Quality Reporting System, the Value-Based Modifier, and the Meaningful Use of EHR incentive programs, are subject to positive, zero, or negative performance adjustments depending on how the physician's or practitioner's performance compared to a performance threshold. The payment adjustments are based on the physician's or practitioner's performance in the year that is two years prior to the current payment period. As a result, PFS payments in CY 2024 will be based on CY 2022 performance scores, and so on for the following years. HHS and CMS revise the MIPS reporting measures on an annual basis and have indicated that they intend to routinely increase the performance thresholds in connection with those revisions. In addition, from CY 2019 through CY 2024, MACRA provides $500 million per year for an additional performance adjustment for physicians and practitioners who participate in MIPS and achieve exceptional performance. Physicians and practitioners who participate in a specified APM program, which, among other things, requires the physician or practitioner to receive a substantial amount of their revenue from an APM, will receive, from CYs 2019 through 2024, a lump-sum incentive payment equal to 5% of their Medicare payments in the prior year for services paid under the PFS. Pursuant to the CAA23, for CY 2025, physicians and practitioners who participate in a specified APM program will receive a lump-sum incentive payment equal to 3.5 % of their Medicare payments in the prior year for services paid under the PFS. Beginning in CY 2026, PFS payment rates for physicians and practitioners participating in an APM program would be increased by 0.75% a year. Payments for other physicians and practitioners would be increased by 0.25% per year.

Medicaid

For the year ended December 31, 2023, approximately 19.1% of our revenues related to patients participating in the various state Medicaid programs. Included in these payments are DSH and other supplemental payments received under various state Medicaid programs. Medicaid programs are funded by both the federal government and states to provide healthcare benefits to limited categories of low-income individuals under 65 years of age. These programs and the reimbursement methodologies are administered by the states under approved plans and vary from state to state and from year to year. Amounts received under the Medicaid programs are often significantly less than the hospital's customary charges for the services provided. Most state Medicaid payments are made under a prospective payment system, fee schedule, cost reimbursement program, or some combination of these three methods. All of our hospitals are currently certified to participate in their respective state Medicaid programs.

As enacted, the Affordable Care Act essentially required states to expand Medicaid coverage to all individuals under age 65 with incomes effectively at or below 138% of the federal poverty level ("***FPL***"). However, that portion of the Affordable Care Act was held to be unconstitutional by the U.S. Supreme Court, and, as a result, states may opt out of the expansion without losing their existing Medicaid funding. Therefore, the income level required for individuals to qualify for Medicaid varies widely from state to state. To offset the cost of the Medicaid program's expansion, the Affordable Care Act authorized the federal government to provide states with "matching funds," in the form of increases to the Federal Medical Assistance Percentage (the "***FMAP***" and, as increased, referred to as "***Enhanced FMAP***"), to cover the costs of covering the newly eligible individuals. The Enhanced FMAP was 100% for CYs 2014 through 2016; 95% in CY 2017; 94% in CY 2018; 93% in CY 2019; and will be 90% in CYs 2020 and thereafter. The ARP, which was signed into law on March 11, 2021, provides a new incentive, in the form of a temporary 5% increase to the FMAP, to states that have not yet expanded their Medicaid programs in an effort to encourage them to do so. In addition, to assist state Medicaid programs with the additional expenses attributable to the COVID-19 pandemic, the Families First Coronavirus Act provided a 6.2% increase in the FMAP retroactive to January 1, 2020. The temporary FMAP increase was phased out on January 1, 2024.

In recent years, we have benefited from the expansion of Medicaid under the Affordable Care Act, and since January 1, 2020, Missouri, Oklahoma, and Utah, three additional states in which we operate, expanded their Medicaid programs. However, a number of states in which we operate have not expanded their Medicaid programs or are seeking waivers that could reduce their Medicaid-eligible populations. Several states have adopted or are considering legislation designed to reduce or control their Medicaid expenditures, including enrolling Medicaid recipients in managed care programs, and imposing additional taxes on hospitals to help finance such states' Medicaid systems. Given the reductions in the Enhanced FMAP, the temporary nature of the assistance provided by the ARP and the Coronavirus Aid, Relief, and Economic Security Act (the "***CARES Act***"), and the potential for further modifications to the Affordable Care Act, we are unable to predict how many, if any, additional states in which we operate will expand their Medicaid programs or how many, if any, of the states in which we operate that have expanded their Medicaid programs will keep their expansions in place in the future.

The Affordable Care Act also included a number of provisions that are intended to improve the quality of care that is provided to Medicaid beneficiaries. Among other things, the Affordable Care Act prohibits federal funds from being used to reimburse providers for services related to provider preventable conditions, such as HACs, wrong site surgeries and other provider preventable conditions that may be designated by each state Medicaid program.

Medicaid Supplemental Payments

Medicaid supplemental payments ("***MSPs***") are payments made to providers separate from and in addition to those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid DSH and Upper Payment Limit ("***UPL***") payments.

Medicaid DSH payments are federally required to be made by the states to hospitals that serve significant numbers of Medicaid and uninsured patients in recognition of the added costs incurred by hospitals in treating those patients. The federal government distributes federal Medicaid DSH funds to each state based on a statutory formula. The states then distribute the DSH funding among qualifying hospitals. Although federal Medicaid law defines some level of hospitals that must receive Medicaid DSH funding, states have broad discretion to define additional hospitals that also may qualify for Medicaid DSH payments and the amount of such payments. However, the total amount of Medicaid DSH payments a state may make and the total amount any one hospital may receive are both capped by federal law.

Pursuant to the Affordable Care Act, as amended by subsequent legislation, funding for Medicaid DSH programs was to be reduced by $4 billion in FFY 2020 and $8 billion per year from FFY 2021 through FFY 2025. Congress has delayed the reduction in funding for Medicaid DSH programs on a number of occasions, most recently through the CAA, which eliminates the scheduled Medicaid DSH reductions for FFYs 2021 through 2023 but adds additional Medicaid DSH reductions for FFYs 2026 and 2027. We cannot predict whether Congress will further delay or otherwise modify the reductions in the future. Because many of the states in which we operate have not expanded Medicaid programs as intended under the Affordable Care Act, the reduction in Medicaid DSH payments may take place without a coupled increase in the Medicaid eligible population, thus increasing the net amount of uncompensated care we provide.

Unlike Medicaid DSH payments, UPL payments are not required to be made by states under federal law. Rather, federal regulations establish an upper payment limit above which states may not receive federal matching dollars. UPL programs have expanded in recent years, and certain of our hospitals receive payments under such programs. Because services provided to Medicaid beneficiaries enrolled in managed care are not included in state UPL calculations, as states increase their use of managed care Medicaid programs, UPL MSPs could be reduced. UPL funding and matching federal funds may also be reduced or eliminated as a result of state or local governmental legislation, state changes to historical funding levels or related taxes, compliance reviews by CMS, or changes to federal Medicaid funding affecting such programs.

On November 18, 2019, CMS released a proposed rule, the Medicaid Fiscal Accountability Rule, that was intended to increase federal oversight of MSPs and state Medicaid financing policies. Among other things, the proposed rule would have added new reporting requirements on UPL payment arrangements, imposed limitations on UPL payments that are made to physicians and certain other practitioners, and imposed limits on the use of healthcare provider taxes, intergovernmental transfers and certified public expenditures. CMS withdrew the proposed rule in 2020. However, some of the reporting requirements contained in the Medicaid Fiscal Accountability Rule were included in the CAA, and, beginning in FFY 2022, each state will be required to provide CMS with, among other things, (i) a description of the stated purpose and intended effects of the state's MSPs, (ii) an explanation of how the state's MSPs will result in payments that are consistent with the requirements of the Medicaid program, including the program's standards with respect to efficiency, economy, quality of care, and access, (iii) the criteria used to determine provider eligibility for the state's MSPs, (iv) a comprehensive description of the methodology used to calculate the amount of, and distribute, MSPs to each eligible provider, and (v) an assurance that the total Medicaid payments made by the state to inpatient hospital providers, including any MSPs, will not exceed the UPL. The CAA also further clarifies how third-party payments are to be considered when determining Medicaid DSH hospital-specific limits. We cannot predict the impact, if any, that the reporting requirements and other Medicaid provisions in the CAA will have on MSPs and UPL payments that are made by state Medicaid programs or whether Congress or CMS will adopt any additional legislation or regulations that will eliminate or otherwise limit MSPs and/or UPL payments. In addition, we cannot predict whether MSP programs will continue (and, if continued, whether we will qualify for such programs) or guarantee that revenues recognized from these programs will not decrease.

Budget cuts, federal or state legislation, or other changes in the administration or interpretation of government health programs by government agencies or contracted managed care organizations could have a material adverse effect on our financial position and results of operations.

North Carolina Healthcare Access and Stabilization Program (HASP) and Medicaid Expansion

On March 27, 2023, the governor of North Carolina signed into law a bill to expand Medicaid coverage in North Carolina, which expanded health coverage to an estimated 600,000 people across North Carolina on December 1, 2023. The legislation also enacted the Healthcare Access and Stabilization Program ("***HASP***") aimed at increasing Medicaid reimbursement rates to hospitals providing safety-net services for low-income patients. CMS approved initial HASP payments for the North Carolina fiscal year July 1, 2022 to June 30, 2023. HASP payments for future fiscal years will require annual approval by CMS. Increased reimbursement rates under the initial HASP preprint were applied retrospectively to the beginning of the North Carolina fiscal year, which commenced on July 1, 2022. We cannot predict whether, or the extent to which, future HASP payments will be approved by CMS or the impact any such decision will have on our business.

Medicaid Block Grants and Capped Federal Funding

As part of the movement to repeal, replace or modify the Affordable Care Act and as a means to reduce the federal budget deficit, there have been Congressional and administrative efforts to move Medicaid from an open-ended program with coverage and benefits set by the federal government to one in which states receive a fixed amount of federal funds, either through block grants or per capita caps, and have more flexibility to determine benefits, eligibility and provider payments. If implemented, we cannot predict whether the amount of fixed federal funding to the states will be based on current payment amounts, or if it will be based on lower payment amounts, which would negatively impact those states that expanded their Medicaid programs in response to the Affordable Care Act. Such efforts to modify or reduce federal funding of the Medicaid program, as well as those that would reduce the amount of federal Medicaid matching funds available to states by curtailing the use of provider taxes, could have a negative impact on state Medicaid budgets resulting in less coverage for eligible individuals or lower reimbursement rates.

On November 11, 2019, Tennessee, one of the states in which we operate, submitted an amendment to CMS for its Medicaid demonstration waiver that would convert federal funding for the Tennessee Medicaid program to a modified block grant program. CMS approved the amendment on January 8, 2021, and as required by state law, the Tennessee General Assembly approved the implementation of the amendment on January 15, 2021. Under the amendment, the Tennessee Medicaid program would receive federal matching funds for expenditures up to an aggregate annual cap. The aggregate cap would be based on the Tennessee Medicaid program's historical expenditures and would be increased to reflect a reasonable growth rate over time and for unexpected increases in enrollment. In exchange, the Tennessee Medicaid program would be given increased flexibility in how it operates and would be entitled to 55% of any savings that are achieved if spending is below the aggregate cap and the state meets certain quality targets. Any savings would generally be required to be re-invested in the Tennessee Medicaid or other health related programs. Despite being granted increased administrative flexibility, the Tennessee Medicaid program would be required to maintain the coverage and benefit levels that were in place as of December 31, 2020. A lawsuit was filed in the U.S. District Court for the District of Columbia on April 22, 2021, seeking to stop the conversion of the Tennessee Medicaid program to a modified block grant program. On June 30, 2022, following a public comment period, CMS sent a letter to Tennessee requesting that the state make certain modifications to the Tennessee Medicaid demonstration waiver, which included, among other things, a request that the state submit a new financing and budget neutrality model based on a traditional per member per month cap, instead of an aggregate cap. In response, on August 30, 2022, following a public comment period, Tennessee sent CMS a proposed amendment to its demonstration waiver intended to address CMS's concerns, including changes to the financing of the demonstration, moving from an aggregate cap to a per member per month cap, and revising the framework for reinvestment of demonstration savings. We cannot predict whether CMS will accept Tennessee's proposed amendments to its demonstration waiver or whether CMS will request further modifications or rescind altogether its approval of the amendment to the Tennessee Medicaid program or the impact that the amendment and related changes to the Tennessee Medicaid program would have on our operations and revenues.

Recovery Audit and Other Review Contractors

Recovery audit contractors ("***RACs***") are used by CMS and state agencies to detect Medicare and Medicaid overpayments not identified through existing claims review mechanisms. The RAC program relies on private companies to examine Medicare and Medicaid claims filed by healthcare providers. RACs perform post-discharge audits of medical records to identify overpayments resulting from incorrect payment amounts, non-covered services, medically unnecessary services, incorrectly coded services, and duplicate services and are paid on a contingency basis. Any claims identified as overpayments are subject to a RAC program appeals process. In 2016, in connection with the procurement of the new recovery audit contracts, CMS made a number of enhancements to the RAC program, including the establishment of a RAC program Provider Relations Coordinator, requiring RACs to maintain an overturn rate of less than 10% at the first level of appeal, requiring RACs to maintain an accuracy rate of at least 95%, and establishing additional documentation request limits based on a provider's compliance with Medicare rules, that are intended to address provider and other stakeholder concerns. CMS has also limited the number of claims that RACs may audit by limiting the number of records that RACs may request from hospitals based on each hospital's claim denial rate for the previous year.

In addition to RACs, CMS employs Unified Program Integrity Contractors ("***UPICs***"), which integrate the functions of the former Zone Program Integrity Contractors, Program Safeguard Contractors, and Medicaid Integrity Contractors, to perform post-payment audits of Medicare and Medicaid claims and identify overpayments. A number of state Medicaid agencies and other contractors have also increased their review activities.

Although we believe our claims for reimbursement submitted to the Medicare and Medicaid programs are accurate, many of our facilities have had Medicare claims audited by the RAC program. While our facilities have successfully appealed many of the adverse determinations raised by Medicare RAC audits, we cannot predict if this trend will continue or the results of any future audits. We cannot predict the volume or outcome of any future audits conducted by the various RACs and other review programs to which our facilities will be subject.

Utilization and Claim Review

Federal law contains numerous provisions designed to ensure that services rendered to Medicare and Medicaid patients meet professionally recognized standards and are medically necessary and that claims for reimbursement are properly filed. These provisions include a requirement that a sampling of admissions of Medicare and Medicaid patients must be reviewed on a post-discharge basis by quality improvement organizations ("***QIOs***"), which review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of MS-DRG classifications and the appropriateness of cases of extraordinary length of stay or cost. QIOs may deny payment for services or assess fines and also have the authority to recommend to HHS that a provider which is in substantial noncompliance with the standards of the QIO be excluded from participation in the Medicare program. Utilization review is also a requirement of most non-governmental managed care organizations.

In addition to utilization reviews, CMS has also adopted a nationwide claim review and provider education program known as the Targeted Probe and Educate ("***TPE***") program, which is intended to reduce errors in the claims submission process and focuses on items and services that pose the greatest risk to the Medicare program or that have a high national error rate, such as short inpatient stays. Under the TPE program, MACs use data analysis to identify providers who, for a particular item or service, have high claim denial rates or billing practices that vary significantly from their peers. Once a provider has been identified, the MAC reviews between 20 and 40 of the provider's claims for the item or service and, if issues are noted, offers the provider an individualized education session that is based on the results of the review. The provider is then generally given 45 days to improve its systems and processes, and, after that period has ended, the MAC conducts another review of the provider's claims. If additional issues are identified, the provider is given the opportunity for another education session. Providers are typically given three rounds of review and education before being referred to CMS for further action, potentially including pre-payment review, referral for RAC review, or in some cases revocation of billing privileges.

HMOs, PPOs and Other Private Insurers

In addition to government programs, our facilities are reimbursed by differing types of private payers including HMOs, PPOs and other private insurers. Also included in this category are the patient responsibility portions for co-payment and deductible obligations under these programs. Our revenues from HMOs, PPOs and other private insurers were approximately 37.9% of our revenues for the year ended December 31, 2023. Revenues from HMOs, PPOs and other private insurers are subject to contracts and other arrangements that require us to discount the amounts we customarily charge for healthcare services or accept fixed, pre-determined fees for our services. These contractual discounted arrangements often limit our ability to increase charges or revenues in response to increasing costs. We actively negotiate with these payers in an effort to maintain or increase the pricing of our healthcare services; however, we have no control over patients switching their healthcare coverage to a payer with which we have negotiated less favorable reimbursement rates. In recent years, an increasing number of our patients have moved to lower-cost healthcare coverage plans, and such plans generally provide lower reimbursement rates and require patients to pay an increased portion of the costs of care through deductibles, co-payments or exclusions. Additionally, plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices. If we provide services when we are not a participating provider in the network, it can result in higher patient responsibility amounts that a patient may not have the ability to pay or may choose not to pay. We expect these trends to continue in the coming years.

Self-Pay Patients

Self-pay revenues are primarily generated through the treatment of uninsured patients. Our revenues from self-pay patients were approximately 0.7% of our revenues for the year ended December 31, 2023. Beginning in 2014, our self-pay revenues began to decrease as a percentage of overall revenues due largely to a shift from self-pay to Medicaid and HMOs, PPOs and other private insurers for a portion of our patient population, which primarily has been a result of the Affordable Care Act and the expansion of Medicaid coverage in certain of the states in which we operate. These reductions partially offset trends our facilities experienced in prior years, which included increases in self-pay revenues due to a combination of broad economic factors, including high levels of unemployment in many of our markets and increasing numbers of individuals and employers who purchase insurance plans with high deductibles and high co-payments. We cannot predict how administrative or judicial interpretations, legislative actions or any other modifications to the Affordable Care Act that may be implemented or adopted, such as the cessation of cost sharing reduction payments or the repeal of the individual mandate, may impact our self-pay revenues. We also cannot predict whether the layoffs that may occur as a result of a decline in economic conditions, such as recession, economic downturn, and/or inflationary conditions in the U.S., will increase the number of underinsured and uninsured patients that seek treatment at our facilities.

In addition, effective January 1, 2022, the No Surprises Act requires healthcare providers, including hospitals and other healthcare facilities, to provide uninsured patients with a good faith estimate of the provider's total expected charges for scheduled items or services, including any expected ancillary services, before providing the items or services to the patient. Uninsured patients will be able to utilize a patient-provider dispute resolution process to challenge the provider's charges if they receive a bill that is substantially higher than the good faith estimate that was provided by the healthcare provider. We estimate that the uninsured patient good faith estimate and dispute resolution provisions of the No Surprises Act have not materially impacted the Company's revenues or cash flow.

Surprise Medical Billing

On December 21, 2020, Congress adopted legislation that is intended to limit the "surprise" medical bills that are often received by individuals receiving emergency and certain other services (such as anesthesia services) from out-of-network providers. Effective as of January 1, 2022, the No Surprises Act prohibits, among other things, out-of-network providers from balance billing patients for emergency care services that are provided by out-of-network facilities or at in-network facilities by out-of-network providers. The No Surprises Act also generally prohibits out-of-network providers from billing patients for non-emergency medical treatment unless the provider first notifies the patient of the provider's network status and estimated charges and the patient agrees to be financially liable for the additional amounts. Violations of the No Surprises Act are punishable by civil monetary penalties of up to $10,000, and the No Surprises Act may be enforced by both the state and federal governments.

When the prohibitions of the No Surprises Act apply, a patient's financial liability will generally be limited to his or her in-network amount. In addition, the patient's third-party payer must either pay the out-of-network provider an initial payment amount or issue a notice of denial to the provider for the services that were rendered within 30 days of the payer's receipt of the provider's claim. If the provider is not satisfied with the payer's initial payment amount, the provider and the payer will begin a 30-day negotiation period. If the provider and the payer cannot agree on a payment amount during the negotiation period, the parties may elect to initiate an independent dispute resolution ("***IDR***") process. The IDR process will be conducted by a neutral arbitrator that has been approved by the federal government. Under regulations that have been issued by HHS, the Department of Labor, and the Department of Treasury (collectively, the "***Departments***"), in making a payment determination, the arbitrator must begin with the "qualifying payment amount" (the "***QPA***"), which generally will be the plan or the insurer's median contracted rate, and then consider additional permissible information submitted by a party. A number of lawsuits have been filed against the Departments challenging various aspects of the final rules implementing the No Surprises Act, including the weight an arbitrator should give to the QPA in the IDR process. Multiple federal court decisions struck down provisions in the regulations that created a presumption or weighting in favor of the QPA as inconsistent with the language of the No Surprises Act. The regulations that have been issued by the Departments in connection with the No Surprises Act also require certain healthcare providers and facilities to make publicly available, post on a public website and provide a one-page notice to individuals about the requirements and prohibitions applicable to the facility or provider under the No Surprises Act, any applicable state balance billing limitations or prohibitions, and how the individual can contact the appropriate state and federal agencies if he or she believes the provider or facility has violated the requirements set forth in the notice.

We cannot predict how the No Surprises Act will be implemented by the Departments, or how it will ultimately be enforced by the federal and various state governments. We also cannot predict the amounts that will be received by our facilities and our employed providers for out-of-network services, whether the No Surprises Act will impact the in-network payment rates that are offered by third-party payers and the willingness of those payers to enter into participation agreements with us and our facilities in the future, or the costs we will incur in complying with the requirements of the No Surprises Act. In addition, a number of states are considering or have already adopted legislation to eliminate surprise medical billing. We cannot predict how state legislative actions to modify or pass these proposals may be implemented or adopted, or what impact, if any, those actions may have on our operations and revenues.

Price Transparency

Transparency in healthcare pricing has become a focal point for CMS, Congress, and many state legislatures. For example, effective as of January 1, 2021, hospitals generally are required to post their standard charges prominently on a publicly available website. Under CMS regulations, each hospital's standard charges must be posted in two ways: (1) a single machine-readable digital file containing the gross charges, discounted cash prices, payer-specific negotiated charges, and de-identified minimum and maximum negotiated charges for all items and services provided by the hospital and (2) a public display in a consumer-friendly manner of cash prices, payer-specific negotiated charges, and de-identified minimum and maximum negotiated charges for at least 300 "shoppable" services (70 CMS-specified and 230 hospital-selected). CMS is actively auditing and monitoring hospital compliance with its reporting requirements and has taken a number of steps to address hospital noncompliance, including issuing warning notices to and requesting corrective action plans from hospitals that are determined to be out of compliance with the price transparency requirements, implementing measures that are intended to increase the availability of the required machine-readable file, and increasing the civil monetary penalties that are applicable to violations of the price transparency requirements. CMS issued its first civil monetary penalties under the CMS hospital price transparency regulations in June of 2022. On April 26, 2023, CMS published an enforcement update, in which it outlined steps that CMS intends to take in order to increase compliance with the price transparency requirements, including, but not limited to, shortening the average time by which hospitals must come into compliance after a deficiency is identified and automatically imposing civil monetary penalties on hospitals that fail to submit a corrective action plan at the end of the 45-day corrective action plan submission deadline. On November 2, 2023, as part of the Medicare hospital outpatient prospective payment system final rule for CY 2024, CMS finalized a number of modifications to hospital price transparency requirements, including, among other things, requiring hospitals to display their standard charges data using a CMS template and to encode additional data elements specified in the rule. While all of the changes with respect to hospital price transparency regulations are effective as of January 1, 2024, the final rule also sets specific implementation dates for specific provisions, with most having an implementation date of July 1, 2024. The final rule also increases CMS' enforcement authority with respect to the hospital price transparency rules by, among other things, permitting CMS to require hospital officials to certify the accuracy and completeness of data in the hospital's machine-readable file, allowing CMS to work with health system leadership to address deficiencies across the health system, and allowing CMS to publicize on its website information related to its assessment of a hospital's compliance, any compliance action taken against a hospital, and notifications sent to health system leadership.

In addition to addressing surprise billing, the No Surprises Act contains a number of provisions that are intended to promote provider and health plan price transparency. Among other things, under the No Surprises Act, healthcare providers will be required to provide "good faith estimates" of their total expected charges for scheduled items and services to the patient's health plan if the patient is insured prior to the item and/or service being provided. Health plans will be required to provide patients with an "advanced explanation of benefits" that includes: (1) information regarding the network status of the provider, (2) a copy of the provider's "good faith estimate," (3) an estimate of the amount that the patient will be expected to pay for the item or service, and (4) information on any applicable pre-authorization requirements.

Although we continue to evaluate, and are taking proactive steps in response to, the legislative and regulatory developments regarding price transparency, we cannot predict how existing regulations will be implemented or interpreted or whether any other requirements will be imposed on providers and health plans. We also cannot predict what affect the public disclosure of hospitals' or insurance providers' negotiated rates will have on our future negotiations with payers or the effect that the disclosure of pricing information by healthcare providers and health plans will have on our patient volumes and revenues.

Executive Order - Competition in the American Economy

On July 9, 2021, President Biden issued an executive order that is intended to promote competition in the American economy. Among other things, the executive order encourages the Federal Trade Commission (the "***FTC***") to ban or limit non-compete agreements, directs the Food and Drug Administration to work with states and tribes to import prescription drugs from Canada, directs HHS to increase its support for generic and biosimilar drugs, issue a comprehensive plan to combat high drug prices, and support existing price transparency rules, and encourages the Department of Justice ("***DOJ***") and the FTC to review and revise their merger guidelines to ensure that patients are not harmed by hospital mergers. In response, on January 6, 2023, the FTC issued a proposed rule that would ban employers from imposing post-termination non-competes on its workers (whether employees or independent contractors), subject to certain exceptions, and require employers to rescind existing non-competes and actively inform workers that they are no longer in effect. The proposed rule may not apply to non-profit hospitals, which could create a competitive disadvantage for us in our hiring and retention efforts. Although we cannot predict whether the FTC's proposed rule will be adopted in its current form, any limitation or ban on our ability to enter into non-compete agreements with employed or contracted staff may impact our ability to hire and retain qualified physicians, nurses and other medical support personnel and may adversely affect our costs of doing business or our ability to deliver services in our communities. The FTC is not expected to vote on the proposed rule until April 2024, and the rule is widely expected to be challenged in court if adopted substantially in its current form. Also in response to the executive order, on February 3, 2023, the DOJ announced its withdrawal of three long-standing antitrust policy statements related to enforcement in the health care industry, and on July 14, 2023, the FTC followed suit, announcing its withdrawal of two long-standing antitrust policy statements related to enforcement in the health care industry. These statements had provided guidance in the form of "safety zones," which described conduct that the antitrust agencies would not challenge under the antitrust laws, absent extraordinary circumstances. The safety zones covered a wide variety of collaborations between health care providers, including mergers, joint ventures, joint purchasing arrangements, information exchanges, and the formation and operation of financially and clinically integrated networks and accountable care organizations. The withdrawal of these antitrust policy statements signals increased antitrust scrutiny for collaborations within the health care industry. We cannot predict the impact that the withdrawal of DOJ's antitrust policy statements will have on our operations or future transactions or how, if at all, the various other initiatives set forth in the executive order will be implemented by the regulatory agencies involved.

U.S. Supreme Court Decision – Dobbs v. Jackson Women's Health Organization

On June 24, 2022, the U.S. Supreme Court issued a decision in *Dobbs v. Jackson Women's Health Organization* (the "***Dobbs Decision***") that overturned *Roe v. Wade* (the "***Roe Decision***") and held that the U.S. Constitution does not confer a right to an abortion. This decision sparked a litany of changes in state laws across the country, including a number of state "trigger" laws that have or are set to take effect and which ban or severely restrict the performance of abortion services and in some cases impose civil and criminal penalties on service providers and patients. In turn, many state legislatures have introduced bills or proposed state constitutional amendments to protect access to abortions, and lawsuits have been filed in numerous states challenging trigger bans and other abortion restrictions that went into effect after the Dobbs Decision. We cannot predict the full implications of the Dobbs Decision or changes in state or federal laws resulting therefrom, including potential conflicting interpretations of requirements under existing or new laws relating to the provision of reproductive health services in the various jurisdictions in which we operate.

Executive Order - Protecting Access to Reproductive Health Care Services

Following the Dobbs Decision that overturned the Roe Decision, President Biden issued an executive order on July 8, 2022, that is intended, among other things, to coordinate the implementation of federal efforts to safeguard access to reproductive health care services (including abortion and contraception) and to protect patient privacy and access to accurate information. As directed by the executive order, on July 11, 2022, HHS announced new guidance that is intended to clarify provider responsibilities and protections under EMTALA with respect to providing stabilizing medical treatment for pregnant women and those experiencing pregnancy loss. Notably, HHS affirms that EMTALA obligations preempt directly conflicting state abortion laws or bans when needed for emergency care. Consequently, according to HHS, under federal law, providers in emergency situations are required to provide stabilizing care to someone with an emergency medical condition, including the performance of abortion services if necessary, regardless of the state where they live. A violation of EMTALA could result in termination of a provider's Medicare provider agreement and/or the imposition of civil monetary penalties. On August 23, 2022, at the request of the Attorney General of the State of Texas, the U.S. District Court for the Northern District of Texas issued a preliminary injunction against enforcement of HHS's new EMTALA guidance as it pertains to Texas's abortion law. The next day, the U.S. District Court for the District of Idaho issued a preliminary injunction in favor of the DOJ blocking enforcement of Idaho's abortion ban to the extent the law conflicts with EMTALA-mandated care. As expected, the federal government appealed the decision in Texas, and the State of Idaho appealed the decision in Idaho. On January 2, 2024, the U.S. Court of Appeals for the Fifth Circuit sided with the State of Texas, upholding the injunction issued by the U.S. District Court for the Northern District of Texas. On January 5, 2024, the U.S. Supreme Court agreed to hear the Idaho abortion case and stayed the district court's preliminary injunction pending resolution of the appeal. We cannot predict the outcome of the U.S. Supreme Court's decision and other lawsuits, or how federal and state government agencies will ultimately enforce EMTALA or related state laws in light of HHS's new guidance or the impact that the new guidance will have on our operations. We also cannot predict how, if at all, the various initiatives set forth in President Biden's executive order relating to reproductive health care services will be implemented by the regulatory agencies involved or the impact that the executive order will have on us, our employees, or our patients.

Healthcare Reform

In recent years, Congress has passed a number of laws, including the Affordable Care Act, that are intended to effect major changes in the U.S. healthcare system. The Affordable Care Act, which became federal law in 2010, dramatically altered the U.S. healthcare system and was intended to decrease the number of uninsured Americans and reduce the overall cost of healthcare. The net effect of the Affordable Care Act, as currently adopted, on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. While the U.S. Supreme Court rejected the most recent challenge to constitutionality of the Affordable Care Act, we cannot predict the outcome of other lawsuits that are still pending in lower courts regarding the implementation of various aspects of the Affordable Care Act or whether the U.S. Supreme Court will decide to hear future cases. Additionally, we cannot predict the impact that the current or future Presidential administrations and Congresses will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

Expanded Coverage

Based on original Congressional Budget Office ("***CBO***") and CMS estimates, by 2020, the Affordable Care Act was originally expected to expand coverage for 32 to 34 million people, resulting in coverage of an estimated 95% of the legal U.S. population and an uninsured population of approximately 27 million individuals. This increased coverage was expected to occur through a combination of public program expansion and private sector health insurance and other reforms. In July 2021, the CBO estimated that, due to a number of factors, approximately 28 million people were uninsured in 2020 and that the number of uninsured individuals would remain relatively consistent through 2031.

Public program expansion has been driven primarily by expanding the categories of individuals who are eligible for Medicaid coverage and allowing individuals with relatively higher incomes to qualify for Medicaid coverage. When the Affordable Care Act was adopted, it essentially made the expansion of the Medicaid program mandatory. However, in 2012, the U.S. Supreme Court held that the provision of the Affordable Care Act that authorized the Secretary of HHS to penalize states that chose not to participate in the expansion of the Medicaid program by removing all of their existing Medicaid funding was unconstitutional. Based on the U.S. Supreme Court's ruling, a number of states, including several in which the Company has facilities, have opted not to expand their Medicaid programs. Additional public program expansion has occurred through provisions of the Affordable Care Act that authorize the federal government to subsidize states that create non-Medicaid plans for residents whose incomes are greater than 133% of the FPL but do not exceed 200% of the FPL and allow Medicaid participating hospitals to make presumptive determinations of Medicaid eligibility for certain categories of individuals, such as pregnant women, infants, children, and parents and other caretaker relatives and their spouses. If an individual is found to be presumptively eligible for Medicaid benefits, the hospital will get paid for the services it provides during the temporary presumptive eligibility period, just as though the patient were already enrolled in the Medicaid program.

The expansion of health coverage through the private sector as a result of the Affordable Care Act has occurred through new requirements on health insurers, employers and individuals. For example, commencing January 1, 2014, health insurance companies were prohibited from imposing annual coverage limits, excluding persons based upon pre-existing conditions or denying coverage for any individual who is willing to pay the premiums for such coverage. In addition, since January 1, 2011, each health plan has been required to keep its annual non-medical costs lower than 15% of premium revenue for the group market and lower than 20% in the small group and individual markets or rebate its enrollees the amount spent in excess of the percentage. Also, since September 23, 2010, health insurers have not been permitted to deny coverage to children based upon a pre-existing condition and must allow dependent care coverage for children up to 26 years old. Larger employers are subject to new requirements and incentives to provide health insurance benefits to their full-time employees, and, effective January 1, 2016, all employers subject to the requirement were required to offer health insurance coverage to 95% of their full-time employees and their dependents in order to avoid penalties.

To facilitate the purchase of health insurance by individuals and small employers, each state was required to establish an Exchange by January 1, 2014. For individuals and families below 400% of the FPL, the cost of obtaining health insurance through the Exchanges is subsidized by the federal government. Those with lower incomes will be eligible to receive greater subsidies. The ARP temporarily extends the availability of those subsidies to individuals and families with incomes over 400% of the FPL and increases the amount of the subsidies that are available for individuals and families who were already eligible for financial assistance under the Affordable Care Act. Health insurers participating in the Exchanges must offer a set of minimum benefits to be defined by HHS and may offer more benefits. Any benefits to us from the expansion of private sector coverage depend in large part on our success in contracting with payers whose policies are listed on the Exchanges. We currently have contracts with Exchange payers in every state in which we operate, and the reimbursement rates paid under those contracts generally are comparable to that paid to us by other private payers.

Public Program Spending

The Affordable Care Act provides for a number of Medicare, Medicaid and other federal healthcare program spending reductions. The CBO previously estimated that between 2013 and 2023, these program spending reductions would include $415 billion in Medicare fee-for-service market basket and productivity reimbursement reductions for all providers, the majority of which ($260 billion) would come from hospitals. The CBO's estimate also included an additional $56 billion in reductions of Medicare and Medicaid DSH funding. CMS had originally estimated that the Affordable Care Act would result in $64 billion in reductions of Medicare and Medicaid DSH funding, with $50 billion of the reductions coming from Medicare. Some of those reductions, most notably the Medicaid DSH funding reductions, have been delayed by subsequent legislation, and we cannot predict whether the public program spending reductions required by the Affordable Care Act will be further delayed or modified in the future.

Accountable Care Organizations

The Affordable Care Act required HHS to establish a Medicare Shared Savings Program that promotes accountability and coordination of care through the creation of accountable care organizations ("***ACOs***"). ACOs are groups of hospitals and/or physicians and other designated professionals and suppliers who come together voluntarily to invest in infrastructure and redesign delivery processes to achieve high quality and efficient delivery of services. The program is intended to produce savings as a result of improved quality and operational efficiency. ACOs that achieve quality performance standards established by HHS are eligible to share in a portion of the amounts saved by the Medicare program. There are several types of ACO programs, and as of January 17, 2023, 456 ACOs participate in the Medicare Shared Savings Program, and additional ACOs are being established by private payers. The number of ACOs participating in the Medicare Shared Savings Program decreased in 2023, but the policies finalized in the final PFS rule for CY 2023 are expected to grow participation next year. On November 1, 2022, CMS issued the CY 2023 PFS final rule which included "significant reforms" to the Medicare Shared Savings Program intended to incentivize participation and promote equity and alignment across quality programs. Among other things, such measures included providing advance shared savings payments to certain new ACOs that serve underserved populations, allowing smaller ACOs more time to transition to downside risk, a health equity adjustment that would upwardly adjust ACOs' quality performance scores to reward excellent care delivered to underserved populations, and certain changes to benchmarking methodologies that are designed to encourage more ACOs to participate and succeed. A few of our facilities currently participate in ACOs.

Bundled Payment Pilot Programs

The Affordable Care Act created the Center for Medicare & Medicaid Innovation ("***CMMI***") and made it responsible for establishing demonstration projects and other initiatives in order to identify, develop, test and encourage the adoption of new methods of delivering and paying for healthcare that create savings under the Medicare and Medicaid programs while improving quality of care. Under these projects and initiatives, participating providers agree to receive one payment for services provided to Medicare patients for certain medical conditions or episodes of care and accept accountability for costs and the quality of care that is provided. By financially rewarding providers for quality, cost-effective care and penalizing providers when costs exceed a certain amount, these models are intended to lead to higher quality, more coordinated care at a lower cost to the Medicare program. In connection with these programs, CMMI has developed a voluntary Bundled Payment for Care Improvement Advanced Model to test innovative payment and service delivery models that have the potential to reduce Medicare and Medicaid expenditures while preserving or enhancing the quality of care for beneficiaries. Participation in bundled payments programs is generally voluntary, but CMS does currently require hospitals in certain geographic areas to participate in the Comprehensive Care for Joint Replacement model, which covers certain extremity joint replacement procedures and is scheduled to end in 2024. CMS has developed a radiation oncology bundled payment program that was expected to begin on January 1, 2022, but has been delayed indefinitely until CMS determines a date through future rulemaking. CMS has indicated that it expects to develop additional voluntary and mandatory bundled payment models in the future. Several of our facilities currently participate in bundled payment programs.

Specialty Hospital Limitations

Over the last decade, we have faced competition from hospitals that have physician ownership. The Affordable Care Act prohibits newly created physician-owned hospitals from billing for Medicare patients referred by their physician owners. While the Affordable Care Act grandfathers existing physician-owned hospitals, it does not allow these hospitals to increase the percentage of physician ownership and significantly restricts their ability to expand. As of December 31, 2023, we operated two acute care hospitals through joint ventures with physicians in which we own a controlling interest.

Competition for Patients

Our hospitals and other healthcare businesses operate in extremely competitive environments. Competition among healthcare providers occurs primarily at the local level. Accordingly, each facility develops its own strategies to address competition locally. A hospital's position within the geographic area in which it operates is affected by a number of competitive factors, including, but not limited to:

- the scope, breadth and quality of services a hospital offers to its patients and physicians;
- whether new, competitive services are subject to certificate of need or other restrictions;
- the number, quality and specialties of the physicians who admit and refer patients to the hospital;
- the nurses and other healthcare professionals employed by the hospital or on the hospital's staff;
- the hospital's reputation;
- its managed care contracting relationships;
- its location and the location and number of competitive facilities and other healthcare alternatives;
- the physical condition of its buildings and improvements;
- the quality, age and state-of-the-art of its medical equipment;
- its parking or proximity to public transportation;
- the length of time it has been a part of the community;
- the relative convenience of the manner in which care is provided (for example, whether services are available on an outpatient basis and whether services can be obtained quickly);
- the choices made by the physicians on the medical staff of the hospital; and
- the charges for its services.

In addition, tax-exempt competitors may have certain financial advantages not available to our facilities, such as endowments, charitable contributions, tax-exempt financing, exemptions from sales, property and income taxes, and participation in the 340B Program. In certain states, some not-for-profit hospitals are permitted by law to directly employ physicians while for-profit hospitals are prohibited from doing so.

We also face increasing competition from specialized care providers, including freestanding emergency departments and outpatient surgery, oncology, physical therapy, diagnostic and urgent care centers, as well as competing services rendered in physician offices. To the extent that other providers are successful in developing specialized outpatient facilities, our market share for those specialized services will likely decrease. Physician competition also has increased as physicians, in some cases, have become equity owners in surgery centers and outpatient diagnostic centers to which they refer patients. Some of our hospitals have developed specialized outpatient facilities where necessary to compete with these other providers.

We believe other key factors in our competition for patients are the quality of our patient care and the perception of that quality in the communities where our facilities are located, which may be influenced by, among other things, the technology, service lines and capital improvements made at our facilities and by the skills and experience of our non-physician employees involved in patient care.

In addition to competitive concerns, many of our communities are experiencing slow growth, and in some cases, population declines. We believe this trend has occurred mainly as a result of challenging economic conditions in the non-urban communities where our facilities primarily operate, which are often dependent on a small number of larger employers, especially manufacturing or other facilities. This causes the economies of our communities to be more sensitive to economic downturns and slower to rebound when the overall U.S. economy improves. In addition, other economic factors, including, the recent negative macroeconomic conditions, rising inflation and, potentially, self-rationing of healthcare services, have made it more difficult to increase the number of patients who seek care at many of our facilities.

Human Capital Resources

Overview

Our facilities must compete with other healthcare providers for professional talent. A significant factor in our future success will be the ability of our facilities to attract and retain physicians, as it is physicians who decide whether a patient is admitted to the hospital and the procedures to be performed.

We also compete with other healthcare providers in recruiting and retaining qualified management and other healthcare providers such as nurses, pharmacists, and lab technicians and other non-physician personnel responsible for day-to-day operations of each of our facilities. In some markets, the scarce availability of nurses and other medical support personnel presents a significant operating issue, which was heightened by the COVID-19 pandemic and has since continued due to a variety of factors, including increased competition for a limited number of qualified candidates. This shortage has required, and may continue to require us, to enhance wages and benefits to recruit and retain nurses and other medical support personnel, recruit personnel from foreign countries, and utilize more expensive temporary personnel. We also depend on the available labor pool of semi-skilled and unskilled employees in each of the markets in which we operate.

At December 31, 2023, our subsidiaries collectively had approximately 50,000 employees, including approximately 14,000 part-time employees. The majority of these employees are hospital-based, including nursing staff, physical and occupational therapists, laboratory and radiology technicians, pharmacy staff, facility maintenance workers and the administrative staffs of our facilities. We understand that, to fulfill our mission of Making Communities Healthier®, we must create places where people choose to come for healthcare, physicians want to practice, and employees want to work. To support this mission, talent development has been a longstanding strategic pillar for the organization.

Diversity, Equity and Inclusion

We are committed to creating an inclusive, community-based healthcare delivery system that provides equitable opportunities for all people, starting with our employees. As we have continued on our diversity, equity and inclusion ("***DEI***") journey, it has become clear that in a large and complex organization like ours – with people located across the nation – DEI requires the engagement and perspectives of many – many voices across many departments, disciplines and locations. Given this, we created an interdisciplinary team to continue to refine our overall DEI strategy and grow what we do in this critical area. This team is jointly led by three Lifepoint leaders who bring valuable expertise from their respective areas – representing Quality, People Services, and Communications – that are helping enrich our DEI strategy. Lifepoint's commitment to DEI has never been stronger, and we are excited about the opportunities to continue to expand our work and leadership in this area.

Serving the Community

We have a culture of giving and service that impacts the community of care beyond the bedside. We do this by: (i) educating our employees on the importance of positively impacting the communities they call home, (ii) serving our communities by advancing our mission both inside and outside our facilities' walls, (iii) investing in organizations that align with our mission and are making a difference and (iv) leading by example through our collective impact nationwide.

Our Lifepoint Community Foundation guides our charitable giving and economic development efforts, reviews requests for local financial or in-kind support and continuously evaluates the effectiveness of our social responsibility efforts in supporting our mission. Our local community support includes, among other charitable causes, strategic community impact partnerships with Second Harvest Food Bank of Middle Tennessee and Special Olympics Tennessee.

We are committed to taking care of our Lifepoint family so we can better care for others. The Lifecare Fund was established in 2010 as a safety net for employees experiencing serious financial hardship from unforeseen or unpreventable circumstances. Managed by the Community Foundation of Middle Tennessee, the Lifecare Fund has provided financial assistance for thousands of our employees during their times of greatest need.

Recruitment and Retention

We believe that healthcare is best delivered close to home, and our facilities strive to recruit and retain qualified management and staff personnel. Our frontline caregivers, including nurses, are the heartbeat of our organization, and we have a robust strategy to enhance the recruitment and retention of clinical staff into the future. This strategy includes meaningful education and career advancement opportunities, and competitive compensation. The scarce availability of nurses and other medical support personnel in some markets, which was heightened by the COVID-19 pandemic and has since continued due to a variety of factors, including increased competition for a limited number of qualified candidates, has required us to enhance wages and benefits and/or utilize more expensive temporary personnel in certain situations.

Our facilities also employ and have affiliations with physicians. Many physicians today prefer to be employed, rather than operating their own practices or joining existing medical groups. When employing office-based physicians, we also often employ office employees and other personnel necessary to support these physicians and incur additional expenses as a result. We expect this trend to continue.

We seek to attract both employed and affiliated physicians by maintaining a sharp focus on quality, driven by our National Quality Program; employing high performing talent; equipping our facilities with technologically advanced equipment and an attractive, up-to-date physical plant; and otherwise creating an environment within which physicians choose to practice. While physicians may terminate their association with our facilities at any time, we believe that, by striving to maintain and improve the quality of care at our facilities and by maintaining ethical and professional standards, our facilities will be better positioned to attract and retain qualified physicians with a variety of specialties.

When recruiting new physicians to our communities, the types, amount and duration of compensation and assistance we can provide to recruited physicians are limited by the federal physician self-referral law (commonly referred to as the "***Stark law***"), the federal Anti-kickback Statute (the "***Anti-kickback Statute***"), state anti-kickback and physician self-referral statutes, and related regulations. The Stark law requires, among other things, that recruitment assistance can only be provided to physicians who meet certain geographic and practice requirements, that the amount of assistance cannot be changed during the term of the recruitment agreement, and that the recruitment payments cannot generally benefit physicians currently in practice in the community beyond recruitment costs actually incurred. In addition to these legal requirements, there is competition from other communities and facilities for these physicians, and this competition continues after the physician begins practicing in one of our communities.

Labor Costs and Union Activity

As of December 31, 2023, approximately 2,900 of our employees across certain of our facilities are unionized. While some of our non-unionized facilities experience union organizing activity from time to time, currently we do not expect these efforts to affect our future operations materially. Our facilities, like most facilities, have experienced rising labor costs and increases in the rate and utilization of contract labor. Our labor costs also may increase at higher rates among unionized employees. Unionized employees also may have rights under their collective bargaining agreements that restrict the ability of a facility to take certain actions with respect to these employees.

Government Regulation

Overview

All participants in the healthcare industry are required to comply with extensive government regulations at the federal, state and local levels. Under these laws and regulations, facilities must meet requirements for licensure and to qualify to participate in government healthcare programs, including the Medicare and Medicaid programs. These requirements relate to the adequacy of medical care, equipment, personnel, operating policies and procedures, maintenance of adequate records, rate-setting, use and storage of pharmaceuticals and controlled substances, compliance with building codes and environmental protection laws. If we fail to comply with applicable laws and regulations, we may be subject to criminal penalties, civil sanctions, and the imposition of corporate integrity and other similar agreements, and our facilities may lose their licenses and ability to participate in Medicare and Medicaid. In addition, government regulations frequently change. When regulations change, we may be required to make changes in our facilities, equipment, personnel and services so that our facilities remain licensed and qualified to participate in these programs. We believe that our facilities are in substantial compliance with current federal, state and local regulations and standards.

Fraud and Abuse Laws

Participation in the Medicare and/or Medicaid programs is heavily regulated by federal statutes and regulations. If a facility fails to comply substantially with the numerous federal laws governing the facility's activities, the facility's participation in the Medicare and/or Medicaid programs may be terminated, and/or civil or criminal penalties may be imposed. For example, a facility may lose its ability to participate in the Medicare and/or Medicaid programs if it, among other things:

- submits claims to Medicare and/or Medicaid for services not provided or misrepresents actual services provided in order to obtain higher payments;
- pays money to induce the referral of patients or purchase of items or services where such items or services are reimbursable under a federal or state healthcare program; or
- is a hospital and fails to provide appropriate emergency medical screening services to any individual who comes to a hospital's campus or otherwise fails to properly treat and transfer emergency patients.

Anti-kickback Statute

The federal Anti-kickback Statute is a criminal statute that generally prohibits the payment, receipt, offer or solicitation of anything of value, whether in cash or in kind, with the intent of generating referrals or orders, or recommending or arranging for services or items covered by a federal or state healthcare program. Violations of the Anti-kickback Statute are punishable by, among other things, imprisonment, criminal fines, substantial civil monetary penalties that are subject to annual adjustments for inflation for each violation, damages equal to three times the total remuneration associated with the unlawful referrals or services, and/or possible exclusion from participating in Medicare, Medicaid or other governmental healthcare programs. Violations of the Anti-kickback Statute can also result in liability under the False Claims Act.

The Office of Inspector General (the "***OIG***") is the primary federal agency responsible for identifying fraud and abuse in government healthcare programs. In order to fulfill its duties, the OIG performs audits, investigations and inspections. In addition, it provides guidance to healthcare providers by identifying types of activities that could violate the Anti-kickback Statute. The OIG has identified the following hospital/physician incentive arrangements, among other things, as potential violations:

- payment of any incentive by a hospital based on physician referrals of patients to the hospital;
- use of free or significantly discounted office space or equipment;
- provision of free or significantly discounted billing, nursing or other staff services;
- free training (other than compliance training) for a physician's office staff, including management and laboratory technique training;
- guarantees which provide that if a physician's income fails to reach a predetermined level, the hospital will pay any portion of the remainder;
- low-interest or interest-free loans, or loans that may be forgiven if a physician refers patients to the hospital;
- payment of the costs for a physician's travel and expenses for conferences;
- payment of services which require few, if any, substantive duties by the physician or which are in excess of the fair market value of the services rendered; or
- purchasing goods or services from physicians at prices in excess of their fair market value.

In 1998, the OIG published the Provider Self-Disclosure Protocol (which was subsequently replaced in 2013 and further amended in 2021 and renamed the Health Care Fraud Self-Disclosure Protocol) to establish a process for persons to voluntarily identify, disclose, and resolve instances of potential fraud involving federal healthcare programs and provide guidance on how to investigate this conduct, quantify damages, and report the conduct to OIG to resolve liability under OIG's civil monetary penalty authorities. We have a variety of financial relationships with physicians who refer patients to our facilities, including employment contracts, independent contractor agreements, professional service agreements, leases and joint ventures. We provide financial incentives to recruit physicians to relocate to communities served by our facilities. These incentives for relocation include minimum revenue guarantees and, in some cases, loans. The OIG is authorized to publish regulations outlining activities and business relationships that would be deemed not to violate the Anti-kickback Statute. These regulations are known as "safe harbor" regulations. Failure to comply with the safe harbor regulations does not, by itself, make conduct illegal, but instead the safe harbors delineate standards that, if complied with, protect conduct that might otherwise be deemed in violation of the Anti-kickback Statute. We intend for all our business arrangements to be in full compliance with the Anti-kickback Statute and seek to structure each of our arrangements with physicians to fit as closely as possible within an applicable safe harbor. However, not all of our business arrangements fit wholly within safe harbors, so we cannot guarantee that these arrangements will not be scrutinized by government authorities or, if scrutinized, that they will be determined to be in compliance with the Anti-kickback Statute or other applicable laws.

Eliminating Kickbacks in Recovery Act

The Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (the "***SUPPORT Act***") contains a number of provisions aimed at identifying at-risk individuals, increasing access to opioid abuse treatment, reducing overprescribing and promoting data sharing with the primary goal of reducing the use and abuse of opioids. Additionally, the SUPPORT Act attempts to address the problem of "patient brokering" in the context of addiction treatment facilities and sober living homes.

One section of the SUPPORT Act, the Eliminating Kickbacks in Recovery Act ("***EKRA***"), makes it a federal crime to knowingly and willfully: (1) solicit or receive any remuneration in return for referring a patient to a recovery home, clinical treatment facility or laboratory; or (2) pay or offer any remuneration to induce such a referral or in exchange for an individual using the services of a recovery home, clinical treatment facility, or laboratory. Each conviction under the EKRA is punishable by up to $200,000 in monetary damages, imprisonment for up to ten years, or both. Unlike the Anti-kickback Statute, EKRA is not limited to services reimbursable under a government healthcare program. The EKRA also contains exceptions similar to the Anti-kickback Statute safe harbors, but those exceptions are narrower than the Anti-kickback Statute safe harbors, such that practices that would be permissible under the Anti-kickback Statute may violate EKRA.

Stark Law

The federal Stark law prohibits physicians from referring Medicare and Medicaid patients to entities with which they or any of their immediate family members have a financial relationship if those entities provide certain "designated health services" unless an exception applies. The Stark law also prohibits entities that provide designated health services reimbursable by Medicare and Medicaid from billing the Medicare and Medicaid programs for any items or services that result from a prohibited referral and requires entities to refund amounts received for items and services provided pursuant to a prohibited referral on a timely basis. "Designated health services" include, among other things, inpatient and outpatient hospital services, laboratory services and radiology services. A violation of the Stark law may result in (i) a denial of payment, (ii) substantial civil monetary penalties that are subject to annual adjustments for inflation for each violation or circumvention scheme and (iii) exclusion from participation in the Medicare and Medicaid programs and other governmental healthcare programs. In addition, violations of the Stark law could also result in penalties under the False Claims Act.

There are ownership and compensation arrangement exceptions to the self-referral prohibition. There are also exceptions for many of the customary financial arrangements between physicians and facilities, including employment contracts, leases and recruitment agreements, and there is a "whole hospital exception," which allows a physician to make a referral to a hospital if, among other things, the physician owns an interest in the entire hospital, as opposed to an ownership interest in a department of the hospital. The Affordable Care Act significantly modified the requirements of the whole hospital exception and placed a number of restrictions on the ownership structure, operations, and expansion of physician owned hospitals. Two of our facilities are subject to those requirements. We intend for our financial arrangements with physicians to comply with the exceptions included in the Stark law and regulations.

In recent years, CMS has issued a number of proposed and final rules modifying and/or clarifying the Stark law exceptions. For example, on November 20, 2020, HHS published two final rules related to the Anti-kickback Statute and the Stark law that are intended to reduce regulatory barriers to care coordination and ease unnecessary compliance burdens for physicians and other healthcare providers. Among other things, the rules create new Anti-kickback Statute safe harbors and Stark law exceptions for value-based and cyber-technology arrangements and provide new guidance and clarification as to how the Anti-kickback Statute and Stark law will be interpreted and enforced by the OIG and CMS, respectively. We cannot predict the impact that the final rules will have on our facilities and our operations or whether the recent trend toward reducing provider compliance burdens will continue in the future. We also anticipate that there will be further changes to the regulations that implement the Anti-kickback Statute and/or the Stark law, and those changes may require us to modify our activities.

In addition to issuing new regulations, or applying new interpretations to existing rules or regulations, the federal government has modified its approach for ensuring compliance with and enforcing penalties for violations of the Stark law. In 2010, CMS also issued a "self-referral disclosure protocol" for hospitals and other providers that wish to self-disclose potential violations of the Stark law and attempt to resolve those potential violations and any related overpayment liabilities at levels below the maximum penalties and amounts set forth in the statute.

False Claims Act

The federal False Claims Act prohibits providers from, among other things, knowingly submitting false or fraudulent claims for payment to the federal government and failing to refund identified overpayments received from the government. The False Claims Act defines the term "knowingly" broadly, and while simple negligence generally will not give rise to liability, submitting a claim with reckless disregard to its truth or falsity can constitute the "knowing" submission of a false or fraudulent claim for the purposes of the False Claims Act. The "qui tam" or "whistleblower" provisions of the False Claims Act allow private individuals to bring actions under the False Claims Act on behalf of the government. These private parties are generally entitled to share in any amounts recovered by the government, and, as a result, the number of "whistleblower" lawsuits that have been filed against providers has increased significantly in recent years. When a private party brings a qui tam action under the False Claims Act, because such cases are filed under seal, the defendant will generally not be aware of the lawsuit until the government makes a determination whether it will intervene and take a lead in the litigation. If found liable under the False Claims Act, a provider may be required to pay up to three times the actual damages sustained by the government plus substantial civil monetary penalties that are subject to annual adjustments for inflation for each separate false claim. The government and whistleblowers have used the False Claims Act to prosecute Medicare, Medicaid and other government healthcare program fraud such as coding errors, billing for services not provided, submitting false cost reports and providing care that is not medically necessary or that is substandard in quality. Violations of the Stark law can result in False Claims Act liability, as well.

Regulatory Environment

Our business and our facilities are highly regulated, and the penalties for noncompliance can be severe. We are required to comply with extensive, complicated and overlapping government laws and regulations at the federal, state and local levels. These laws and regulations govern every aspect of how our hospitals conduct their operations, from what service lines must be offered in order to be licensed as an acute care hospital, to whether our hospitals may employ physicians, and to how (and whether) our hospitals may receive payments pursuant to the Medicare and Medicaid programs. The failure to comply with these laws and regulations can result in severe penalties including criminal penalties, civil sanctions, the imposition of corporate integrity and other similar agreements, and the loss of our ability to receive reimbursements through the Medicare and Medicaid programs or the refund of such payments we previously received.

Not only are our facilities heavily regulated, but the rules, regulations and laws to which they are subject often change, with little or no notice, and are often interpreted and applied differently by various regulatory agencies with authority to enforce such requirements. Each change or conflicting interpretation may require our facilities to make changes in space usage, equipment, personnel or services, and may also require that standard operating policies and procedures be re-written and re-implemented. The cost of complying with such laws and regulations is a significant component of our overall expenses. Further, this expense has grown in recent periods because of new regulatory requirements and the severity of the penalties associated with non-compliance. Management anticipates that compliance expenses will continue to grow in the foreseeable future. The healthcare industry has seen a number of ongoing investigations related to patient referrals, physician recruiting and employment practices, cost reporting and billing practices, medical necessity of inpatient admissions, physician office leasing, laboratory and home healthcare services, physician ownership of hospitals and other healthcare providers, and joint ventures involving hospitals and physicians. Hospitals continue to be one of the primary focal areas of the OIG, the DOJ and other governmental fraud and abuse programs.

The Fraud Enforcement and Recovery Act of 2009 ("***FERA***") expanded the scope of the False Claims Act by, among other things, creating liability for knowingly and improperly avoiding or decreasing an obligation to pay money to the federal government and broadening protections for whistleblowers. In addition, the Affordable Care Act made several significant changes to healthcare fraud and abuse laws, including providing additional enforcement tools to the government, increasing cooperation between agencies by establishing mechanisms for the sharing of information and enhancing criminal and administrative penalties for non-compliance. For example, the Affordable Care Act: (1) expanded the scope of the RAC program to include Medicaid, (2) authorized HHS, in consultation with the OIG, to suspend Medicare and Medicaid payments to a provider of services or a supplier "pending an investigation of a credible allegation of fraud," (3) provided Medicare contractors with additional flexibility to conduct random prepayment reviews, and (4) required providers to adopt compliance programs that meet certain specified requirements as a condition of their Medicare enrollment. The Affordable Care Act also expanded the scope of the False Claims Act to cover payments in connection with the Exchanges if those payments include any federal funds and provides that claims submitted in connection with patient referrals that result from violations of the Anti-kickback Statute constitute false claims for the purposes of the False Claims Act.

In addition to the changes mentioned above, the Affordable Care Act created False Claims Act liability for the knowing failure to report and return an overpayment within 60 days of the identification of the overpayment or the date by which a corresponding cost report is due, whichever is later. On February 11, 2016, CMS published a final rule that provides clarification around the meaning of overpayment identification and generally establishes a six-year lookback period for Medicare Part A and Part B providers and suppliers. On December 27, 2022, CMS issued a proposed rule that, if adopted, would have, among other things, materially revised the meaning of overpayment identification and, thereby, would have created uncertainty related to the timing of a provider's repayment obligation; however, CMS has decided not to proceed with the proposed changes at this time. To avoid liability, providers must, among other things, carefully and accurately code claims for reimbursement, promptly return overpayments, accurately prepare cost reports and timely resolve credit balances. In light of the provisions of FERA and the Affordable Care Act relating to reporting and refunding overpayments and the robust funding for enforcement activities and audits, an increasing number of healthcare providers have self-reported potential violations of law, including technical violations of certain fraud and abuse laws, and refunded overpayments to avoid incurring fines and penalties. It is likely such refunds and voluntary disclosures will continue in the future, and we will make such refunds and disclosures in accordance with the law.

State Laws

Many of the states in which we operate have adopted laws similar to the Anti-kickback Statute and the Stark law. These state laws are generally very broad in scope and typically apply to patients whose treatment is covered by the Medicaid program and, in some cases, to all patients regardless of payment source. In addition, many of the states in which we operate have false claims statutes that impose civil and/or criminal liability for the types of acts prohibited by the False Claims Act or that otherwise prohibit the submission of false or fraudulent claims to the state government or Medicaid program. Violations of these laws are punishable by substantial civil and/or criminal penalties and, in many cases, the loss of the facility's license. Although we believe that our operations and arrangements with physicians and other referral sources comply with the applicable state fraud and abuse laws, most of these laws have not been interpreted by any court or governmental agency, and there can be no assurance that the regulatory authorities responsible for enforcing these laws will determine that our arrangements comply with the applicable requirements.

Emergency Medical Treatment and Active Labor Act

Our acute care hospitals are all generally subject to EMTALA. This federal law requires any hospital that participates in the Medicare program and has an emergency department to conduct an appropriate medical screening examination of every person who presents to the hospital's emergency department for treatment and, if the patient is suffering from an emergency medical condition, to either stabilize that condition or make an appropriate transfer of the patient to a facility that can handle the condition. The obligation to screen and stabilize emergency medical conditions or transfer exists regardless of a patient's ability to pay for treatment. Off-campus facilities such as specialty clinics, surgery centers and other facilities that lack emergency departments or otherwise do not treat emergency medical conditions are not generally subject to EMTALA. They must, however, have policies in place that explain how the location should proceed in an emergency situation, such as transferring the patient to the closest hospital with an emergency department. There are severe penalties under EMTALA if a hospital fails to screen or appropriately stabilize or transfer a patient or if the hospital delays appropriate treatment in order to first inquire about the patient's ability to pay, including substantial civil monetary penalties and exclusion from participation in the Medicare program. In addition, an injured patient, the patient's family or a medical facility that suffers a financial loss as a direct result of another hospital's violation of the law can bring a civil suit against that other hospital. CMS has actively enforced EMTALA and has indicated that it will continue to do so in the future. Although we believe that our acute care hospitals comply with EMTALA, we cannot predict whether CMS will implement new requirements in the future and, if so, whether our hospitals will comply with any new requirements.

On July 11, 2022, in response to an executive order issued by President Biden in the wake of the Dobbs Decision that overturned the Roe Decision, HHS issued guidance on the applicability of EMTALA to the performance of abortion services when needed for emergency care. In its guidance HHS stated that EMTALA requires providers to provide stabilizing care to all individuals with an emergency medical condition, including providing abortion services when necessary, regardless of the state where they live. HHS also reiterated that EMTALA preempts directly conflicting state abortion laws that may restrict or ban abortions. A number of lawsuits have been filed challenging the enforceability of HHS's guidance in states with abortion laws. We cannot predict the outcome of these and other lawsuits, or how the federal and state government agencies will ultimately enforce EMTALA or related state laws in light of HHS's EMTALA guidance or the impact that such guidance will have on our operations or the cost of providing services in the communities we serve.

Administrative Simplification Provisions and Privacy and Security Requirements

We are subject to the administrative simplification provisions of the Health Insurance Portability and Accountability Act of 1996 ("***HIPAA***") which require the use of uniform electronic data transmission standards for healthcare claims and payment transactions submitted or received electronically. These provisions are intended to encourage electronic commerce in the healthcare industry. Additionally, we are subject to the privacy, security and breach notification regulations promulgated under HIPAA and the Health Information Technology for Economic and Clinical Health Act (the "***HITECH Act***"), which are designed to protect the confidentiality, availability and integrity of protected health information ("***PHI***") and establish an array of patient rights with respect to such information. The HIPAA privacy, security and breach notification regulations apply to covered entities, which include health plans, healthcare clearinghouses, and healthcare providers that conduct certain standard transactions (such as billing insurance) electronically. In addition, certain provisions of the privacy, security and breach notification regulations apply to business associates, which are entities that perform certain functions or activities on behalf of covered entities that require access to or the use or disclosure of protected health information. In certain circumstances, a covered entity may be held liable for the actions of its business associate if HHS determines an agency relationship exists between the covered entity and the business associate under federal agency law.

The HIPAA privacy regulations, which apply to individually identifiable health information held or disclosed by a covered entity in any form, whether communicated electronically, on paper or orally, impose extensive administrative requirements on us, which require that we adopt policies and procedures to comply with HIPAA, routinely train our workforce members on our HIPAA policies, provide patients with a copy of our notice of privacy practices, comply with rules governing the use and disclosure of PHI and impose these rules, by contract, on any business associate to whom we disclose such information in order to perform functions on our behalf. They also create rights for patients in their health information, such as the right to access and amend their health information and to request an accounting for certain disclosures of their health information. The HIPAA security regulations require us to establish and maintain reasonable and appropriate administrative, technical and physical safeguards to ensure the integrity, confidentiality and the availability of electronic health information and to perform ongoing assessments of the potential risks and vulnerabilities to the confidentiality, integrity and availability of such information. In addition, the HIPAA breach notification regulations require that we report breaches of unsecured (unencrypted) PHI to affected individuals without unreasonable delay, but in no case later than 60 calendar days of discovery of the breach. Notification must also be made to HHS and, in certain cases involving large breaches, to the local media. HHS is required to report on its website a list of all covered entities that report a breach involving more than 500 individuals. All non-permitted uses or disclosures are presumed to be breaches unless the covered entity or business associate can demonstrate that there is a low probability that the information has been compromised. We implement a comprehensive set of HIPAA policies and procedures, which we believe materially complies with the privacy, security and breach notification requirements of HIPAA.

HIPAA enforcement actions arise from audits, complaints, and breach notifications. Violations of the HIPAA regulations may result in criminal penalties and substantial civil monetary penalties subject to a limit for violations of the same requirement in a calendar year, based on the level of culpability associated with the violation. The civil monetary penalties are also subject to annual inflation adjustments. In addition, state attorneys general are authorized to bring civil actions seeking either injunction or damages up to $25,000 for violations of the same requirement in a calendar year in response to HIPAA violations that affect their state residents. HHS has the discretion in many cases to resolve HIPAA violations through informal means without the imposition of penalties. However, the HIPAA privacy, security and breach notification regulations have and will continue to impose significant costs on our facilities in order to comply with these standards. In recent years, enforcement of the HIPAA regulations has increased significantly, and we expect the increased level of enforcement to continue in the future.

Our facilities continue to remain subject to other applicable federal or state laws that are more restrictive than the HIPAA privacy and security regulations, which could impose additional penalties on us. For example, the federal government and some states impose laws governing the use and disclosure of health information pertaining to substance use disorder and/or mental health treatment that are more stringent than the rules that apply to healthcare information generally. In addition, the FTC uses its consumer protection authority to initiate enforcement actions against companies whose inadequate data security programs may expose consumers to fraud, identity theft and privacy intrusions, including the security programs of entities subject to the HIPAA regulations. Other state data privacy and security laws also may be applicable to certain data held by our facilities of residents of such states, such as the California Consumer Privacy Act of 2018, as amended by the California Privacy Rights Act of 2023, the Virginia Consumer Data Protection Act, the Colorado Privacy Act, and the Utah Consumer Privacy Act, as well as other similar laws that are selected to go into effect in the future (for example, the Indiana Consumer Data Protection Act, the Iowa Consumer Data Protection Act, the Montana Consumer Data Privacy Act, the Oregon Consumer Privacy Act, the Tennessee Information Protection Act, and the Texas Data Privacy and Security Act). These laws provide for civil penalties, and, in some cases, a private right of action, for violations. These laws and other proposed state privacy bills could have far-reaching effects and require that we modify our data processing practices and policies and incur substantial costs and expenses in order to comply.

Corporate Practice of Medicine and Fee-Splitting

Some states have laws that prohibit unlicensed persons or business entities, including corporations or business organizations that own hospitals, from employing physicians. Some states also have adopted laws that prohibit direct or indirect payments or fee-splitting arrangements between physicians and unlicensed persons or business entities. Possible sanctions for violations of these restrictions include loss of a physician's license, civil and criminal penalties and rescission of business arrangements. These laws vary from state to state, are often vague and have seldom been interpreted by the courts or regulatory agencies. We attempt to structure our arrangements with healthcare providers to comply with the relevant state laws and the few available judicial and regulatory interpretations.

Facility Licensure, Certification, and Accreditation

All of our facilities must comply with various federal, state and local licensing and certification regulations and undergo periodic inspection by licensing agencies to certify compliance with such regulations. The initial and continued licensure of our facilities and certification to participate in government healthcare programs depends upon many factors including various state licensure regulations relating to quality of care, environment of care, equipment, services, staff training, personnel and the existence of adequate policies, procedures and controls. Federal, state and local agencies survey our facilities on a regular basis to determine whether the facilities are in compliance with regulatory operating and health standards and conditions for participating in government healthcare programs.

Most of our general acute care hospitals and IRFs maintain accreditation from private entities, such as The Joint Commission or the Commission on Accreditation of Rehabilitation Facilities ("***CARF***"). The Joint Commission accredits a broad variety of healthcare organizations, including hospitals and behavioral health organizations. CARF accredits behavioral health organizations providing mental health and alcohol and drug use and addiction services, rehabilitation services, as well as opiate treatment programs, and other types of healthcare programs. These accreditation programs are intended generally to improve the quality, safety, outcomes and value of healthcare services provided by accredited facilities. Certain federal and state licensing agencies as well as many government and private healthcare payment programs require that providers be accredited as a condition of licensure, certification or participation. Accreditation is typically granted for a specified period, ranging from one to three years, and renewals of accreditation generally require completion of a renewal application and an on-site renewal survey.

The Controlled Substances Act and Drug Enforcement Administration ("***DEA***") regulations require every person who dispenses controlled substances to be registered with the DEA at each principal place of business or professional practice where the person dispenses controlled substances, subject to limited exceptions. Each hospital or clinic must hold a DEA registration at each location and may be subject to similar state registration requirements. In addition, our facilities are subject to a variety of federal and state statutes and regulations that govern operational issues related to pharmaceuticals and controlled substances, such as those related to packaging, storing, and dispensing of pharmaceutical drugs, inventory control and recordkeeping requirements for controlled substances, and other standards intended to prevent diversion of controlled substances. The DEA, the DOJ, HHS, and state boards of pharmacy have broad enforcement powers, may conduct audits and investigations and can impose substantial fines and other penalties, including revocation of registration.

Certificates of Need

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and expensive equipment at our facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of the new equipment or services and allow competing healthcare providers to challenge the need for the facility, service or equipment. We operate facilities in certain states that have adopted certificate of need laws. If we fail to obtain necessary state approval, we will not be able to expand our facilities, complete acquisitions or add new services at our facilities in these states. Violation of these state laws may result in the imposition of civil sanctions or the revocation of the applicable hospital or facility license. Some states in which we operate do not have certificate of need requirements. Additionally, from time to time, states with existing requirements may repeal or limit the scope of their certificate of need programs. Our facilities in states that do not have (or limit the scope of) certificate of need programs could be subject to increased competition from other providers who may choose to enter the market.

Not-for-Profit Hospital Conversion Legislation

Many states have adopted legislation regarding the sale or other disposition of hospitals operated by not-for-profit entities. In states that do not have such legislation, the attorneys general have demonstrated an interest in reviewing these transactions under their general obligations to protect charitable assets. These legislative and administrative efforts primarily focus on the appropriate valuation of the assets divested and the use of the proceeds of the sale by the not-for-profit seller. Reviews and, in some instances, approval processes adopted by state authorities can add additional time to the closing of a not-for-profit hospital acquisition, and can also impose on buyers ongoing requirements to provide certain levels of charity care, or limit buyers' ability to discontinue particular service lines or to sell or otherwise dispose of a converted hospital. Future actions by state legislators or attorneys general may seriously delay or even prevent our ability to acquire certain hospitals.

Environmental Regulation

Our healthcare operations generate medical waste that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Our operations, as well as our purchases and sales of healthcare facilities, are also subject to compliance with various other environmental laws, rules and regulations. Such compliance costs are not significant, and we do not anticipate that such compliance costs will be significant in the future. However, regulations limiting greenhouse gas emissions and energy inputs may increase in coming years, which may increase our costs associated with compliance, disrupt and adversely affect our operations and could materially adversely affect our financial performance.

Compliance Program

We maintain a company-wide ethics and compliance program designed to ensure that we maintain high standards of ethical conduct in the operation of our business and to meet or exceed applicable federal guidance and industry standards. We continually implement written policies and procedures for all of our employees to promote compliance with all applicable laws, regulations and Company policies and to encourage a "culture of compliance" within the Company and its facilities. The organizational structure of our ethics and compliance program includes oversight by our Board of Directors (the "***Board***") and compliance committees at the Company and facility levels. We have compliance officers and personnel at the Company level and at our facilities. Other features of our compliance program include initial and periodic ethics and compliance training, systems for identifying and tracking compliance issues (including databases and hotlines for employees to report, without fear of retaliation, any suspected legal or ethical violations), regular auditing and monitoring of compliance issues, including coding audits and reviews of our financial relationships with physicians, and prompt review and resolution of identified issues.

Our compliance program also oversees the implementation and monitoring of the standards set forth by HIPAA for privacy. Ongoing HIPAA compliance also includes self-monitoring of HIPAA policy and procedure implementation by each of our healthcare facilities and oversight at the Company level.

Risk Management and Insurance

Given the nature of our operating environment, we are subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, we maintain insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("***SIR***") and deductible levels. At December 31, 2023, our SIR for professional liability claims is $15 million per claim at the majority of our acute care hospitals. Additionally, we participate in state-specific professional liability programs in New Mexico and Pennsylvania. We have a $25,000 deductible for professional liability at each of our IRFs and a $100,000 deductible at each of our BHFs. At December 31, 2023, our deductible for workers' compensation claims at each of our acute care and BHFs was $1 million per claim in all states in which we operate except for Montana, Ohio and Washington. We participate in state-specific programs for our workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at our IRFs. Our SIR and deductible levels are evaluated annually as a part of our insurance program's renewal process.

We also maintain directors' and officers', property, some professional liability and other types of insurance coverage with unrelated commercial carriers. Our directors' and officers' liability insurance coverage for current officers and directors is a program that protects us as well as the individual director or officer. We maintain property insurance through unrelated commercial insurance companies.

We operate a captive insurance company under the name Point of Life Indemnity, Ltd. This captive insurance company, which is licensed by the Cayman Islands Monetary Authority and is a wholly-owned subsidiary of Lifepoint, issues malpractice indemnity policies to some subsidiaries employing physicians and advanced practice providers.

Item 1A. ***Risk Factors.***

Any of the following risks could materially and adversely affect our business, financial condition, results of operations or cash flow. In addition, the risks described below are not the only risks that we face. The following information should be read in conjunction with "Part II, Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" included in this Report. Additional risks and uncertainties not currently known to us or those that we currently view to be immaterial could also materially and adversely affect our business, financial condition, results of operations or cash flow.

Risk Factor Summary

The following is a summary of the principal risks that could adversely affect our business, financial condition, results of operations or cash flow.

Business and Operational Risks

- Changes in reimbursement rates, methods or timing of payment by federal or state programs may reduce our Medicare or Medicaid payments and adversely affect our revenues, results of operations and cash flow.
- Changes to Medicaid supplemental payment programs may materially and adversely affect our results of operations and cash flow.
- Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may adversely affect our revenues, results of operations and cash flow.
- Uncertainty regarding the Affordable Care Act or future healthcare reform may adversely affect our business, financial condition, results of operations and cash flow.
- COVID-19 and resulting legislation may continue to affect our operations, business and financial condition.
- We may encounter difficulty operating, integrating and improving financial performance at acquired facilities. Also, if we acquire facilities with unknown or contingent liabilities, we could become liable for material obligations, or it could diminish the anticipated value of the acquired facility.
- We are subject to risks associated with outsourcing functions to third parties, including risks associated with the protection of patient data.
- We conduct a significant portion of our operations through joint ventures. We cannot provide assurances that relationships with our joint venture partners will remain strong, which could negatively affect our joint ventures, affiliations and other strategic alliances as well as our overall business.
- If our fair value declines or if our estimated future cash flows decrease, a material non-cash charge to earnings from impairment of our goodwill or our long-lived assets could result.
- Deterioration in the collectability of "patient due" accounts could adversely affect our revenues, results of operations and cash flow.
- Other hospitals and inpatient and outpatient facilities provide services similar to those which we offer. In addition, physicians and other healthcare practitioners provide services in their offices that could be provided in our facilities. These factors increase the level of competition we face and may therefore adversely affect our revenues, results of operations and cash flow.
- We may have difficulty acquiring or divesting facilities on favorable terms. Furthermore, our business could be negatively affected if acquisitions or divestitures are not successfully completed or if contingent liabilities materialize in connection with such transactions.
- If we are unable to implement successfully standardized processes, policies and systems throughout our facilities, our operating results and cash flow could be negatively impacted.
- Under each of the 2021 Master Lease (defined below) and the Springstone Master Lease, a default with respect to one facility could cause a default under all of the facilities subject to the 2021 Master Lease or the Springstone Master Lease, respectively, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.
- Because many of the facilities we operate are subject to long-term leases, failure to comply with the terms of such leases or failure to renew such leases could cause us to lose the ability to operate these facilities and incur substantial costs in restoring the premises.
- Many non-urban communities in which we operate continue to face challenging economic conditions and demographic trends, which may materially and adversely impede our business strategies to generate organic growth and improve operating results at our facilities.
- Our financial condition, results of operations and cash flow may be adversely affected by changing economic conditions, including interest rates and inflation.
- Supply chain issues of the medical supplies, equipment and pharmaceuticals used in our facilities could adversely affect our operations.
- Our cash and cash equivalents could be adversely affected if the financial institutions in which we hold our cash and cash equivalents fail.
- Factors associated with global climate change, including evolving and increasing regulations, increasing global concern and stakeholder scrutiny about climate change, and extreme weather conditions could adversely affect our business, reputation, results of operations and financial position.
- Our operations could be adversely impacted by civil unrest, acts of war or terrorism, other criminal activities, infectious disease outbreaks or other unexpected events outside our control.

Credit and Liquidity Risks

- Our substantial indebtedness could materially and adversely affect our ability to raise additional capital to fund our operations or fund strategic initiatives, limit our ability to react to changes in the economy or our industry and prevent us from making debt service payments.
- Our debt agreements contain restrictions that will limit our flexibility in operating our business.
- We are dependent on cash flow generated by our subsidiaries to service our indebtedness.
- We may not be able to generate sufficient cash to service all of our indebtedness and may be forced to take other actions to satisfy our obligations under our indebtedness that may not be successful.

- Our ability to obtain, and the terms of any, financing or refinancing will be dependent on the condition of the financial markets and our financial condition and operating performance. Any inability to obtain refinancing as our debt matures could materially and adversely affect our financial condition.
- Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.
- Despite our substantial indebtedness, we may still be able to incur significantly more debt, which could intensify the risks described above.
- We may not be able to generate sufficient cash flow through operations or successfully access other capital resources to fund all of our capital expenditure programs and commitments.
- Our ability to utilize our net operating loss carryforwards ("***NOLs***") may be limited, and we may not be able to utilize our NOLs as a result of recent U.S. federal tax reform legislation.

Human Capital Risks

- Factors related to our employment of physicians could affect our financial performance.
- Our operations and ability to deliver healthcare services efficiently may be adversely affected if we are unable to recruit and retain quality physicians, nurses and other healthcare professionals.
- Our performance and labor costs may be adversely affected by challenging labor market conditions and the shortage of qualified nurses and other healthcare personnel.
- Labor union activity could raise costs and interfere with our operations. Certain of our employees are union members and subject to the terms of collective bargaining agreements.
- We are dependent on our executive management team and the loss of the services of one or more members of our executive management team could have a material adverse effect on our business.

Regulatory and Legal Risks

- We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may adversely affect our revenues, results of operations and cash flow.
- We may be subjected to actions brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the False Claims Act's "qui tam" or "whistleblower" provisions.
- We may be subjected to liabilities because of malpractice and other legal claims brought against our facilities or healthcare providers associated with, or employed by, our facilities or affiliated entities. If we become subject to these claims, we could be required to pay significant damages, which may not be covered by insurance.
- As a result of reviews of claims to Medicare and Medicaid for our services, we may experience delayed payments or incur additional costs and may be required to repay amounts already paid to us.
- Controls designed to reduce inpatient services may adversely affect our revenues, results of operations and cash flow.
- If we do not manage admissions in the IRFs that we operate or manage in compliance with a 60% threshold, reimbursement for services rendered by us in these facilities will be based upon less favorable rates.
- Certificate of need laws and regulations regarding licenses, ownership and operation may impair our future expansion in some states. In states without certificate of need laws, competing providers of healthcare services are able to expand and construct facilities without the need for significant regulatory approval.
- Failure to implement and use certified health information technology in an effective and timely manner could adversely affect our operations and result in reduced Medicare and Medicaid reimbursement and government enforcement actions.
- The industry emphasis on value-based purchasing and bundled payment arrangements may negatively affect our revenues.
- The implementation of participation and quality measurement requirements under the MACRA's Merit-Based Incentive Payment System may affect our revenues.
- If current or future laws or regulations force us or cause us to restructure our arrangements with physicians and other providers, we may incur additional costs, lose contracts and suffer a reduction in net revenue under existing contracts, and we may need to refinance our debt or obtain consent from our lenders.
- We care for a large number of vulnerable individuals with complex needs and any incident involving one or more of our patients or the failure by one or more of our facilities to provide appropriate care could adversely affect our business, financial condition, results of operations or cash flow.

Data Security and Privacy Risks

- A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business.
- If access to our information systems or those provided by our third-party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer.
- If we fail to comply with our obligations under license or technology agreements with third parties, we may be required to pay damages and we could lose license rights that are critical to our business.
- The constant growth and development of technology, including the increased use of Artificial Intelligence, presents risks and challenges to our operations that could give rise to legal or regulatory action, damage our reputation or otherwise materially harm of our business.

Business and Operational Risks

Changes in reimbursement rates, methods or timing of payment by federal or state programs may reduce our Medicare or Medicaid payments and adversely affect our revenues, results of operations and cash flow.

For the years ended December 31, 2023, 2022 and 2021, approximately 56.5%, 56.9% and 56.1% of our revenues, respectively, related to patients participating in Medicare and Medicaid programs, collectively. Numerous factors could materially decrease, or delay timing of, Medicare and Medicaid payments to our facilities and, accordingly, adversely affect our revenues, results of operations and cash flow. These factors include statutory and regulatory changes, administrative rulings and determinations concerning patient and provider eligibility and requirements for utilization review. Furthermore, the Affordable Care Act and related federal laws provide for material scheduled reductions in the growth rate of Medicare and Medicaid program spending, including reductions in market basket updates and Medicare and Medicaid DSH funding. Additionally, a number of states have adopted or are considering legislation designed to reduce their Medicaid expenditures or reform their Medicaid programs, including enrolling Medicaid recipients in managed care programs or converting to modified block grant funded programs. States also may impose additional taxes on hospitals to help finance the state's Medicaid programs.

Changes to Medicaid supplemental payment programs may materially and adversely affect our results of operations and cash flow.

MSPs are payments made to providers separate from and in addition to those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid DSH and UPL payments. Medicaid DSH payments are federally required to be made by the states to hospitals that serve significant numbers of Medicaid and uninsured patients in recognition of the additional costs incurred by hospitals in treating these patients. The total amount of Medicaid DSH payments a state may make and the total amount any one hospital may receive are both capped by federal law. Unlike Medicaid DSH payments, UPL payments are not required to be made by states under federal law. Rather, federal regulations establish an UPL above which states may not receive federal matching dollars.

The Affordable Care Act called for significant reductions in Medicaid DSH funding to account for decreases in uncompensated care anticipated under the health insurance coverage expansion. Subsequent changes in the law have delayed the implementation of these reductions until FFY 2024. Reductions in Medicaid DSH payments may take place without increases in the Medicaid eligible population, thus increasing the net amount of uncompensated care we provide.

UPL programs have expanded in recent years and certain of our hospitals receive payments under such programs. Because services provided to Medicaid beneficiaries enrolled in managed care are not included in state UPL calculations, as states increase their use of managed care Medicaid programs, UPL MSPs could be reduced. UPL funding and matching federal funds may also be reduced or eliminated as a result of state or local governmental legislation, state changes to historical funding levels or related taxes, compliance reviews by CMS, or changes to federal Medicaid funding affecting such programs. We cannot predict whether MSP programs will continue, and, if continued, whether we will qualify for such programs, or guarantee that revenues recognized from these programs will not decrease.

Changes in payer mix, the financial condition of payers and healthcare cost containment initiatives may adversely affect our revenues, results of operations and cash flow.

The amounts we receive for services provided to patients are determined by a number of factors, including the payer mix of our patients and the reimbursement methodologies and rates utilized by our payers. We have seen shifts of patients from commercial and private insurance to Medicare and Medicaid programs and from "traditional" fee-for-service Medicare and Medicaid programs to managed Medicare and Medicaid programs. Reimbursement rates generally are lower for (i) Medicare and Medicaid beneficiaries than they are for patients whose care is covered by commercial and private insurance and (ii) managed Medicare and Medicaid beneficiaries than they are for traditional Medicare and Medicaid beneficiaries. Broad economic factors, including those resulting from inflationary pressures, supply chain disruptions, labor shortages, increased unemployment and underemployment rates and reduced consumer spending and confidence, may impact our revenue mix. We also experience demographic pressures as aging populations in our non-urban communities shift from commercial insurance programs to Medicare or managed Medicare programs. Our revenues, results of operations and cash flow may be adversely affected by these shifts.

In addition, our revenues from negotiated rates with HMOs, PPOs, insurance companies, employers and other private payers may decline based on renegotiations and the respective bargaining power of these parties. Also, consolidation among private payers may increase their bargaining power over fee structures. As a result, payers increasingly are demanding discounted fee structures or the assumption by healthcare providers of all or a portion of the financial risk related to paying for care provided. These changes include moving away from a percent of charge payment structure to a fixed payment for an episode of care, which typically reduces our payment rate and limits our ability to raise prices going forward. Furthermore, low-cost plans purchased through the Exchanges are increasingly using narrow and tiered networks that limit beneficiary provider choices, restrict or exclude our facilities or impose significantly higher cost sharing obligations for care provided by our facilities if they are classified in a disfavored tier. In addition, other healthcare providers, including some with greater financial resources, greater geographic coverage or a wider range of services, may negotiate exclusivity provisions with managed care plans or otherwise restrict the ability of managed care plans to contract with us. As payments are reduced, if we are excluded from more payer networks or if the scope of services covered by payers is limited, there could be a material adverse effect on our revenues, results of operations and cash flow.

There are also an increasing number of patients enrolling in insurance plans with high deductibles or high co-payments, including those purchased on the Exchanges, which increase the amount due from the patient and may result in reimbursement for a lower portion of the total payment amount relative to traditional employer-sponsored health insurance plans for the healthcare services provided by our facilities and employed providers. Patients enrolled in higher deductible and co-payment plans tend to defer elective and non-emergency procedures or default on their portion of the payment. We may be adversely affected by the growth in patient responsibility accounts because of plan structures, including health savings accounts, which shift more responsibility for care to individuals through greater exclusions and higher deductible and co-payment amounts. If we experience shifts in our patient volumes to these types of plan structures, our revenue, results of operations and cash flow may be adversely affected.

Uncertainty regarding the Affordable Care Act or future healthcare reform may adversely affect our business, financial condition, results of operations and cash flow.

The Affordable Care Act dramatically altered the U.S. healthcare system, and we have expended substantial cost and effort to prepare for and comply with the Affordable Care Act. The net effect of the Affordable Care Act on our business continues to be subject to a number of variables, including the law's complexity, its changing and often incomplete implementation of regulations and interpretive guidance, and the sporadic implementation of the numerous programs designed to improve access to and the quality of healthcare services. Additionally, the Affordable Care Act has been the subject of numerous legal challenges and legislative efforts to delay, defund or repeal the implementation or amend significant provisions of the Affordable Care Act. We cannot predict the outcome of lawsuits regarding the implementation of various aspects of the Affordable Care Act and whether the U.S. Supreme Court will decide to hear additional cases related to the Affordable Care Act in the future. We also cannot predict the impact that the current or future Presidential administrations and Congresses, including that of the upcoming 2024 Presidential election, will have on the implementation and enforcement of the provisions of the Affordable Care Act or any future healthcare reform legislation or initiatives, including "Medicare-for-all" or other single-payer proposals.

COVID-19 and resulting legislation may continue to affect our operations, business, and financial condition.

As a front-line provider of health care services, COVID-19 has affected and may continue to affect our facilities, employees, patients, communities, business operations and financial performance. Although vaccines are widely available in the U.S., the extent to which COVID-19 impacts will continue is difficult to predict due to factors beyond our control, such as the vaccination rates in the communities we serve, the number and severity of the variants of the virus that emerge, the effectiveness of the vaccines against the virus and those variants, the unknown extent of the long-term health effects of COVID-19, and the effects of COVID-19 on macroeconomic conditions.

In response to the COVID-19 pandemic, federal and state governments passed legislation, promulgated regulations and took other administrative actions intended to assist healthcare providers during the public health emergency and to provide financial relief. The CARES Act, the Paycheck Protection Program and Health Care Enhancement Act, the Consolidated Appropriations Act and the ARP authorized funding to be distributed to eligible healthcare providers through the Public Health and Social Services Emergency Fund (the "***Emergency Fund***"). These funds were intended to reimburse eligible providers, including public entities and Medicare- and/or Medicaid-enrolled providers and suppliers, for lost revenues and healthcare related expenses attributable to COVID-19. Recipients are not required to repay these funds, provided that they attest to and comply with certain terms and conditions. However, the Company is required to submit reports for all of its providers that received and retained payments from the Emergency Fund, which are closely monitored by HHS. As a result we may be subject to or incur costs from related government actions including payment recoupment, audits and additional inquiries by governmental authorities.

We may encounter difficulty operating, integrating and improving financial performance at acquired facilities. Also, if we acquire facilities with unknown or contingent liabilities, we could become liable for material obligations or it could diminish the anticipated value of the acquired facility.

We may be unable to timely and effectively integrate facilities that we acquire with our ongoing operations. Many of the facilities we have acquired had, or future acquisitions may have, significantly lower operating margins than we do and/or operating losses prior to the time we acquired or will acquire them. In the past, we have occasionally experienced delays in improving the operating margins or effectively integrating the operations of our acquired facilities, and we may experience such delays in implementing operating procedures and systems in newly or future acquired facilities. Integrating an acquired facility could be expensive and time consuming and could disrupt our ongoing business, negatively affect cash flow, distract management and other key personnel, negatively impact our ability to attract, retain and motivate current and prospective employees, subject us to increased regulatory oversight, and result in legal proceedings. Additionally, we may experience delays in reimbursement from governmental and third-party payers as a result of the change of ownership of our acquired facilities.

We must integrate complex information, accounting and operational systems, compliance programs and internal controls over financial reporting of acquired facilities into our existing systems, processes and internal controls. While we devote a significant amount of employee and management resources on these integrations, we also rely heavily on third parties for systems integration. Our efforts to integrate new facilities, including causing those third parties to convert our newly acquired facilities' systems, may fail or be significantly delayed. Failure to timely and effectively integrate or convert any of these systems could cause business interruption, affect provider and staff morale and our ability to accurately manage accounting, clinical, compliance and operational functions. As future acquisitions may involve large operations, any such failure could cause a material adverse effect on our results of operations or cash flow.

Facilities we have acquired or facilities we acquire in the future, may have unknown or contingent liabilities for historical activities or conditions, including liabilities for failure to comply with laws and regulations, retroactive payment adjustments or recoupments from payer and Emergency Fund audits, medical and general professional malpractice liabilities, unfunded pension liabilities, workers' compensation or other employee-related liabilities, previous tax or environmental liabilities, regulatory and compliance related liabilities, and unacceptable business or accounting practices. Although we endeavor to obtain contractual indemnification from sellers covering these matters in connection with some acquisitions, we have not obtained contractual indemnifications in connection with all of them, and any indemnification obtained from sellers may be insufficient to cover material claims or liabilities for past activities of acquired businesses and the sellers may have insufficient funds to satisfy any claims or liabilities for which we may otherwise be entitled to be reimbursed.

We typically retain and rely on existing local management teams at newly acquired facilities to implement changes to operating procedures and systems. Integrating local management teams can involve cultural and systems challenges that may demand a disproportionate share of our resources and senior management's attention, and we may experience turnover of providers and other key personnel. Our acquisitions have become, and may continue to become larger, and may occur in communities with competing facilities. As a result, the issues surrounding integration may become more complex, expensive and time-consuming and may have a greater impact on our financial performance when we experience delays or difficulties.

Our growth has placed, and will continue to place, increased demands on our management, operational and financial information systems and other resources. Furthermore, expansions into new geographic markets and diversification of services and service lines may require us to comply with new and unfamiliar legal and regulatory requirements, which could impose substantial obligations on us and our management, cause us to expend additional time and resources, and increase our exposure to penalties or fines for non-compliance with such requirements. To accommodate our past and anticipated future growth, and to compete effectively, we will need to continue to improve our management, operational and financial information systems and to expand, train, manage and motivate our workforce. Our personnel, systems, procedures or controls may not be adequate to support our operations in the future. Further, focusing our financial resources and management attention on the expansion and diversification of our operations may negatively impact our financial results. Any failure to improve our management, operational and financial information systems, or to expand, train, manage or motivate our workforce, could reduce or prevent our growth.

We are subject to risks associated with outsourcing functions to third parties, including risks associated with the protection of patient data.

We outsource selected business functions to third parties, including electronic health record software and data hosting, revenue cycle management, patient access, billing, cash collections, payment compliance and support services, project implementation, supply chain management, payroll system services and a portion of our cybersecurity management. We take steps to monitor and regulate the performance of the independent third parties to whom we delegate selected functions. Arrangements with third-party service providers may make our operations vulnerable if vendors fail to satisfy their obligations to us as a result of their performance, changes in their own operations, financial condition, or other matters outside of our control. We may also face legal, financial or reputational harm for the actions or omissions of such providers, including for violations of HIPAA and other privacy and security laws applicable to healthcare providers and the Cures Act information blocking regulations, and we may not have effective recourse against the providers for those harms. While we evaluate the information security programs and defenses of such third parties, we cannot be certain that our evaluations will identify all or any potential information security weaknesses, or that such third parties' information security protocols are or will be sufficient to withstand or adequately respond to a cyber-attack or other information security incident. The expanding role of third-party providers may also require changes to our existing operations and the adoption of new procedures and processes for retaining and managing these providers, as well as redistributing responsibilities as needed. Effective management, development and implementation of our outsourcing strategies are important to our business and strategy. If there are delays or difficulties in enhancing business processes or our third-party providers do not perform as anticipated, we may not fully realize on a timely basis the anticipated economic and other benefits of the outsourcing projects or other relationships we enter into with key vendors, which could result in substantial costs, divert management's attention from other strategic activities, negatively affect employee morale or create other operational or financial problems for us. Terminating, transitioning or renegotiating arrangements with key vendors or failure to renegotiate on favorable terms could result in additional costs and a risk of operational delays, potential errors and possible control issues as a result of the termination or during the transition or renegotiation phase.

We conduct a significant portion of our operations through joint ventures. We cannot provide assurances that relationships with our joint venture partners will remain strong, which could negatively affect our joint ventures, affiliations and other strategic alliances as well as our overall business.

We are a party to a number of joint ventures, affiliations and other strategic alliances as part of our business strategy. We expect to enter into similar transactions in the future, including joint ventures where we may have a noncontrolling interest**.** Any changes in our relationships with our joint venture partners could disrupt ongoing business, negatively affect results of operations or cash flow and distract management and other key personnel. In the event of a material disagreement with any of our joint venture partners or the breach of any of our joint venture agreements, a joint venture may be subject to dissolution, unwinding or purchase of either party's interest, which could adversely affect our revenues, results of operations or cash flow, or result in reputational harm.

As a general matter, our joint venture partners may have investment and operational goals that are not aligned with our company-wide objectives, including the timing, terms and strategies for future growth and development opportunities, and we could reach an impasse on certain decisions, which may hinder our ability to pursue preferred strategies for growth and development, could require significant resources and attention from management and key employees to resolve and could have an adverse effect on our operations, cash flow and revenue growth. In addition, our joint venture relationships with not-for-profit partners and the agreements that govern these relationships are structured based on current provisions of the Internal Revenue Code of 1986, as amended (the "***Code***") (and the Treasury Regulations thereunder), published rulings by the Internal Revenue Service ("***IRS***"), as well as case law relevant to joint ventures between for-profit and not-for-profit entities. Material changes in these legal authorities could adversely affect our relationships with not-for-profit partners and related joint venture arrangements.

Furthermore, joint ventures in which we have a noncontrolling equity interest and noncontrolling investments may involve a lesser degree of control over business operations, thereby potentially increasing the financial, legal, operational and compliance risks associated with the joint venture or noncontrolling investment. We may be dependent on joint venture partners or management who may have business interests, strategies or goals that are inconsistent with ours. Business decisions or other acts or omissions of the joint venture partner or management may adversely affect the value of our investment, result in litigation or regulatory action against us or result in reputational harm to us. To the extent another party makes decisions that negatively impact the joint venture or internal control issues arise within the joint venture, we may have to take responsive or other actions or we may be subject to penalties, fines or other related actions for these activities.

If our fair value declines or if our estimated future cash flows decrease, a material non-cash charge to earnings from impairment of our goodwill or our long-lived assets could result.

As of December 31, 2023, we had approximately $4.2 billion of goodwill and other intangible assets and approximately $3.4 billion of property and equipment, net of accumulated depreciation. We expect to recover the carrying values of our goodwill and other long-lived assets through our future cash flows. We evaluate the carrying value of our goodwill at least annually, based on our fair value determined using a discounted cash flow analysis and consideration of certain market inputs, to determine whether it is impaired. We evaluate our long-lived assets for possible impairment whenever circumstances indicate that the carrying amount of the asset, or related group of assets, may not be recoverable from estimated future cash flows. If the carrying value of our goodwill or our long-lived assets is impaired, we may incur a material non-cash charge to earnings.

Deterioration in the collectability of "patient due" accounts could adversely affect our revenues, results of operations and cash flow.

The primary collection risks associated with our accounts receivable relate to uninsured patient accounts and patient accounts for which the primary insurance carrier has paid the amounts covered by the applicable agreement, but patient responsibility amounts (exclusions, deductibles and co-payments) remain outstanding. The provision for doubtful accounts relates primarily to amounts due directly from patients. The amount of our provision for doubtful accounts is based on management's assessment of historical collection trends, business and economic conditions, trends in federal and state governmental and private employer health coverage, the rate of growth in uninsured patient admissions and other collection indicators.

If we experience growth in self-pay volume and revenue, including increased acuity levels for uninsured patients and increases in co-payments and deductibles for insured patients, our revenues, results of operations and cash flow could be adversely affected. Although we have experienced a reduction in uninsured patients since 2014 as a result of the Affordable Care Act and the expansion of state Medicaid programs, we are unable to predict whether that trend will continue in light of the repeal of the penalties associated with the individual mandate, the cessation of the cost sharing reduction payments to insurers, the decision by some states not to expand their Medicaid programs, and the availability and utilization of employer-sponsored health plans. In addition, the risk of collection from insured patients (and the amounts due) has increased, and will likely continue to increase, as a result of more individuals being enrolled in insurance plans with high deductibles and high co-payments, including those purchased on the Exchanges. Furthermore, our ability to improve co-insurance collections and collections from self-pay patients may be limited by legislative developments, such as federal and state legislation designed to reduce "surprise billing," or by other regulatory or investigatory initiatives, including private lawsuits directed at hospital charges and collection practices for uninsured and underinsured patients.

An increase in the proportion of our accounts receivable being comprised of uninsured accounts and a deterioration in the collectability of these both insured and uninsured accounts could adversely affect our revenues, results of operations and cash flow. Even if the Affordable Care Act remains implemented in its current form, we may continue to experience bad debts and be required to provide uninsured discounts and charity care for patients who choose not to purchase coverage, are undocumented immigrants who are not permitted to enroll in the Exchanges or government healthcare programs or live in states that do not expand or maintain the expansion of their Medicaid programs.

Other hospitals and inpatient and outpatient facilities provide services similar to those which we offer. In addition, physicians and other healthcare practitioners provide services in their offices that could be provided in our facilities. These factors increase the level of competition we face and may therefore adversely affect our revenues, results of operations and cash flow.

Competition among hospitals and other healthcare service providers, including inpatient and outpatient facilities, has intensified in recent years. We also have acquired, and may continue to acquire, larger facilities in more concentrated population centers, which experience greater competition for healthcare services. We compete with other facilities, including larger tertiary and quaternary care centers located in metropolitan areas. Although the facilities with which we compete may be a significant distance away from our facilities, patients in our markets may migrate on their own to, may be referred by local providers to, or may be required by their health plan to travel to these facilities. Furthermore, some of the facilities with which we compete may offer more or different services than those available at our facilities, may have more advanced equipment or technology or may have a medical staff that is perceived to be better qualified. We also compete with facilities and health systems that are implementing physician and other provider alignment strategies, such as employing providers, acquiring physician practice groups and participating in ACOs or other clinical integration models, which may impact our competitive position. Also, many of the facilities that compete with our facilities are owned by tax-supported governmental agencies or not-for-profit entities supported by endowments and charitable contributions and are eligible to participate in the 340B Program. These facilities, in most instances, are also exempt from paying sales, property and income taxes and have the ability to issue tax-exempt bonds for financing.

Quality of care, value-based purchasing, and price transparency have also become significant trends and competitive factors in the healthcare industry. CMS makes public the performance data relating to multiple quality measures that facilities submit in connection with their Medicare payment. CMS also requires every Medicare participating hospital to establish and update annually a public online listing of the hospital's standard charges for items and services and has issued regulations that significantly increase hospital charge reporting requirements. If the publicly-available performance and charge data become a primary factor in where patients choose to receive care, and if competing facilities have lower charges or better results than our facilities on those measures, our revenues and/or patient volumes could decline.

We also face significant and increasing competition from services offered by providers (including providers on our medical staffs) in their offices and from other specialized care providers, including freestanding emergency departments and outpatient surgery, oncology, physical therapy, diagnostic and urgent care centers (including many in which providers may have an ownership interest). We also compete with specialty facilities that focus on one or a small number of lucrative service lines, some of which are not required to operate emergency departments. Some of our facilities have and will seek to develop outpatient facilities where necessary to compete effectively. However, to the extent that other providers are successful in developing outpatient facilities or providers are able to offer additional, advanced services in their offices, our market share for these services will likely decrease in the future.

We may have difficulty acquiring or divesting facilities on favorable terms. Furthermore, our business could be negatively affected if acquisitions or divestitures are not successfully completed or if contingent liabilities materialize in connection with such transactions.

A significant element of our business strategy is expansion through the acquisition of acute care and post-acute care facilities along the continuum of care, especially those around which a system of facilities and other healthcare services can be created. We face significant competition to acquire attractive facilities, and we may not find suitable acquisitions on favorable terms. Our primary competitors for acquisitions have included for-profit and tax-exempt facilities and hospital systems and privately capitalized start-up companies. Buyers with a strategic desire for any particular facility—for example, a facility located near existing facilities or those who will realize economic synergies—have demonstrated an ability and willingness to pay premium prices for facilities. Strategic buyers, as a result, can present a competitive barrier to our acquisition efforts.

The cost of an acquisition could result in a dilutive effect on our results of operations, depending on various factors, including the amount paid for the acquisition, the acquired facility's results of operations, allocation of purchase price, effects of subsequent legislation and limitations on rate increases. As part of our acquisition strategy, we may commit to making significant capital improvements at acquired facilities. Such improvements may be difficult to achieve in the anticipated timeframe, if at all, due to a variety of factors beyond our control, such as zoning, environmental, licensing and certificate of need regulations and restrictions.

Our ability to engage in certain acquisitions in several states may be limited due to exclusivity, non-competition and non-solicitation provisions that we have agreed to in connection with our joint ventures, leases and previous acquisitions and divestiture transactions. Additionally, certain acquisitions may require the consent of and collaboration with our joint venture partners based upon the applicable governing documents. If we cannot obtain the cooperation of our joint venture partners in certain instances, we may not be able to pursue these opportunities.

Even if we are able to identify an attractive target, we may need to obtain financing for acquisitions, joint ventures or required capital improvements. Such financing may not be available, or we may incur or assume additional indebtedness as a result. Any financing arrangements we enter into may not be on terms favorable to us, and this could have a material adverse effect on our results of operations and cash flow.

In recent years, the legislatures and attorneys general of several states have sought to exercise more active oversight authority regarding sales of facilities by tax-exempt entities. For example, as a condition to approving an acquisition involving a non-profit hospital, the state attorney general of a state in which an acquisition takes place may require us to maintain specific service lines or provide charity care at certain minimum levels for set periods of time after closing of the acquisition, regardless of profitability. Additionally, the federal government and most states have enacted antitrust laws that prohibit certain types of conduct deemed to be anti-competitive, and antitrust enforcement in the healthcare industry is currently a priority of the FTC and the DOJ, including with respect to hospital and physician practice acquisitions. This heightened scrutiny may increase the cost and difficulty, or prevent the completion, of transactions in the future. Our failure to acquire facilities consistent with our growth plans could prevent us from increasing our revenues.

We regularly evaluate the potential disposition of assets and facilities that may no longer help us attain our objectives. When we decide to sell assets or facilities, we may encounter difficulties in finding buyers or alternative exit strategies on acceptable terms or in a timely manner, which could delay the accomplishment of our strategic objectives. Certain of our facilities are subject to master leases which, in general, may make it more difficult for us to dispose of facilities or terminate facility leases subject to the terms of such master leases, including under the terms of our Master Lease Agreement, dated December 23, 2021, entered into with certain affiliates of MPT (as amended from time to time, the "***2021 Master Lease***") and the Springstone Master Lease. We may also dispose of assets or a facility at a price, or on terms, less desirable than we anticipated. In addition, we may experience greater dis-synergies than expected. After reaching an agreement with a buyer for the disposition of assets or a facility, we will be subject to satisfaction of pre-closing conditions as well as to necessary regulatory and governmental approvals on acceptable terms, which, if not satisfied or obtained, may prevent us from completing the transaction. Dispositions may also involve continued financial involvement in the divested facilities, such as through continuing equity ownership, guarantees, indemnities, transition service agreements or other financial and commercial obligations, and inability to avoid retention of certain regulatory and compliance risks. There can be no assurance that the anticipated benefits of our future divestiture strategies will be realized. Furthermore, we may be exposed to contingent liabilities in connection with completed divestitures. Finally, certain acquisition agreements and joint venture arrangements contain covenants that restrict our ability to dispose of certain facilities without first seeking consent of a joint venture partner or other third parties, which may affect our ability to take advantage of business opportunities that may be in our interest. If we do not realize the anticipated benefits of such divestitures, if contingent liabilities related to such divestitures materialize or if we are unable to divest certain properties on favorable terms or at all, this could have a material adverse effect on our results of operations and cash flow.

If we are unable to implement successfully standardized processes, policies and systems throughout our facilities, our operating results and cash flow could be negatively impacted.

We have initiated a multi-year business initiative to standardize certain processes, policies and systems throughout our facilities, including migrating our multiple IT platforms to an integrated ERP. If we do not allocate and effectively manage the resources necessary to build and sustain the proper IT infrastructure and implement an integrated ERP system, or if we fail to achieve the expected benefits from this initiative, it may impact our ability to operate profitably and efficiently, as well as comply in a timely manner with changing regulatory requirements and with the requests of patients, payers and business partners. The failure to transition to these systems on time, or anticipate necessary readiness and training needs, could lead to business disruption, management attention may be diverted, we may see increased operational costs while operating multiple systems, and loss of revenue. In addition, the operating results of newly acquired facilities could be impacted if such facilities are not integrated on a timely and effective basis into our new systems. The actions we take to resolve compliance or regulatory issues within acquired facilities may affect our revenue, results of operations or cash flow.

In addition, as new information and business management software systems are developed in the future, we will need to integrate them into our existing systems. Evolving industry and regulatory standards may require changes to our systems in the future. System conversions are costly, time consuming and disruptive for providers, staff, management and, in some cases, patients. Some of our facilities have recently converted or are currently converting from their existing system to another third-party information system. If such conversions occurred on a large scale or if conversions at our larger facilities experience difficulties, the costs and disruptions could have a material adverse effect on our revenues, results of operations or cash flow.

Under each of the 2021 Master Lease and the Springstone Master Lease, a default with respect to one facility could cause a default under all of the facilities subject to the 2021 Master Lease or the Springstone Master Lease, respectively, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.

Upon certain defaults under each of the 2021 Master Lease and the Springstone Master Lease, even if such default relates to one facility under the 2021 Master Lease or the Springstone Master Lease, as the case may be, the applicable lessors may terminate the 2021 Master Lease or Springstone Master Lease in its entirety with respect to all of the facilities governed by such 2021 Master Lease or Springstone Master Lease, as the case may be. Under each of the 2021 Master Lease and the Springstone Master Lease, the portfolio of facilities supporting each of the 2021 Master Lease and the Springstone Master Lease is subject to financial covenants, including required minimum lease coverage and fixed charge coverage ratios. The failure to meet or obtain a waiver of such covenants or otherwise cure such non-compliance with such financial covenants in the 2021 Master Lease or the Springstone Master Lease in the future could result in an event of default under the 2021 Master Lease or the Springstone Master Lease, as the case may be.

Other events that could trigger a default under the 2021 Master Lease or the Springstone Master Lease if not cured within the time periods required by the 2021 Master Lease or the Springstone Master Lease, as the case may be, include, without limitation, (i) failure to pay rent or other amounts due under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (ii) failure to comply with the non-financial covenants under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (iii) the bankruptcy of any facility lessee under the 2021 Master Lease or the Springstone Master Lease or the guarantor of the facility lessees under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (iv) termination of any licenses necessary for operation of a facility or required for certification under Medicare or Medicaid for any facility leased under the 2021 Master Lease or the Springstone Master Lease, as the case may be, (v) a change of control in violation of the 2021 Master Lease or the Springstone Master Lease, as the case may be, and (vi) a default under any material documents between any lessee of the facilities and any lessor of any facility leased under the 2021 Master Lease or the Springstone Master Lease, as the case may be. A default under the 2021 Master Lease or the Springstone Master Lease that results in a termination of the 2021 Master Lease or the Springstone Master Lease, as the case may be, would cause us to lose the ability to operate all of the facilities subject to the 2021 Master Lease or the Springstone Master Lease, respectively, and to incur substantial costs in restoring the premises, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.

If the 2021 Master Lease or the Springstone Master Lease is terminated prior to its expiration because of a default and the lessor exercises its rights thereunder, in addition to losing the ability to operate our facilities, we may be liable for (i) damages and charges such as continued lease payments through the end of the lease term (or such shorter period as provided in the 2021 Master Lease or the Springstone Master Lease, as the case may be, or by law) and (ii) maintenance costs for the leased property leased under the 2021 Master Lease or the Springstone Master Lease, as the case may be. Upon termination of the 2021 Master Lease or the Springstone Master Lease, as the case may be, we will be obligated to restore the applicable premises to its original condition and repair all damage caused by the installation or removal of our personal property, ordinary wear and tear excepted. We also have restoration obligations with respect to certain casualty and condemnation events. In addition, upon termination of the 2021 Master Lease or the Springstone Master Lease, the lessor will have the option to purchase all of the applicable lessee's personal property at fair market value.

The 2021 Master Lease and the Springstone Master Lease are not cross-defaulted to one another.

Because many of the facilities we operate are subject to long-term leases, failure to comply with the terms of such leases or failure to renew such leases could cause us to lose the ability to operate these facilities and incur substantial costs in restoring the premises.

The rights to use many of our facilities are based upon long-term leases, including the 2021 Master Lease and the Springstone Master Lease. Pursuant to the terms of these leases, we are required to pay all rent due and comply with all other lessee obligations. As of December 31, 2023, the remaining term of these leases (including renewal options) generally ranged from less than one year up to 47 years. A pledge of our interest in some of these leases may also require the consent of the respective lessor and its lenders. As a result, we may not be able to sell, assign, transfer or convey our interest in certain facilities subject to such leases in the future absent consent of such third parties even if such transactions may be in our best interest. Most of the leases require that, upon the expiration or termination of the leases, we must surrender any improvements to the land to lessor. In addition, some of our leases include early termination provisions. We are typically responsible for all taxes, insurance, assessments and maintenance obligations under the leases. The leases also generally require the lessee to either reconstruct or restore the premises to its original condition following a casualty and to apply in a specified manner any proceeds received in connection therewith. In some leases, the lessor has the option to purchase some or all of the assets owned by us and used in connection with the operation of the applicable facility. Accordingly, failure to comply with the terms of such leases, the invalidity of or default or termination under such leases could cause us to lose the ability to operate these facilities altogether and incur substantial costs in restoring the premises, which could have a material adverse effect on our business, financial condition, results of operations and cash flow.

Many non-urban communities in which we operate continue to face challenging economic conditions and demographic trends, which may materially and adversely impede our business strategies to generate organic growth and improve operating results at our facilities.

Many non-urban communities in which we operate continue to face challenging economic conditions, including high levels of unemployment and unfavorable demographic trends, which may impede our business strategies to generate organic growth and improve operating results at our facilities. These challenging economic conditions have been further exacerbated recently by inflationary pressures and other negative macroeconomic pressures. The economies in the non-urban communities in which our facilities primarily operate are often dependent on a small number of large employers, especially manufacturing or similar facilities. These employers often provide income and health insurance for a disproportionately large number of community residents who may depend on our facilities for care. The failure of one or more large employers, or the closure or substantial reduction in the number of individuals employed at manufacturing or similar facilities located in or near many of the non-urban communities in which our facilities primarily operate, could cause affected employees to move elsewhere for employment or lose insurance coverage that was otherwise available to them.

When patients are experiencing personal financial difficulties or have concerns about general economic conditions, they may choose to (i) defer or forego elective surgeries and other non-emergent procedures, which are generally more profitable lines of business for facilities, or (ii) purchase a high-deductible insurance plan or no insurance at all, which increases a facility's dependence on self-pay revenue. Moreover, a greater number of uninsured patients may seek care in our emergency rooms, which are generally more costly settings for us to administer care.

Additionally, non-urban communities are experiencing a much slower rate of growth, if any, as compared to more concentrated population centers. As a result, we may experience payer mix pressures as aging populations in our non-urban communities shift from commercial insurance programs to Medicare or managed Medicare programs.

Our financial condition, results of operations and cash flow may be adversely affected by changing economic conditions, including interest rates and inflation.

In recent years, the U.S. market has experienced cyclical or episodic downturns, and worldwide economic conditions remain uncertain and volatile, as a result of current geopolitical conditions including the Israel-Hamas War, the ongoing Russia-Ukraine War and conflict between China and Taiwan, instability in the U.S. and global banking systems, increased inflation, the downgrading of the U.S.'s credit rating and the possibility of a recession. A decline in economic conditions, such as recession, economic downturn, and/or inflationary conditions in the U.S. can adversely and negatively impact our patients in a manner that could adversely affect our financial condition, results of operations and cash flow. Further, broad economic factors in connection with a potential economic recession or slowdown, including increased unemployment rates, increased inflation rates and decrease in disposable income and wages, could also negatively affect our payer mix, increase the relative proportion of lower margin services we provide and reduce patient volumes, as well as diminish our ability to collect outstanding receivables.

In addition, government actions intended to reduce inflation, including raising the federal funds rate, will increase our cost of borrowing, which in turn could make it more difficult to obtain financing for our operations or investments on favorable terms.

Supply chain issues of the medical supplies, equipment and pharmaceuticals used in our facilities could adversely affect our operations.

We are dependent on various medical supplies, equipment and pharmaceuticals used in our facilities to conduct our operations. Supply chain issues, such as shortages, delivery delays, manufacturing disruptions, and other supply chain interruptions affecting such supplies, equipment and pharmaceuticals, and price increases of such supplies, equipment, pharmaceuticals and raw materials could adversely impact our results of operations.

Our cash and cash equivalents could be adversely affected if the financial institutions in which we hold our cash and cash equivalents fail.

We regularly maintain cash balances at third-party financial institutions in excess of the Federal Deposit Insurance Corporation insurance limit. If a depository financial institution in which we hold our cash and cash equivalents fails or if a depository institution is subject to other adverse conditions in the financial or credit markets, and impacts access to our invested cash or cash equivalents, our operating liquidity and financial performance could be adversely affected.

Factors associated with global climate change, including evolving and increasing regulations, increasing global concern and stakeholder scrutiny about climate change and extreme weather conditions could adversely affect our business, reputation, results of operations and financial position.

There has been an increased focus from regulators and stakeholders on environmental, social, and governance ("***ESG***") matters. Our failure or perceived failure to achieve our ESG goals, maintain ESG practices, or comply with emerging ESG regulations that meet evolving regulatory or stakeholder expectations could adversely affect public perception of our business, employee morale or patient or stakeholder support, expend corporate resources, result in substantial costs and expenses, result in legal or regulatory proceedings against the Company and negatively impact our financial condition and results of operations. Damage to our reputation may reduce demand for our services and thus have an adverse effect on our future financial performance, as well as require additional resources to rebuild our reputation.

Global climate change also presents both immediate and long-term physical risks (such as extreme weather conditions) and risks associated with the transition to a low-carbon economy (such as regulatory or technology changes). These changes could result in, for example, temporary declines in the number of patients seeking our services, closures of our hospitals and related facilities, and supply chain disruptions, as well as increased costs of products, commodities and energy (including utilities), and disruptions in our information systems, which in turn could negatively impact our business and results of operations. In addition, certain of our operations and facilities are located in regions that may be disproportionately impacted by the physical risks of climate change (including hurricanes and flooding), and we face the risk of losses incurred as a result of physical damage to our hospitals and related facilities and business interruptions caused by such events. We maintain property insurance coverage to address the impact of physical damage to our facilities and for business interruption losses. However, such insurance coverage may be insufficient to cover all losses and we may experience a material, adverse effect on our results of operations that is not recoverable through our insurance policies. Additionally, if we experience a significant increase in climate-related events that result in material losses we may be unable to obtain similar levels of property insurance coverage in the future or at rates that are significantly higher than our current rates. Changes in consumer preferences and additional legislation and regulatory requirements, including those associated with the transition to a low-carbon economy, may increase costs associated with compliance, the operation of our facilities and supplies. Regulations limiting greenhouse gas emissions and energy inputs may also increase in coming years, which may adversely impact us through increased compliance costs for us and our suppliers and vendors.

Our operations could be adversely impacted by civil unrest, acts of war or terrorism, other criminal activities, infectious disease outbreaks or other unexpected events outside our control.

Our operations are always subject to adverse impacts resulting from civil unrest, acts of war, hostilities or acts of terrorism or other criminal activities. Such events may result in a temporary decline in the number of patients who seek our services or in our employees' ability to perform their job duties. In addition, such events may temporarily interrupt our ability to provide our services. The occurrence of any such event and/or a disruption of our operations as a result may adversely affect our financial condition, results of operations and cash flow.

Additionally, as evidenced by the COVID-19 pandemic, the occurrence of a pandemic, epidemic, outbreak of an infectious disease or other public health crisis in an area in which we operate could adversely affect our operations, business, and financial condition. In reaction to such a crisis or the fear of exposure to infection, patients might cancel elective procedures or fail to seek needed care at our facilities, which could result in reduced patient volumes and operating revenues, potentially over an extended period of time. Furthermore, a pandemic, epidemic or outbreak might adversely affect our operations by causing a temporary shutdown or diversion of patients, by disrupting or delaying production and delivery of materials and products in the supply chain or by causing staffing shortages in our facilities. Additionally, such a crisis could diminish the public trust in healthcare facilities, especially hospitals that fail to accurately or timely diagnose, or are treating (or have treated) patients affected by infectious diseases, and negatively affect the reputation at our facilities.

Although we have disaster plans in place and operate pursuant to infectious disease protocols, the extent to which the potential emergence of a pandemic, epidemic or outbreak would impact our business and operations is difficult to predict and would depend on many factors beyond our control, including the speed of the contagion, the development and implementation of effective preventative measures and possible treatments, the scope of governmental and other restrictions on travel and other activities, and public reactions to these factors.

Credit and Liquidity Risks

Our substantial indebtedness could materially and adversely affect our ability to raise additional capital to fund our operations or fund strategic initiatives, limit our ability to react to changes in the economy or our industry and prevent us from making debt service payments.

We are a highly leveraged company. As of December 31, 2023, we had total outstanding debt of approximately $6.3 billion, excluding finance lease obligations and unamortized debt issuance costs. Our substantial indebtedness could have important consequences for the Lenders and Holders of our indebtedness. For example, it could:

- limit our ability to borrow money for our working capital, capital expenditures, debt service requirements, strategic initiatives or other purposes;
- make it more difficult for us to satisfy our obligations with respect to our indebtedness and any failure to comply with the obligations of any of our debt instruments, including restrictive covenants and borrowing conditions, could result in an event of default under the agreements governing our indebtedness;
- require us to dedicate a substantial portion of our cash flow from operations to the payment of interest and the repayment of our indebtedness, thereby reducing funds available to us for other purposes;
- limit our flexibility in planning for, or reacting to, changes in our operations or business;
- make us more highly leveraged than some of our competitors, which may place us at a competitive disadvantage;
- make us more vulnerable to downturns in our business, our industry or the economy;
- restrict us from making strategic acquisitions, engaging in development activities, introducing new technologies or exploiting business opportunities;
- compel us to make non-strategic divestitures;
- limit, along with the financial and other restrictive covenants in our indebtedness, among other things, our ability to borrow additional funds or dispose of assets;
- prevent us from raising the funds necessary to repurchase all notes tendered to us upon the occurrence of certain changes of control, which failure to repurchase would constitute an event of default under the Indentures governing the Notes; or
- expose us to the risk of increased interest rates, as certain of our borrowings, including borrowings under the ABL Facility and the Term Loan Facility, are at variable rates of interest.

In addition, the Indentures and the Credit Agreements contain restrictive covenants that limit or will limit our ability to engage in activities that may be in our long-term best interest. Our failure to comply with those covenants could result in an event of default which, if not cured or waived, could result in the acceleration of substantially all of our existing and future indebtedness.

Our debt agreements contain restrictions that will limit our flexibility in operating our business.

The Indentures and the Credit Agreements contain, and any other existing or future indebtedness of ours would likely contain, a number of covenants that will impose significant operating and financial restrictions on us, including restrictions on our and our subsidiaries ability to, among other things:

- incur additional debt, guarantee indebtedness or issue certain preferred shares;
- pay dividends on or make distributions in respect of, or repurchase or redeem, our capital stock or make other restricted payments;
- prepay, redeem or repurchase certain debt;
- make loans or certain investments;
- sell certain assets;
- create liens on certain assets;
- consolidate, merge, sell or otherwise dispose of all or substantially all of our assets;
- enter into certain transactions with our affiliates;
- alter the businesses we conduct;
- enter into agreements restricting our subsidiaries' ability to pay dividends; and
- designate our subsidiaries as unrestricted subsidiaries.

As a result of these covenants, we will be limited in the manner in which we conduct our business, and we may be unable to engage in favorable business activities or finance future operations or capital needs.

In addition, the ABL Facility requires us to maintain a minimum fixed charge coverage ratio at any time when the average availability is less than the greater of $65.0 million and 10% of the lesser of the aggregate amount of revolving facility commitments and the borrowing base at such time. In that event, we must satisfy a minimum fixed charge ratio of 1.0 to 1.0. At December 31, 2023, we were in compliance with this financial maintenance covenant.

A failure to comply with the covenants under the Indentures, the Credit Agreements or any of our other future indebtedness could result in an event of default, which, if not cured or waived, could have a material adverse effect on our business, financial condition, results of operations and cash flow. In the event of any such default, the Lenders thereunder:

- will not be required to lend any additional amounts to us;
- could elect to declare all borrowings outstanding, together with accrued and unpaid interest and fees, to be due and payable and terminate all commitments to extend further credit;
- could require us to apply all of our available cash to repay these borrowings; or
- could effectively prevent us from making debt service payments on the Notes (due to a cash sweep feature under the ABL Facility).

Such actions by the Lenders could cause cross defaults under our other indebtedness. If we were unable to repay those amounts, the Lenders and Holders under the ABL Facility, the Term Loan Facility, the 4.375% Secured Notes, the 9.875% Secured Notes and the 11.0% Secured Notes could proceed against the collateral granted to them to secure the ABL Facility, the Term Loan Facility or the 4.375% Secured Notes, the 9.875% Secured Notes and the 11.0% Secured Notes, respectively. If any of our outstanding indebtedness under the ABL Facility, the Term Loan Facility, Notes or any of our other existing or future indebtedness were to be accelerated, there can be no assurance that our assets would be sufficient to repay such indebtedness in full.

We are dependent on cash flow generated by our subsidiaries to service our indebtedness.

We are a holding company with no operations and are dependent on our operating subsidiaries' cash flow and their ability to make such cash available to us to meet our financial obligations, including principal and interest payments related to the ABL Facility, the Term Loan Facility and the Notes. Unless they are guarantors of the indebtedness, our subsidiaries do not have any obligation to pay amounts due on such indebtedness or to make funds available for that purpose. Our subsidiaries may not be able to, or may not be permitted to, make distributions to enable us to make payments in respect of our indebtedness. Each subsidiary is a distinct legal entity and, under certain circumstances, legal and contractual restrictions may limit our ability to obtain cash from our subsidiaries. While our debt agreements will limit the ability of our restricted subsidiaries to incur consensual restrictions on their ability to pay dividends or make other intercompany payments to us, these limitations are subject to certain qualifications and exceptions. In the event that we do not receive distributions from our subsidiaries, we may be unable to make required principal and interest payments on our indebtedness.

We may not be able to generate sufficient cash to service all of our indebtedness and may be forced to take other actions to satisfy our obligations under our indebtedness that may not be successful.

Our ability to pay principal and interest and to satisfy our other debt obligations will depend upon, among other things:

- our future financial and operating performance, which will be affected by prevailing economic, industry and competitive conditions and financial, business, legislative, regulatory and other factors, many of which are beyond our control; and
- our future ability to borrow under the ABL Facility, the availability of which depends on, among other things, the borrowing base and our complying with the covenants in the credit agreement governing the ABL Facility.

We cannot assure you that our business will generate cash flow from operations, or that we will be able to draw under the ABL Facility or otherwise, in an amount sufficient to fund our liquidity needs, including the payment of principal and interest on the ABL Facility, the Term Loan Facility and the Notes.

If our cash flows and capital resources are insufficient to service our indebtedness, we may be forced to reduce or delay capital expenditures, sell assets, seek additional capital or restructure or refinance our indebtedness, including the Notes and any indebtedness under the Credit Agreements. These alternative measures may not be successful and may not permit us to meet our scheduled debt service obligations.

Our ability to obtain, and the terms of any, financing or refinancing will be dependent on the condition of the financial markets and our financial condition and operating performance. Any inability to obtain refinancing as our debt matures could materially and adversely affect our financial condition.

Our ability to restructure or refinance our debt will depend on the condition of the capital markets and our financial condition and performance at such time. Disruptions or prolonged downturns in the financial markets may cause us to seek alternative sources of potentially less attractive financing or refinancing. Any refinancing of our debt could be at higher interest rates and may require us to comply with more onerous covenants, which could further restrict our business operations. In addition, the terms of existing or future debt agreements, including the ABL Facility, the Term Loan Facility and the Indentures, may restrict us from adopting some of these alternatives. In the absence of such operating results and resources, we could face substantial liquidity problems and might be required to dispose of material assets or operations to meet our debt service and other obligations. We may not be able to consummate those dispositions for fair market value or at all. Furthermore, any proceeds that we could realize from any such dispositions may not be adequate to meet our debt service obligations then due. The Sponsor and its affiliates have no continuing obligation to provide us with debt or equity financing. Our inability to generate sufficient cash flow to satisfy our debt obligations, or to refinance our indebtedness on commercially reasonable terms or at all, could result in a material adverse effect on our business, financial condition and results of operations and could negatively impact our ability to satisfy our obligations under our indebtedness.

If we cannot make scheduled payments on our indebtedness, we will be in default, and the Lenders under the Term Loan Facility and the Holders of the Notes could declare all outstanding principal and interest to be due and payable, the Lenders under the ABL Facility could terminate their commitments to loan money, our secured lenders (including the Lenders under the ABL Facility and the Holders of the Notes) could foreclose against the assets securing their loans and the Notes and we could be forced into bankruptcy or liquidation.

Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.

Interest rates are highly sensitive to many factors that are beyond our control, including general economic conditions and policies of various governmental and regulatory agencies and, in particular, the Federal Reserve Board. If the Federal Reserve Board increases the federal funds rate, which it has recently done in an effort to help counter inflation, overall interest rates will likely rise. Interest rate increases would increase the interest costs on our borrowings under the ABL Facility and the Term Loan Facility, which have variable rates of interest and expose us to interest rate risk. Assuming the revolving credit facility is fully drawn, each 1% change in assumed blended interest rates would result in an approximately $40 million change in aggregate annual interest expense on indebtedness under the ABL Facility and the Term Loan Facility.

Despite our substantial indebtedness, we may still be able to incur significantly more debt, which could intensify the risks described above.

We and our subsidiaries may be able to incur substantial indebtedness in the future. Although the terms of the Credit Agreements and the Indentures contain restrictions on our and our subsidiaries' ability to incur additional indebtedness, these restrictions are subject to a number of important qualifications and exceptions, and the indebtedness incurred in compliance with these restrictions could be substantial. These restrictions also will not prevent us from incurring obligations that do not constitute indebtedness. As of December 31, 2023, we had $682 million available for additional borrowing under the ABL Facility (after giving effect to any letters of credit issued thereunder (which were approximately $63 million as of December 31, 2023)), all of which would be secured. In addition to the Notes and our borrowings under the Credit Agreements, the covenants under any other existing or future debt instruments could allow us to incur a significant amount of additional indebtedness and, subject to certain limitations, such additional indebtedness could be secured. The more leveraged we become, the more we, and in turn our security holders, will be exposed to certain risks described above under "—Our debt agreements contain restrictions that will limit our flexibility in operating our business."

We may not be able to generate sufficient cash flow through operations or successfully access other capital resources to fund all of our capital expenditure programs and commitments.

We require substantial capital resources to fund our growth strategy and ongoing capital expenditure programs, including capital expenditure programs for renovation, expansion and construction at our facilities and the addition of equipment and technology at our facilities. We often commit to significant capital expenditures well in advance of the time these expenditures will be made. Additionally, we are subject to annual capital expenditure commitments in connection with several of our facilities. At December 31, 2023, we estimated our total remaining annual capital expenditure commitments to be approximately $540 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues at the applicable facility. Our cash flows and available capital resources may be insufficient to fund our capital expenditure programs and commitments, and we may be forced to reduce or delay planned and required capital expenditures. Additionally, we may experience delays or impediments in satisfying the schedule for capital expenditures and these commitments because of a variety of factors beyond our control, such as zoning, environmental, licensing and certificate of need regulations and restrictions, adverse weather conditions, shortages of labor or materials or other unforeseen problems or delays. The failure to satisfy our capital expenditure commitment obligations could also damage our reputation within our communities, expose us to potential claims from former owners of acquired facilities, lessors or other governing or regulatory agencies, and adversely impact our ability to negotiate and complete future acquisitions. Additionally, as a result, if our cash flows and available capital resources are not sufficient to fund all of our anticipated capital expenditures, it may be necessary for us to give priority to contractual capital expenditure commitment obligations over other elective capital expenditure programs.

Our ability to utilize our NOLs may be limited, and we may not be able to utilize our NOLs as a result of recent U.S. federal tax reform legislation.

As of December 31, 2023, we had federal NOLs of approximately $47 million with an indefinite carryforward period and subject to annual usage limitations under Section 382 of the Code. In addition, we had state and local NOLs of approximately $2 billion that expire at various dates between 2023 and 2042 or have an indefinite carryforward period. To the extent available and not otherwise utilized, we intend to use any NOLs to reduce the applicable federal and state corporate income tax liability associated with our operations. However, our ability to utilize our NOLs is based on the extent to which we generate future taxable income and on prevailing corporate income tax rates, and we cannot provide any assurance as to when and to what extent we will generate sufficient future taxable income to realize our deferred tax assets, whether in whole or in part. Furthermore, the utilization of our NOLs may become subject to an annual limitation under Section 382 of the Code (and similar state provisions) in the event of certain cumulative changes in the ownership interest of significant shareholders in excess of 50 percent over a three-year period. This could limit the amount of NOLs that can be utilized annually to offset taxable income. The amount of the annual limitation is determined based on the value of a company immediately prior to the ownership change. Subsequent ownership changes may further affect the limitation in future years. For these reasons, our ability to utilize our NOLs may be limited.

Human Capital Risks

Factors related to our employment of physicians could affect our financial performance.

Our subsidiaries employ a large number of physicians. Physician employment by health systems and healthcare facilities, where permissible, is a trend in the industry and has become more common as a result of actual and potential reductions in payment amounts for physician services and increasing operating costs to physicians. Employed physicians generally present more direct risks to us than those presented by independent members of our hospitals' medical staffs, such as risks of unsuccessful physician integration, challenges associated with physician practice management and compliance risks arising from the increased billing and coding activities associated with the employment of physicians, the possibility of legal claims under federal and state employment law, and governmental scrutiny of physician employment arrangements. Employed physicians also require us to incur additional expenses, such as increased salary and benefit costs, medical malpractice expense and rent expense. Payments received by us for services provided by our employed physicians, the physicians to whom our facilities have provided recruitment assistance, and the physician members of our medical staffs could be adversely affected as physician payment methodologies move toward pay-for-performance similar to what hospital payment models are doing. The combination of payment cuts, potential liabilities and increased expenses could have an adverse effect on our results of operations and cash flow.

Our operations and ability to deliver healthcare services efficiently may be adversely affected if we are unable to recruit and retain quality physicians, nurses and other healthcare professionals.

The success of our business operations and the efficiency with which we deliver healthcare services depends on the number and quality of our physicians and other healthcare providers such as nurses, pharmacists and lab technicians, and management and other non-physician personnel responsible for the day-to-day operations of each of our facilities. Our ability to recruit and retain quality providers and personnel, in turn, depends on several factors, including the actual and perceived quality of services furnished by our facilities, our ability to meet demands for new technology, our ability to identify and communicate with providers who want to practice in our communities and our ability to provide competitive financial compensation packages. Our failure to recruit and retain qualified physicians, nurses and other medical support staff, and management and non-physician personnel could have a material adverse effect on our revenues, results of operations and cash flow.

Federal and state laws and regulations may impact our ability to hire and retain and increase our costs of employing qualified physicians, nurses and other medical support personnel. For example, a significant portion of the providers serving our facilities are native to countries other than the U.S. Our ability to recruit such providers and their ability and willingness to remain and work in the U.S. are impacted by immigration laws and regulations. Changes in immigration or naturalization laws, regulations, or procedures may adversely affect our ability to hire or retain providers and may adversely affect our costs of doing business or our ability to deliver services in our communities. In addition, the states in which we operate have adopted or could adopt mandatory nurse staffing ratios, or could increase mandatory nurse staffing ratios. State-mandated nurse staffing ratios could significantly affect labor costs and have an adverse impact on revenues if we are required to limit admissions in order to meet the required ratios. Also, the types, amount and duration of compensation and assistance we can provide to recruited physicians are limited by the federal physician self-referral law (commonly referred to as the Stark law), the Anti-kickback Statute, state anti-kickback and self-referral statutes, and related regulations. The Stark law requires, among other things, that recruitment assistance can only be provided to physicians who meet certain geographic and practice requirements, that the amount of assistance cannot be changed during the term of the recruitment agreement, and that the recruitment payments cannot generally benefit physicians currently in practice in the community beyond recruitment costs actually incurred by them. All arrangements with physicians must also be fair market value and commercially reasonable. In addition, some of the states in which we operate limit or restrict our ability to enter into non-compete agreements or enforce restrictive covenants with physicians we employ, which may impact our ability to hire and retain qualified physicians in those states. Also, on January 5, 2023, the FTC issued a proposed rule that would ban employers from imposing post-termination non-competes on its workers (whether employees or independent contractors), subject to certain exceptions, and require employers to rescind existing non-competes and actively inform workers that they are no longer in effect. The proposed rule may not apply to non-profit hospitals, which could create a competitive disadvantage for us in our hiring and retention efforts. The FTC's proposed rule follows President Biden's July 9, 2021 executive order in which the administration encouraged the FTC to ban or limit non-compete agreements. Although we cannot predict whether the FTC's proposed rule will be adopted in its current form, any limitation or ban on our ability to enter into non-compete agreements with employed or contracted physicians, nurses and other medical support personnel may impact our ability to hire and retain qualified physicians, nurses and other medical support personnel and may adversely affect our costs of doing business or our ability to deliver services in our communities.

In addition to these legal requirements, there is competition from other communities and facilities for these providers, and this competition continues after the provider is practicing in one of our communities. For example, integrated ACOs and other kinds of "narrow" provider networks or organizations may exclude our providers from their plans' networks of healthcare providers. These contracting networks often organize hospitals, providers and ancillary healthcare providers into exclusive networks involving fewer healthcare providers. If our affiliated providers are excluded from such networks, we may have difficulty recruiting new providers or retaining existing providers.

Finally, a small number of attending physicians within each of our facilities may represent a large share of our inpatient revenues and admissions. The loss of one or more of these physicians—even if temporary—could cause a material reduction in our revenues, which could take significant time to replace given the difficulty and cost associated with recruiting and retaining physicians.

Our performance and labor costs may be adversely affected by challenging labor market conditions and the shortage of qualified nurses and other healthcare personnel.

The nationwide shortage of nurses and other clinical staff and support personnel has been a significant operating issue facing healthcare providers, including at certain of our facilities. This shortage has required, and may continue to require, us to enhance wages and benefits to recruit and retain nurses and other medical support personnel, recruit personnel from foreign countries, and utilize more expensive temporary personnel. We also depend on the available labor pool of semi-skilled and unskilled employees in each of the markets in which we operate. In some of our markets, employers across various industries have increased their minimum wage, which has created more competition for this sector of employees.

We cannot predict the degree to which we will be affected by the future availability or cost of attracting and retaining talented medical support staff. Because a significant percentage of our revenue consists of fixed, prospective payments, our ability to pass along increased labor costs is constrained. Our failure to either recruit and retain qualified hospital management, nurses and other medical support personnel or control our labor costs could harm our results of operations.

Labor union activity could raise costs and interfere with our operations. Certain of our employees are union members and subject to the terms of collective bargaining agreements.

Increased or ongoing labor union activity could adversely affect our labor costs or otherwise adversely impact us. Several of our facilities, including those in which we have a non-controlling interest, have unionized employees. When a new collective bargaining agreement with a union must be negotiated, whether such agreements are renewals or first contracts, there is the possibility that strikes could occur, and our operations could be disrupted or our labor costs increased as a result of these disruptions. Our labor costs also could increase significantly if a substantial number of other employees at our facilities unionize. If our labor costs increase, we may not be able to raise our payer rates sufficiently or commensurately in order to offset these increased costs. Because a significant percentage of our revenue consists of fixed, prospective payments, our ability to pass along increased labor costs is constrained.

The terms of the collective bargaining agreements also set forth certain requirements related to the respective facility's employment practices, seniority, hours of work, overtime, holidays, use and redemption of paid time off, extended illness bank, vacation scheduling, compensation, pay practice, health and non-health benefits, leaves of absence, grievance procedures, disability accommodations and the facility's drug and alcohol policies. If these facilities fail to fulfill any of these requirements, it could result in discussions with union representatives or the filing of a grievance that could be costly and time-consuming for those facilities. Furthermore, the terms of the collective bargaining agreements constrain our flexibility with respect to these and other employee issues. The inability to negotiate future collective bargaining agreements on favorable terms with these employees or with other unionized employees could have a material adverse effect on our business, financial condition, results of operations and cash flow.

We are dependent on our executive management team and the loss of the services of one or more members of our executive management team could have a material adverse effect on our business.

The success of our business is largely dependent upon the services and management experience of our executive management team. In addition, we depend on the ability of our executive officers and key employees to manage growth successfully and on our ability to attract and retain skilled employees. We do not maintain key man life insurance policies on any of our officers. If we were to lose any of our executive management team or members of our local management teams, or if we are unable to attract other necessary personnel in the future, it could have a material adverse effect on our business, financial condition and results of operations. If we were to lose the services of one or more members of our executive management team, we could experience a significant disruption in our operations and failure of the affected facilities to adhere to their respective business plans.

Regulatory and Legal Risks

We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may adversely affect our revenues, results of operations and cash flow.

All participants in the healthcare industry are required to comply with numerous overlapping laws and regulations at the federal, state and local government levels. These laws and regulations require that healthcare facilities and providers meet various requirements, including those relating to relationships with referral sources, the adequacy and quality of medical care, inpatient admission criteria, privacy and security of health information, standards for equipment, personnel, operating policies and procedures, billing and cost reports, payment for services and supplies, maintenance of adequate records, the use and storage of pharmaceuticals and controlled substances and other standards intended to prevent diversion of controlled substances, compliance with building codes and environmental protection, among other matters. Many of the laws and regulations applicable to the healthcare industry are complex and may be violated inadvertently, and there are numerous enforcement authorities, including CMS, the OIG, the DOJ, the DEA, state attorneys general, and contracted auditors, as well as private plaintiffs.

There are also heightened coordinated civil and criminal enforcement efforts by both federal and state government agencies relating to the healthcare industry, including the hospital segment, which has led to a number of investigations, prosecutions, convictions and settlements in the healthcare industry. Recent enforcement actions have focused on, among other things, financial arrangements between hospitals and providers, billing for services without adequately documenting the medical necessity for such services and billing for services outside the coverage guidelines for such services. Hospital services, IRF services and certain other ancillary services that our facilities provide, such as physical therapy services, continue to be focal areas of the OIG and other governmental fraud and abuse programs, as described in the OIG Work Plan. Dealing with investigations can be time and resource consuming and can divert management's attention from the business. Any such investigation or settlement could increase our costs or otherwise have an adverse effect on our business. In addition, because of the potential for large monetary exposure under the False Claims Act, which provides for treble damages and substantial civil monetary penalties for each separate false claim or statement, healthcare providers often resolve allegations without admissions of liability for significant and material amounts to avoid the uncertainty of damages and penalties that may be awarded in litigation proceedings. Such settlements often contain additional compliance and reporting requirements as part of a consent decree, settlement agreement or corporate integrity agreement. These additional requirements can result in significant additional and ongoing expenditures. Given the significant size of actual and potential settlements, it is expected that the government will continue to devote substantial resources to investigating healthcare facility and provider compliance with the healthcare payment rules and fraud and abuse laws. Over the past several years, certain of our facilities have received inquiries and subpoenas from various governmental agencies regarding these matters, and we are also subject to various claims and lawsuits relating to these and other matters.

The laws and regulations with which we must comply continually change. In the future, different interpretations or enforcement of these laws and regulations could subject our business practices to allegations of impropriety or illegality or could require us to make changes in our facilities, equipment, personnel, services, capital expenditure programs and operating expenses. Although we intend and will endeavor to conduct our business in compliance with all applicable federal and state laws and regulations, many of these laws and regulations are broadly worded and may be interpreted or applied in ways that cannot be predicted. Therefore, we cannot assure you that our arrangements or business practices will be free from government scrutiny or be found to be in compliance with applicable laws and regulations. If we fail to comply with applicable laws and regulations, we could suffer substantial civil or criminal penalties, including the loss of our licenses to operate our facilities or loss of our ability to participate in the Medicare, Medicaid and other governmental programs.

Additionally, we are subject to a variety of different federal, state and local employment and wage and hour laws. While we strive to comply with those laws, if we fail to do so, we may be subject to lawsuits by governmental authorities or private plaintiffs (including employee class action lawsuits). In addition, the IRS and/or state taxing authorities may successfully challenge positions taken on our tax returns.

We are also subject to various federal, state and local statutes and ordinances regulating the discharge of materials into the environment. For example, our healthcare operations generate medical waste, such as pharmaceuticals, biological materials and disposable medical instruments that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Environmental regulations also may apply when we build new facilities or renovate existing facilities, particularly older facilities. If we fail to comply with environmental regulations, we may be liable for substantial investigation and clean-up costs or we may be subject to lawsuits by governmental authorities or private plaintiffs.

Finally, we communicate with patients, with prior consent, through short message service ("***SMS***") text messages. While we obtain consent from these individuals to send text messages and limit the content of those messages, federal or state regulatory authorities or private litigants may claim that the notices and disclosures we provide, form of consents we obtain, or our SMS texting practices are not adequate or violate applicable law. In addition, we must ensure that our SMS texting practices comply with regulations and agency guidance under the Telephone Consumer Protection Act (the "***TCPA***"), a federal statute that protects consumers from unwanted telephone calls, faxes and text messages, HIPAA, and all applicable state data privacy and security laws and regulations. While we strive to adhere to strict policies and procedures that comply with the TCPA, the Federal Communications Commission, as the agency that implements and enforces the TCPA, may disagree with our interpretation of the TCPA and impose penalties and other consequences for noncompliance. Determination by a court or regulatory agency that our SMS texting practices violate the TCPA could subject us to civil penalties and could require us to change some portions of our business. Even an unsuccessful challenge by patients or regulatory authorities of our activities could result in adverse publicity and could require a costly response from and defense by us.

We may be subjected to actions brought by the government under anti-fraud and abuse provisions or by individuals on the government's behalf under the False Claims Act's "qui tam" or "whistleblower" provisions.

The False Claims Act prohibits healthcare facilities and providers, as well as other entities or individuals from, among other things, knowingly submitting false claims for payment to the federal government, or knowingly causing the submission of such claims. The "qui tam" or "whistleblower" provisions of the False Claims Act allow private individuals to bring actions under the False Claims Act on behalf of the government. These private parties are generally entitled to share in any amounts recovered by the government, and, as a result, the number of "whistleblower" lawsuits that have been filed against providers has increased significantly in recent years. We are required to provide information to our employees and certain contractors about state and federal false claims laws and whistleblower provisions and protections. Defendants found to be liable under the False Claims Act may be required to pay up to three times the actual damages sustained by the government, plus substantial civil monetary penalties, that are subject to annual inflation adjustments, for each separate false claim.

There are many potential bases for liability under the False Claims Act, including reckless or intentional acts or omissions. The government has used the False Claims Act to prosecute Medicare and other government healthcare program violations such as coding errors, billing for services not provided, submitting false cost reports, falsely certifying meaningful use of certified health information technology, and providing care that is not medically necessary or that is substandard in quality. The Affordable Care Act also (i) created potential False Claims Act liability for failing to report and repay identified overpayments within sixty (60) days of the identification of the overpayment or the date by which a corresponding cost report is due, whichever is later, and (ii) provided that claims submitted in connection with patient referrals that result from violations of the Anti-kickback Statute constitute false claims for the purposes of the False Claims Act. Violations of the Stark law can result in False Claims Act liability, as well. In addition, a number of states have adopted their own false claims and whistleblower provisions whereby a private party may file a civil lawsuit in state court.

Although we intend and will endeavor to conduct our business in compliance with all applicable federal and state laws, many of these laws are broadly worded and may be interpreted or applied in ways that cannot be predicted. Therefore, we cannot assure you that our arrangements or business practices will be free from government scrutiny or be found to be in compliance with applicable fraud and abuse laws.

We may be subjected to liabilities because of malpractice and other legal claims brought against our facilities or healthcare providers associated with, or employed by, our facilities or affiliated entities. If we become subject to these claims, we could be required to pay significant damages, which may not be covered by insurance.

We may be subjected to medical malpractice lawsuits and other legal actions arising out of the operations of our facilities and the activities of our employed or affiliated providers, including regulatory proceedings and private litigation (including employee class action lawsuits) concerning our application of various federal and state labor laws, rules and regulations governing a variety of workplace wage and hour issues. As a matter of policy, we typically notify patients of any potential harms they may have suffered at our facilities, regardless of whether such notifications are required by law and notwithstanding our uncertainty as to the severity of such harms or whether they even took place. This may lead to class actions or other multi-plaintiff lawsuits or whistleblower reports. These actions may involve large claims and significant defense costs and, if we or our facilities are found liable, any judgments against us may be material. Furthermore, some states in which we operate do not impose caps on non-economic malpractice damages and, even in the states that have imposed caps on such damages, litigants may seek recoveries under alternative theories of liability that might not be subject to such caps. In an effort to resolve one or more of these matters, we may choose to negotiate a settlement whether or not we believe we are liable. Amounts we pay to settle any of these matters also may be material.

Although we maintain professional and general liability insurance with unrelated commercial insurance carriers, each individual plaintiff's claim is generally subject to a deductible or SIR insurance program administered in-house by our risk department with assistance from our insurance brokers. As a result, we are effectively self-insured for claims or portions of claims that are less than our deductible or SIR amounts and for claims or portions of claims that are not covered by insurance or exceed policy limits. Any successful claim against us that is within our deducible or SIR amounts or that is not covered by insurance or exceeds our policy limits could have an adverse effect on our financial condition, results of operations or cash flow.

Insurance coverage in the future may not continue to be available at a cost allowing us to maintain adequate levels of insurance with acceptable deductibles or SIR attachments. One or more of our insurance carriers may become insolvent and unable to fulfill its obligation to pay or reimburse us when that obligation becomes due. In addition, providers practicing at our facilities may be unable to obtain insurance on acceptable terms, which could result in these providers not being able to meet the minimum insurance requirements in the applicable facilities' medical staff bylaws or necessitate a reduction in the level of insurance required to be carried under such bylaws.

As a result of reviews of claims to Medicare and Medicaid for our services, we may experience delayed payments or incur additional costs and may be required to repay amounts already paid to us.

We are subject to regular post-payment inquiries, investigations and audits of the claims we submit to Medicare and Medicaid for payment for our services. These post-payment reviews may increase as a result of government cost-containment initiatives, including, without limitation, enhanced medical necessity reviews for patients admitted as inpatients to general acute care hospitals for certain procedures and audits of claims under the RAC programs to detect overpayments not identified through existing claims review mechanisms. RACs utilize a post-payment targeted review process employing data analysis techniques in order to identify those claims most likely to contain overpayments, such as incorrectly coded services, short stays, incorrect payment amounts, non-covered services and duplicate payments. The claims review strategies used by the RACs generally include a review of high dollar claims, including, for example, inpatient hospital claims. As a result, a large majority of the total amounts recovered by RACs has come from hospitals.

In addition, CMS and the states use UPICs to perform post-payment audits of claims and identify Medicare and Medicaid overpayments. Third party audits or investigations of Medicare or Medicaid claims could result in increases or decreases in operating revenues to be recognized in periods subsequent to when the related services were performed, which may have a material adverse effect on our results of operations and cash flow.

Controls designed to reduce inpatient services may adversely affect our revenues, results of operations and cash flow.

Over the last several years, payers have instituted policies and procedures to reduce or limit the use of inpatient services. Controls imposed by Medicare, Medicaid, and commercial third-party payers designed to reduce admissions and lengths of stay, commonly referred to as "utilization review," have affected and are expected to continue to affect our facilities. Federal law contains numerous provisions designed to ensure that services rendered by hospitals to Medicare and Medicaid patients meet professionally recognized standards and are medically necessary and that claims for payment are properly filed. In the hospital context, these provisions include a requirement that a sampling of admissions of Medicare and Medicaid patients must be reviewed by QIOs, which review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of the MS-DRG classifications and the appropriateness of cases of extraordinary length of stay or cost on a post-discharge basis. QIOs may deny payment for services or assess fines and also have the authority to recommend to HHS that a provider that is in substantial noncompliance with quality standards be excluded from participation in the Medicare program.

Utilization review is also a requirement of most non-governmental managed care organizations and other third-party payers. Inpatient utilization, average lengths of stay and occupancy rates continue to be negatively affected by payer-required preadmission authorization and utilization review and by payer pressure to maximize outpatient and alternative healthcare delivery services for less acutely ill patients. Additionally, in some states in which we operate, commercial third-party payers and Medicaid managed care plans have instituted policies that retroactively limit or deny patient coverage for emergency department and certain other services provided at hospitals or services provided at other inpatient facilities if the payers believe the services could have been provided in less expensive settings. For example, such payers are increasingly seeking to pay relatively low "triage fees" for patients seen in emergency departments when the payers retrospectively determine the patients' treatment did not qualify as an emergency service. Significant limits on the scope of services reimbursed or on the amounts paid for such services may adversely affect our revenues, results of operations and cash flow.

If we do not manage admissions in the IRFs that we operate or manage in compliance with a 60% threshold, reimbursement for services rendered by us in these facilities will be based upon less favorable rates.

IRFs and ARUs are subject to a Medicare requirement that 60% or more of the patients admitted to the facilities have one or more specific conditions in order to qualify for reimbursement under the IRF PPS. If that compliance threshold is not maintained, the IRFs and ARUs will be reimbursed by Medicare at IPPS rates applicable to acute care hospitals. That likely would lead to reduced revenue in the IRFs and ARUs that we operate or manage and also may lead customers of IRFs and ARUs to attempt to renegotiate the terms of their contracts or terminate their contracts. Our inability to appropriately manage admissions in our IRFs and ARUs in compliance with applicable thresholds could have a material adverse effect on our business, financial position, results of operations and cash flow.

Certificate of need laws and regulations regarding licenses, ownership and operation may impair our future expansion in some states. In states without certificate of need laws, competing providers of healthcare services are able to expand and construct facilities without the need for significant regulatory approval.

Some states require prior approval for the purchase, construction and expansion of healthcare facilities, based on the state's determination of need for additional or expanded healthcare facilities or services. Certain states in which we operate facilities require a certificate of need for the purchase, construction or expansion of hospital facilities, capital expenditures exceeding a prescribed amount, changes in bed capacity or services, or for other hospital-related activities. We may not be able to obtain certificates of need required for expansion activities or to effectively compete with competing healthcare providers in the future. In addition, all of the states in which we operate facilities require hospitals, other healthcare facilities, and most healthcare providers to maintain one or more licenses. If we fail to obtain any required certificate of need or license, our ability to operate or expand operations in those states could be impaired.

In the states in which we operate that do not require certificates of need for the purchase, construction and expansion of hospital facilities, competing healthcare facilities face lower regulatory barriers to entry and expansion. If competing healthcare entities are able to purchase, construct or expand healthcare facilities without the need for regulatory approval, we may face decreased market share and revenues in those markets.

Failure to implement and use certified health information technology in an effective and timely manner could adversely affect our operations and result in reduced Medicare and Medicaid reimbursement and government enforcement actions.

The federal government has adopted laws and regulations intended to promote the adoption of health information technology, advance the interoperability of medical record systems, and support the access, exchange, and use of electronic health information. For example, under the Medicare Promoting Interoperability Programs (formerly the Medicare EHR Incentive Program), eligible hospitals, critical access hospitals and eligible professionals that do not successfully demonstrate meaningful use of certified electronic health record technologies every year (absent a hardship exception) may be subject to a downward payment adjustment under Medicare. In addition, health information technology that is certified by CMS is subject to an annual certification process. While we generally have no control over whether the health information technology we have implemented will continue to maintain CMS certification, we routinely monitor and evaluate our health information technology for compliance with the applicable CMS certification standards. Failure of our health information technology to maintain CMS certification could result in reduced Medicare and Medicaid reimbursement. Also, the Cures Act and its implementing regulations impose regulatory obligations, including new Medicare conditions of participation on hospitals and critical access hospitals, related to the access and exchange of electronic health information and prohibit information blocking, which includes any practice that is unreasonable and likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information, by healthcare providers and certain other entities, unless required by law or otherwise permitted by an exception in the applicable regulations. Failure to comply with these requirements could subject us to financial penalties or other disincentives or reputational damage. Complying with these and future initiatives related to healthcare technology and interoperability may also require us to change our operations or incur additional costs related to investments in information technology and EHR system software upgrades, and our payers may not adequately reimburse us for these costs and investments.

The industry emphasis on value-based purchasing and bundled payment arrangements may negatively affect our revenues.

There is a trend in the healthcare industry toward value-based purchasing of healthcare services and bundled payment arrangements. Value-based purchasing programs include both public reporting of quality data and payment limitations tied to the incidence of preventable adverse events or the quality and efficiency of care provided by facilities. For example, Medicare, Medicaid and many large commercial payers may require facilities to report certain quality data to receive full payment updates or avoid payment reductions. They may also impose payment reductions in connection with HACs and excessive readmissions for certain conditions designated by HHS. Our revenue may be negatively impacted by the application of one or more of these measures. Bundled payment arrangements generally set target payment amounts for all healthcare services provided to patients during particular episodes of care. They are intended to create incentives for physicians, hospitals and other providers to work together to provide higher quality and more coordinated care at a lower cost. We currently participate in a few ACOs as well as a number of bundled payment programs, and we expect value-based purchasing programs, including programs that condition payment on patient outcome measures, to become more common and to involve a higher percentage of our payment amounts. We are unable at this time to predict how this trend will affect our results of operations and cash flow, but it could negatively affect our revenues.

The implementation of participation and quality measurement requirements under the MACRA's Merit-Based Incentive Payment System may affect our revenues.

Under MACRA, CMS updates payment rates for physician and practitioner services on an annual basis, and implements the QPP that rewards value and outcomes through participation in traditional MIPS, an APM program, or, beginning with the 2023 performance year, MVPs. MIPS measures provider performance under four categories: quality, improvement activities, promoting interoperability and cost, and annually establishes a point threshold for each category and overall performance. The results of the measurement are used to establish a positive, negative, or neutral payment adjustment for the physician or practitioner for claims that are submitted two years after the applicable MIPS measurement period. The MIPS adjustment has a more significant impact on payment for physician and practitioner services than the annual inflationary update to the Medicare PFS.

Physicians participate in traditional MIPS unless they are participants of specific forms of APM report MVPs, are newly enrolled in Medicare, or see a low volume of Medicare patients (i.e., no more than 200 Medicare Part B patients in a calendar year, 200 covered professional services to Medicare Part B patients, or $90,000 in charges for Medicare Part B professional services). Groups or eligible clinicians who choose not to participate and fall within specified circumstances may request an exception through a hardship application and incur no MIPS impact on Medicare payments. CMS permits hardship applications, including, in the 2022 performance year, hardships based on circumstances arising from COVID related operational issues, through which clinicians can request reweighing of any or all performance categories if they encounter an extreme and uncontrollable circumstance or a public health emergency. MIPS eligible clinicians or Group Practices are subject to a sliding scale payment adjustment of minus to plus 9% per claim in CY 2022 and beyond. In addition, MIPS eligible clinicians with exceptional performance may receive up to 10% bonus payment from $500 million specifically allocated for this purpose through the end of CY 2024. MIPS is a budget neutral program, and, as a result, any upward payment adjustments that are made for highly performing clinicians are offset by downward payment adjustments for others. Providers participating in an APM may be eligible for more advantageous adjustments under MIPS (or avoid any negative adjustment) and receive a 5% bonus. At this time, we have limited participation in APMs.

If an eligible clinician has not been satisfactorily participating in MIPS (and is not qualified to participate in an APM), his or her claims for Medicare Part B services are likely to be subject to negative payment adjustments in CY 2023 (which was based on CY 2021 performance) and CY 2024 (which was based on CY 2022 performance). For participating eligible clinicians that meet or exceed the MIPS threshold or APM requirements, claims for payment are likely to be subject to positive adjustments as well as a share of an additional pool of bonus payments. At this time, and as CMS continues to modify MIPS payment policies, it is unclear how MIPS will impact our overall physician payments under the Medicare program. If we have not timely and effectively implemented policies and procedures, quality programs and appropriate clinician contracting to ensure compliance with MACRA and other QPP requirements, we would experience a negative effect on future revenues related to Medicare Part B claims.

MACRA requires that CMS publish each eligible clinician's MIPS score and performance category scores on its Physician Compare website. Publishing of MIPS scores could have an adverse reputational effect on us if our employed physicians have low scores or scores that are lower than those of the other clinicians in the relevant communities.

If current or future laws or regulations force us or cause us to restructure our arrangements with physicians and other providers, we may incur additional costs, lose contracts and suffer a reduction in net revenue under existing contracts, and we may need to refinance our debt or obtain consent from our lenders.

A number of laws impact our relationships with our physicians and other providers. There is a risk that state authorities in some jurisdictions may find that our contractual relationships with our physicians violate laws prohibiting the corporate practice of medicine and fee-splitting. These laws generally prohibit the practice of medicine by lay entities or persons and are intended to prevent unlicensed persons or entities from interfering with or inappropriately influencing the physician's professional judgment. They may also prevent the sharing of professional services income with non-professional or business interests. In states that have enacted corporate practice of medicine and fee-splitting prohibitions, we believe that we have structured our physician contracts in an effort to remain compliant with such laws. A regulatory agency, however, could still make a determination that our arrangements constitute a corporate practice of medicine or fee splitting violation. A review or action by regulatory authorities or the courts could force us to terminate or modify our contractual relationships with physicians and affiliated medical groups or revise them in a manner that could be materially adverse to our business.

In addition, we have also entered into a number of joint venture arrangements with physicians and other potential sources of referrals (e.g., hospitals and hospital operators) that are subject to state and federal fraud and abuse laws, including the Anti-kickback Statute and False Claims Act. See "—We are subject to increasingly stringent governmental regulations, and we may face allegations that we have failed to comply with such regulations, which could result in criminal and civil sanctions, exclusion from government healthcare programs and even greater scrutiny that may reduce our revenues and profitability." To the extent applicable, regulatory agencies may view these transactions as prohibited arrangements that must be restructured, or discontinued, or for which we could be subject to other significant penalties, including debarment, suspension or exclusion from state and federal government healthcare programs. Although compliance programs can mitigate the risk of investigation and prosecution for violations of these laws, the risks cannot be entirely eliminated. Any action against us for violation of these laws, even if we successfully defend against it, could cause us to incur significant legal expenses and loss of revenue from those joint ventures and divert our management's attention from the operation of our business.

We care for a large number of vulnerable individuals with complex needs and any incident involving one or more of our patients or the failure by one or more of our facilities to provide appropriate care could adversely affect our business, financial condition, results of operations or cash flow.

Many of our patients, including those in our behavioral health facilities, have complex medical conditions or special needs, are vulnerable and often require a substantial level of care and supervision. There is a risk that one or more patients could be harmed by one or more of our employees, either intentionally, through negligence or by accident. Further, individuals cared for by us have in the past engaged, and may in the future engage, in behavior that results in harm to themselves, our employees or to one or more other individuals, including members of the public. Further, because many of the patients we treat, including those in our behavioral health facilities, suffer from severe mental health and chemical dependency disorders, patient incidents, including deaths, sexual abuse, assaults and theft, occur from time to time. If one or more of our facilities experiences an adverse patient incident or is found to have failed to provide appropriate patient care, loss of accreditation, license revocation or other adverse regulatory action could be taken against us. Any such patient incident or adverse regulatory action could result in damage to our reputation, governmental investigations, judgments or fines and could adversely affect our business, financial condition, results of operations or cash flow.

Data Security and Privacy Risks

A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business.

We rely extensively on our information systems and certain systems operated by us and third-parties to manage clinical, financial and employee data, communicate with our patients, payers, vendors and other third parties and summarize and analyze operating results. These systems are at risk from cybersecurity attacks, ransomware attacks, denial-of-service attacks, and other intrusions, including attempts to gain unauthorized access to and theft of our confidential data, misuse, corruption or destruction of confidential data and damage, disruptions or shutdowns of these systems due to viruses, malware, ransomware, malicious code, employee error or malfeasance, and other electronic security breaches. Our and our third-party vendors' systems, which transmit and store sensitive and confidential data, including personally identifiable information ("***PII***") and other PHI of our patients, employees and others, and our proprietary and confidential business performance and other data, will continue to be a target for attempts to gain unauthorized access and data theft due to the valuable nature of the information they contain, as well as at risk for accidental exposure. In addition, certain third-party medical devices and equipment are used at our facilities, and may be vulnerable to cybersecurity attacks or other breaches which could negatively impact our systems or our patients.

Cybersecurity breaches and other unauthorized access to our data can sometimes be difficult to discern, and any delays in detection may lead to increased harm. Such attacks or breaches are common in the healthcare sector and could result in the compromise of health information or other data subject to protection by HIPAA and other laws and regulations or disrupt our IT systems or business. We and our third-party vendors have been subject to security and privacy incidents in the past and there can be no assurance that we and our third-party vendors will not be subject to material cyber-attacks or security breaches in the future, or that the preventive actions we take to reduce the risk of such incidents and protect our IT and data will be sufficient. We continue to develop our cybersecurity practices and controls to protect our systems. However, regardless of the nature, extent and timing of our actions, these measures may not prevent security breaches. If our services are subject to cyber-attacks that impair or deny the ability of patients to access our services, current and potential patients may become unwilling to provide us the information necessary for them to become users of our services or may curtail or stop using our services. As cyber-threats continue to evolve, we may be required to expend significant additional resources to continue to modify or enhance our protective measures and to investigate and remediate any information security vulnerabilities. As we are subjected to cyber-attacks and possible security breaches in the future, this could have an adverse impact on our business, reputation, financial condition and results of operations, as well as expose us to class action lawsuits and regulatory investigation, action, and penalties. We also cannot be sure that our existing insurance coverage will continue to be available on acceptable terms or will be available in sufficient amounts to cover one or more large claims related to a security breach, or that the insurer will not deny coverage as to any future claim. See "Governmental Regulation—Administrative Simplification Provisions and Privacy and Security Requirements."

The secure processing, maintenance and transmission of this information is critical to our operations and business strategy. If, in spite of our security and compliance efforts we or any of our business associates were to experience a breach, loss, or other compromise of PHI or PII, such event could disrupt our operations, result in increased data protection costs, damage our reputation, or result in regulatory penalties, legal claims and civil or criminal liability under HIPAA and other state and federal laws, which could have a material adverse effect on our results of operations. In addition, failure to comply with state and federal data breach notification and reporting laws could result in additional regulatory penalties, legal claims and civil or criminal liability, which could have a material adverse effect on our financial condition, results of operations and cash flow.

If access to our information systems or those provided by our third-party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer.

Our business depends heavily on effective information systems to process clinical, operational and financial information. Information systems require an ongoing commitment of significant resources to maintain and enhance existing systems and to develop new systems in order to keep pace with continuing changes in information processing technology. In addition to our own systems, we rely on multiple third-party providers of financial, clinical, supply chain, patient accounting and network information services and, as a result, we face operational challenges in maintaining multiple provider platforms and facilitating the interface of such systems with one another. The third-party providers may not have appropriate controls to protect confidential information. We do not control the information systems of third-party providers, and in some cases we may have difficulty accessing information archived on third-party systems, which could subject us to liability for failure to respond to legal, regulatory or payer obligations or information requests.

For example, we use, directly or indirectly through our third-party vendors, information technology systems provided by Change Healthcare (the "***Change Systems***") for various business and administrative support functions, including revenue cycle management. On February 21, 2024, we were notified by Change Healthcare of a cybersecurity incident impacting the Change Systems (the "***Change Systems Incident***"), and our access to such systems was disabled. As of the date of this Report, Change Healthcare has not provided an estimated timeframe for resuming functionality of the Change Systems. We continue to work directly with Change Healthcare, our third-party vendors, and other parties to identify and implement solutions intended to minimize the operational and financial impact on us caused by the Change Systems Incident. We have implemented, and plan to continue to implement, alternative systems where available to help mitigate the potential impact of delays in the timing of remittances from payors. While the Change Systems Incident has yet to be resolved, to date, it has not adversely impacted patient care at our facilities, and we expect it will not have a material impact on our business, financial condition or results of operations. However, we cannot predict the ultimate outcome of the Change Systems Incident and whether our efforts to minimize its impact will be successful.

Our networks and technology systems are also subject to disruption due to events such as a major earthquake, fire, flood, hurricane, telecommunications failure, terrorist attack or other catastrophic event. If these systems fail or are interrupted, if our access to these systems is limited in the future or if providers develop systems more appropriate for more urban healthcare markets and not suited for our facilities, our operations could suffer.

We intend to expand our operations, including by acquiring more facilities, which will require us to integrate and transition certain existing information systems. In addition, as new information systems are developed in the future and we enter into agreements with new third-party providers, we will need to integrate these systems into our existing systems. Evolving industry and regulatory standards, such as the HITECH Act, HIPAA and EHR meaningful use regulations, also may require changes to our information systems in the future. System conversions are costly, time consuming and disruptive for providers, staff and, in some cases, patients. If such conversions occurred on a large scale or if we are unable to properly integrate other information systems or expand or update our current information systems, the costs and disruptions could have a material adverse effect on our revenues, results of operations and cash flow.

If we fail to comply with our obligations under license or technology agreements with third parties, we may be required to pay damages and we could lose license rights that are critical to our business.

We license certain intellectual property, including technologies and software from third parties, that is important to our business, and in the future we may enter into additional agreements that provide us with licenses to valuable intellectual property or technology. If we fail to comply with any of the obligations under our license agreements, we may be required to pay damages and the licensor may have the right to terminate the license. Termination by the licensor would cause us to lose valuable rights, and could prevent us from selling our solutions and services, or adversely impact our ability to commercialize future solutions and services. Our business would suffer if any current or future licenses terminate, if the licensors fail to abide by the terms of the license agreement, if the licensors fail to enforce licensed intellectual property against infringing third parties, if the licensed intellectual property are found to be invalid or unenforceable, or if we are unable to enter into necessary license agreements on acceptable terms or at all. Any of the foregoing could have an adverse effect on our business, financial condition, or results of operations and cash flow.

The constant growth and development of technology, including the increased use of Artificial Intelligence, presents risks and challenges to our operations that could give rise to legal or regulatory action, damage our reputation or otherwise materially harm of our business.

Emerging technology is a consistent subject of new laws or regulations and evolving interpretations and applications of laws and regulations. If we fail to comply with these laws, we may be subject to penalties, fines or criminal or civil liability. The development and use of artificial intelligence ("***AI***") presents new risks and challenges that can impact our operations if we incorporate AI into our operations, or if used by our third-party vendors. While we aim to develop and use AI responsibly and attempt to mitigate ethical and legal issues presented by its use, we may ultimately be unsuccessful in identifying or resolving issues before they arise. AI technologies are complex and rapidly evolving and the technologies that we develop or use may ultimately be flawed. Moreover, AI technology is subject to rapidly evolving domestic and international laws and regulations, which could impose significant costs and obligations on the Company. For example, in 2023 the Biden Administration issued a new, executive order on safe, secure and trustworthy AI. Emerging regulations may pertain to data privacy, data protection, and the ethical use of AI, as well as clarifying intellectual property considerations. Our use of AI could give rise to legal or regulatory action, increased scrutiny or liability, damage our reputation or otherwise materially harm our business. Additionally, if we fail to keep pace with rapidly evolving AI technological developments, our competitive position and business results may be negatively impacted.

Item 1B. Unresolved Staff Comments.

Not applicable.

Item 1C. Cybersecurity.

Risk Management and Strategy

We have developed cybersecurity and data privacy programs designed to enable and safeguard the confidentiality, integrity and availability of our information systems and data by providing proactive security expertise and risk assessments, creating and maintaining a resilient and secure environment, and fostering a culture of security awareness and compliance throughout our organization. Our programs are largely aligned to, among others, the U.S. National Institute of Standards and Technology Cybersecurity Framework to assess, identify and manage material risks from cybersecurity threats. We regularly assess and improve our programs to address the changing landscape of potential threats and the needs of our business. These threats include cybersecurity attacks, ransomware attacks, denial-of-service attacks, unauthorized access and misuse, and theft of our sensitive and confidential data. Our information systems, and those of other companies in our industry, will continue to be targets for cybersecurity incidents due to the valuable nature of the information they contain. In addition, we are at risk for accidental or unauthorized exposure of our data and are subject to the privacy, security and breach notification regulations promulgated under HIPAA, the HITECH Act and other federal and state privacy, security, and consumer protection laws. Through our programs, we routinely conduct cybersecurity and data privacy training with our employees and conduct cybersecurity awareness and phishing campaigns.

We engage with third parties to separately conduct cyber assessments on a recurring basis and assist with containment and remediation efforts. In addition, third-party technology and analytics are utilized to identify potential vulnerabilities. We recognize that third-party service providers can be subject to cybersecurity incidents that could, in turn, impact us. To manage third-party risk, we maintain a third-party risk management program, which is designed to assess the security controls of our third-party service providers. The assessment methodology is based on risk and relies on the data, access, connectivity, and criticality of the services that the third party offers.

We have in place a cybersecurity incident response plan to enable us to assess and address cybersecurity incidents. We regularly review and update our response plan based on evaluations of the cybersecurity landscape and our business needs. Under our response plan, designated executive and senior leadership are responsible for initially assessing the severity of incidents and any continuing threats, managing any damage to our information systems, engaging third parties to assist our response, and escalating to the Audit Committee of the Board (the "***Audit Committee***") as appropriate. We periodically perform tabletop exercises to test our incident response procedures to identify and address gaps and promote team awareness.

Our cybersecurity efforts are led by our Chief Information Officer and our Chief Security & Privacy Officer. Each of our cybersecurity leaders has more than 15 years of information technology oversight or information security experience, and our Chief Security & Privacy Officer holds an Executive Chief Information Security Officer (CISO) certificate.

To date, we have not experienced a cybersecurity incident or data breach that has materially affected us or our business strategy, results of operations, or financial condition. However, no assurances can be given that such an event will not occur in the future. See Item 1A, Risk Factors—Data Security and Privacy Risks—"A cybersecurity attack or security breach could cause a loss of confidential data, give rise to remediation and other expenses, expose us to liability under HIPAA, consumer protection laws, common law or other theories, subject us to litigation and federal and state governmental inquiries, damage our reputation, and otherwise be disruptive to our business" and "If access to our information systems or those provided by our third-party vendors is interrupted or restricted, or if we are unable to make changes to our information systems, our operations could suffer."

Governance

Our management is responsible for assessing and managing material risks posed to us from cybersecurity threats, and the Audit Committee oversees management's efforts. Pursuant to the charter of the Audit Committee, the Board has delegated to the Audit Committee responsibility for: (i) overseeing and periodically reviewing management's processes and procedures for assessing, identifying and managing material risks to us from cybersecurity threats and the effectiveness of our information security processes and procedures; (ii) periodically evaluating the knowledge, experience and capabilities of the members of the Audit Committee and management with respect to cybersecurity risk and information security processes and procedures; and (iii) evaluating the nature, scope, timing and impact to us of any material cybersecurity incidents.

In carrying out its responsibility, management provides updating reports to the Audit Committee and/or our Board at their regularly scheduled meetings, with topics including management's information security efforts to prevent, detect, mitigate and remediate cybersecurity incidents, as well trends in the information security space that impact us or our industry. Our cybersecurity incident response plan requires management to report timely cybersecurity incidents that have the potential to materially impact our business strategy, results of operations or financial condition to our Audit Committee for their evaluation of the nature, scope, timing and impact to us of such incidents.

Item 2. ***Properties.***

The following tables and map present certain information with respect to our consolidated facilities as of December 31, 2023:

Service Line	Facilities	Licensed Beds	States
Acute Care	60	8,216	18
Inpatient Rehabilitation [(a)]	39	1,929	19
Behavioral Health	23	1,741	10
	122	11,886	31

(a) Excludes two non-consolidated IRFs.

We own or lease and operate medical office buildings, clinics and other ancillary properties in conjunction with many of our acute care hospitals. These medical office buildings and clinics are primarily occupied by physicians who practice at our hospitals. Additionally, we lease office space in Brentwood, Tennessee and Louisville, Kentucky for our HSC. All of our facilities are suitable for their respective uses and are generally adequate for our present needs.

Item 3. ***Legal Proceedings.***

Healthcare facilities, including us and our facilities, are, from time to time, subject to claims and suits arising in the ordinary course of business, including but not limited to, claims for damages for personal injuries, medical malpractice, breach of contracts, wrongful restriction of or interference with physicians' staff privileges, employment related claims, wage and hour claims, consumer protection and data privacy claims, and putative class action claims. In certain of these actions, plaintiffs request payment for damages, including punitive damages, that may not be covered by insurance.

The information set forth under "Legal Proceedings and General Liability Claims" in Note 13 to our accompanying consolidated financial statements included elsewhere in this Report, is incorporated herein by reference.

Item 4. ***Mine Safety Disclosures.***

Not applicable.

PART II

Item 5. ***Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.***

All of our equity securities are held by Holdings, an indirect subsidiary of DSB Parent L.P., a Delaware limited partnership (the "***Parent***"). As of December 31, 2023, our Sponsor and certain co-investors beneficially owned approximately 97.6% of the capital units of the Parent with the remaining approximate 2.4% owned by our or our affiliates' current or former directors, members of management, employees and certain other service providers, and/or our affiliates. Because our equity securities are privately held, there is no established public trading market for our equity securities.

Equity Compensation Plan Information

Refer to Note 12 to our accompanying consolidated financial statements included elsewhere in this Report for a discussion of profits units issued by the Parent to certain of our current and former service providers.

Recent Sales of Unregistered Securities

There have been no recent sales of unregistered equity securities of the Company within the period covered by this Report.

Item 6. [Reserved.]

Item 7. ***Management's Discussion and Analysis of Financial Condition and Results of Operations.***

The following is management's discussion and analysis of our financial condition and results of operations for the years ended December 31, 2023 and December 31, 2022. We recommend that you read this discussion together with our accompanying consolidated financial statements and related notes included elsewhere in this Report.

Refer to Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operations—Results of Operations" in our Annual Report for the year ended December 31, 2022 for management's discussion and analysis of changes in financial condition and results of operations as of and for the years ended December 31, 2022 and 2021.

Overview

We are a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. We generate revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network, which at December 31, 2023 was comprised of 60 community hospital campuses, 39 IRFs, 23 BHFs, and additional sites of care that include ARUs, outpatient centers and post-acute care facilities. As of December 31, 2023, we operated 122 healthcare facilities in 31 states throughout the U.S. with approximately 12,000 licensed beds and approximately 50,000 dedicated employees.

We seek to fulfill our mission of *Making Communities Healthier*® and strive to create places where people choose to come for healthcare, physicians and providers want to practice and employees want to work. Additionally, we are committed to upholding our core values, which are champion patient care; do the right thing; embrace individuality; act with kindness; and make a difference together. Together, our shared mission, vision and values guide our work and unite our employees across our organization.

We generated revenues of $9,111 million and $8,020 million for the years ended December 31, 2023 and 2022, respectively. For the years ended December 31, 2023 and 2022, approximately 56.5% and 56.9% of our revenues, respectively, related to patients participating in Medicare and Medicaid programs, collectively. Payments made to our facilities pursuant to the Medicare and Medicaid programs for services rendered are often less than our costs for such services. As a result, we rely largely on payments made by private or commercial payers, together with certain limited services provided to Medicare recipients, to generate an operating profit. The healthcare industry continues to endure a period where the costs of providing care are rising faster than reimbursement rates from government or private commercial payers. This places a premium on efficient operation, the ability to reduce or control costs and the need to leverage the benefits of our organization across all of our facilities.

Developments, Trends and Operating Environment

Rehabilitation Expansion

We have continued to expand our rehabilitation business since closing the Kindred Transaction. Following the transactions described below, as of December 31, 2023, our consolidated inpatient rehabilitation operations include 39 IRFs with approximately 1,900 beds across 19 states. For additional information regarding the Everest Operational IRF Transaction and the Everest Developing IRFs (defined below), refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Everest Operational IRFs Acquisition

On January 24, 2023, a wholly-owned, indirect subsidiary of ours entered into a definitive agreement with entities affiliated with Everest, to acquire four IRFs (the "***Everest Operational IRFs***") located in Arkansas, Texas, and Ohio (the "***Everest Operational IRF Transaction***") for an aggregate purchase price of approximately $38 million. The closing of the Everest Operational IRF Transaction was consummated on March 1, 2023. Effective September 28, 2023, we contributed the Everest Operational IRF located in Rogers, Arkansas to a new joint venture between us and Mercy Hospital Northwest Arkansas. We maintain a controlling interest in the joint venture and continue to consolidate the facility in our consolidated financial statements.

Everest Developing IRFs Acquisitions.

In connection with the closing of the Everest Operational IRF Transaction, certain of our affiliated entities entered into a definitive agreement with entities affiliated with Everest to acquire six IRFs under development by Everest in Texas and Florida (the "***Everest Developing IRFs***") for an aggregate purchase price of approximately $60 million. The acquisition of the first of the Everest Developing IRFs, located in El Paso, Texas (the "***El Paso IRF***"), was consummated on August 1, 2023. We anticipate closing the acquisitions of the remaining five Everest Developing IRFs on a rolling basis beginning in the second quarter of 2024.

De Novo IRFs Openings

During the two years ended December 31, 2023, our consolidated joint ventures have opened six de novo IRFs with approximately 300 beds (which does not include Saint Thomas Rehabilitation Hospital listed below), as summarized below.

Facility Name	Location	Opening Date	Beds
Frazier Rehabilitation Hospital - Brownsboro	Louisville, KY	July 18, 2023	40
UC Davis Rehabilitation Hospital	Sacramento, CA	May 18, 2023	52
Community Rehabilitation Hospital West	Indianapolis, IN	May 16, 2023	40
Dignity Health East Valley Rehabilitation Hospital - Gilbert	Gilbert, AZ	December 21, 2022	40
Mercy Rehabilitation Hospital South	St. Louis, MO	December 6, 2022	50
Saint Thomas Rehabilitation Hospital (a)	Nashville, TN	June 14, 2022	40
Tampa Rehabilitation Hospital	Tampa, FL	May 17, 2022	80

(a) We hold a noncontrolling ownership interest in Saint Thomas Rehabilitation Hospital and have accounted for it as an equity investment in accordance with Accounting Standards Codification ("***ASC***") 323, "Investments – Equity Method and Joint Ventures" ("***ASC 323***").

Behavioral Health Expansion

During the twelve months ended December 31, 2023, we significantly expanded our behavioral health presence through the transactions described below. Following such transactions, as of December 31, 2023, our consolidated behavioral health operations include 23 BHFs with approximately 1,700 beds across ten states. For additional information regarding the Springstone Transaction and El Dorado Transaction, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Springstone Transaction

On August 26, 2022, we entered into a definitive agreement with (i) entities affiliated with MPT and (ii) BH EIK Management, LP, a management company owned by Springstone Management, for the Lifepoint Member to acquire a majority ownership interest in Springstone from Springstone Management and to acquire a promissory note issued by Springstone to an affiliate of MPT. Springstone was a national behavioral health provider with 18 BHFs and 37 outpatient locations across nine states. The transaction closed on February 7, 2023, at which time we funded $229 million in cash and certain of our subsidiaries entered into the Springstone Master Lease with respect to the 18 BHFs. The Springstone Master Lease has an initial 20-year term with two optional five-year renewal periods. We accounted for the Springstone Master Lease as a finance lease in accordance with ASC 842, "Leases" ("***ASC 842***") and established an initial finance lease obligation of $546 million as of the closing date. In connection with the transaction, MPT retained a noncontrolling equity interest in Springstone, subject to the Put/Call Agreement. On January 25, 2024, MPT DS delivered to the Lifepoint Member a put option notice pursuant to the Put/Call Agreement, notifying the Lifepoint Member of its exercise of the put right under the Put/Call Agreement. In accordance with the Put/Call Agreement, the Lifepoint Member is obligated to acquire all of the equity interests of Springstone owned by MPT DS. We expect to close on the purchase of MPT DS's equity interest in Springstone during the three months ended March 31, 2024 for a purchase price of approximately $12 million, following which we will own all of the outstanding equity interests of Springstone.

Cornerstone El Dorado Transaction

On January 20, 2023, we acquired El Dorado, a 54-bed BHF located in Tucson, Arizona for $35 million in cash.

De Novo BHF Opening

During the year ended December 31, 2023, our consolidated joint venture opened one de novo BHF, as summarized below.

Facility Name	Location	Opening Date	Beds
Valley Springs Behavioral Health Hospital	Holyoke, MA	August 14, 2023	150

Joint Venture for Highpoint Health System

On December 1, 2023, we formed a joint venture with an affiliate of Ascension Saint Thomas to expand access to high quality care and services in Northern Middle Tennessee (the "***Highpoint Joint Venture***"). Pursuant to a contribution agreement between the parties, at the closing we contributed our ownership interest in the Highpoint Health System in exchange for a controlling interest in the Highpoint Joint Venture. The Highpoint Health System is a regional health system comprised of Sumner Regional Medical Center, a 167-bed acute care hospital located in Gallatin, Tennessee; Sumner Station Emergency Room and Outpatient Services, a free standing emergency department and outpatient services center located in Gallatin, Tennessee; Trousdale Medical Center, a 25-bed critical access hospital located in Carthage, Tennessee; and Riverview Regional Medical Center, a 25-bed critical access hospital located in Carthage, Tennessee; and more than 15 affiliated clinics and sites of care. At the closing, Ascension Saint Thomas contributed $19 million of cash (which was distributed to us) and brand licensing rights to the Highpoint Joint Venture in exchange for a noncontrolling equity interest in the Highpoint Joint Venture. We also entered into management agreements with the Highpoint Joint Venture pursuant to which we provide certain management and administrative services to the facilities for a percentage of their net revenues. We maintain a controlling interest in the Highpoint Joint Venture and continue to consolidate the results in our consolidated financial statements. For additional information regarding the Highpoint Joint Venture, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Kindred Transaction

On June 18, 2021, we entered into the Kindred Purchase Agreement for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred, a leading specialty hospital company that operated facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. At the closing of the Kindred Transaction on December 23, 2021, a new healthcare company was established operating under the name ScionHealth, which is separate from Lifepoint; we acquired the IRF, behavioral health, contract rehabilitation service and certain support center businesses of Kindred; we separated and transferred the equity and assets comprising 18 select acute care hospitals to ScionHealth; and we acquired the Class B Units, with an aggregate value of $350 million, which are perpetual non-convertible, non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends. Our acquisition of Kindred's inpatient rehabilitation and contract rehabilitation service business (including 28 IRFs with 1,447 beds), behavioral health business (including two BHFs with 96 beds), and certain support center businesses transformed us into a more diversified healthcare platform, well-positioned to advance healthcare delivery in communities across the country. For additional information regarding the Kindred Transaction, refer to "Item 1. Business–Recent Updates to our Business–Kindred Transaction" and Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

In connection with the Kindred Transaction, we have entered into a number of transition services agreements ("***TSAs***") and other ancillary agreements with ScionHealth and its subsidiaries. For the year ended December 31, 2023, in connection with the TSAs, we were reimbursed by ScionHealth for certain costs incurred on their behalf of $47 million, and paid ScionHealth $2 million for certain costs incurred on our behalf. For the year ended December 31, 2022, in connection with the TSAs, we were reimbursed by ScionHealth for certain costs incurred on their behalf of $61 million, and paid ScionHealth $3 million for certain costs incurred on our behalf. We had a net receivable of $124 million and $84 million recorded under the caption "Other current assets" in our accompanying consolidated balance sheet as of December 31, 2023 and December 31, 2022, respectively.

In addition, we and ScionHealth are parties to a number of commercial services agreements, pursuant to which we provide ScionHealth with therapy services, rehabilitation unit and behavioral health unit management, consulting and development services, among other commercial services. For the twelve months ended December 31, 2023 and December 31, 2022, we recorded revenues related to these commercial services agreements of $63 million and $55 million, respectively.

Divestitures

Effective September 29, 2023, we sold our 75% equity interest in the joint venture that owned Clark Memorial Hospital ("***Clark Memorial***"), a 236-bed acute care facility located in Jeffersonville, Indiana, and Scott Memorial Hospital ("***Scott Memorial***"), a 25-bed acute care facility located in Scottsburg, Indiana, to Norton Healthcare, the minority owner of such joint venture. We received net cash proceeds from the transaction of $37 million, including certain net working capital accounts.

Effective May 1, 2022, we sold Colorado Plains Medical Center ("***Colorado Plains***"), a 50-bed acute care facility located in Fort Morgan, Colorado, and Western Plains Medical Complex ("***Western Plains***"), a 99-bed acute care facility located in Dodge City, Kansas, to an unrelated third party. We received cash proceeds from the transaction of $135 million, including net working capital, of which $63 million was utilized to settle a finance lease obligation related to Western Plains.

The results of operations of the foregoing divested facilities are excluded from the discussion and analysis of our results of operations for the years ended December 31, 2023 and 2022 on a "same-facility" basis. See "Non-GAAP Measures" below for such "same-facility" results. For additional information regarding our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Debt Refinancing Activities

On August 14, 2023, we completed the offering of $800 million in aggregate principal amount of our 9.875% Secured Notes. The 9.875% Secured Notes will mature on August 15, 2030. The net proceeds from the offering of the 9.875% Secured Notes, together with cash on hand, were used to purchase or redeem all $600 million aggregate principal amount of our then outstanding 6.75% Senior Secured Notes due 2025 (the "***6.75% Secured Notes***"), which were scheduled to mature on April 15, 2025, repay $200 million of outstanding borrowings under our Term Loan Facility and pay related fees and expenses in connection with the 9.875% Secured Notes offering.

On September 28, 2023, we executed an amendment to our ABL Facility (the "***ABL Facility Amendment***") that provided for $80 million in last-out revolving credit commitments (collectively, the "***ABL Last-Out Revolving Credit Facility***"), with a maturity date of January 27, 2028, which was incremental to the $800 million revolving commitments under the ABL Facility.

Effective October 10, 2023, we entered into an Incremental Assumption and Amendment Agreement No. 4, which amended and restated the Term Loan Facility in its entirety to provide for a new, senior secured term loan credit facility in an aggregate principal amount of $1,850 million, maturing on November 16, 2028. Prior to amendment, the Term Loan Facility consisted of outstanding principal amount of $3,015 million and was scheduled to mature on November 16, 2025.

On October 10, 2023, we completed the offering of $1,100 million in aggregate principal amount of our 11.0% Secured Notes. The 11.0% Secured Notes will mature on October 15, 2030. The net proceeds from the offering, together with proceeds of $1,850 million under the amendment and restatement of the Term Loan Facility and cash on hand, were used to repay in full all $3,015 million of outstanding borrowings under the Term Loan Facility and pay related fees and expenses in connection with the 11.0% Secured Notes offering.

As a result of our recent debt refinancing activities, we extended the tenor of approximately $3.8 billion of senior secured debt, previously maturing in 2025, to periods in 2028 and 2030, and our nearest term debt maturity is now in 2026. For additional information regarding our debt refinancing activities, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Non-Core Real Estate Financing Transaction

Effective September 19, 2023, we and certain of our subsidiaries (such subsidiaries, the "***Lifepoint OpCos***") entered into the Master Transaction Agreement (the "***Master Transaction Agreement***") with DSB Holdings, Inc., an indirect parent company of Lifepoint ("***DSB Holdings***"), Realpoint Properties, LLC, a subsidiary of DSB Holdings ("***Realpoint***"), and certain of Realpoint's subsidiaries (such subsidiaries, the "***Realpoint PropCos***"). Under the terms of the Master Transaction Agreement, the Lifepoint OpCos contributed to the Realpoint PropCos, by deed or 99-year ground lease as applicable, 36 medical office buildings, one skilled nursing facility and one assisted living facility. In connection with the Non-Core Real Estate Financing Transaction (as defined in this Report), the applicable Lifepoint OpCos entered into separate triple-net leases for the contributed properties, which have a 15-year term and aggregate initial base rent of approximately $25 million per year, subject to a 3% annual escalator. We accounted for the leases with Realpoint as operating leases under ASC 842 and recognized $219 million of right-of-use operating lease assets and right-of-use operating lease obligations in the accompanying consolidated balance sheet as of December 31, 2023. In connection with the Non-Core Real Estate Financing Transaction, under the Master Transaction Agreement, Realpoint distributed approximately $225 million in cash to us, and we retained approximately $169 million of Class B preferred interests in Realpoint, having a liquidation preference of approximately $169 million with a 9.5% annual preferred return, and approximately 2% of the outstanding Class A common interests in Realpoint. In addition, we entered into asset management agreements with Realpoint or the Realpoint PropCos, as applicable, under which we will provide certain administrative and management services to them in exchange for management fees of approximately $0.3 million per year, in the aggregate, subject to a 3% annual escalator. We refer to these transactions, collectively, as the "***Non-Core Real Estate Financing Transaction***." For additional information regarding the Non-Core Real Estate Financing Transaction, refer to Note 7 to our accompanying consolidated financial statements included elsewhere in this Report.

Legislative and Regulatory Developments in Response to COVID-19

Numerous legislative and regulatory actions, including the CARES Act and related stimulus legislation, were taken in an attempt to provide businesses, including healthcare providers, with relief from and to combat the negative effects of the COVID-19 pandemic.

In addition to the financial relief that was provided by the federal government under the CARES Act and other legislation that was passed by Congress during the public health emergency, CMS and many state governments issued a number of waivers or temporarily suspended a number of healthcare facility licensure and reimbursement requirements in order to provide hospitals, skilled nursing facilities, and other types of healthcare providers with increased flexibility to meet the challenges presented by the COVID-19 pandemic. For example, CMS temporarily waived the enforcement of certain requirements of the Stark law to enable hospitals to treat patients in temporary locations and to obtain services from physicians in a more efficient and timely manner. Likewise, many states suspended the enforcement of certain certificate of need and licensure requirements to ensure that hospitals and other healthcare providers had sufficient capacity to treat COVID-19 patients. Our facilities utilized the waivers and regulatory flexibility that were provided to the extent necessary to appropriately respond to the COVID-19 pandemic. On May 11, 2023, the COVID-19 public health emergency ended. As a result, many of the flexibilities and waivers issued in response to the COVID-19 public health emergency are no longer in effect.

Results of Operations

Certain Definitions

The following definitions apply throughout the remaining portion of this Management's Discussion and Analysis of Financial Condition and Results of Operations:

Adjusted EBITDA. EBITDA adjusted to exclude unusual items and other adjustments required or permitted in calculating debt covenant compliance under the Indentures governing the Notes and/or the Credit Agreements. We believe that this inclusion of supplementary adjustments to EBITDA applied in presenting Adjusted EBITDA are appropriate to provide additional information to investors about the impact of certain non-cash, non-recurring or unusual items that we do not expect to continue or to continue at the same level in the future and other items.

Admissions. The total number of patients admitted to our facilities for inpatient treatment.

Case mix index. Refers to the acuity or severity of illness of an average patient at our acute care facilities.

Consolidated. Consolidated information includes the results of all facility operations and corporate overhead costs generated during our applicable periods of ownership, including the results of our new acquisitions, new facility openings and our completed divestitures.

EBITDA. Earnings before interest, taxes, depreciation and amortization.

Equivalent admissions. Management and investors use equivalent admissions as a general measure of combined inpatient and outpatient volume. We compute equivalent admissions by multiplying admissions (inpatient volume) by the Outpatient factor. The equivalent admissions computation "equates" outpatient revenue to the volume measure (admissions) used to measure inpatient volume resulting in a general measure of combined inpatient and outpatient volume.

Outpatient factor. The sum of gross inpatient revenue and gross outpatient revenue divided by gross inpatient revenue.

Patient days. The total number of days of care provided to patients admitted to our facilities for inpatient treatment.

Same-facility. Same-facility information includes the results of the same facilities operated during the entire three months and years ended December 31, 2023 and 2022, as if the Springstone Transaction had occurred on January 1, 2022. Same-facility information excludes the results of certain de novo facilities opened in 2022 and 2023, facilities acquired through the Everest Operational IRF Transaction, Everest Developing IRFs, and the El Dorado Transaction, and our completed divestitures.

Summary

The following table summarizes our consolidated results of operations for the years ended December 31, 2023 and 2022 (dollars in millions):

	Years Ended December 31,			
	2023		2022	
	Amount	% of Revenues	Amount	% of Revenues
Revenues	$ 9,111	100.0 %	$ 8,020	100.0 %
Salaries and benefits	4,466	49.0	4,016	50.1
Supplies	1,306	14.3	1,243	15.5
Other operating expenses, net	2,456	27.0	2,025	25.2
Depreciation and amortization	330	3.6	323	4.0
Interest expense, net	679	7.5	480	6.0
Debt refinancing costs	52	0.6	-	-
Other transaction-related costs	28	0.3	46	0.6
Other non-operating losses (gains), net	12	0.1	(8)	(0.1)
	9,329	102.4	8,125	101.3
Loss before income taxes	(218)	(2.4)	(105)	(1.3)
Provision for income taxes	52	0.6	100	1.3
Net loss	(270)	(3.0)	(205)	(2.6)
Less: Net income attributable to noncontrolling interests and redeemable noncontrolling interests	(66)	(0.7)	(66)	(0.8)
Net loss attributable to Lifepoint Health, Inc.	$ (336)	(3.7) %	$ (271)	(3.4) %

Revenues

The following table summarizes our key revenue metrics on a consolidated basis for the years ended December 31, 2023 and 2022:

	Years Ended December 31,		Increase	% Increase
	2023	2022	(Decrease)	(Decrease)
Number of facilities (at end of period) (a)	122	96		
Revenues (in millions)	$ 9,111	$ 8,020	$ 1,091	13.6%
Patient days	1,962,779	1,541,709	421,070	27.3%
Admissions	308,111	248,646	59,465	23.9%
Equivalent admissions	787,035	636,886	150,149	23.6%
Revenues per equivalent admission	$ 11,576	$ 12,593	$ (1,017)	(8.1)%
Case mix index	1.47	1.47	-	-%
Total surgeries	318,662	306,655	12,007	3.9%
Emergency department visits	1,270,530	1,275,070	(4,540)	(0.4)%

(a) Excludes two non-consolidated IRFs accounted for as equity method investments in accordance with ASC 323.

For the year ended December 31, 2023, our consolidated revenues increased $1,091 million, or 13.6%, to $9,111 million compared to $8,020 million for the prior year. The increase in our consolidated revenues was attributable to the impact of our acquisitions completed in 2023, increases in our acute care hospital admissions and equivalent admissions and increases in revenues associated with MSPs. Refer to *"Supplemental Results of Operations on a Same-Facility Basis"* included elsewhere in this Report for a more comparable analysis of our key revenue metrics.

Our revenues by payer and approximate percentages of revenues on a consolidated basis were as follows for the years ended December 31, 2023 and 2022:

	Years Ended December 31,			
	2023		2022	
	% of Revenues		% of Revenues	
Medicare	37.4	%	40.1	%
Medicaid	19.1		16.8	
HMOs, PPOs and other private insurers	37.9		37.1	
Self-pay	0.7		0.7	
Other (a)	4.7		5.1	
Revenue from contracts with customers	99.8		99.8	
Rental income	0.2		0.2	
Revenues	100.0	%	100.0	%

(a) Includes revenues from managed ARUs and ancillary goods and services.

Salaries and Benefits

For the year ended December 31, 2023, our consolidated salaries and benefits expense was $4,466 million, or 49.0% of revenues, compared to $4,016 million, or 50.1% of revenues, for the prior year. The increase in our consolidated salaries and benefits expense was primarily attributable to improvements in same facility volumes, including a 4.4% increase in admissions, a 7.8% increase in equivalent admissions and a 4.9% increase in total surgeries, as well as, but to a lesser extent, as a result of increases due to our 2023 acquisitions. As a percentage of revenues, our consolidated salaries and benefits expense decreased primarily as a result of continued reductions in contract labor expenses across our acute care hospital markets during the year ended December 31, 2023 compared to the prior year.

Supplies

For the year ended December 31, 2023, our consolidated supplies expense was $1,306 million, or 14.3% of revenues, compared to $1,243 million, or 15.5% of revenues, for the prior year. The decrease in our consolidated supplies expense as a percentage of revenues was primarily attributable to our 2023 acquisitions in the rehabilitation and behavioral health lines of business, which incurred less supply costs as a percentage of revenues compared to the majority of our acute care hospital markets.

Other Operating Expenses, Net

Other operating expenses include, among other things, contract services, professional fees, rents and leases, repairs and maintenance, utilities, insurance, non-income taxes, other income and other expenses. For the year ended December 31, 2023, our consolidated other operating expenses were $2,456 million, or 27.0% of revenues, compared to $2,025 million, or 25.2% of revenues, for the prior year. The increase in our other operating expenses was primarily attributable to our 2023 acquisitions, as well as increases in contract services, professional fees and provider taxes associated with our MSPs.

Depreciation and Amortization

For the year ended December 31, 2023, our consolidated depreciation and amortization expense was $330 million, or 3.6% of revenues, compared to $323 million, or 4.0% of revenues, for the prior year. The increase in our consolidated depreciation and amortization expense was primarily attributable to our 2023 acquisitions.

Interest Expense, Net

For the year ended December 31, 2023, our consolidated interest expense was $679 million, or 7.5% of revenues, compared to $480 million, or 6.0% of revenues, for the prior year. The increase in our interest expense was primarily attributable to rising variable interest rates as compared to the prior year as well as higher fixed interest rate instruments as a result of our recent debt refinancing activities. We expect our interest expense to continue to increase in the near-term as a result of our recent debt refinancing activities. For a further discussion of our debt and corresponding interest expense, refer to Notes 3 and 10 to our accompanying consolidated financial statements included elsewhere in this Report.

Debt Refinancing Costs

For the years ended December 31, 2023, we recognized debt refinancing costs of $52 million in connection with our recent debt refinancing activities. For a further discussion of our recent debt refinancing activities, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Other Transaction-Related Costs

For the years ended December 31, 2023, we recognized transaction and advisory-related costs of $28 million, primarily in connection with the Springstone Transaction, the Non-Core Real Estate Financing Transaction and other business development activities, including those discussed in Note 2 to our accompanying consolidated financial statements included elsewhere in this Report. For a further discussion of the Non-Core Real Estate Financing Transaction, refer to Note 7 to our accompanying consolidated financial statements included elsewhere in this Report.

For the year ended December 31, 2022, we incurred transaction-related costs of $46 million, primarily related the Springstone Transaction, the Kindred Transaction and other business development activities, including those discussed in Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Other Non-Operating Losses (Gains), Net

For the year ended December 31, 2023, we recognized a net other non-operating loss of $12 million, primarily related to the divestitures of Clark Memorial and Scott Memorial. For the year ended December 31, 2022, we recognized a net other non-operating gain of $8 million, primarily comprised of gains related to our divestitures of Colorado Plains and Western Plains and the repurchase of a portion of our 9.75% Unsecured Notes, partially offset by losses recognized in connection with miscellaneous disposals of property and equipment. For additional information regarding our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Income Taxes

For the years ended December 31, 2023 and 2022, we recognized a provision for income taxes of $52 million and $100 million, respectively. For additional information regarding income taxes, including a summary of the drivers, refer to Note 5 to our accompanying consolidated financial statements included elsewhere in this Report.

Non-GAAP Measures

Supplemental Results of Operations on a Same-Facility Basis

The following table summarizes our key supplemental results of operations for the three months and years ended December 31, 2023 and 2022 on a same-facility basis (as previously defined). GAAP does not allow for such a combination of results of operations; however, we believe this information is useful in evaluating our financial performance.

	Three Months Ended December 31,		Increase (Decrease)	% Increase (Decrease)
	2023	2022		
Number of facilities (at end of period) (a)	110	110		
Revenues (in millions)	$ 2,296	$ 2,097	$ 199	9.5%
Patient days	485,735	470,294	15,441	3.3%
Admissions	76,545	72,632	3,913	5.4%
Equivalent admissions	193,691	183,476	10,215	5.6%
Revenues per equivalent admission	$ 11,854	$ 11,427	$ 427	3.7%
Case mix index	1.47	1.46	0.01	0.7%
Total surgeries	77,242	74,091	3,151	4.3%
Emergency department visits	319,130	322,300	(3,170)	(1.0)%

	Years Ended December 31,		Increase (Decrease)	% Increase (Decrease)
	2023	2022		
Number of facilities (at end of period) (a)	109	109		
Revenues (in millions)	$ 8,872	$ 8,229	$ 643	7.8%
Patient days	1,891,344	1,857,619	33,725	1.8%
Admissions	298,162	285,463	12,699	4.4%
Equivalent admissions	769,766	714,390	55,376	7.8%
Revenues per equivalent admission	$ 11,525	$ 11,518	$ 7	0.1%
Case mix index	1.47	1.48	(0.01)	(0.7)%
Total surgeries	311,653	297,032	14,621	4.9%
Emergency department visits	1,237,408	1,222,363	15,045	1.2%

(a) Excludes two non-consolidated IRFs accounted for as equity method investments in accordance with ASC 323.

For the three months and year ended December 31, 2023, our same-facility revenues increased $199 million, or 9.5%, and $643 million, or 7.8%, respectively, compared to the same periods last year. The increase in our same-facility revenues was primarily attributable to an increase in equivalent admissions for the three months and year ended December 31, 2023 of 5.6% and 7.8%, respectively, compared to the same periods last year. The increase in our same-facility equivalent admissions was attributable to increases in inpatient admissions and total surgical volumes compared to the same periods last year. Additionally, our revenues per equivalent admission increased over the prior year primarily as a result of improvements in commercial pricing and reimbursement associated with MSPs.

EBITDA and Adjusted EBITDA

The following table presents a reconciliation of net loss to EBITDA and Adjusted EBITDA prepared in accordance with the calculations set forth in the Indentures and the Credit Agreements for the three months ended December 31, 2023 and 2022 and the twelve months ended December 31, 2023 and September 30, 2023 (in millions):

	Three Months Ended December 31,		Twelve Months Ended	
	2023	2022	December 31, 2023	September 30, 2023
Net income (loss)	$ 34	$ (167)	$ (270)	$ (471)
Interest expense, net	184	135	679	630
Income taxes	(105)	81	52	238
Depreciation and amortization	84	84	330	330
EBITDA	197	133	791	727
Debt refinancing costs (a)	34	-	52	18
Transaction-related costs (b)	-	19	28	47
Facility lease interest expense (c)	(28)	(12)	(97)	(81)
Divested operations (d)	-	-	14	16
One-time costs, non-cash and non-recurring items (e)	45	42	166	163
Subtotal	248	182	954	890
Pro forma run rate adjustments:				
Cost savings initiatives (f)	30	24	154	166
Strategic investments (g)	36	38	162	162
	66	62	316	328
Adjusted EBITDA	$ 314	$ 244	$ 1,270	$ 1,218

(a) Represents the exclusion of costs and non-cash charges associated with our recent debt refinancing activities during 2023. For a further discussion of our recent debt refinancing transactions, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

(b) Represents the exclusion of certain transaction-related expenses, including costs associated with the Non-Core Real Estate Financing Transaction, the Springstone Transaction, the Kindred Transaction, and other business development activities occurring during the applicable periods. For additional information regarding our recent business development activities, refer to Notes 2 and 7, respectively, to our accompanying consolidated financial statements included elsewhere in this Report.

(c) Represents cash interest expense in connection with certain finance leases. Pursuant to the terms of the financial covenants contained in our debt agreements, we are required to consider cash interest expense on facility-related finance leases within the calculation of Adjusted EBITDA.

(d) Represents the elimination of EBITDA losses associated with our divestitures of Clark Memorial and Scott Memorial. For additional information regarding our recent divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

(e) Represents the exclusion of certain one-time costs, non-cash and non-recurring items, including, but not limited to, incremental operating expenses associated with litigation-related expenses, employee severance and other restructuring charges, facility pre-opening costs and start-up related expenses, implementation costs related to various strategic initiatives, differences between cash payments and reported rent expense for facility operating leases, stock-based compensation expense, gains and losses related to disposals of property and equipment, and other non-operational items.

(f) Represents the unrealized savings associated with various discrete cost reduction initiatives across our business, including our transition to an enterprise business services model.

(g) Represents the estimated pro forma EBITDA impact attributable to various strategic investments we are making in the business, including (i) our IRF and BHF de novo pipeline, (ii) in-market investments in new or expanded acute care service lines, and (iii) our completed 2023 acquisitions, including the Springstone Transaction, the El Dorado Transaction and the Everest Operational IRF Transaction.

Leverage

The following table illustrates our indebtedness and certain leverage ratios prepared in accordance with the calculations set forth in the Indentures and the Credit Agreements as of and for the twelve months ended December 31, 2023 and September 30, 2023 (dollars in millions):

	December 31, 2023	September 30, 2023
Cash and cash equivalents	$ 90	$ 230
ABL Facility	$ 35	$ -
ABL Last-Out Revolving Credit Facility	80	80
Term Loan Facility	1,850	3,015
4.375% Secured Notes	600	600
9.875% Secured Notes	800	800
11.0% Secured Notes	1,100	-
Other Secured Debt	20	20
Total Secured Debt (a)	$ 4,485	$ 4,515
Net Secured Debt (a)	$ 4,395	$ 4,285
9.75% Unsecured Notes	$ 1,270	$ 1,270
5.375% Unsecured Notes	500	500
Total Debt (a)	$ 6,255	$ 6,285
Net Debt (a)	$ 6,165	$ 6,055
Adjusted EBITDA	$ 1,270	$ 1,218
Total Secured Debt (a) / Adjusted EBITDA	3.53x	3.71x
Net Secured Debt (a) / Adjusted EBITDA	3.46x	3.52x
Total Debt (a) / Adjusted EBITDA	4.93x	5.16x
Net Debt (a) / Adjusted EBITDA	4.85x	4.97x

(a) Excludes finance lease obligations, which are not considered indebtedness for purposes of calculating the ratios set forth in the Indentures and the Credit Agreements, as well as unamortized debt issuance costs.

As described above, effective October 10, 2023, we used the net proceeds of the amendment and restatement of the Term Loan Facility in an outstanding principal amount of $1,850 million and the offering of $1,100 million aggregate principal amount of the 11.0% Secured Notes, together with cash on hand, to prepay all $3,015 million of term loans then-outstanding under the Term Loan Facility.

Liquidity and Capital Resources

Liquidity

Our primary sources of liquidity are cash generated by operations and borrowings under the ABL Facility. Our cash on hand, borrowings under the ABL Facility and total liquidity fluctuates from period to period, and intra-period, based on various factors, including the timing of payment by federal and state programs. Our primary uses of cash are working capital requirements, debt service requirements and capital expenditures. We expect our interest expense to continue to increase in the near-term as a result of our recent debt refinancing activities. We believe our cash flows from operations, combined with available cash and availability under the ABL Facility, will provide sufficient liquidity to fund our current obligations, projected working capital requirements, debt service requirements and capital spending requirements over the next twelve months and into the foreseeable future prior to the maturity dates of our outstanding long-term debt. We cannot assure you, however, that our business will generate sufficient cash flows from operations or that future borrowings will be available to us under the ABL Facility, which is subject to a borrowing base, in an amount sufficient to enable us to pay principal and interest on the ABL Facility, the Term Loan Facility and the Notes, or to fund other liquidity needs. Our ability to do so depends on prevailing economic conditions, many of which are beyond our control. In addition, upon the occurrence of certain events, such as a change of control, we could be required to repay or refinance our indebtedness. We cannot assure you that we will be able to refinance any of our indebtedness on commercially reasonable terms or at all. Any future acquisitions, joint ventures or other similar transactions will likely require additional capital, and there can be no assurance that any such capital will be available to us on acceptable terms or at all. Any refinancing of our indebtedness could be at higher interest rates and may require us to comply with more onerous covenants that could further restrict our business operations. See “Item 1A, Risk Factors—Credit and Liquidity Risks” included elsewhere in this Report.

The following table presents summarized cash flow information for the years ended December 31, 2023 and 2022 (in millions):

	2023	2022
Net cash provided by operating activities	$ 141	$ 82
Net cash used in investing activities	(494)	(138)
Net cash provided by (used in) financing activities	48	(402)
Change in cash and cash equivalents	$ (305)	$ (458)

Operating Activities

Net cash provided by operating activities for the years ended December 31, 2023 and 2022 was $141 million and $82 million, respectively. The increase in our net cash provided by operating activities was primarily attributable to improvements in various working capital accounts, partially offset by increases in interest payments.

Investing Activities

We invested $229 million and $227 million in purchases of property and equipment for the years ended December 31, 2023 and 2022, respectively. Refer to “—Capital Expenditures” below for further information.

During the year ended December 31, 2023, we invested $313 million, collectively, in business acquisitions, including the Springstone Transaction, the El Dorado Transaction, the Everest Operational IRF Transaction and the El Paso IRF acquisition. Lastly, we received cash proceeds of $37 million in connection with the divestitures of Clark Memorial and Scott Memorial.

During the year ended December 31, 2022, we received cash proceeds of $135 million in connection with the divestitures of Colorado Plains Medical Center and Western Plains Medical Complex. Additionally, during the year ended December 31, 2022, certain of our subsidiaries invested approximately $47 million for an aggregate $50 million principal amount of ScionHealth’s senior secured term loan.

For a further discussion of our acquisitions and divestitures, refer to Note 2 to our accompanying consolidated financial statements included elsewhere in this Report.

Financing Activities

Our net cash provided by financing activities for the year ended December 31, 2023 primarily consisted of cash provided by our debt refinancing activities, as well as cash proceeds related to our Non-Core Real Estate Financing Transaction, distributions to our joint venture partners and payments made under finance lease arrangements. For more information regarding our debt financing activities and Non-Core Real Estate Financing Transaction, refer to Notes 3 and 7, respectively, to our accompanying consolidated financial statements included elsewhere in this Report.

Our net cash used in financing activities for the year ended December 31, 2022 primarily consisted of repurchases of a portion of our 9.75% Unsecured Notes in connection with our Notes Repurchase Program (as defined in this Report), distributions to our joint venture partners and a cash distribution to our Parent to fund the repurchase of certain previously issued profit interest units and capital units held by certain of our former employees. Additionally, our net cash used in financing activities for the year ended December 31, 2022 included payments to terminate the finance lease obligations related to one of our acute care facilities that we continue to operate and Western Plains Medical Complex.

Capital Expenditures

We continue to make significant, targeted investments at our facilities to add new technologies, modernize facilities and expand the services available. These investments should assist in our efforts to attract and retain physicians, to offset outmigration of patients and to make our facilities more desirable to our employees and potential patients.

The following table summarizes our capital expenditures as a percentage of revenues and as a percentage of depreciation expense for the years ended December 31, 2023 and 2022 (dollars in millions):

	2023		2022	
	Amount	% of	Amount	% of
Capital expenditures	$ 229	2.5 %	$ 227	2.8 %
Depreciation expense	$ 330		$ 323	
Ratio of capital expenditures to depreciation expense	69.4 %		70.3 %	

We have a formal and intensive review procedure for the authorization of capital expenditures that exceed an established threshold. One of the most important financial measures of acceptability for a discretionary capital project is whether its projected discounted cash flow return on investment exceeds our projected cost of capital for that project. We expect to continue to invest in information systems, modern technologies, emergency room and operating room expansions, the construction of medical office buildings for physician expansion and the reconfiguration of the flow of patient care. Additionally, we may from time to time replace existing hospital buildings with new buildings as we evaluate ongoing repair and maintenance costs and other factors that impact the future operations of the existing buildings. Refer to "—Liquidity and Capital Resources Outlook" below for further information regarding our long-term capital expenditure commitments.

Capital Resources

We monitor the capital markets and our capital structure and make changes from time to time, with the goal of maintaining financial flexibility, preserving or improving liquidity and/or achieving cost efficiency. From time to time, we, our subsidiaries and our respective affiliates may elect to purchase, repurchase, acquire or retire portions of our outstanding debt, including any of the Notes, in open market purchases, privately negotiated transactions, tender offer transactions or otherwise, although there is no assurance we will do so. Any such purchase, repurchase, acquisition or retirement is dependent on a variety of factors, including prevailing market conditions, liquidity requirements, contractual restrictions and other factors. As a result of our recent debt refinancing activities, we extended the tenor of approximately $3.8 billion of senior secured debt, previously maturing in 2025, to periods in 2028 and 2030, and our nearest term debt maturity is now in 2026.

ABL Facility

As of December 31, 2023, we had $35 million in borrowings outstanding under the ABL Facility and approximately $63 million in letters of credit outstanding primarily related to the SIR level of our general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements. Amounts available for borrowing under the ABL Facility were approximately $682 million as of December 31, 2023.

The ABL Facility, initially effective as of November 16, 2018, provided for an aggregate principal amount of $800 million with a maturity of five years.

On January 27, 2023, we entered into an Incremental Assumption and Amendment Agreement No. 2, which amended and restated the ABL Facility. The ABL Facility, as amended and restated, has a stated maturity of five years; provided, that if more than $200 million aggregate principal amount of the Notes or the Term Loan Facility remain outstanding 91 days before the stated maturity thereof, then the ABL Facility will mature and the commitments under the facility will terminate on such date. The ABL Facility, as amended and restated, continues to provide revolving availability of $800 million, with a $150 million letter of credit sub-facility and a $40 million swingline sub-facility.

Availability under the ABL Facility continues to be subject to a borrowing base that is based on a specified percentage of eligible accounts receivable. Borrowings under the ABL Facility continue to be subject to the satisfaction of customary conditions, including the absence of a default and the accuracy of representations and warranties. For further information regarding the ABL Facility, including certain restrictive covenants and such amendment and restatement, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

ABL Last-Out Revolving Credit Facility

On September 28, 2023, we executed the ABL Facility Amendment that provided for the ABL Last-Out Revolving Credit Facility, $80 million in last-out revolving credit commitments, with a maturity date of January 27, 2028, which was incremental to the $800 million revolving commitments under the ABL Facility. The ABL Last-Out Revolving Credit Facility is required to be drawn before the revolving commitments under the ABL Facility, but cannot be repaid if any amount of the revolving commitment under the ABL Facility remains outstanding unless the applicable last-out revolving credit commitments are permanently reduced and certain other conditions are met. As of December 31, 2023, there was $80 million outstanding under the ABL Last-Out Revolving Credit Facility. For more information regarding the ABL Last-Out Revolving Credit Facility, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Term Loan Facility

Effective November 16, 2018, we entered into the Term Loan Facility, which is a senior secured term loan credit facility with a maturity of seven years. Effective October 10, 2023, we entered into an Incremental Assumption and Amendment Agreement No. 4, which amended and restated the Term Loan Facility in its entirety to provide for a new, senior secured term loan credit facility in an aggregate principal amount of $1,850 million, maturing on November 16, 2028. As of December 31, 2023, approximately $1,850 million was outstanding on the Term Loan Facility. For more information regarding the Term Loan Facility, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

4.375% Secured Notes

On February 13, 2020, we issued the 4.375% Secured Notes in an aggregate principal amount of $600 million with a maturity of seven years. For further information regarding the 4.375% Secured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

9.875% Secured Notes

Effective August 14, 2023, we issued the 9.875% Secured Notes in aggregate principal amount of $800 million with a maturity of seven years. For further information regarding the 9.875% Secured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

11.0% Secured Notes

Effective October 10, 2023, we issued the 11.0% Secured Notes in aggregate principal amount of $1,100 million with a maturity of seven years. For further information regarding the 11.0% Secured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

9.75% Unsecured Notes

On November 16, 2018, we issued the 9.75% Unsecured Notes in an aggregate principal amount of $1,425 million with a maturity of eight years. During year ended December 31, 2022, we repurchased $155 million aggregate principal amount of the 9.75% Unsecured Notes in connection with our Notes Repurchase Program. For further information regarding the 9.75% Unsecured Notes, including certain restrictive covenants, and our Notes Repurchase Program, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

5.375% Unsecured Notes

On December 4, 2020, we issued the 5.375% Unsecured Notes in an aggregate principal amount of $500 million with a maturity of eight years. For further information regarding the 5.375% Unsecured Notes, including certain restrictive covenants, refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report.

Other Secured Debt

On February 7, 2023, concurrently with the consummation of the Springstone Transaction, certain of the Company's subsidiaries entered into an amended and restated credit agreement with Capital One, N.A. as administrative agent and lender, which provides for a $35 million senior secured asset-based revolving credit facility ("***Other Secured Debt***") and matures on December 17, 2026. At December 31, 2023, approximately $20 million of Other Secured Debt was outstanding. Refer to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report for further discussion regarding Other Secured Debt.

Notes Repurchase Program

On June 3, 2022, the Executive Committee of our Board (the "***Executive Committee***") authorized the repurchase of up to $200 million aggregate principal amount of the Notes (the "***Notes Repurchase Program***"). During the year ended December 31, 2022, we repurchased $155 million aggregate principal amount of our 9.75% Unsecured Notes for an aggregate repurchase price of $144 million in connection with the Notes Repurchase Program. As of December 31, 2023, we had remaining authority to repurchase up to an additional $45 million aggregate principal amount of the Notes in accordance with the Notes Repurchase Program. Future repurchases, if any, under the Notes Repurchase Program will depend on a number of factors, including but not limited to market conditions.

Liquidity and Capital Resources Outlook

We continue to have ongoing capital expenditure commitments in connection with several of our facilities. At December 31, 2023, we estimated our total remaining capital expenditure commitments to be approximately $540 million. The majority of this amount represents long-term commitments that are computed as a percentage of revenues at the applicable facility. We anticipate funding these expenditures through cash provided by operating activities, available cash and borrowings available under the ABL Facility.

Our business strategy contemplates the selective acquisition of additional hospitals and other healthcare service providers, and we regularly review potential acquisitions. These acquisitions may, however, require additional financing. Our primary sources of liquidity are cash flows provided by our operations and our borrowings available under the ABL Facility. We believe that our internally generated cash flows and borrowing availability under the ABL Facility will be adequate to service existing debt, finance internal growth and fund capital expenditures and small to mid-size hospital acquisitions over the next twelve months and into the foreseeable future prior to maturity dates of our outstanding debt. Certain larger hospital acquisitions may, however, require additional financing.

Inflation

The healthcare industry is labor-intensive. Wages and other expenses increase during periods of inflation and when labor shortages in marketplaces occur. In addition, suppliers pass along rising costs to us in the form of higher prices. Private insurers pass along their rising costs in the form of lower reimbursement to us. Our ability to pass on these increased costs in increased rates is limited because of increasing regulatory and competitive pressures and the fact that the majority of our revenues are fee-based. Accordingly, inflationary pressures could have a material adverse effect on our results of operations. Additionally, there is uncertainty surrounding the impact of any monetary policy changes taken by the U.S. Federal Reserve and other central banks to address the structural risks associated with inflation.

Contractual Obligations and Material Cash Requirements

We have certain material contractual obligations which are recorded as liabilities in our consolidated financial statements, primarily including:

- long-term debt obligations (refer to "—Capital Resources" above and to Note 3 to our accompanying consolidated financial statements included elsewhere in this Report); and
- finance and operating lease obligations (refer to Note 7 to our accompanying consolidated financial statements included elsewhere in this Report).

Additionally, we have certain other material cash requirements related to items that are not recognized as liabilities in our consolidated financial statements, primarily including:

- capital expenditure commitments (refer to "—Capital Expenditures" above and to Note 13 to our accompanying consolidated financial statements included elsewhere in this Report);
- shared centralized resource model arrangements with various third parties to provide certain nonclinical business functions to us, including payroll, supply chain management and revenue cycle management;
- information technology services, including, but not limited to, financial, clinical, patient accounting and other information services;
- diagnostic imaging equipment maintenance and bio-medical services; and
- other minimum commitments to purchase miscellaneous goods or services under non-cancelable contracts.

Adoption of Recently Issued Accounting Standards

None.

Critical Accounting Estimates

The preparation of financial statements in accordance with GAAP requires us to make estimates and assumptions that affect the reported amounts and related disclosures. We consider an accounting estimate to be critical if:

- it requires assumptions to be made that were uncertain at the time the estimate was made; and
- changes in the estimate or different estimates that could have been made could have a material impact on our consolidated results of operations or financial condition.

Our critical accounting estimates include the following areas:

- Revenue recognition and accounts receivable;
- Goodwill impairment analysis;
- Accounting for income taxes; and
- Reserves for self-insurance claim.

The following discussion of critical accounting estimates is not intended to be a comprehensive list of all of our accounting policies that require estimates, but the estimates discussed below involve a higher degree of judgment and complexity. We believe the current assumptions and other considerations used to estimate amounts reflected in our consolidated financial statements are appropriate. However, if actual experience differs from the assumptions and other considerations used in estimating amounts reflected in our consolidated financial statements, the resulting changes could have a material adverse effect on our consolidated results of operations and our financial condition. The discussion that follows presents information about our critical accounting estimates, as well as the effects of hypothetical changes in the material assumptions used to develop each estimate.

Revenue Recognition and Accounts Receivable

We recognize revenues in the period in which performance obligations are satisfied. Generally, we bill patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. Our ability to collect outstanding receivables is critical to our results of operations and cash flows. Amounts we receive for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, HMOs, PPOs and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in our financial statements are recorded at the net consideration to which we expect to be entitled to receive in exchange for providing patient care.

Approximately 95.1%, 94.7% and 98.0% of our patient revenues recognized during the years ended December 31, 2023, 2022 and 2021, respectively, related to discounted charges, which were comprised of the following sources (as a percentage of our revenues):

	2023	2022	2021
Medicare	37.4 %	40.1 %	37.7 %
Medicaid	19.1 %	16.8 %	18.4 %
HMOs, PPOs and other private insurers	37.9 %	37.1 %	41.3 %
Self-pay	0.7 %	0.7 %	0.6 %

Revenues are recorded at estimated net amounts due from patients, third-party payers and others for healthcare services provided. For certain payers, such as Medicare, Medicaid, as well as some managed care payers with which we have contractual arrangements, the contractual allowances are calculated by computerized logging systems based on defined payment terms. For other payers, the contractual allowances are determined based on historical data by insurance plan. All contractual adjustments, regardless of payer type or method of calculation, are reviewed and compared to actual experience.

We monitor our processes for calculating contractual allowances through:

- review of payment discrepancy reports for logged payers;
- analysis of historical contractual allowance trends based on actual claims paid by HMOs, PPOs and other private insurers;
- review of contractual allowance information reflecting current contract terms;
- consideration and analysis of changes in charge rates and payer mix reimbursement levels; and
- other issues that may impact contractual allowances.

Medicare and Medicaid

The majority of services performed on Medicare and Medicaid patients are reimbursed at predetermined reimbursement rates. The differences between the established billing rates (i.e. gross charges) and the predetermined reimbursement rates are recorded as contractual discounts and deducted from gross charges. Under the Medicaid program's prospective reimbursement systems, there is no adjustment or settlement of the difference between the actual cost to provide the service and the predetermined reimbursement rates.

Discounts for retrospectively cost-based revenues are estimated based on historical and current factors and are adjusted in future periods when settlements of filed cost reports are received. Final settlements under these programs are subject to adjustment based on administrative review and audit by third-party intermediaries, which can take several years to resolve completely.

Because the laws and regulations governing the Medicare and Medicaid programs are complex and subject to change, the estimates of contractual discounts we record could change by material amounts. A significant increase in our estimate of contractual discounts for Medicare and Medicaid would lower our earnings. This would adversely affect our results of operations, financial condition, liquidity and future access to capital.

HMOs, PPOs and Other Private Insurers

Amounts we receive for the treatment of patients covered by HMOs, PPOs and other private insurers (collectively, "***managed care plans***") are generally less than our established billing rates. We include contractual allowances as a reduction to revenues in our consolidated financial statements based on payer specific identification and payer specific factors for rate increases and denials. For most managed care plans, estimated contractual allowances are adjusted to actual contractual allowances as cash is received and claims are reconciled.

The process of determining the allowance requires us to estimate the amount expected to be received based on payer contract provisions, historical collection data as well as other factors and requires a high degree of judgment. It is impacted by changes in managed care contracts and other related factors. A significant increase in our estimate of contractual discounts for managed care plans would lower our earnings. This would adversely affect our results of operations, financial condition, liquidity and future access to capital.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. We evaluate these patients, after the patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. We estimate the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that we utilize include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that we expect to collect. Because we provide care to patients regardless of their ability to pay, we have determined that the differences between the amounts we bill based on gross or discounted charges and the amounts we expect to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and we account for this variable consideration in accordance with the provisions of ASC 606, "Revenue from Contracts with Customers" ("***ASC 606***"). Self-pay accounts receivable are written off after collection efforts have been followed in accordance with our policies. The Company's revenue recognition and accounts receivable policies are discussed further in Note 1 to our accompanying consolidated financial statements included elsewhere in this Report.

Goodwill Impairment Analysis

Goodwill represents the excess of the purchase price over the fair value of the net assets of acquired businesses. Our goodwill included in our consolidated balance sheet as of December 31, 2023 was $4.2 billion. Refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report for a detailed roll forward of changes in our goodwill during the years ended December 31, 2023 and 2022.

In accordance with ASC 350, "Intangibles — Goodwill and Other" (***"ASC 350"***) goodwill and intangible assets with indefinite lives are reviewed by us at least annually for impairment on October 1. In 2022, we were comprised of two distinct reporting units: (i) acute hospital operations and (ii) rehabilitation hospital operations. Due to the significance of the Springstone Transaction and the impact on our management team and business operations, we re-evaluated our reporting units in accordance with ASC 280, "Segment Reporting" ("***ASC 280***") and ASC 350 during 2023 and determined that we are now comprised of three distinct reporting units: (i) acute hospital operations (ii) rehabilitation hospital operations; and (iii) behavioral health operations.

For the annual impairment evaluation, we estimate fair values of our reporting units utilizing both a discounted cash flow ("***DCF***") analysis and a guideline public company analysis considering observable market data of the Company's industry peers. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates, profitability and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing the Company's assumptions. The cash flows employed in the DCF analysis are based on the Company's most recent financial budgets and business plans and, when applicable, various growth rates and profitability for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the reporting unit.

If we determine the carrying value of goodwill is impaired, or if the carrying value of a business that is to be sold or otherwise disposed of exceeds its fair value, then we reduce the carrying value, including any allocated goodwill, to fair value. Refer to Note 4 to our accompanying consolidated financial statements included elsewhere in this Report for further discussion of the results of our annual goodwill impairment evaluation procedures.

Accounting for Income Taxes

Deferred tax assets generally represent items that will result in a tax deduction in future years for which we have already recorded the tax benefit in our income statement. We assess the likelihood that deferred tax assets will be recovered from future taxable income. To the extent we believe that recovery is not probable, a valuation allowance is established. To the extent we establish a valuation allowance or subsequently increase or decrease this allowance, we must include an adjustment as part of the income tax provision in our results of operations. Our deferred tax asset balances in our consolidated balance sheets were $697 million and $488 million as of December 31, 2023 and 2022, respectively. Our valuation allowances for deferred tax assets in our consolidated balance sheets were $441 million and $305 million as of December 31, 2023 and 2022, respectively.

In addition, significant judgment is required in determining and assessing the impact of certain tax-related contingencies. We establish accruals when, despite our belief that our tax return positions are fully supportable, it is probable that we have incurred a loss related to tax contingencies and the loss or range of losses can be reasonably estimated. We adjust the accruals related to tax contingencies as part of our provision for income taxes in our results of operations based upon changing facts and circumstances, such as progress of a tax audit, development of industry related examination issues, as well as legislative, regulatory, or judicial developments. A number of years may elapse before a particular matter, for which we have established an accrual, is audited and resolved.

The first step in determining the deferred tax asset valuation allowance is identifying reporting jurisdictions where we have a history of tax and operating losses or are projected to have losses in future periods as a result of changes in operational performance. We then determine if a valuation allowance should be established against the deferred tax assets for that reporting jurisdiction. The second step is to determine the amount of the valuation allowance. We will generally establish a valuation allowance equal to the net deferred tax asset (deferred tax assets less deferred tax liabilities) related to the jurisdiction identified in step one of the analysis. In certain cases, we may not reduce the valuation allowance by the amount of the deferred tax liabilities depending on the nature and timing of future taxable income attributable to deferred tax liabilities.

In assessing tax contingencies, we apply the provisions of ASC 740, "Income Taxes". We apply the recognition threshold and measurement of a tax position taken or expected to be taken in a tax return and follow the guidance on various matters such as derecognition, interest, penalties and disclosure. We classify interest and penalties as a component of income tax expense. During each reporting period, we assess the facts and circumstances related to recorded tax contingencies. If tax contingencies are no longer deemed probable based upon new facts and circumstances, the contingency is reflected as a reduction of the provision for income taxes in the current period.

Our deferred tax assets exceeded our deferred tax liabilities by $420 million as of December 31, 2023, excluding the impact of valuation allowances. Historically, we have not produced federal taxable income and are highly leveraged. As such, we believe it is likely that a significant component of our deferred tax assets will not be realized and thus have established a valuation allowance against these deferred tax assets as of December 31, 2023. In addition, we have subsidiaries with a history of tax losses in certain state jurisdictions, and, based upon those historical tax losses, we have assumed that the subsidiaries would not be profitable in the future for those states' tax purposes. If our assertion regarding the future profitability of those subsidiaries would have been different, then our deferred tax assets would be understated by the amount of the state valuation allowance of $182 million at December 31, 2023.

Reserves for Self-Insurance Claims

Given the nature of our operating environment, we are subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, we maintain insurance for individual professional liability claims and employee workers' compensation claims exceeding SIR and deductible levels. At December 31, 2023, our SIR for professional liability claims is $15 million per claim at the majority of our acute care hospitals. Additionally, we participate in state-specific professional liability programs in New Mexico and Pennsylvania. We have a $25,000 deductible for professional liability at each of our IRFs and a $100,000 deductible at each of our BHFs. At December 31, 2023, our deductible for workers' compensation claims at each of our acute care and BHFs was $1 million per claim in all states in which we operate except for Montana, Ohio and Washington. We participate in state-specific programs for our workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at our IRFs. Our SIR and deductible levels are evaluated annually as a part of our insurance program's renewal process.

Each year, we obtain quotes from various insurers with respect to the cost of obtaining insurance coverage. We compare these quotes to our most recent actuarially determined estimates of losses at various SIR and deductible levels. Accordingly, changes in insurance costs affect the SIR and deductible levels we choose each year.

Our reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. Our expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of our self-insured retention and deductible levels; the administrative costs of the insurance program; and interest expense related to the discounted portion of the liability.

Our reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. Our reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. We have discounted our reserves for self-insured claims to their present value using a discount rate of 2.0% at December 31, 2023 and 1.8% at December 31, 2022. We select a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

The following table provides information regarding our reserves for self-insured claims at December 31, 2023 and 2022 (in millions):

	2023	2022
Undiscounted	$ 282	$ 308
Discounted (as reported)	$ 265	$ 293

As of December 31, 2023 and 2022, our reserves for self-insurance claims did not include any significant amounts for settled and unpaid claims. Our average lag time between the settlement and payment of a self-insured claim ranges from 1 to 2 weeks.

Our estimated reserves for self-insured claims will be significantly affected if current and future claims differ from historical trends. While we monitor reported claims closely and consider potential outcomes when determining our reserves for self-insured claims, the complexity of the claims, the extended period of time to settle the claims and the wide range of potential outcomes complicate the estimation process. In addition, certain states have passed varying forms of tort reform which attempt to limit the amount of awards. If such laws are passed in the states where our hospitals are located, our loss estimates could decrease.

Our estimate of reserves for self-insured and deductible claims are based upon actuarial calculations and are significantly influenced by key assumptions and other factors. These factors include, but are not limited to: historical paid claims; trending of loss development factors; trends in the frequency and severity of claims, which can differ significantly by jurisdiction as a result of the legislative and judicial climate in such jurisdictions; coverage limits of third-party insurance and actuarial determined statistical confidence levels. Given the number of assumptions and characteristics of each assumption considered in establishing the reserves for self-insured claims, it is difficult to compute the individual financial impact of each assumption or groups of assumptions. Some of the assumptions are dependent upon the quantitative measurement of other assumptions, and therefore are not accurately evaluated in isolation. For example, a change in the frequency of claims assumption is also affected by the estimated severity of these claims resulting in an inability to properly isolate and quantify the impact of a change in this assumption.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Our reserves for self-insured claims are comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period. We have the ability to reliably determine the amount and timing of payments based on sufficient history of our claims development, the use of external actuarial expertise and our rigorous review process. Actuarial payment patterns are based on our individual hospital historical data both prior to and after our inception. The processes, performed by both external actuaries and our management, enable us to reliably determine the amount of our ultimate losses as well as the timing of the loss settlements such that discounting of the reserves for self-insured claims is appropriate. Given the number of factors considered in establishing the reserves for self-insured claims, it is neither practical nor meaningful to isolate a particular assumption or parameter of the process and calculate the impact of changing that single item.

Ultimately, from an actuarial standpoint, the sensitivity in the estimates of reserves for self-insured claims is reflected in the various actuarial confidence levels. Our best estimate of our reserves for self-insured claims utilizes an actuarial central estimate, which employs a statistical confidence level that approximates 50%. Higher statistical confidence levels, while not representative of our best estimate, reflect reasonably likely outcomes upon the ultimate resolution of related claims. Using a higher statistical confidence level would increase the estimated reserves for self-insured claims. At a 75% statistical confidence level, our estimated reserve would increase by $21 million. Changes in our estimates of reserves for self-insured claims are non-cash charges and accordingly, do not impact our liquidity or capital resources.

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of our quarterly and semi-annual actuarial calculations resulted in changes to our reserves for self-insured claims for prior years. For the years ended December 31, 2023 and 2022 our related self-insured claims expense decreased by $5 million and increased by $5 million, respectively.

Item 7A. ***Quantitative and Qualitative Disclosures About Market Risk.***

Market Risk

Market risk is defined as the risk of loss resulting from changes in market prices as a result of changes in interest rates, credit and liquidity or general economic conditions. Our principal market risks in the ordinary course of business are credit risk, liquidity risk and interest rate risk. We currently do not have direct exposure to either market risk from trading activities or foreign currency exchange rate risk.

Credit Risk

We define credit risk as the risk that amounts payable by uninsured patients and remaining patient responsibility amounts (deductibles and co-payments) for patient accounts where the primary insurance carrier has paid the amounts covered by the applicable agreements will not be paid. The provision for doubtful accounts relates primarily to amounts due directly from patients. While we have experienced a reduction in uninsured patients, the risk of collection from insured patients and the amounts due, may increase as more individuals are enrolled in insurance plans with larger deductibles and/or co-payments, including those purchased on insurance exchanges.

Liquidity Risk

We define liquidity risk as the risk that we will not meet our payment obligations in a timely manner or the risk that market conditions or institution-specific events may reduce our ability to raise funds from market counterparties. An adverse institution-specific event such as a major loss that causes a perceived or actual deterioration in our financial condition or an adverse systemic event could affect our funding liquidity.

Interest Rate Risk

Borrowings under the ABL Facility and the Term Loan Facility are at variable rates of interest and expose us to interest rate risk. As of December 31, 2023, we had total outstanding debt of approximately $6.3 billion, excluding finance lease obligations and unamortized debt issuance costs, of which approximately $2.0 billion, or 31.7%, was subject to variable rates of interest. If the interest rate on our variable rate long-term debt outstanding as of December 31, 2023 were to increase by 100 basis points during any annual period, our cash flows would be negatively impacted by approximately $20 million.

Item 8. ***Financial Statements and Supplementary Data.***

Information with respect to this Item is contained in our accompanying consolidated financial statements beginning on page F-1 of this Report.

Item 9. ***Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.***

None.

Item 9A. ***Controls and Procedures.***

The information that would be required to be disclosed under Part II, Item 9A of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a**)** of each of the Indentures.

Item 9B. ***Other Information.***

None.

Item 9C. ***Disclosure Regarding Foreign Jurisdictions that Prevent Inspections.***

None.

PART III

Item 10. ***Directors, Executive Officers and Corporate Governance.***

The following table provides information regarding our executive officers and the members of our Board (ages as of February 29, 2024):

Name	Age	Position(s)
David M. Dill	55	President, Chief Executive Officer, Director and Chairman
Michael S. Coggin	54	Executive Vice President and Chief Financial Officer
Jennifer C. Peters	52	Executive Vice President, Chief Administrative and Legal Officer
Jason Zachariah	46	Executive Vice President, Chief Operating Officer
Aaron Lewis	39	Executive Vice President, Growth and Integrated Solutions
Evan Bayh	68	Director
Heather Berger	46	Director
Norman Brownstein	80	Director
Nell Buhlman	57	Director
Christine Cahill	29	Director
Maxwell David	33	Director
William M. Lewis, Jr.	67	Director
Matthew H. Nord	44	Director
Wendell Pritchett	59	Director
Kenneth Shea	65	Director
G. Rodney Wolford	77	Director

David M. Dill became our Chief Executive Officer in November 2018 after serving in various roles at Legacy LifePoint Health, Inc. (***"Legacy Lifepoint"***) prior to its merger with RCCH HealthCare Partners (***"RCCH"***), including serving as President since January 2011, as Chief Operating Officer since April 2009, and as Executive Vice President from February 2008 to January 2011. Mr. Dill has also served on our Board as Chair since September 2021. He joined Legacy Lifepoint in July 2007 as Chief Financial Officer and continued to serve in that role until April 2009. Prior to that, from March 2006 he served as executive vice president of Fresenius Medical Care North America and as chief executive officer of one of two U.S. divisions of Fresenius Medical Care Services, a wholly-owned subsidiary of Fresenius Medical Care AG & Co. KGaA. Mr. Dill previously served as executive vice president, chief financial officer and treasurer of Renal Care Group, Inc., a publicly traded dialysis services company, from November 2003 until Renal Care Group, Inc. was acquired by Fresenius Medical Care in March 2006. From 1996 to November 2003, Mr. Dill served in various finance and accounting roles with Renal Care Group, Inc. Mr. Dill served as a member of the board of directors of Psychiatric Solutions, Inc., a behavioral health services company, from 2005 until 2010. Mr. Dill is a former chairman of the board for the Federation of American Hospitals ("***FAH***") and currently serves as a member of the FAH's board and Executive Committee. He also serves on the board of directors of R1 RCM, Inc. and the Nashville Health Care Council and previously served as its chairman, and serves on the boards of the American Heart Association's Greater Southeast Affiliate and is a member of the board of trustees for the Murray State University Foundation and the Montgomery Bell Academy.

Michael S. Coggin became our Executive Vice President and Chief Financial Officer in November 2018 after serving in various roles at Legacy Lifepoint, including as Executive Vice President, Chief Financial Officer and Chief Accounting Officer since September 2016 and Senior Vice President and Chief Accounting Officer from December 2008 until September 2016. From September 2007 until December 2008, Mr. Coggin served as chief financial officer of Specialty Care Services Group, a multi-service line healthcare provider primarily focused on providing perfusion and auto-transfusion services to hospitals. Mr. Coggin was a senior vice president in the finance, accounting and internal audit groups of Renal Care Group, Inc. from April 2004 until its acquisition by Fresenius Medical Care AG & Co. KGaA in March 2006. Following the acquisition, Mr. Coggin provided finance and accounting oversight for business units within the East Division of Fresenius. Prior to that time, Mr. Coggin was an audit manager at KPMG Peat Marwick in Nashville, Tennessee. Mr. Coggin will retire as our Executive Vice President and Chief Financial Officer effective March 31, 2024.

Jennifer C. Peters became our Executive Vice President and Chief Administrative and Legal Officer in July 2023 after serving as Executive Vice President and General Counsel since November 2018. Prior to that time, Ms. Peters served as Legacy Lifepoint's General Counsel since April 2017 and Corporate Secretary since June 2017 after previously serving as senior vice president and chief operations counsel of Legacy Lifepoint. Prior to joining the Company in November 2013, Ms. Peters served as general counsel, secretary and chief compliance officer for Simplex Healthcare from October 2010 through November 2013. Ms. Peters has also served as vice president and associate general counsel at Community Health Systems, Inc. In addition, Ms. Peters has experience as a hospital administrator.

Jason Zachariah was promoted to Executive Vice President, Chief Operating Officer in June 2022. Prior to his current role, Mr. Zachariah served as President, Integrated Solutions upon consummation of the Kindred Transaction in December 2021. Before joining Lifepoint, he served as president and chief operating officer of Kindred, where he led the company's hospital division, rehabilitation services and behavioral health operations until consummation of the Kindred Transaction. Prior to that, he served as president of Kindred's rehabilitation services and in various roles in the company's hospital division, including chief operating officer and executive director for the division's California/Arizona district. From 2003 until Mr. Zachariah joined Kindred, he served in various business development and manufacturing roles at GlaxoSmithKline Pharma GmbH and Abbott.

Aaron Lewis was promoted to Executive Vice President, Growth and Integrated Solutions in June 2022. Prior to his current role, Mr. Lewis served as Senior Vice President, Care Continuum and Business Transformation, and previously served the Company as Senior Vice President, Physician Enterprise and Strategic Growth. Before joining Lifepoint Health, Mr. Lewis served in multiple roles for RCCH, including Senior Vice President of Strategic Growth and Vice President, Operations and Strategic Alignments. Prior to his RCCH tenure, he held operational and development roles with Vanguard Health Systems, after beginning his career in investment banking for Merrill Lynch. Mr. Lewis has been appointed to serve as our Executive Vice President and Chief Financial Officer effective upon Mr. Coggin's retirement.

Senator Evan Bayh became a Director of the Company in September 2023. He serves as a senior advisor to Apollo. From 1999 to 2010, Senator Bayh was a member of the U.S. Senate, representing the State of Indiana. He served on six committees for the U.S. Senate – Banking, Housing and Urban Affairs; Armed Services; Energy and Natural Resources; the Select Committee on Intelligence; Small Business and Entrepreneurship; and the Special Committee on Aging. He also chaired two subcommittees. From 1989 until 1997, Senator Bayh served as the Governor of Indiana. He currently serves on the boards of RLJ Lodging Trust, Berry Global, Marathon Petroleum and Fifth Third Bank. Senator Bayh also served as a Distinguished Scholar and Executive at Large of the Paul H. O'Neill School of Public and Environmental Affairs at Indiana University. In 2022, President Biden appointed Senator Bayh to the Presidential Intelligence Advisory Board where he provides the President with an independent source of advice on the effectiveness with which the Intelligence Community is meeting the nation's intelligence needs. Senator Bayh received a B.S. in Economics with honors from Indiana University and a J.D. from the University of Virginia.

Heather Berger became a Director of the Company in September 2023. She is Partner and Head of Global Product at Apollo, where she leads product strategy, thought leadership and client relations across Apollo's global platform. Ms. Berger is a member of Apollo's Leadership Team. Ms. Berger is also on the board of AltFinance, a comprehensive program to introduce talented students of Historically Black Colleges and Universities (HBCUs) to the alts industry and to provide them training, support, and mentorship. Prior to joining Apollo in 2008, Ms. Berger worked in the Private Fund Group at Credit Suisse Securities (USA), where she was responsible for raising institutional capital for private equity funds. Prior thereto, she was with Capital Z Financial Service Partners, and its affiliate, where she focused on investor relationships and fundraising. Ms. Berger is a member of the Board of Trustees of The Spence School in New York. She has previously served on the board of directors of The Fresh Market and Presidio. Ms. Berger graduated cum laude from Duke University with a B.A. in Comparative Area Studies and French.

Norman Brownstein became a Director of the Company in April 2016. Mr. Brownstein is the founding member and chairman of the board of the law firm of Brownstein Hyatt Farber Schreck, LLP. Mr. Brownstein is nationally recognized for his extensive experience in real estate law, commercial transactions and public policy advocacy, which spans the economic spectrum, extending to telecommunications, financial services, agriculture, tax and healthcare interests. Mr. Brownstein's firm is one of the leading lobbying firms in the U.S. Mr. Brownstein serves on the board of directors of National Jewish Health and the Simon Wiesenthal Center, and during the past five years has also served as a director of Ardent Healthcare Services. Mr. Brownstein received a B.S. degree from the University of Colorado and a J.D. from the University of Colorado Law School.

Nell Buhlman became a Director of the Company in March 2022. Ms. Buhlman is the Chief Administrative Officer and Head of Strategy for Press Ganey Forsta, an international company that works with health systems to optimize the healthcare experience for patients, consumers, and staff. In her role, Nell has responsibility for enterprise growth and client strategy for provider, payer, life sciences and healthcare consumer solutions in the U.S. and abroad. Ms. Buhlman joined Press Ganey in 2010. Prior to the company's 2022 merger with Forsta, Ms. Buhlman served as Press Ganey's Chief Operating Officer, Chief Strategy Officer, Senior Vice President for Clinical Solutions, and Vice President for Product Strategy. Ms. Buhlman is a board member for the Hospital for Consumptives of Maryland (Eudowood Foundation), serves on the Parent Advisory Council for the Greater Baltimore Medical Center, and is an Executive in Residence for the Johns Hopkins Carey Business School. She also serves as a trustee for the WPW Foundation, a charitable organization that provides grants to nonprofits serving vulnerable women and children. Ms. Buhlman holds B.A. degree from Connecticut College and an MBA from Johns Hopkins Carey Business School.

Christine Cahill became a Director of the Company in March 2022. Ms. Cahill is a Principal in Apollo Global Management's Private Equity business, having joined in 2018. Prior to joining Apollo, Ms. Cahill worked in the Investment Banking division at Goldman Sachs. Ms. Cahill also serves on the board of Knight Health Holdings, LLC d/b/a ScionHealth. She also serves on the advisory board of Lune Holdings S.a.r.l. (parent of Kem One). Ms. Cahill graduated cum laude with high honors from Harvard College with a B.A. in Economics.

Maxwell David became a Director of the Company in December 2018. Mr. David is a Partner in Apollo Global Management's Private Equity business, having joined in 2014. Prior to that time, Mr. David was a member of the Investment Banking division of Bank of America Merrill Lynch. Mr. David serves on the board of directors of 25m Health, LLC, Camaro Parent, LLC (parent of CareerBuilder), Nexera Holdco, Inc. (parent of Newfi Lending) and Knight Health Holdings, LLC d/b/a ScionHealth. Mr. David previously served on the board of directors of Aris Mortgage Holding Company, LLC (parent of AmeriHome). Mr. David graduated cum laude from Dartmouth College with a B.A. in Economics.

William M. Lewis, Jr. became a Director of the Company in June 2023. He joined Apollo Global Management in November 2021 as a Partner and member of the Management Committee. Mr. Lewis also co-chairs Apollo's Partner Promotion Committee and its Expanding Opportunity Committee. Prior to joining Apollo, Mr. Lewis was a Managing Director and Chairman of Investment Banking at Lazard Ltd., which he joined in 2004, and where he advised a number of global corporations. In addition, Mr. Lewis chaired the firm's Managing Director Promotion Committee. Mr. Lewis was elected a Managing Director of Morgan Stanley in 1989 becoming the firm's first African-American Managing Director, and served as head or co-head of the firm's Global Corporate Finance Department, Global Mergers & Acquisitions Department and Global Banking Department. Mr. Lewis serves on the boards of ADT, Inc., Ariel Alternatives, LLC and formerly served on the boards of Freddie Mac, Darden Restaurants and Lazard Ltd. Mr. Lewis also serves on the boards of a number of not-for-profit organizations including Uncommon Schools, New Visions for Public Schools, New York Presbyterian Hospital, the New York City Police Foundation, the Posse Foundation, the Economic Club of New York, the National Bureau of Economic Research and Echoing Green. In the past, he has served as Co-Chairman of the NAACP Legal Defense Fund, Treasurer of the National Urban League, Chairman of A Better Chance and as a member of the boards of Phillips Academy, the American Museum of Natural History, the National Constitution Center, the Executive Committee of the USGA, Carnegie Endowment for International Peace, the New York Philharmonic, Morehouse College, the Central Park Conservancy, the NCAA Advisory Board, the Harvard Management Company (endowment), Harvard's Committee on Alumni Affairs and Development, Harvard's Task Force on Students and Chicago's Northwestern Memorial Hospital. Mr. Lewis graduated with honors in Economics from Harvard College and received his MBA from Harvard Business School in 1982.

Matthew H. Nord became a Director of the Company in December 2015 in connection with the consummation of the acquisition of RCCH by Apollo-managed funds and served as Chairman of the Board from December 2018 until September 2021. Mr. Nord is a Partner and Co-Head of Equity at Apollo, where he oversees the firm's private equity strategy and has led numerous investments across technology, healthcare and business services. Mr. Nord serves on Apollo's diversity, equity and inclusion committee and is a member of Apollo Women Empower (AWE). Mr. Nord is on the board of directors of TD Synnex, West Technology Group, ScionHealth and Tenneco. Mr. Nord previously served on the board of directors of ADT, Inc., from April 2016 to June 2022, Exela Technologies, Inc., from July 2017 to October 2019, where he was on the Nominating and Governance Committees, and Presidio, Inc., from November 2014 to December 2019, where he was on the Compensation and Nomination Committees. Prior to joining Apollo in 2003, Mr. Nord was a member of the Investment Banking division of Salomon Smith Barney Inc. Mr. Nord graduated summa cum laude from the University of Pennsylvania's Wharton School of Business with a B.S. in Economics. He also serves on the Montefiore Health System Board of Trustees, the Board of Advisors of the University of Pennsylvania's Stuart Weitzman School of Design and the Board of the Rock and Roll Hall of Fame Foundation.

Wendell Pritchett became a Director of the Company in September 2022. Dr. Pritchett serves as the James S. Riepe Presidential Professor of Law and Education at the University of Pennsylvania. He served as Provost of the University from 2017 to 2021 and as Interim President in 2022. Between 2009 and 2014, Dr. Pritchett served as Chancellor and Professor of Law and History at Rutgers University-Camden. Dr. Pritchett also sits on the boards of the publicly traded companies Toll Brothers and Clarivate, as well as several nonprofit organizations, including College Unbound, the Philadelphia Foundation, Reinvestment Fund, and Minerva University. He holds a B.A. in Political Science from Brown University, earned his J.D. from Yale Law School and his PhD from the University of Pennsylvania.

Kenneth Shea became a Director of the Company in June 2023. He brings more than 30 years of experience in investment banking, private investment, and operations experience, primarily focused on the real estate, gaming, lodging, and leisure sectors. He is currently a Co-Founder and Managing Principal of Manufactured Housing Partners, LLC, a private real estate investment fund focused on the acquisition and operation of manufactured housing communities, founded in 2022. Prior to that, he was an Investment Partner with Pilot Growth Equity, a venture capital firm focused on growth-stage technology companies, from 2020 to 2022. From 2014 to 2019, Mr. Shea served as a Senior Managing Director at Guggenheim Securities, LLC, where he ran the firm's real estate, gaming & leisure investment banking department. He previously served as President of Coastal Capital Management, LLC from 2009 to 2014, as a Managing Director of Icahn Capital LP from 2008 to 2009, and as a Senior Managing Director of Bear, Stearns & Co. Inc., where he was employed from 1996 to 2008 and ran the firm's gaming and leisure investment banking practice. Mr. Shea currently serves on the boards of Viskase Companies, Inc., and Kindred Group plc. Previously Mr. Shea served on the board of Equity Commonwealth, Hydra Industries, Perthera.ai, Sunlight Financial Holdings, Inc., and CVR Refining, LP. Mr. Shea received his B.A. in Economics, magna cum laude, from Boston College and an MBA from the University of Virginia.

G. Rodney Wolford became a Director of the Company in April 2016. Mr. Wolford, beginning his career as a CPA, has over 40 years of wide-ranging experience in the healthcare industry, having served in leadership roles with healthcare providers, suppliers, consulting firms, associations and insurers. Among his executive positions, Mr. Wolford served as chief executive officer of Alliant Healthcare (now Norton Healthcare, Inc.) in Louisville, Kentucky, Sterling Diagnostic, a worldwide manufacturer of x-ray film, Forhealth Technologies, the inventor of the first robot dedicated to hospital IV production, and a senior executive of Blue Cross Tennessee. Mr. Wolford currently serves on the boards of D4C Dental Brands, Liberate Medical, as Chairman of Parasight Systems and as a fund manager of Bluegrass Angel Venture Funds. Mr. Wolford also previously served on the boards of multiple healthcare related companies, including Image Guided Neurologics, Provation Medical, Haven Behavioral, Laboratory Supply Company and VetCor.

Code of Ethics

Our Board expects its members, as well as our officers and employees, to act ethically at all times and to acknowledge in writing their adherence to the policies comprising our Code of Conduct, which is known as "Common Ground," and, as applicable, our Code of Ethics for Senior Financial Officers and Chief Executive Officer.

The Board consists of 12 directors. The Board has the following standing committees: Audit; Compensation; Nominating and Governance; Compliance and Enterprise Risk; Quality; and Executive. In addition, the board of directors of the Parent also has a compensation committee that administers equity-based compensation plans in which our managers, officers, employees, consultants and directors participate. Apollo has the authority to designate a majority of the members of our Board and appoint of management.

Committees of our Board of Directors

The Board has adopted written charters for each of the following standing committees:

Audit Committee

The current members of the Audit Committee are Messrs. Shea, Wolford and Pritchett and Ms. Buhlman. Mr. Shea is the chair of the Audit Committee. The principal duties and responsibilities of the Audit Committee are to assist the Board in overseeing:

- the integrity of our financial statements;
- the independent auditor's qualifications, independence and performance;
- the performance of our internal audit function; and
- our compliance with certain legal, ethical and regulatory requirements.

The Audit Committee is also responsible for: (i) overseeing and periodically reviewing management's processes and procedures for assessing, identifying and managing material risks to us from cybersecurity threats and the effectiveness of our information security processes and procedures; (ii) periodically evaluating the knowledge, experience and capabilities of the members of the Audit Committee and management with respect to cybersecurity risk and information security processes and procedures; and (iii) evaluating the nature, scope, timing and impact to us of any material cybersecurity incidents.

The Audit Committee has the authority to conduct or authorize investigations into or studies of matters within its scope of responsibilities. It also has the authority to retain and determine funding for independent legal, accounting or other advisors (without seeking Board approval) as it determines necessary or appropriate to carry out its duties and responsibilities.

Our Board has determined that each of Messrs. Shea and Wolford is an "audit committee financial expert" within the meaning of applicable SEC regulations.

Compensation Committee

The current members of the Compensation Committee are Messrs. Nord and David. Mr. Nord is the chair of the Compensation Committee. The principal duties and responsibilities of the Compensation Committee are as follows:

- approving the non-equity-based compensation of our officers, directors and key employees;
- administering our non-equity-based compensation plans; and
- making recommendations to the Parent for the equity-based compensation of the Parent and its subsidiaries' officers, directors, employees and other service providers.

Nominating and Governance Committee

The current members of our Nominating and Governance Committee are Ms. Cahill and Mr. David. Mr. David is the chair of the Nominating and Governance Committee. The principal duties and responsibilities of the Nominating and Governance Committee are as follows:

- to assist the Board in identifying individuals qualified to serve as members of the Board and/or its committees; and
- other duties and responsibilities that our Board may delegate to the Nominating and Governance Committee.

Compliance and Enterprise Risk Committee

The current members of the Compliance and Enterprise Risk Committee are Messrs. Bayh, Pritchett, Shea and Wolford. Mr. Wolford is the chair of the Compliance and Enterprise Risk Committee. The Compliance and Enterprise Risk Committee is responsible for overseeing our legal and regulatory compliance program, including our enterprise risk management program, and certain healthcare and regulatory compliance matters that affect us and our business operations.

Quality Committee

The current members of the Quality Committee are Ms. Buhlman and Messrs. Brownstein and David. Ms. Buhlman is the chair of the Quality Committee. The Quality Committee is responsible for monitoring and evaluating the adequacy and effectiveness of our quality of care and patient safety programs and initiatives.

Executive Committee

The current members of the Executive Committee are Ms. Cahill and Messrs. David and Nord. Mr. Nord is the chair of the Executive Committee. The principal duties and responsibilities of the Executive Committee are as follows:

- to advise and counsel our Chief Executive Officer regarding company matters; and
- to take such actions as are necessary due to their urgent or highly confidential nature, or where convening the Board is impracticable, subject to certain limitations.

Item 11. ***Executive Compensation.***

The information that would be required to be disclosed under Part III, Item 11 of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 12. ***Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.***

The information that would be required to be disclosed under Part III, Item 12 of an annual report on Form 10-K filed with the SEC has been omitted as permitted pursuant to Section 4.02(a) of each of the Indentures.

Item 13. ***Certain Relationships and Related Transactions, and Director Independence*****.**

Executive Compensation

Employment Agreements

From time to time, we are party to employment and employment related agreements with our officers, employees, contractors and consultants that are entered into in the ordinary course of business.

Nonqualified Deferred Compensation

We established a nonqualified deferred compensation plan effective January 1, 2021 in which certain Company executives and employees participate. Certain former Kindred executives and employees, including Mr. Zachariah, who are now Company executives and employees, participate in a separate nonqualified deferred compensation plan that replicates the former Kindred deferred compensation plan. Plan participants may defer a portion of their salary and bonuses. Currently, the Company does not make any matching or other contributions to the nonqualified deferred compensation plans. The timing and form of payments are based on the terms of the applicable plan and deferral elections made by participants.

Parent Capital Units and Profits Units

Certain of our and our affiliates' executives, employees, consultants, directors and other service providers have been granted profits units and/or purchased or otherwise acquired capital units in the Parent.

The profits units provide the recipients with the opportunity to share in our future appreciation, subject to vesting. In general, for grants to non-directors, one-third of the profits units vest in substantially equal installments on the last day of each of the first 20 calendar quarters commencing on or after the applicable grant date, and the remaining two-thirds of the profits units vest based on the achievement of certain investment returns to our Sponsor. The profits units we grant to certain members of our Board on an annual basis generally vest on the date that is six months and one day from the date of grant. The time-vested profits units and the director profits units will vest in full on a sale of the Company.

The capital units and profits units are generally subject to the terms and condition set forth in the applicable award agreements or subscription agreements, as applicable, and in the partnership agreement of the Parent, including, but not limited to, customary transfer restrictions, redemption rights, drag-along rights, tag-along rights, and preemptive rights.

Equity Repurchases

From time to time, the Parent repurchases previously issued profits units and capital units held by certain of our former and current service providers, including executive officers and directors. Refer to Note 12 to our accompanying consolidated financial statements included elsewhere in this Report for a discussion of profits units issued by the Parent to our service providers and additional information regarding our accounting for stock-based compensation.

Director Retainers and Fees

Certain members of our Board are entitled to receive annual retainers and fees for their service in accordance with our director compensation policy.

Management Agreement

We are party to a management consulting agreement dated June 25, 2021 (the "***Management Agreement***") with an affiliate of our Sponsor relating to the provision of certain management consulting and advisory services. In exchange for the provision of such services, we currently pay a non-refundable quarterly management fee of approximately $2.3 million. The Management Agreement will terminate on the earlier of (i) the eighth anniversary of July 25, 2021, (ii) the consummation of any transaction or series of transactions, whether or not related, as a result of which New Holders (as defined in the Management Agreement) become the beneficial owner, directly or indirectly, of more than 90% of our equity and voting securities and (iii) such earlier date as is mutually agreed upon. Our payment obligations under the Management Agreement may be subject to deferral to the extent such obligations would otherwise violate any prohibitions or limitations under our then existing indebtedness. We may be required to reimburse such affiliate of our Sponsor for all out-of-pocket expenses incurred by such affiliate and its affiliates and each of their representatives in the connection with the performance of its obligations under the Management Agreement or the Transaction Fee Agreement (as defined in this Report), including expenses incurred in connection with any Underwritten Offering or Change of Control (as defined in the Transaction Fee Agreement).

Transaction Fee Agreement

We are party to a transaction fee agreement dated June 25, 2021 (the "***Transaction Fee Agreement***") with an affiliate of our Sponsor, which will terminate automatically upon the termination of the Management Agreement. Under the Transaction Fee Agreement, if we, or certain of our parent entities or controlled affiliates, consummate an acquisition (including of assets or equity interests) of any business or entity, we are required to pay to an affiliate of our Sponsor a success fee equal to 1% of the aggregate enterprise value (i) paid or provided by or to the Company Group (as defined in the Transaction Fee Agreement) or us or (ii) otherwise indicated by such acquisition. We may be required to reimburse such affiliate of our Sponsor for all out-of-pocket expenses incurred by such affiliate and its affiliates and each of their representatives in the connection with the performance of its obligations under the Transaction Fee Agreement.

Participation of Apollo Global Securities, LLC

Apollo Global Securities, LLC, an affiliate of our Sponsor, acted as an initial purchaser in the sale of the Unsecured Notes and the Secured Notes, including our offerings of the 9.875% Secured Notes and the 11.00% Secured Notes completed during the year ended December 31, 2023, and received a portion of the initial purchasers' discount and commissions for each offering. Apollo Global Securities, LLC or one of its affiliates also participated as an arranger and received customary fees in respect of the Term Loan Facility and the ABL Facility, including such fees in respect of the amendment to the Term Loan Facility completed during the year ended December 31, 2023.

Transition Services Agreements and Other Agreements with ScionHealth

In connection with the Kindred Transaction, we have entered into a number of TSAs and other ancillary agreements with ScionHealth and its subsidiaries. For the year ended December 31, 2023, in connection with the TSAs, we were reimbursed by ScionHealth for certain costs incurred on its behalf of $47 million, and we paid ScionHealth $2 million for certain costs incurred on our behalf. For the year ended December 31, 2022, in connection with the TSAs, we were reimbursed by ScionHealth for certain costs incurred on its behalf of $61 million, and we paid ScionHealth $3 million for certain costs incurred on our behalf. We had a net receivable of $124 million and $84 million, respectively, recorded under the caption "Other current assets" in our consolidated balance sheets as of December 31, 2023 and December 31, 2022, respectively. In connection with the Kindred Transaction, we acquired the Class B Units with an aggregate initial value of $350 million, which are perpetual non-convertible, non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends. Additionally, we own an aggregate $50 million principal amount of ScionHealth's senior secured term loan, which we acquired for approximately $47 million during the twelve months ended December 31, 2022. For more information regarding such term loan receivable, refer to Note 8 to our accompanying consolidated financial statements included elsewhere in this Report.

In addition, we and ScionHealth are party to a number of commercial services agreements pursuant to which we provide ScionHealth with therapy services, rehabilitation unit and behavioral health unit management, consulting and development services, among other commercial services. For the twelve months ended December 31, 2023 and December 31, 2022, we recorded revenues related to these commercial services agreements of $63 million and $55 million, respectively.

On January 20, 2023, ScionHealth acquired Cornerstone Healthcare Group Holding, Inc., a Delaware corporation ("***Cornerstone***"), which operated 15 specialty hospitals, eight senior living locations, and El Dorado (the "***Cornerstone Transaction***"). Immediately following ScionHealth's acquisition of Cornerstone on January 20, 2023, we paid $35 million in cash to acquire El Dorado from ScionHealth. In connection with the Cornerstone Transaction and the El Dorado Transaction, we entered into a number of TSAs other ancillary agreements with ScionHealth and its subsidiaries pursuant to which (i) we provide certain transition services to ScionHealth to support the businesses acquired by ScionHealth in connection with the Cornerstone Transaction and (ii) ScionHealth provides certain transition services to us to support El Dorado.

Investments Related to Lifepoint Forward Innovation Strategy

In connection with our Lifepoint Forward innovation strategy, we have made investments of cash and contributions of existing investments and securities into certain unconsolidated but affiliated entities owned by us, Parent, ScionHealth and other affiliated entities (collectively, "***Forward Health Ventures***"). Forward Health Ventures, in turn makes targeted and strategic investments in new and existing early-stage enterprises primarily focused on developing meaningful solutions to enhance quality, increase access to care, and improve value across our enterprise, including a significant focus on digital health capabilities that span the healthcare continuum. In exchange for our investments of cash and contributions of existing investments and securities, Forward Health Ventures has issued to us noncontrolling equity interests and perpetual cumulative preferred instruments.

As of December 31, 2023, in the aggregate, our cost method investment in Forward Health Ventures totaled $54 million. In addition to our cost method investment in Forward Health Ventures, we also have entered into management and administrative services arrangements with Forward Health Ventures and commercial arrangements with certain underlying early-stage enterprises, including pilot and services agreements and a revolving credit facility that we provide to one of these enterprises. The revolving credit facility provides for loans up to approximately $15 million, has a 5-year maturity (or earlier upon our demand) and bears interest at 9.00%. As of December 31, 2023, $14 million was drawn and outstanding on such facility.

Non-Core Real Estate Financing Transaction

In September 2023, the Company and the Lifepoint OpCos entered into, and consummated the transactions contemplated by, a Master Transaction Agreement with DSB Holdings, Realpoint and the Realpoint PropCos. Refer to Note 7 to our accompanying consolidated financial statements included elsewhere in this Report for additional information regarding the transactions.

Item 14. *Principal Accountant Fees and Services.*

The Audit Committee has appointed Ernst & Young LLP as our independent registered public accounting firm. Services provided to us by Ernst & Young LLP in fiscal 2023 are described below.

Audit Fees. The aggregate audit fees billed by Ernst & Young LLP for professional services rendered for the audit of our annual consolidated financial statements and services that are normally provided by the independent registered public accounting firm in connection with statutory and regulatory filings totaled approximately $5 million for 2023 and approximately $4 million for 2022.

Audit-Related Fees. The aggregate fees billed by Ernst & Young LLP for assurance and related services other than those described under "Audit Fees" were nominal for each of the years 2023 and 2022.

Tax Fees. The aggregate fees billed by Ernst & Young LLP for professional services rendered for tax compliance, tax advice and tax planning were approximately $1 million for each of the years 2023 and 2022.

All Other Fees. There were no fees billed by Ernst & Young LLP for products or services other than those described above in 2023 or 2022.

PART IV

Item 15. ***Exhibits and Financial Statement Schedules.***

(a) The following documents are filed as part of this Report:

1. *Consolidated Financial Statements*:

2. *Financial Statement Schedule*: All schedules for which provision is made in the applicable accounting regulations of the SEC are omitted because they either are not required under the related instructions, are inapplicable, or the required information is shown in the consolidated financial statements or notes thereto.

3. *Exhibits*: The exhibits required by Item 601 of Regulation S-K that would be disclosed under Part IV, Item 15 of an annual report on Form 10-K filed with the SEC have been omitted as permitted pursuant to Section 4.02(a) of the Indentures.

Report of Independent Auditors

Board of Directors and Shareholders of
Lifepoint Health, Inc.

Opinion

We have audited the consolidated financial statements of Lifepoint Health, Inc. (the Company), which comprise the consolidated balance sheets as of December 31, 2023 and 2022, and the related consolidated statements of operations, comprehensive (loss) income, equity and cash flows for each of the three years in the period ended December 31, 2023, and the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company at December 31, 2023 and 2022, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2023, in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error. In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements. In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Other Information

Management is responsible for the other information. The other information comprises the financial and nonfinancial information included in the annual report but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

Note 1. Organization and Summary of Significant Accounting Policies

Organization

Lifepoint Health, Inc., a Delaware corporation ("Lifepoint" or the "Company"), acting through its subsidiaries, is a leading provider of healthcare serving patients, clinicians, communities and partner organizations across the healthcare continuum. The Company generates revenues by providing a broad range of general and specialized healthcare services to patients through a growing diversified healthcare delivery network, which at December 31, 2023 was comprised of 60 community hospital campuses, 39 inpatient rehabilitation facilities ("IRFs"), 23 behavioral health facilities ("BHFs") and additional sites of care that include acute rehabilitation units ("ARUs"), outpatient centers and post-acute care facilities. At December 31, 2023, on a consolidated basis, the Company operated 122 healthcare facilities in 31 states throughout the United States ("U.S.") with approximately 12,000 licensed beds and approximately 50,000 dedicated employees.

Unless otherwise indicated or the context otherwise requires, references throughout these notes to the consolidated financial statements to the "Company" or "Lifepoint" refer to Lifepoint Health, Inc., and each of its consolidated subsidiaries. References in this Annual Report for the fiscal year ended December 31, 2023 to the "Sponsor" refer to certain funds that are affiliates of the Company (the "Apollo Funds") that are ultimately controlled and/or managed by certain affiliates of Apollo Management Holdings, L.P. ("Apollo Management" and, when acting on behalf of the Apollo Funds, "Apollo"), which is an affiliate of Apollo Global Management, Inc.

Principles of Consolidation

The accompanying consolidated financial statements include the accounts of the Company and all subsidiaries and entities controlled by the Company through majority voting control and variable interest entities of which the Company is the primary beneficiary. All significant intercompany accounts and transactions within the Company have been eliminated in consolidation. Noncontrolling interests in non-wholly-owned consolidated subsidiaries of the Company are presented as noncontrolling interests and redeemable noncontrolling interests and distinguish between the interests of the Company and the interests of the noncontrolling owners. Net income attributable to noncontrolling interests and redeemable noncontrolling interests represents the amounts attributable to the noncontrolling interests for each of the applicable periods presented. Investments in entities the Company does not control but in which it does have a substantial ownership interest and over which it can exercise significant influence are accounted for using the equity method.

The Company's financial statements have been presented on the basis of push down accounting in accordance with Financial Accounting Standards Board Accounting Standards Codification ("ASC") No. 805-50-S99. Under the push down basis of accounting, certain transactions incurred by the parent company which would otherwise be accounted for in the accounts of the parent are "pushed down" and recorded on the financial statements of the subsidiary. Accordingly, certain items resulting from the acquisition by Apollo have been recorded on the financial statements of the Company.

Use of Estimates

The preparation of financial statements in conformity with U.S. generally accepted accounting principles ("GAAP") requires management to make estimates and assumptions that affect the amounts reported in the Company's accompanying consolidated financial statements and notes to the consolidated financial statements. Actual results could differ from those estimates.

Reclassifications

Certain reclassifications have been made to the prior years to conform to current year presentation. These reclassifications had no effect on results of operations, financial position or cash flows as previously reported.

Revenue Recognition and Accounts Receivable

Overview

The Company recognizes revenues in the period in which performance obligations are satisfied. Generally, the Company bills patients and third-party payers several days after the services are performed or the patient is discharged. Accounts receivable primarily consist of amounts due from third-party payers and patients. The Company's ability to collect outstanding receivables is critical to its results of operations and cash flows. Amounts the Company receives for treatment of patients covered by governmental programs and third-party payers such as Medicare, Medicaid, health maintenance organizations ("HMOs"), preferred provider organizations ("PPOs") and private insurers as well as directly from patients are subject to contractual adjustments, discounts and implicit price concessions. Accordingly, the revenue and accounts receivable reported in the Company's financial statements are recorded at the net consideration to which the Company expects to be entitled to receive in exchange for providing patient care.

The majority of the Company's performance obligations are satisfied over time for the delivery of patient care in both outpatient and inpatient settings. Revenue for performance obligations satisfied over time is recognized based on actual charges incurred in relation to total expected charges for services anticipated to be provided. The Company believes that this method provides a faithful depiction of the transfer of services over the term of the performance obligation based on the remaining services needed to satisfy the obligation. Generally, unsatisfied or partially unsatisfied performance obligations at the end of the reporting period are related to patients admitted to the Company's hospitals that have not yet been discharged. The performance obligations for these patients are typically satisfied when the patients are discharged, which generally occurs within a matter of days of admission. Patients are generally billed when discharged, though they may be billed on an interim basis for longer stays. Accordingly, because all of the Company's performance obligations are part of a contract that is expected to have a duration of one year or less, the Company has elected to apply the exemption provided by ASC 606, "Revenue from Contracts with Customers" ("ASC 606") to not disclose the aggregate amount of the transaction price allocated to performance obligations that are unsatisfied or partially unsatisfied as of period end.

Subsequent adjustments that are determined to be the result of an adverse change in the patient's or the payer's ability to pay are recognized as bad debt expense. With the adoption of ASC 606, bad debt expense is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations, instead of separately as a deduction to arrive at revenue. Bad debt expense for the years ended December 31, 2023, 2022 and 2021 was not material for the Company.

Contractual Discounts

The Company derives a significant portion of its revenues from Medicare, Medicaid and other payers that receive discounts from the Company's established billing rates. The Company must estimate the total amount of these discounts to prepare its financial statements. The Medicare and Medicaid regulations and various managed care contracts under which these discounts must be calculated are complex and are subject to interpretation and adjustment. The Company estimates contractual discounts on a payer-specific basis given its interpretation of the applicable regulations or contract terms. These interpretations sometimes result in payments that differ from the Company's estimates. Additionally, updated regulations and contract renegotiations occur frequently, necessitating regular review and assessment of the estimation process by management. Subsequent changes in estimates for contractual discounts are reflected as an adjustment to revenues in the period of the change. Medicare, Medicaid and other discounted payer accounts receivables are written off after they have been final settled with the payer.

Medicaid Supplemental Payments

Medicaid supplemental payments ("MSPs") are payments made to providers separate from, and in addition to, those made at a state's standard Medicaid payment rate. MSP programs are jointly financed by state funds and federal matching funds. The state portion may be funded through general revenue, intergovernmental transfers from local governments or healthcare-related taxes imposed by states in the form of a mandatory provider payment related to healthcare items or services. The two most prevalent forms of MSPs are Medicaid Disproportionate Share Hospital ("DSH") and Upper Payment Limit ("UPL") payments. The Company had total receivables related to Medicaid DSH and UPL programs of $239 million and $106 million at December 31, 2023 and 2022, respectively, which are included under the caption "Other current assets" in the Company's accompanying consolidated balance sheets.

North Carolina Healthcare Access and Stabilization Program and Medicaid Expansion

On March 27, 2023, the governor of North Carolina signed into law a bill to expand Medicaid coverage in North Carolina, which expanded health coverage to an estimated 600,000 people across North Carolina on December 1, 2023. The legislation also enacted the Healthcare Access and Stabilization Program ("HASP") aimed at increasing Medicaid reimbursement rates to hospitals providing safety-net services for low-income patients. The Centers for Medicare and Medicaid Services ("CMS") approved initial HASP payments for the North Carolina fiscal year July 1, 2022 to June 30, 2023. HASP payments for future fiscal years will require annual approval by CMS. Increased reimbursement rates under the initial HASP preprint were applied retrospectively to the beginning of the North Carolina fiscal year, which commenced on July 1, 2022. As a result of the increased reimbursement rates, the Company recognized additional revenues of $121 million in its consolidated statements of operations for the year ended December 31, 2023, of which $35 million is related to the period from July 1, 2022 to December 31, 2022. The Company recognized additional provider taxes of $28 million for the year ended December 31, 2023, included under the caption "Other operating expenses, net" in its accompanying consolidated statements of operations, of which $9 million is related to the period from July 1, 2022 to December 31, 2022.

Kentucky Hospital Rate Improvement Program

The Commonwealth of Kentucky has implemented a Medicaid Hospital Rate Improvement Program ("KY HRIP"), which provides supplemental Medicaid payments to all Kentucky hospitals, other than university hospitals and state mental hospitals, and is intended to reduce the gap between the Kentucky Medicaid program's regular inpatient Medicaid payments and each hospital's Medicare allowable costs. During the first quarter of 2021, CMS and the Commonwealth of Kentucky approved a modification to the KY HRIP, which increased the inpatient hospital reimbursement rate from a contracted managed care rate up to a percentage of the average commercial rate. This modification was applied retrospectively to the beginning of the KY HRIP fiscal year, which commenced on July 1, 2020. As a result of this modification, the Company recognized additional revenues of $113 million in its consolidated statement of operations for the year ended December 31, 2021, of which $33 million is related to the period from July 1, 2020 to December 31, 2020. Additionally, the Company recognized additional provider taxes of $15 million for the year ended December 31, 2021, included under the caption "Other operating expenses, net" in the accompanying consolidated statement of operations, of which $5 million is related to the period from July 1, 2020 to December 31, 2020.

Cost Report Settlements

Cost report settlements under reimbursement agreements with Medicare, Medicaid and certain other payers for retroactive adjustments due to audits, reviews or investigations are considered variable consideration and are included in the determination of the estimated transaction price for providing patient care. These settlements are estimated based on the payment terms of the reimbursement agreement with the payer, correspondence from the payer, and the Company's historical experience. Estimated settlements are adjusted in future periods as final settlements are determined. There is a reasonable possibility that recorded estimates will change by a material amount in the near-term.

The net cost report settlements due to the Company were $4 million and $3 million at December 31, 2023 and 2022, respectively, and are included under the caption "Accounts receivable" on the accompanying consolidated balance sheets. The Company's management believes that adequate provisions have been made for adjustments that may result from final determination of amounts earned under these programs consistent with the constraints that are required by ASC 606.

For the years ended December 31, 2023, 2022 and 2021, the net retroactive adjustments to revenue related to prior periods for changes in MSP programs, estimated cost report settlements and other reimbursement adjustments resulted in an increase to revenues of $47 million, $32 million and $62 million, respectively.

Self-Pay Revenues

Self-pay revenues are derived from patients who do not have any form of healthcare coverage as well as from patients with third-party healthcare coverage related to the patient responsibility portion, including deductibles and co-payments. The Company evaluates these patients, after such patient's medical condition is determined to be stable, for their ability to pay based upon federal and state poverty guidelines, qualifications for Medicaid or other governmental assistance programs. The Company estimates the transaction price for self-pay patients and the patient responsibility portion using a number of analytical tools, benchmarks and market conditions. No single statistic or measurement determines the transaction price for these patients. Some of the analytical tools that the Company utilizes include, but are not limited to, historical cash collection experience, revenue trends by payer classification and revenue days in accounts receivable.

The revenues associated with self-pay patients are reported at the net amount that the Company expects to collect. Because the Company provides care to patients regardless of their ability to pay, the Company has determined that the differences between the amounts it bills based on gross or discounted charges and the amounts the Company expects to collect represent implicit price concessions. The final amount that will be received from the patient is not known at the date of service, and the Company accounts for this variable consideration in accordance with the provisions of ASC 606. Self-pay accounts receivable are written off after collection efforts have been followed in accordance with the Company's policies.

Charity Care

The Company provides care without charge to certain patients that qualify under the local charity care policy of each of its hospitals. For the years ended December 31, 2023, 2022 and 2021, the Company estimates that its costs of care provided under its charity care programs approximated $28 million, $18 million and $23 million, respectively. The Company does not report a charity care patient's charges in revenues or in the provision for doubtful accounts as it is the Company's policy not to pursue collection of amounts related to these patients, and therefore contracts with these patients do not exist.

The Company's management estimates its costs of care provided under its charity care programs utilizing a calculated ratio of costs to gross charges multiplied by the Company's gross charity care charges provided. The Company's gross charity care charges include only services provided to patients who are unable to pay and qualify under the Company's local charity care policies. To the extent the Company receives reimbursement through the various governmental assistance programs in which it participates to subsidize its care of indigent patients, the Company does not include these patients' charges in its cost of care provided under its charity care program.

Financing Component

The Company has elected to apply the practical expedient permitted under ASC 606 and does not adjust the estimated amount of consideration from patients and third-party payers for the effects of a significant financing component due to the Company's expectation that the period between the time the service is provided to a patient and the time that the patient or a third-party payer pays for that service will be one year or less.

Rental Income

The Company leases certain real estate assets it owns to unrelated third parties, primarily medical office buildings to non-employed physicians. The Company recognizes rental income for these operating lease arrangements in which the Company is the lessor on a straight-line basis over the lease term in accordance with ASC 842, "Leases" ("ASC 842").

Concentration of Revenues

The Company's revenues by payer and approximate percentages of revenues were as follows for the years ended December 31, 2023, 2022 and 2021:

	2023	2022	2021
	% of Revenues	% of Revenues	% of Revenues
Medicare	37.4 %	40.1 %	37.7 %
Medicaid	19.1	16.8	18.4
HMOs, PPOs and other private insurers	37.9	37.1	41.3
Self-pay	0.7	0.7	0.6
Other (a)	4.7	5.1	1.8
Revenue from contracts with customers	99.8	99.8	99.8
Rental income	0.2	0.2	0.2
Revenues	100.0 %	100.0 %	100.0 %

(a) Includes revenues from managed ARUs and ancillary goods and services.

During the years ended December 31, 2023, 2022 and 2021, approximately 56.5%, 56.9% and 56.1%, respectively, of the Company's revenues related to patients participating in the Medicare and Medicaid programs, collectively. The Company's management recognizes that revenues and receivables from government agencies are significant to the Company's operations, but it does not believe that there are significant credit risks associated with these government agencies.

Any changes in the current demographic, economic, competitive or regulatory conditions, or to Medicaid programs could have an adverse effect on the Company's revenues or results of operations. The Company's management does not believe that there are any other significant concentrations of revenues from any particular payer or geographic area that would subject the Company to any significant credit risks in the collection of its accounts receivable.

The Company's revenues by primary service type and approximate percentages of revenues were as follows for the years ended December 31, 2023, 2022 and 2021:

	2023		2022		2021	
	% of Revenues		% of Revenues		% of Revenues	
Inpatient services	44.4	%	43.5	%	39.4	%
Outpatient services	50.7		51.2		58.6	
Non-patient (a)	4.9		5.3		2.0	
Revenues	100.0	%	100.0	%	100.0	%

(a) Includes revenues from managed ARUs and ancillary goods and services.

General and Administrative Costs

The majority of the Company's operating expenses are "cost of revenue" items. Operating expenses that could be classified as "general and administrative" by the Company would include its corporate overhead costs, which were $237 million, $207 million and $195 million for the years ended December 31, 2023, 2022 and 2021, respectively, excluding depreciation and amortization, net income and losses associated with non-consolidated equity investments, and certain costs the Company considers non-recurring in nature, including but not limited to, severance and restructuring charges, and transaction and advisory costs recognized in connection with the Company's various business development activities. Lastly, the Company recognized accelerated stock-based compensation expense during the year ended December 31, 2021 in connection with a transaction involving the Company's indirect parent, DSB Parent, L.P., a Delaware limited partnership (the "Parent"), which is also excluded from its aforementioned general and administrative costs. Refer to Note 12 for further discussion of the Company's accounting for the stock-based compensation.

Legislative and Regulatory Response to COVID-19

Numerous legislative and regulatory actions, including enacting the Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act") and related stimulus legislation, were taken in an attempt to provide businesses, including healthcare providers, with relief from, and to combat the negative effects of, the COVID-19 pandemic.

Medicare Accelerated and Advance Payment Program

Using existing authority and certain expanded authority under the CARES Act, the U.S. Department of Health and Human Services temporarily expanded the CMS Accelerated and Advance Payment Program to a broad group of Medicare Part A and Part B providers. Under the expanded CMS Accelerated and Advance Payment Program, inpatient acute care hospitals could request up to 100% of their Medicare payment amount for a six-month period (critical access hospitals could request up to 125% of their payment amount for such period), and other providers and suppliers could request up to 100% of their Medicare payment amount for a three-month period.

The Company received a total of $991 million of Medicare advance payments under the CMS Accelerated and Advance Payment Program during the year ended December 31, 2020. During the year ended December 31, 2021, the Company fully repaid all Medicare advance payments.

CARES Act Tax Provisions

The CARES Act also provided for certain federal income tax changes, including an increase in the interest expense tax deduction limitation, the deferral of the employer portion of Social Security payroll taxes, refundable payroll tax credits, employee retention tax credits, net operating loss carryback periods, alternative minimum tax credit refunds and bonus depreciation of qualified improvement property. During the year ended December 31, 2020, the Company deferred cash payments of approximately $84 million related to Social Security payroll tax payments. During the year ended December 31, 2021, the Company fully repaid all previously deferred Social Security payroll taxes.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash on hand and short-term investments with original maturities of three months or less. The Company places its cash in financial institutions that are federally insured in limited amounts.

Inventories

Inventories of supplies are stated at the lower of cost (first-in, first-out) or market and consist of purchased items. Inventories acquired in connection with business combinations are recorded at fair value which approximates replacement cost. Inventory items are primarily operating supplies used in the direct or indirect treatment of patients.

Investments and Notes Receivable

The Company accounts for its investments in entities in which the Company does not control under either the cost method or the equity method of accounting in accordance with ASC 321 “Investments – Equity Securities” (“ASC 321”) or ASC 323, “Investments – Equity Method and Joint Ventures” (“ASC 323”), respectively. The Company does not consolidate its cost and equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses or evaluates them for impairment and observable price changes. Refer to Note 8 for further discussion of the Company’s investments.

In June 2016, the Financial Accounting Standards Board issued Accounting Standards Update No. (this “ASU”) 2016-13, Financial Instruments – Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments. This ASU requires entities to report “expected” credit losses on financial instruments and other commitments to extend credit rather than the current “incurred loss” model. These expected credit losses for financial assets held at the reporting date are to be based on historical experience, current conditions, and reasonable and supportable forecasts. This ASU will also require enhanced disclosures relating to significant estimates and judgments used in estimating credit losses, as well as the credit quality. This ASU was effective for the Company beginning January 1, 2023. The Company has adopted this ASU with no material impact to its consolidated financial statements.

Property and Equipment

Purchases of property and equipment are recorded at cost. Property and equipment acquired in connection with business combinations are recorded at estimated fair value in accordance with the acquisition method of accounting as prescribed in ASC 805, “Business Combinations” (“ASC 805”). Routine maintenance and repairs are charged to expense as incurred. Expenditures that increase capacities or extend useful lives are capitalized. Fully depreciated assets are retained in property and equipment accounts until they are disposed. The Company capitalizes interest on funds used to pay for the construction of major capital additions and such interest is included in the cost of each capital addition.

The following table provides information regarding the Company’s property and equipment included in the accompanying consolidated balance sheets as of December 31, 2023 and 2022 (in millions):

	2023	2022
Land	$ 212	$ 180
Buildings and improvements	2,638	2,376
Equipment	1,926	1,751
Construction in progress	212	148
Property and equipment, at cost	4,988	4,455
Accumulated depreciation	(1,602)	(1,339)
Property and equipment, net of accumulated depreciation	$ 3,386	$ 3,116

Depreciation is computed by applying the straight-line method over the estimated useful lives of buildings, improvements and equipment. Assets under capital and finance leases are generally amortized using the straight-line method over the shorter of the estimated useful life of the assets or life of the lease term, excluding any lease renewals, unless the lease renewals are reasonably assured. Capitalized internal-use software costs are amortized over their expected useful life, which is generally four years. Useful lives are as follows:

	Years		
Buildings and improvements (including those under finance leases)	3	-	40
Equipment	2	-	15
Equipment under finance leases	3	-	6

Depreciation expense (including amortization of finance lease obligations) totaled $330 million, $323 million and $344 million for the years ended December 31, 2023, 2022 and 2021, respectively.

Whenever events or changes in circumstances indicate that the carrying values of certain long-lived assets may be impaired, the Company projects the undiscounted cash flows expected to be generated by these assets. If the projections indicate that the reported amounts are not expected to be recovered, such amounts are reduced to their estimated fair value based on a quoted market price, if available, or an estimate based on valuation techniques available in the circumstances. There were no long-lived asset impairments recorded for the years ended December 31, 2023, 2022 and 2021.

Goodwill and Intangible Assets

The Company accounts for its acquisitions in accordance with ASC 805 using the acquisition method of accounting. Goodwill represents the excess of the cost of an acquired entity over the net amounts assigned to assets acquired and liabilities assumed. In accordance with ASC 350, Intangibles – Goodwill and Other ("ASC 350"), goodwill and intangible assets with indefinite lives are reviewed by the Company annually for impairment on October 1. In 2022, the Company was comprised of two distinct reporting units (i) acute hospital operations and (ii) rehabilitation hospital operations. Due to the significance of the Springstone Transaction (as defined under Note 2) and the impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280, "Segment Reporting" ("ASC 280") and ASC 350 during 2023 and determined that the Company is now comprised of three distinct reporting units: (i) acute hospital operations, (ii) rehabilitation hospital operations and (iii) behavioral health operations.

For the annual impairment evaluation, the Company estimates fair values of its reporting units utilizing both a discounted cash flow ("DCF") analysis and a guideline public company ("GPC") analysis considering observable market data of the Company's industry peers. Determining fair value requires the exercise of significant judgment, including judgments about appropriate discount rates, perpetual growth rates, profitability and the amount and timing of expected future cash flows. The significant judgments are typically based upon Level 3 inputs, generally defined as unobservable inputs representing the Company's assumptions. The cash flows employed in the DCF analysis are based on the Company's most recent financial budgets and business plans and, when applicable, various growth rates and profitability for years beyond the current business plan period. Discount rate assumptions are based on an assessment of the risks inherent in the future cash flows of the reporting unit.

The Company's intangible assets primarily relate to contract-based physician minimum revenue guarantees; certificates of need and certificates of need exemptions; and licenses, provider numbers and accreditations. Contract-based physician minimum revenue guarantees are amortized over the terms of the agreements. The certificates of need, certificates of need exemptions, licenses, provider numbers, and accreditations have been determined to have indefinite lives and, accordingly, are not amortized. Refer to Note 4 for further discussion of the Company's goodwill and intangible assets.

Income Taxes

The Company accounts for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in the income tax provision in the period that includes the enactment date. The Company assesses the likelihood that deferred tax assets will be recovered from future taxable income. To the extent the Company believes that recovery is not likely, a valuation allowance is established. The establishment or increase in a valuation allowance is included as an expense within the provision for income taxes in the consolidated statements of operations. The Company classifies interest and penalties related to its tax positions as a component of income tax expense. Refer to Note 5 for further discussion of the Company's accounting for income taxes.

Reserves for Self-Insurance Claims

Given the nature of the Company's operating environment, the Company is subject to potential professional liability claims, employee workers' compensation claims and other claims. To mitigate a portion of this risk, the Company maintains insurance for individual professional liability claims and employee workers' compensation claims exceeding self-insured retention ("SIR") and deductible levels**.** At December 31, 2023, the Company's SIR for professional liability claims is $15 million per claim at the majority of its acute care hospitals. Additionally, the Company participates in state-specific professional liability programs in New Mexico and Pennsylvania. The Company has a $25,000 deductible for professional liability at each of its IRFs and a $100,000 deductible at each of its BHFs. At December 31, 2023, the Company's deductible for workers' compensation claims at each of its acute care and BHFs was $1 million per claim in all states in which it operates except for Montana, Ohio and Washington. The Company participates in state-specific programs for its workers' compensation claims arising in these states. There is no deductible for workers' compensation claims at IRFs. The Company's SIR and deductible levels are evaluated annually as a part of the Company's insurance program's renewal process.

The Company's reserves for self-insurance and deductible claims reflect the current estimate of all outstanding losses, including incurred but not reported losses, based upon actuarial calculations as of the balance sheet date. The loss estimates included in the actuarial calculations may change in the future based upon updated facts and circumstances. The Company's expense for self-insurance and deductible claims coverage each year includes: the actuarially determined estimate of losses for the current year, including claims incurred but not reported; the change in the estimate of losses for prior years based upon actual claims development experience as compared to prior actuarial projections; the insurance premiums for losses in excess of the Company's SIR and deductible levels; and interest expense related to the discounted portion of the liability. The Company's expense for self-insurance and deductible claims was approximately $48 million, $69 million and $86 million for the years ended December 31, 2023, 2022 and 2021, respectively.

The Company's reserves for professional liability claims are based upon quarterly and/or semi-annual actuarial calculations. These reserve calculations consider historical claims data, demographic considerations, severity factors and other actuarial assumptions, which are discounted to present value. The Company's reserves for self-insured claims have been discounted to their present value using a discount rate of 2.0% at December 31, 2023 and 1.8% at December 31, 2022. The Company's management selects a discount rate by considering a risk-free interest rate that corresponds to the period when the self-insured claims are incurred and projected to be paid.

Professional and general liability claims are typically resolved over an extended period of time, often as long as five years or more, while workers' compensation claims are typically resolved in one to two years. Accordingly, the Company's reserves for self-insured claims, comprised of estimated indemnity and expense payments related to reported events and incurred but not reported events as of the end of the period, include both a current and long-term component. The current portion of the Company's reserves for self-insured claims is included under the caption "Other current liabilities" and the long-term portion is included under the caption "Other long-term liabilities" in the accompanying consolidated balance sheets.

The following table provides information regarding the classification of the Company's reserves for self-insured claims at December 31, 2023 and 2022 (in millions):

	2023	2022
Current portion	$ 70	$ 74
Long-term portion	195	219
	$ 265	$ 293

The following table presents the changes in our reserves for self-insured claims for the years ended December 31, 2023 and 2022 (in millions):

	2023	2022
Reserve at the beginning of the period	$ 293	$ 295
Increase for the provision of current year claims	55	65
(Decrease)/Increase for the provision of prior year claims	(5)	5
Payments related to current year claims	(3)	(3)
Payments related to prior year claims	(71)	(72)
Provision for the change in discount rate	(2)	(1)
Non-cash change in reserve for claims in excess of SIR levels	(6)	2
Liabilities assumed in connection with acquisitions	4	2
Reserve at the end of the period	$ 265	$ 293

The combination of changing conditions and the extended time required for claim resolution results in a loss estimation process that requires actuarial skill and the application of judgment, and such estimates require periodic revision. As a result of the variety of factors that must be considered, there is a risk that actual incurred losses may develop differently from estimates. The results of the Company's quarterly and semi-annual actuarial calculations resulted in changes to its reserves for self-insured claims for prior years. As a result, the Company's related self-insured claims expense decreased by $5 million and increased by $5 million for the years ended December 31, 2023 and 2022, respectively.

Point of Life Indemnity, Ltd.

The Company operates, with approval from the Cayman Islands Monetary Authority, a captive insurance company under the name Point of Life Indemnity, Ltd. Through this wholly-owned subsidiary of the Company, the captive insurance company issues malpractice indemnity policies to certain subsidiaries employing physicians and advanced practice providers and contracting with physicians. Fees charged to these subsidiaries are eliminated in consolidation. Reserves for the Company's estimate of the related outstanding claims, including incurred but not reported losses, are actuarially determined and are included as a component of the Company's reserves for professional liability self-insurance claims.

Self-Insured Medical Benefits

The Company is self-insured for substantially all of the eligible medical plan claims of its employees. The reserve for medical benefits primarily reflects the current estimate of incurred but not reported losses based upon an annual actuarial calculation as of the balance sheet date. The undiscounted reserve for self-insured medical benefits was $72 million and $50 million at December 31, 2023 and 2022, respectively, and is included in the Company's accompanying consolidated balance sheets under the caption "Other current liabilities".

Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to the Company. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues, and expenses at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes as a separate component of earnings that portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company. Refer to Note 9 for further discussion of the Company's noncontrolling interests and redeemable noncontrolling interests.

Variable Interest Entities

The Company follows the provisions of ASC 810, "Consolidation" for determining whether an entity is a variable interest entity ("VIE"). In order to determine if the Company is a primary beneficiary of a VIE for financial reporting purposes, it must consider whether it has the power to direct activities of the VIE that most significantly impact the performance of the VIE and whether the Company has the obligation to absorb losses or the right to receive returns that are significant to the VIE. The Company consolidates a VIE when it is the primary beneficiary.

As of December 31, 2023, the Company consolidated 23 acute care hospitals, 36 IRFs, and 19 BHFs that are subject to joint venture agreements. Under GAAP, the Company determined that 9 of its acute care hospitals, 32 of its IRFs and 19 of its BHFs qualify as VIEs, and furthermore, the Company concluded that it is the primary beneficiary in all of the VIEs. The Company holds an ownership interest and acts as manager in each of the partnerships. Through the management services agreement, the Company is delegated necessary responsibilities to provide management services, administrative services and direction of the day-to-day operations. Based upon the Company's assessment of the most significant activities of its acute care hospitals and IRFs, the Company, as manager, has the ability to direct the majority of those activities in all such joint ventures which qualify as VIEs.

The analysis upon which the consolidation determination rests can be complex, can involve uncertainties, and requires judgment on various matters, some of which could be subject to different interpretations.

The Company's consolidated VIEs comprised approximately $2,303 million, or 19.4%, of the Company's total assets and $1,366 million, or 13.2%, of the Company's total liabilities as of December 31, 2023.

Stock-Based Compensation

The Parent has issued profits units (the "Units") to certain employees, directors, consultants and other service providers under the terms and conditions of the Third Amended and Restated Limited Partnership Agreement of the Parent dated May 27, 2022 (as amended, the "Parent Partnership Agreement") and forms of award agreements. The Company accounted for these stock-based awards in accordance with the provisions of ASC 718, "Compensation – Stock Compensation" ("ASC 718"). In accordance with ASC 718, the Company recognized compensation expense based on the estimated grant date fair value of each stock-based award. The Company recognizes forfeitures of Units as they occur. Refer to Note 12 for further discussion of the Company's accounting for the Units.

Defined Benefit Pension Plans

The Company maintains certain assets and assumed certain liabilities associated with two separate defined benefit pension plans covering certain employees at two of its facilities. The Company accounts for its defined benefit pension plans in accordance with ASC 715, "Compensation – Defined Benefit Plans" ("ASC 715"). In accordance with ASC 715, the Company recognizes the unfunded liability of its defined benefit pension plans in the Company's consolidated balance sheets and unrecognized gains (losses) and prior service credits (costs) as changes in other comprehensive income (loss). The measurement date of the defined benefit pension plans' assets and liabilities coincides with the Company's year-end. The Company's pension benefit obligations are measured using actuarial calculations that incorporate discount rates, rate of compensation increases, when applicable, expected long-term returns on plan assets and consider expected age of retirement and mortality. Refer to Note 11 for further discussion of the Company's defined benefit pension plans.

Defined Contribution Plans

During the year ended December 31, 2023, the Company maintained a defined contribution retirement plan covering a majority of its employees. This defined contribution retirement plan contains discretionary matching contribution formulas, as well as definite contribution formulas for employees at certain facilities. Refer to Note 11 for further discussion of the Company's defined contribution plan.

Note 2. Business Development Update

Rehabilitation Expansion

The Company has continued to expand its rehabilitation business since closing the Kindred Transaction (as defined below). Following the transactions described below, as of December 31, 2023, the Company's consolidated inpatient rehabilitation operations include 39 IRFs with approximately 1,900 beds across 19 states.

Everest Operational IRFs Acquisition

On January 24, 2023, a wholly-owned, indirect subsidiary of the Company entered into a definitive agreement with entities affiliated with Everest Rehabilitation Hospitals, LLC ("Everest"), to acquire four IRFs (the "Everest Operational IRFs") located in Arkansas, Texas, and Ohio (the "Everest Operational IRF Transaction") for an aggregate purchase price of approximately $38 million. The closing of the Everest Operational IRF Transaction was consummated on March 1, 2023. Effective September 28, 2023, the Company contributed the Operational IRF located in Rogers, Arkansas to a new joint venture between the Company and Mercy Hospital Northwest Arkansas ("Mercy"). Upon formation of the joint venture, the Company reclassified $11 million of its equity in the facility to noncontrolling interests in the accompanying consolidated statements of equity representing the estimated fair value of Mercy's intangible assets contributed to the joint venture. The Company maintains a controlling interest in the joint venture and has continued to consolidate the facility in the Company's consolidated financial statements.

Everest Developing IRFs Acquisitions

In connection with the closing of the Everest Operational IRF Transaction, certain of the Company's affiliated entities entered into a definitive agreement with entities affiliated with Everest to acquire six IRFs that Everest is currently developing in Texas and Florida (the "Everest Developing IRFs") for an aggregate purchase price of approximately $60 million. The acquisition of the first of the Everest Developing IRFs, located in El Paso, Texas ("El Paso"), was consummated on August 1, 2023. The Company accounted for the acquisition of El Paso in accordance with ASC 805, under the acquisition method of accounting. The fair values of assets acquired and liabilities assumed are on a preliminary basis at December 31, 2023. The Company anticipates closing the acquisition of the remaining five Everest Developing IRFs on a rolling basis beginning in the second quarter of 2024.

De Novo IRFs Openings

During the two years ended December 31, 2023, the Company's consolidated joint ventures have opened six de novo IRFs with approximately 300 beds (which does not include Saint Thomas Rehabilitation Hospital listed below), as summarized below.

Facility Name	Location	Opening Date	Beds
Frazier Rehabilitation Hospital - Brownsboro	Louisville, KY	July 18, 2023	40
UC Davis Rehabilitation Hospital	Sacramento, CA	May 18, 2023	52
Community Rehabilitation Hospital West	Indianapolis, IN	May 16, 2023	40
Dignity Health East Valley Rehabilitation Hospital - Gilbert	Gilbert, AZ	December 21, 2022	40
Mercy Rehabilitation Hospital South	St. Louis, MO	December 6, 2022	50
Saint Thomas Rehabilitation Hospital (a)	Nashville, TN	June 14, 2022	40
Tampa Rehabilitation Hospital	Tampa, FL	May 17, 2022	80

(a) We hold a noncontrolling ownership interest in Saint Thomas Rehabilitation Hospital and have accounted for it as an equity investment in accordance with ASC 323

Behavioral Health Expansion

During the year ended December 31, 2023, the Company significantly expanded its behavioral health presence through the transactions described below. Following such transactions, as of December 31, 2023, the Company's consolidated behavioral health operations include 23 BHFs with approximately 1,700 beds across ten states.

Springstone Transaction

On August 26, 2022, the Company entered into a definitive agreement with (i) entities affiliated with Medical Properties Trust, Inc. ("MPT") and (ii) BH EIK Management, LP, a management company owned by certain members of the executive leadership team ("Springstone Management") of Springstone Health Opco, LLC ("Springstone"), for an affiliate of the Company (the "Lifepoint Member") to acquire a majority ownership interest in Springstone from Springstone Management and to acquire a promissory note issued by Springstone to an affiliate of MPT (the "Springstone Transaction"). Springstone was a national behavioral health provider with 18 BHFs and 37 outpatient locations across nine states. Pursuant to the Springstone Transaction, MPT continued to own the majority of Springstone's real estate locations, subject to an amended and restated master lease between affiliates of MPT and Springstone (the "Springstone Master Lease"), and an affiliate of MPT ("MPT DS") retained a noncontrolling interest in Springstone, subject to a put/call agreement (the "Put/Call Agreement").

The Springstone Transaction was consummated on February 7, 2023, upon which certain of the Company's subsidiaries entered into the Springstone Master Lease, and the Company funded $229 million in cash to complete the transaction. Refer to Note 7 for further discussion of the Springstone Master Lease.

On January 25, 2024, MPT DS delivered to the Lifepoint Member a put option notice pursuant to the Put/Call Agreement, notifying the Lifepoint Member of its exercise of the put right under the Put/Call Agreement. In accordance with the Put/Call Agreement, the Lifepoint Member is obligated to acquire all of the equity interests of Springstone owned by MPT DS. The Company expects to close on the purchase of MPT DS's equity interest in Springstone during the three months ended March 31, 2024 for a purchase price of approximately $12 million, following which the Company will own all of the outstanding equity interests of Springstone.

The Company accounted for the Springstone Transaction in accordance with ASC 805 under the acquisition method of accounting. The following table summarizes the fair values of assets acquired and liabilities assumed on a preliminary basis in connection with the Springstone Transaction (in millions):

Current assets	$	82
Property and equipment, net		481
Right-of-use operating lease assets		13
Goodwill and intangible assets		286
Current liabilities		(53)
Finance lease obligations		(541)
Other long-term debt, net		(23)
Long-term portion of right-of-use operating lease obligations		(11)
Noncontrolling interests and redeemable noncontrolling interests		(5)
Net assets acquired	$	229

Cornerstone El Dorado Transaction

On January 20, 2023, a subsidiary of Knight Health Holdings LLC (d/b/a ScionHealth), a Delaware limited liability company ("ScionHealth"), acquired Cornerstone Healthcare Group Holding, Inc., a Delaware corporation ("Cornerstone"), which operates 15 specialty hospitals, eight senior living locations, and Cornerstone Behavioral Health El Dorado ("El Dorado") (the "Cornerstone Transaction"). Immediately following ScionHealth's acquisition of Cornerstone on January 20, 2023, the Company paid $35 million in cash to acquire El Dorado, a 54-bed BHF located in Tucson, Arizona, from ScionHealth (the "El Dorado Transaction"). The Company accounted for the acquisition of El Dorado in accordance with ASC Subtopic 805-50 "Related Issues" ("ASC 805-50") as a transaction between entities under common control.

In connection with the Cornerstone Transaction and the El Dorado Transaction, the Company entered into a number of transition services agreements ("TSAs") and other ancillary agreements with ScionHealth and its subsidiaries pursuant to which (i) the Company provides certain transition services to ScionHealth to support the businesses acquired by ScionHealth in connection with the Cornerstone Transaction and (ii) ScionHealth provides certain transition services to the Company to support El Dorado.

De Novo BHF Opening

During the year ended December 31, 2023, the Company's consolidated joint venture opened one de novo BHF, as summarized below.

Facility Name	Location	Opening Date	Beds
Valley Springs Behavioral Health Hospital	Holyoke, MA	August 14, 2023	150

Joint Venture for Highpoint Health System

Effective December 1, 2023, the Company formed a new joint venture with an affiliate of Ascension Saint Thomas to expand access to high quality care and services in Northern Middle Tennessee (the "Highpoint Joint Venture"). Pursuant to a contribution agreement between the parties, at the closing the Company contributed its ownership interest in the Highpoint Health System in exchange for a controlling interest in the Highpoint Joint Venture. The Highpoint Health System is a regional health system comprised of Sumner Regional Medical Center, a 167-bed acute care hospital located in Gallatin, Tennessee; Sumner Station Emergency Room and Outpatient Services, a free standing emergency department and outpatient services center located in Gallatin, Tennessee; Trousdale Medical Center, a 25-bed critical access hospital located in Carthage, Tennessee; and Riverview Regional Medical Center, a 25-bed critical access hospital located in Carthage, Tennessee; and more than 15 affiliated clinics and sites of care. Upon formation of the Highpoint Joint Venture, the Company reclassified $22 million of its equity in Highpoint Health System to noncontrolling interests representing the estimated fair value of Ascension Saint Thomas' ownership interest in Highpoint. The Company maintains a controlling interest in Highpoint Health System and has continued to consolidate the facility in the Company's consolidated financial statements.

Kindred Transaction

On June 18, 2021, the Company entered into a securities purchase agreement (the "Kindred Purchase Agreement") for us and/or one or more affiliated assignees to acquire, directly or indirectly, Kindred Healthcare, LLC ("Kindred"), a leading specialty hospital company that operated facilities providing post-acute care, rehabilitation services and behavioral health services throughout the U.S. Upon the closing of the Kindred Transaction on December 23, 2021, a new healthcare company was established operating under the name ScionHealth, which is separate from Lifepoint. The Company acquired the IRF, behavioral health, contract rehabilitation service and certain support center businesses of Kindred, separated and transferred the equity and assets comprising 18 select acute care hospitals to ScionHealth and acquired Class B Units of ScionHealth, with an aggregate value of $350 million, which are perpetual non-convertible, non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends. The Company refers to the foregoing transactions as the "Kindred Transaction." The Company's acquisition of Kindred's inpatient rehabilitation and contract rehabilitation service business (including 28 IRFs with 1,447 beds), behavioral health business (including two BHFs with 96 beds), and certain support center businesses transformed the Company into a more diversified healthcare platform, well-positioned to advance healthcare delivery in communities across the country.

Transition Services Agreements

The Company entered into a number of TSAs and other ancillary agreements with ScionHealth and its subsidiaries. For the years ended December 31, 2023 and 2022, in connection with the TSAs, the Company was reimbursed by ScionHealth for certain costs incurred on its behalf of $47 million and $61 million, respectively, and paid ScionHealth $2 million and $3 million for each period, respectively, for certain costs incurred on the Company's behalf.

Additionally, the Company and ScionHealth are party to a number of commercial services agreements, pursuant to which the Company provides ScionHealth with therapy services, rehabilitation unit and behavioral health unit management, consulting and development services, among other commercial services. For the years ended December 31, 2023 and 2022, the Company recorded revenues related to these commercial services agreements of $63 million and $55 million, respectively.

Lastly, the Company had a net receivable of $124 million and $84 million, respectively, recorded under the caption "Other current assets" in its accompanying consolidated balance sheets at December 31, 2023 and December 31, 2022.

Accounting for the Kindred Transaction

The Company accounted for the Kindred Transaction in accordance with ASC 805-50 as a transaction between entities under common control. In accordance with ASC 805-50, the Company recognized the assets and liabilities transferred in connection with the Kindred Transaction at the common parent's historical cost basis as of December 23, 2021. In accordance with ASC 805-50, combinations of entities under common control requires retrospective adjustment of comparative period financial information for the periods in which the entities were under common control. The Company and the Knight Transferred Business were under common control beginning December 23, 2021, and therefore, the Company has not retrospectively adjusted its previously issued financial statements.

The following tables summarize the impact of the net asset transfers in connection with ScionHealth and the finalized purchase price allocation (in millions):

Net assets transferred from ScionHealth to Lifepoint	$	1,031
Net assets transferred from Lifepoint to ScionHealth		(404)
Cash transferred to ScionHealth from Lifepoint		(929)
Class B Units of ScionHealth transferred to Lifepoint		350
Net equity adjustments related to common control transactions	$	48

	From ScionHealth To Lifepoint	From Lifepoint To ScionHealth
Current assets	$ 198	$ (271)
Property and equipment, net	153	(501)
Other long-term assets	475	(30)
Goodwill and intangible assets	1,095	(121)
Current liabilities	(123)	118
Long-term liabilities	(473)	378
Noncontrolling interests and redeemable noncontrolling interests	(294)	23
Net assets transferred to (from) Lifepoint	$ 1,031	$ (404)

Transaction-Related Costs

During the years ended December 31, 2023, 2022 and 2021, the Company recognized transaction-related costs of $28 million, $46 million and $86 million, respectively. The transaction-related costs recognized during the year ended December 31, 2023, were primarily related to the Springstone Transaction, the Non-Core Real Estate Financing Transaction (as defined under Note 7) and other business development activities. The transaction-related costs recognized during the years ended December 31, 2022 and 2021 were primarily related to the Kindred Transaction, Springstone Transaction and other business development activities. For more information related to the Non-Core Real Estate Financing Transaction, refer to Note 7.

Additional Divestitures

Clark Memorial Hospital and Scott Memorial Hospital

Effective September 29, 2023, the Company sold its 75% equity interest in the joint venture that owned Clark Memorial Hospital (“Clark Memorial”), a 236-bed acute care facility located in Jeffersonville, Indiana, and Scott Memorial Hospital (“Scott Memorial”), a 25-bed acute care facility located in Scottsburg, Indiana, to Norton Healthcare, Inc., the minority owner of such joint venture. The Company received net cash proceeds from the transaction of $37 million, including certain net working capital accounts.

In connection with the divestitures of Clark Memorial and Scott Memorial, the Company recognized a net loss of approximately $10 million, which is included under the caption “Other non-operating losses (gains), net” in the accompanying consolidated statements of operations for the year ended December 31, 2023. The net loss on sale is primarily attributable to the excess of the carrying values of the net assets associated with Clark Memorial and Scott Memorial, including allocated goodwill, over the net proceeds received in the transaction.

Colorado Plains Medical Center and Western Plains Medical Complex

Effective May 1, 2022, the Company sold Colorado Plains Medical Center (“Colorado Plains”), a 50-bed acute care facility located in Fort Morgan, Colorado, and Western Plains Medical Complex (“Western Plains”), a 99-bed acute care facility located in Dodge City, Kansas, to an unrelated third party. The Company received cash proceeds from the Colorado Plains and Western Plains transaction of $135 million, including net working capital, of which $63 million was utilized to settle a finance lease obligation related to Western Plains.

In connection with the sale of Colorado Plains and Western Plains, the Company recognized a net gain of $12 million, which is included under the caption "Other non-operating (gains) losses, net" in the accompanying consolidated statements of operations for the year ended December 31, 2022. The net gain on sale is primarily attributable to transaction proceeds in excess of the book values of the net assets associated with Colorado Plains and Western Plains, partially offset by losses associated with the write-off of allocated goodwill and the termination of a finance lease obligation related to Western Plains.

Providence Health and KershawHealth

Effective August 1, 2021, the Company sold Providence Health, comprised of two hospital campuses located in Columbia, South Carolina, and KershawHealth, located in Camden, South Carolina, to an unrelated third party. The Company received cash proceeds from the transaction of $86 million, including net working capital, a portion of which was utilized to settle a $28 million finance lease obligation related to KershawHealth. Refer to Note 7 for additional information regarding the Company's accounting for leases.

In connection with the divestiture of Providence Health and KershawHealth, the Company recognized a net impairment loss of $42 million during the year ended December 31, 2021, which is included under the caption "Other non-operating (gains) losses, net" in the accompanying consolidated statement of operations for the year ended December 31, 2021. The net impairment loss is primarily attributable to the write-down of property and equipment and allocated goodwill to their estimated fair values, as well as the termination of a finance lease obligation related to KershawHealth.

Capital Medical Center

On December 23, 2020, the Company entered into a definitive agreement with an unrelated third party to sell its majority ownership interest in Capital Medical Center, located in Olympia, Washington. Effective April 1, 2021, the Company sold its ownership interest in Capital Medical Center for cash proceeds of $38 million, including net working capital, in addition to the purchaser's assumption of certain finance lease obligations.

In connection with the Company's divestiture of Capital Medical Center, the Company recognized a net gain on sale of $24 million during the year ended December 31, 2021, which is included under the caption "Other non-operating (gains) losses, net" in the accompanying consolidated statement of operations for the year ended December 31, 2021. The net gain on sale is primarily attributable to the purchaser's assumption of certain finance lease obligations and liabilities, partially offset by the write-off of property and equipment, allocated goodwill, and certain other assets.

Note 3. Long-Term Debt & Lease Obligations

The Company's long-term debt, including current portions and finance lease obligations, consisted of the following at December 31, 2023 and 2022 (in millions):

	2023	2022
ABL Facility	$ 35	$ -
ABL Last-Out Revolving Credit Facility	80	-
Term Loan Facility	1,850	3,215
6.75% Secured Notes	-	600
4.375% Secured Notes	600	600
9.875% Secured Notes	800	-
11.0% Secured Notes	1,100	-
9.75% Unsecured Notes	1,270	1,270
5.375% Unsecured Notes	500	500
Other Secured Debt	20	-
Unamortized debt issuance costs	(132)	(100)
Finance lease obligations	1,380	809
Total debt	$ 7,503	$ 6,894

Maturities of the Company's long-term debt outstanding at December 31, 2023, excluding finance lease obligations and unamortized debt issuance costs, are as follows for the years indicated (in millions):

2024	$	19
2025		18
2026		1,309
2027		618
2028		1,891
Thereafter		2,400
	$	6,255

As described below, effective October 10, 2023, the Company used the net proceeds of the amendment and restatement of the Term Loan Facility in an outstanding principal amount of $1,850 million and the offering of $1,100 million aggregate principal amount of the 11.0% Secured Notes, together with cash on hand, to prepay all $3,015 million of existing term loans then-outstanding under the Term Loan Facility.

ABL Facility

General

As of December 31, 2023, the Company had $35 million in borrowings outstanding under the ABL Facility (as defined below) and approximately $63 million in letters of credit outstanding primarily related to the self-insured retention level of its general and professional liability insurance and workers' compensation programs as security for payment of claims and as security for certain lease agreements. Amounts available for borrowing under the ABL Facility were approximately $682 million as of December 31, 2023.

Effective November 16, 2018, the Company entered into a senior secured asset-based revolving credit facility (as amended from time to time the "ABL Facility") in an aggregate principal amount of $800 million with a maturity of five years. The ABL Facility also includes both a letter of credit sub-facility and a swingline loan sub-facility. In addition, the Company may request one or more incremental revolving commitments in an aggregate principal amount up to the greater of (x) the greater of (i) $255 million and (ii) 0.23 times pro forma Adjusted EBITDA (as defined in this Report) for the most recently available four fiscal quarter periods, and (y) the amount by which the borrowing base exceeds the aggregate commitments under the ABL Facility, subject to certain conditions and receipt of commitments by existing or additional lenders.

On January 27, 2023, the Company entered into an Incremental Assumption and Amendment Agreement No. 2 with certain of the Company's subsidiaries, DSB Acquisition LLC ("Holdings"), the lenders party thereto and Citibank, N.A., as administrative agent, which amended and restated the ABL Facility. The ABL Facility matures on January 27, 2028; provided, that if more than $200 million aggregate principal amount of the Notes or the Term Loan Facility (as defined below) remain outstanding 91 days before the stated maturity thereof, then the ABL Facility will mature and the commitments under the facility will terminate on such date. The ABL Facility continues to provide revolving availability of $800 million, with a $150 million letter of credit sub-facility and a $40 million swingline sub-facility, and under the ABL Facility, the Company continues to have the right to request one or more incremental revolving commitments. Availability under the ABL Facility continues to be subject to a borrowing base that is based on a specified percentage of eligible accounts receivable. Borrowings under the ABL Facility continue to be subject to the satisfaction of customary conditions, including the absence of a default and the accuracy of representations and warranties.

Collateral and Guarantors

The obligations under the ABL Facility are guaranteed by Holdings, on a limited recourse basis and each of the direct and indirect material, wholly-owned domestic subsidiaries of the Company that guaranteed the obligations under the ABL Facility. The obligations are secured by a pledge of the capital stock of the Company and substantially all of their assets and those of each subsidiary guarantor subject to certain exceptions. Such security interests consist of a first-priority lien with respect to "ABL Priority Collateral" (which generally includes most accounts receivable and certain related assets of the Company and the subsidiary guarantors) and a second-priority lien with respect to the "Non-ABL Priority Collateral" (which generally includes most inventory and fixed assets, equity interests and intellectual property of the Company and the subsidiary guarantors). Additionally, certain of the Company's restricted subsidiaries that are not guarantors will pledge certain of their assets (the "Credit Support Party Collateral") on a first-priority basis, as further security of the obligations under the ABL Facility. The Credit Support Party Collateral will secure only the obligations under

the ABL Facility.

Interest Rates and Fees

Prior to the amendment and restatement effective January 27, 2023, as discussed below, borrowings under the ABL Facility bore interest at a rate equal to, at the Company's option, either (a) a London Interbank Offered Rate ("LIBOR") rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an initial applicable margin of 1.75% for LIBOR loans and 0.75% for base rate loans. The applicable margin for borrowings was subject to step-downs based on average availability thresholds.

Effective January 27, 2023, borrowings under the ABL Facility will bear interest at a rate equal to, at the Company's option, either (a) an adjusted term Secured Overnight Financing Rate ("SOFR") for the interest period in effect, subject to a floor of 0.00%, or (b) a base rate determined by the highest of (i) the prime rate in effect, (ii) the federal funds effective rate plus 0.50% and (iii) an adjusted term SOFR with an interest period of one month plus 1.00%, subject to a floor of 1.00%, in each case plus an applicable margin of 1.75% for adjusted term SOFR loans and 0.75% for base rate loans. The applicable margin for borrowings will be subject to step-downs based on average availability thresholds.

The Company is required to pay a commitment fee under the ABL Facility in respect of the unutilized commitments at an initial rate equal to 0.375% per annum. The commitment fee may be subject to one step-down based on the average daily utilization under the ABL Facility. The Company will also be required to pay customary agency fees as well as letter of credit participation fees.

Restrictive Covenants and Other Matters

The ABL Facility contains certain customary affirmative covenants and events of default. The negative covenants in the ABL Facility include, among other things, limitations (none of which are absolute) on the Company and its subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates, enter into sale-leaseback transactions, change their lines of business, restrict dividends from their subsidiaries or restrict liens, change their fiscal year, and modify the terms of certain debt.

The ABL Facility requires that the Company and its restricted subsidiaries maintain a minimum fixed charge coverage ratio of not less than 1.00 to 1.00 at any time when availability is less than an agreed amount.

The ABL Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the ABL Facility are entitled to take various actions, including the acceleration of amounts due under the ABL Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the ABL Facility.

ABL Last-Out Revolving Credit Facility

On September 28, 2023, the Company executed an amendment to the ABL Facility that provided for $80 million in last-out revolving credit commitments (collectively, the "ABL Last-Out Revolving Credit Facility") with a maturity date of January 27, 2028, which were incremental to the $800 million revolving commitments under the ABL Facility. The ABL Last-Out Revolving Credit Facility is required to be drawn before the revolving commitments under the ABL Facility but cannot be repaid if any amount of the revolving commitment under the ABL Facility remains outstanding unless the applicable ABL Last-Out Revolving Credit Facility is permanently reduced and certain other conditions are met. As of December 31, 2023, there was $80 million outstanding under the ABL Last-Out Revolving Credit Facility.

The ABL Last-Out Revolving Credit Facility bears interest at a rate per annum equal to the SOFR rate, adjusted for statutory reserves, plus a margin of 3.75%. Relative to the 4.375% Secured Notes, the 9.875% Secured Notes and the Company's Term Loan Facility, the ABL Last-Out Revolving Credit Facility shares in the guarantee and security interests in respect of the ABL Facility with the same lien priority as any other loans or obligations under the ABL Facility but is junior in right of payment as compared to such other loans and certain obligations under the ABL Facility.

Term Loan Facility

General

Effective November 16, 2018, the Company entered into a senior secured term loan credit facility initially scheduled to mature on November 16, 2025 (the "Term Loan Facility"). The Term Loan Facility had an initial aggregate principal amount of $3,550 million. The aggregate principal amount outstanding as of January 1, 2022 and June 30, 2023 was $3,215 million. On August 14, 2023, the Company made an optional prepayment of $200 million of outstanding borrowings under the Term Loan Facility with a portion of the net proceeds from the offering of $800 million in aggregate principal amount of the 9.875% Secured Notes described below, together with cash on hand. On October 10, 2023, the Company made an optional prepayment of the remaining $3,015 million of outstanding borrowings under the Term Loan Facility with the net proceeds of a $1,850 million new term loan (as described below) and the net proceeds from the offering of $1,100 million in aggregate principal amount of the 11.0% Secured Notes (the "11.0% Secured Notes") together with cash on hand.

Effective October 10, 2023, the Company entered into an Incremental Assumption and Amendment Agreement No. 4, which amended and restated the Term Loan Facility in its entirety to provide for a new senior secured term loan credit facility in an aggregate principal amount of $1,850 million, maturing on November 16, 2028. In addition, the Company may request one or more incremental term commitments in an aggregate principal amount up to the greater of (i) $800 million and (ii) 0.75 times pro forma Adjusted EBITDA for the most recently available four fiscal quarter periods, plus additional amounts subject to certain agreed leverage requirements, certain other conditions and receipt of commitments by existing or additional lenders. The Term Loan Facility has a springing 91-day maturity if more than $150 million aggregate principal amount of the Company's 9.75% Unsecured Notes remain outstanding 91 days before the stated maturity thereof.

Collateral and Guarantors

All obligations under the Term Loan Facility are unconditionally guaranteed by Holdings on a limited recourse basis and each of the existing and future direct and indirect material, wholly-owned domestic subsidiaries of the co-borrowers, subject to certain exceptions. The obligations under the Term Loan Facility are secured by a pledge of the capital stock of the Company and substantially all of its assets and those of each subsidiary guarantor, including a pledge of the capital stock of all entities directly held by the Company and each subsidiary guarantor (which pledge is limited to 65% of the voting capital stock of first-tier foreign subsidiaries), in each case subject to certain exceptions. Such security interests consist of a first-priority lien with respect to the Non-ABL Priority Collateral and a second-priority lien with respect to the ABL Priority Collateral.

Interest Rates and Principal Payments

Prior to the amendment effective June 30, 2023, as discussed below, borrowings under the Term Loan Facility bore interest at a rate equal to, at the Company's option, either (a) a LIBOR rate determined by reference to the costs of funds for Eurodollar deposits for the interest period relevant to such borrowing, adjusted for certain additional costs or (b) a base rate determined by reference to the highest of (i) the federal funds rate plus 0.50%, (ii) the prime rate of Citibank, N.A. and (iii) the one-month adjusted LIBOR plus 1.00%, in each case plus an applicable margin of 3.75% for LIBOR loans and 2.75% for base rate loans.

Effective June 30, 2023, borrowings under the Term Loan Facility bore interest at a rate equal to, at the Company's option, either (a) adjusted SOFR for the interest period in effect, subject to a floor of 0.00%, or (b) a base rate determined by the highest of (i) prime rate in effect, (ii) federal funds effective rate plus 0.50% and (iii) adjusted SOFR for a one-month interest period plus 1.00%, in each case, plus an applicable margin of 3.75% for SOFR loans and 2.75% for base rate loans.

Effective October 10, 2023, borrowings under the Term Loan Facility bore interest at a rate equal to, at the Company's option, either (a) adjusted SOFR for the interest period in effect, subject to a floor of 0.00%, plus an applicable margin of 5.50% or (b) a base rate determined by the highest of (i) prime rate in effect, (ii) federal funds effective rate plus 0.50% and (iii) adjusted SOFR for a one-month interest period plus 1.00%, in each case, plus an applicable margin of 4.50%. Effective October 10, 2023, the Term Loan Facility requires scheduled quarterly amortization payments in an annual amount equal to 1.0% of the original principal amount of the term loans borrowed on such date, with the balance to be paid at maturity. The Term Loan Facility requires the Company to make certain mandatory prepayments, including using (i) a portion of annual excess cash flow, as defined in the Term Loan Facility, (ii) net cash proceeds of certain non-ordinary assets sales or dispositions of property and (iii) net cash proceeds of any issuance or incurrence of debt not permitted under the Term Loan Facility.

Restrictive Covenants and Other Matters

The Term Loan Facility contains certain customary affirmative covenants and events of default. The negative covenants in the Term Loan Facility include, among other things, limitations (none of which are absolute) on the Company and its subsidiaries' ability to incur additional debt or issue certain preferred shares, create liens on certain assets, make certain loans or investments (including acquisitions), pay dividends on or make distributions in respect of their capital stock or make other restricted payments, consolidate, merge, sell or otherwise dispose of all or substantially all of theirs and their restricted subsidiaries' assets, sell certain assets, enter into certain transactions with their affiliates enter into sale-leaseback transactions, change their lines of business, restrict dividends from subsidiaries or restrict liens, change their fiscal year and modify the terms of certain debt or organizational agreements.

The Term Loan Facility contains certain customary events of default, including relating to a change of control. If an event of default occurs, the lenders under the Term Loan Facility are entitled to take various actions, including the acceleration of amounts due under the Term Loan Facility and all actions permitted to be taken by a secured creditor in respect of the collateral securing the Term Loan Facility.

4.375% Secured Notes

On February 13, 2020, the Company completed the offering of $600 million in aggregate principal amount of its 4.375% Secured Notes (the "4.375% Secured Notes"). The 4.375% Secured Notes will mature on February 15, 2027. Interest on the 4.375% Secured Notes will accrue at 4.375% per annum and will be paid semi-annually, in arrears, on February 15 and August 15 of each year, beginning August 15, 2020. The net proceeds from the offering, together with the net proceeds from the Incremental Term Loan and cash on hand, were used to fund the settlement of the tender offer, which satisfied and discharged the Company's obligations as it relates to the 8.25% secured notes due 2023 and the 11.5% secured notes due 2024 and to pay certain fees in connection with the refinancing transactions described herein.

The Company's obligations under the 4.375% Secured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility. The 4.375% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 4.375% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

The Company may redeem the 4.375% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in such indenture (as amended or supplemented from time to time, the "4.375% Secured Notes Indenture").

The 4.375% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 4.375% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 4.375% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 4.375% Secured Notes Indenture also provides for customary events of default.

9.875% Secured Notes

On August 14, 2023, the Company completed the offering of $800 million in aggregate principal amount of its 9.875% Secured Notes (the "9.875% Secured Notes"). The 9.875% Secured Notes will mature on August 15, 2030. Interest on the 9.875% Secured Notes accrues at 9.875% per annum and is paid semi-annually, in arrears, on February 15 and August 15 of each year, beginning February 15, 2024. The net proceeds from the offering of the 9.875% Secured Notes, together with cash on hand, were used to purchase or redeem all $600 million aggregate principal amount of the Company's outstanding 6.75% Secured Notes (the "6.75% Secured Notes"), repay $200 million of outstanding borrowings under the Company's Term Loan Facility and pay related fees and expenses in connection with the 9.875% Secured Notes offering.

The Company's obligations under the 9.875% Secured Notes are fully and unconditionally guaranteed, jointly and severally, by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility and the other Notes. The 9.875% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 9.875% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to August 15, 2026, the Company may redeem the 9.875% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 9.875% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to August 15, 2026, the Company may also redeem up to 40% of the original aggregate principal amount of the 9.875% Secured Notes (calculated after giving effect to any issuance of additional 9.875% Secured Notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 109.875%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 9.875% Secured Notes (calculated after giving effect to any issuance of additional 9.875% Secured Notes) must remain outstanding after each such redemption. On or after August 15, 2026, the Company may redeem the 9.875% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in such indenture (as amended or supplemented from time to time, the "9.875% Secured Notes Indenture").

The 9.875% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 9.875% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 9.875% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 9.875% Secured Notes Indenture also provides for customary events of default.

11.0% Secured Notes

On October 10, 2023, the Company completed the offering of $1,100 million in aggregate principal amount of its 11.0% Secured Notes. The 11.0% Secured Notes will mature on October 15, 2030. Interest on the 11.0% Secured Notes accrues at 11.0% per annum and is paid semi-annually, in arrears, on April 15 and October 15 of each year, beginning April 15, 2024. The net proceeds from the offering of the 11.0% Secured Notes, together with the net proceeds of the amendment and restatement of the Term Loan Facility and cash on hand, were used to repay in full all $3,015 million of outstanding borrowings under the Term Loan Facility and to pay related fees and expenses in connection with the 11.0% Secured Notes offering.

The Company's obligations under the 11.0% Secured Notes are fully and unconditionally guaranteed, jointly and severally, by each of the Company's wholly-owned domestic restricted subsidiaries that guarantee the Term Loan Facility and the other Notes. The 11.0% Secured Notes and the related guarantees are secured obligations of the Company and each subsidiary guarantor. The 11.0% Secured Notes and related guarantees are secured by, subject to permitted liens, (i) first-priority security interests in the Company's Non-ABL Priority Collateral and (ii) second-priority security interests in the Company's ABL Priority Collateral.

Prior to October 15, 2026, the Company may redeem the 11.0% Secured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 11.0% Secured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to October 15, 2026, the Company may also redeem up to 40% of the original aggregate principal amount of the 11.0% Secured Notes (calculated after giving effect to any issuance of additional 11.0% Secured Notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 111.0%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 11.0% Secured Notes (calculated after giving effect to any issuance of additional 11.0% Secured Notes) must remain outstanding after each such redemption. On or after October 15, 2026, the Company may redeem the 11.0% Secured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in such indenture (as amended or supplemented from time to time, the "11.0% Secured Notes Indenture").

The 11.0% Secured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions as described in the 11.0% Secured Notes Indenture. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 11.0% Secured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 11.0% Secured Notes Indenture also provides for customary events of default.

Tender Offer and Redemption of 6.75% Secured Notes

On August 14, 2023, the Company repurchased and cancelled approximately $569 million (or 95%) of the 6.75% Secured Notes pursuant to the Company's previously announced tender offer and consent solicitation. The Company used part of the net proceeds from the 9.875% Secured Notes offering and cash on hand to repurchase such notes. In connection with the tender offer and consent solicitation for the 6.75% Secured Notes, the Company and the trustee for the 6.75% Secured Notes entered into a supplemental indenture to the indenture governing the 6.75% Secured Notes to eliminate substantially all of the restrictive covenants and certain events of default in the indenture governing the 6.75% Secured Notes, release the collateral securing the 6.75% Secured Notes and shorten the required notice period for redemptions of the 6.75% Secured Notes from 30 days to 2 business days.

Shortly following the repurchases of the 6.75% Secured Notes described above, the Company delivered a notice of redemption to redeem the 6.75% Secured Notes not purchased by the Company on the early settlement date for the tender offer. Such 6.75% Secured Notes were redeemed on August 16, 2023 at a redemption price of 101.688% of the principal amount thereof, plus accrued and unpaid interest to the redemption date.

Debt Refinancing Costs

In connection with the offering of the 9.875% Secured Notes, the 11.0% Secured Notes and the Term Loan Facility, the Company capitalized approximately $12 million, $10 million, and $67 million, respectively, of new debt issuance costs, which are included as a reduction to "Long-term debt, net" in the Company's accompanying consolidated balance sheet.

Additionally, during the year ended December 31, 2023, the Company recognized approximately $52 million of debt refinancing costs associated with the various debt refinancing transactions completed during 2023, which are included under the caption "Debt refinancing costs" in the accompanying consolidated statements of operations for the year ended December 31, 2023. These debt refinancing costs were comprised of $11 million of early termination premiums associated with the tender offer and redemption of 6.75% Secured Notes, the write-off of $36 million of previously capitalized debt issuance costs, and $5 million of other miscellaneous costs.

9.75% Unsecured Notes

On November 16, 2018, the Company completed the offering of $1,425 million in aggregate principal amount of 9.75% Unsecured Notes (the "9.75% Unsecured Notes," and together with the 5.375% Unsecured Notes (the "5.375% Unsecured Notes"), 6.75% Secured Notes and the 4.375% Secured Notes, the "Notes"). The 9.75% Unsecured Notes will mature on December 1, 2026. Interest on the 9.75% Unsecured Notes accrues at 9.750% per annum and is paid semi-annually, in arrears, on June 1 and December 1 of each year, beginning June 1, 2019.

The Company's obligations under the 9.75% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 9.75% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

The Company may redeem the 9.75% Unsecured Notes at its option, in whole at any time or in part from time to time, at the redemption prices set forth in such indenture (as amended or supplemented from time to time, the "9.75% Unsecured Notes Indenture").

The 9.75% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. These covenants are subject to a number of important qualifications and exceptions. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 9.75% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 9.75% Unsecured Notes Indenture also provides for customary events of default.

5.375% Unsecured Notes

On December 4, 2020, the Company completed the offering of the 5.375% Unsecured Notes. The 5.375% Unsecured Notes will mature on January 15, 2029. Interest on the 5.375% Unsecured Notes accrues at 5.375% per annum and is paid semi-annually, in arrears, on January 15 and July 15 of each year, beginning July 15, 2021. The net proceeds of the offering, together with cash on hand, were used to prepay $500 million of the total aggregate principal amount outstanding under the Term Loan Facility and to pay related fees and expenses in connection with the offering.

The Company's obligations under the 5.375% Unsecured Notes are fully and unconditionally guaranteed by each of the Company's wholly-owned domestic restricted subsidiaries that guarantees the Term Loan Facility. The 5.375% Unsecured Notes and the related guarantees are unsecured obligations of the Company and the subsidiary guarantors.

Prior to January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at its option, in whole at any time or in part from time to time, at a redemption price equal to 100% of the principal amount of the 5.375% Unsecured Notes redeemed, plus a "make-whole" premium and accrued and unpaid interest, if any. In addition, prior to December 4, 2023, the Company may also redeem up to 40% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) in an aggregate amount not to exceed the amount of net cash proceeds of one or more equity offerings at a redemption price equal to 105.375%, plus accrued and unpaid interest, if any, so long as at least 50% of the original aggregate principal amount of the 5.375% Unsecured Notes (calculated after giving effect to any issuance of additional notes) must remain outstanding after each such redemption. On or after January 15, 2024, the Company may redeem the 5.375% Unsecured Notes at the redemption prices set forth in such indenture (as amended or supplemented from time to time, the "5.375% Unsecured Notes Indenture").

The 5.375% Unsecured Notes Indenture, among other things, limits the Company's ability and the ability of its restricted subsidiaries to, among other things: (i) incur or guarantee additional indebtedness; (ii) pay dividends or distributions on, or redeem or repurchase, capital stock and make other restricted payments; (iii) make certain investments; (iv) consummate certain asset sales; (v) engage in certain transactions with affiliates; (vi) grant or assume certain liens; and (vii) consolidate, merge or transfer all or substantially all of their assets. Additionally, upon the occurrence of specified change of control events, the Company must offer to repurchase the 5.375% Unsecured Notes at 101% of the principal amount, plus accrued and unpaid interest, if any, to, but not including, the purchase date. The 5.375% Unsecured Notes Indenture also provides for customary events of default.

Other Secured Debt

On February 7, 2023, concurrently with the consummation of the Springstone Transaction, certain of the Company's subsidiaries entered into an amended and restated credit agreement with Capital One, N.A. as administrative agent and lender, which provides for a $35 million senior secured asset-based revolving credit facility ("Other Secured Debt") and matures on December 17, 2026. At December 31, 2023, $20 million of Other Secured Debt was outstanding.

Notes Repurchase Program

On June 3, 2022, the Executive Committee of the Board of Directors of the Company authorized the repurchase of up to $200 million aggregate principal amount of the Notes (the "Notes Repurchase Program"). During the year ended December 31, 2022, the Company repurchased $155 million aggregate principal amount of its 9.75% Unsecured Notes for an aggregate repurchase price of $144 million in connection with the Notes Repurchase Program. As of December 31, 2023, the Company had remaining authority to repurchase up to an additional $45 million aggregate principal amount of the Notes in accordance with the Notes Repurchase Program. Future repurchases, if any, under the Notes Repurchase Program will depend on a number of factors, including but not limited to market conditions.

Finance Lease Obligations

Refer to Note 7 for discussion of the Company's finance lease obligations.

Interest Rate Swap Agreement

On December 21, 2018, the Company entered into an interest rate swap agreement with Citibank, N.A. as counterparty (the "Interest Rate Swap") whereby the Company paid a fixed rate of 2.63% on a notional amount of $1,100 million and received one-month LIBOR. The Interest Rate Swap became effective on February 19, 2019 and terminated on February 19, 2022. Refer to Note 10 for additional information regarding the Company's accounting for its Interest Rate Swap.

Note 4. Goodwill and Intangible Assets

Goodwill

The following table presents the changes in the carrying amount of goodwill for the years ended December 31, 2023 and 2022 (in millions):

Balance at January 1, 2022	$	3,914
Additions related to acquisitions		16
Finalization of the purchase price allocation for the Kindred Transaction		(74)
Write-off allocation related to 2022 divestitures		(45)
Balance at December 31, 2022		3,811
Additions related to acquisitions		375
Write-off allocation related to 2023 divestitures		(19)
Balance at December 31, 2023	$	4,167

In 2022, the Company was comprised of two distinct reporting units (i) acute hospital operations and (ii) rehabilitation hospital operations. Due to the significance of the Springstone Transaction and the impact on the Company's management team and business operations, the Company re-evaluated its reporting units in accordance with ASC 280 and ASC 350 during 2023 and determined that the Company is now comprised of three distinct reporting units: (i) acute hospital operations, (ii) rehabilitation hospital operations and (iii) behavioral health operations. For the annual impairment evaluation, the Company estimates fair values of its reporting units utilizing both a DCF analysis and a GPC analysis. The Company did not recognize any goodwill impairment charges during the years ended December 31, 2023, 2022 and 2021.

Intangible Assets

The following table provides information regarding the Company's intangible assets included in the accompanying consolidated balance sheets as of December 31, 2023 and 2022 (in millions):

	2023	2022
Amortizable intangible assets:		
Physician minimum revenue guarantees		
Gross carrying amount	$ 17	$ 21
Accumulated amortization	(9)	(12)
Net total	8	9
Indefinite-lived intangible assets:		
Certificates of need and certificates of need exemptions	27	26
Licenses, provider numbers, and accreditations	48	48
Net total	75	74
Total intangible assets:		
Gross carrying amount	92	95
Accumulated amortization	(9)	(12)
Net total	$ 83	$ 83

Physician Minimum Revenue Guarantees

The Company has committed to provide certain financial assistance pursuant to recruiting agreements, or "physician minimum revenue guarantees," with various physicians practicing in the communities it serves. In consideration for a physician relocating to one of its communities and agreeing to engage in private practice for the benefit of the respective community, the Company may advance certain amounts of money to a physician to assist in establishing his or her practice.

The Company accounts for its physician minimum revenue guarantees in accordance with the provisions of ASC 460, "Guarantees" ("ASC 460"). In accordance with ASC 460, the Company records a contract-based intangible asset and a related guarantee liability for new physician minimum revenue guarantees. The contract-based intangible asset is amortized as a component of other operating expenses, in the accompanying consolidated statements of operations, over the period of the physician contract, which typically ranges from four to five years.

Certificates of Need and Certificates of Need Exemptions

The construction of new facilities, the acquisition or expansion of existing facilities and the addition of new services and certain equipment at the Company's facilities may be subject to state laws that require prior approval by state regulatory agencies. These certificate of need laws generally require that a state agency determine the public need and give approval prior to the construction or acquisition of facilities or the addition of new services. The Company has acquired facilities in certain states that have adopted certificate of need laws. The Company has determined that these intangible assets have an indefinite useful life.

Licenses, Provider Numbers and Accreditations

To operate hospitals, the Company must obtain certain licenses, provider numbers and accreditations from federal, state and other accrediting agencies. The Company has acquired facilities in certain jurisdictions that require licenses, provider numbers and accreditations.

Amortization Expense

Amortization expense for the Company's intangible assets during the years ended December 31, 2023, 2022 and 2021 was $4 million, $5 million and $8 million, respectively.

Total estimated amortization expense for the Company's intangible assets during the next five years are as follows (in millions):

2024	$ 4
2025	2
2026	1
2027	1
	$ 8

Note 5. Income Taxes

The Company recognized a provision for income taxes of $52 million and $100 million for the years ended December 31, 2023 and 2022, respectively, and a benefit from income taxes of $27 million for the year ended December 31, 2021. The provision for income taxes recognized for the years ended December 31, 2023 and 2022 is primarily a result of an increase in the valuation allowance for certain deferred tax assets due to the limitation on the deductibility of interest expense under Section 163(j) of the Code (and the regulations thereunder) and write-offs of goodwill associated with divestitures. The benefit from income taxes recognized for the year ended December 31, 2021 is primarily a result of a reduction in the valuation allowance for certain deferred tax assets, partially offset by limitations on the tax deductibility of interest expense (back to its previous limitation of 30% of adjusted taxable income), stock-based compensation expense, write-offs of goodwill associated with divestitures, and certain transaction and advisory costs recognized during the year ended December 31, 2021.

The provision for (benefit from) income taxes for the years ended December 31, 2023, 2022 and 2021 consisted of the following (in millions):

	2023	2022	2021
Current:			
Federal	$ 46	$ 56	$ 46
State	16	5	5
	62	61	51
Deferred:			
Federal	(115)	(70)	23
State	(31)	1	(7)
	(146)	(69)	16
Change in valuation allowance	136	108	(94)
Total	$ 52	$ 100	$ (27)

The following table reconciles the differences between the statutory federal income tax rate to the Company's effective tax rate on net (loss) income before income taxes and including net income attributable to noncontrolling interests and redeemable noncontrolling interests for the years ended December 31, 2023, 2022 and 2021:

	2023	2022	2021
Federal statutory rate	21.0 %	21.0 %	21.0 %
State income taxes, net of federal income tax benefits	5.9	5.6	(2.6)
Change in valuation allowance	(62.5)	(102.6)	(83.3)
Tax effect of goodwill write-offs and impairments	(1.7)	(8.7)	9.9
Noncontrolling interests and redeemable noncontrolling interests	6.9	12.8	-
State net operating loss carryforward expirations, refunds and rate and state apportionment changes	2.4	(11.2)	-
Taxes payable and deferred tax liability adjustments	5.0	(10.7)	-
Nondeductible acquisition and merger-related costs	-	-	30.2
Other nondeductible expenses and other items	(1.2)	(1.3)	1.1
Effective income tax rate	(24.2) %	(95.1) %	(23.7) %

Deferred income taxes result from temporary differences in the recognition of assets, liabilities, revenues and expenses for financial accounting and tax purposes. Sources of these differences and the related tax effects were as follows as of December 31, 2023 and 2022 (in millions):

	2023	2022
Deferred income tax liabilities:		
Depreciation and amortization	$ (92)	$ (98)
Right-of-use operating lease assets	(68)	(24)
Tax deductible goodwill	(30)	(28)
Investments in partnerships	(85)	(46)
Other	(2)	(6)
Total deferred income tax liabilities	(277)	(202)
Deferred income tax assets:		
Provision for doubtful accounts	56	43
Employee compensation	47	40
Net operating loss carryforwards	109	115
Insurance reserves	78	76
Section 163(j) interest expense carryforward	216	118
Investments in partnerships	59	1
Right-of-use operating lease obligations	68	24
Deferred loss on sale of facilities	21	21
Other	43	50
Total deferred income tax assets	697	488
Valuation allowance	(441)	(305)
Net deferred income tax assets	256	183
Deferred income taxes	$ (21)	$ (19)

Noncurrent deferred income tax liabilities totaled $21 million and $19 million at December 31, 2023 and 2022, respectively, and are included under the caption "Other long-term liabilities" on the accompanying consolidated balance sheets.

As of December 31, 2023, the Company had federal net operating loss carryforwards ("NOLs") of approximately $47 million with an indefinite carryforward period and subject to annual usage limitations under Section 382 of the Internal Revenue Code 1986, as amended (the "Code"). In addition, the Company had state and local NOLs of approximately $2 billion that expire at various dates between 2024 and 2042 or have an indefinite carryforward period.

The Company has established a valuation allowance for deferred tax assets at December 31, 2023 and 2022, due to the uncertainty of realizing these assets in the future. During the years ended December 31, 2023 and 2022, the Company increased its valuation allowance by $136 million and $108 million, respectively, primarily because of the limitation on the deductibility of interest expense under Section 163(j) of the Code.

The Company made federal income tax payments of $25 million, $20 million, and $50 million for the years ended December 31, 2023, 2022 and 2021, respectively. A net refund of federal income taxes previously paid by Legacy Lifepoint Health, Inc. ("Legacy Lifepoint") for the tax year ended December 31, 2013, in the amount of $23 million was received during the year ended December 31, 2021 related to the carryback of the final Legacy Lifepoint federal NOL generated for the year ended November 16. 2018, to the tax year ended December 31, 2013. The Company made net state and local income tax payments in the amount of $12 million, $8 million, and $17 million for the years ended December 31, 2023, 2022 and 2021, respectively.

The Company's policy is to accrue interest and penalties related to potential underpayment of income taxes within the provision for income taxes. Interest is computed on the difference between the Company's uncertain tax benefit positions and the amount deducted or expected to be deducted in our income tax returns. The Company does not expect to incur interest or penalties related to income taxes for the year ended December 31, 2023, and therefore made no increase to its accrual for uncertain tax benefit positions associated with prior years during the year ended December 31, 2023.

The Company files a consolidated U.S. federal income tax return, as well as income tax returns in various state jurisdictions. All of the Company's tax years are subject to examination by the Internal Revenue Service and various state taxing authorities.

Note 6. Other Current Liabilities

The following table provides information regarding the Company's other current liabilities, which are included in the accompanying consolidated balance sheets at December 31, 2023 and 2022 (in millions):

	2023	2022
Accrued interest	$ 138	$ 86
Current portion of right-of-use operating lease obligations	82	71
Current portion of self-insurance reserves	70	74
Self-insured medical benefits liabilities	72	50
Medicaid supplemental payment program provider taxes	53	25
Income taxes payable	33	10
Accrued property taxes	20	24
Accrued expenses and other	213	205
	$ 681	$ 545

Note 7. Leases

Summary

The Company leases real property and equipment under finance and operating leases. The leases expire at various times and have various renewal options. For leases with terms greater than twelve months, the Company records the related assets and obligations at the present value of lease payments over the term. Interest rates used in computing the present value of the lease payments are based on the Company's incremental borrowing rate at the inception of the lease. The Company's lease agreements generally require the Company to pay maintenance, repairs, taxes and insurance costs.

The following table presents certain information related to the Company's lease assets and liabilities at December 31, 2023 and 2022 (dollars in millions):

	Balance Sheet Classification	2023	2022
Assets:			
Finance leases	Property and equipment, net	$ 963	$ 514
Operating leases	Other long-term assets	1,023	638
Total lease assets		$ 1,986	$ 1,152
Liabilities:			
Current:			
Finance leases	Current maturities of long-term debt	$ 37	$ 29
Operating leases	Other current liabilities	82	71
Long-term:			
Finance leases	Long-term debt, net	1,343	780
Operating leases	Other long-term liabilities	952	572
Total lease liabilities		$ 2,414	$ 1,452
Weighted-average remaining term (in years):			
Finance leases		16.2	17.0
Operating leases		11.1	9.7
Weighted-average discount rate:			
Finance leases		10.2 %	9.6 %
Operating leases		9.4 %	7.6 %

The following table presents certain information related to finance and operating lease expense for the years ended December 31, 2023, 2022 and 2021 (in millions):

	Statement of Operations	2023	2022	2021
Finance lease expense:				
Amortization related to lease assets	Depreciation and amortization	$ 64	$ 44	$ 44
Interest related to lease liabilities	Interest expense, net	123	49	82
Operating lease expense	Other operating expenses, net	152	114	76
Short-term, variable and other lease expense	Other operating expenses, net	48	42	45
Total lease expense		$ 387	$ 249	$ 247

The following table presents supplemental cash flow information related to finance and operating leases for the years ended December 31, 2023, 2022 and 2021 (in millions):

	2023	2022	2021
Operating cash flows related to operating leases	$ 190	$ 149	$ 118
Operating cash flows related to finance leases	$ 113	$ 53	$ 79
Financing cash flows related to finance leases	$ 32	$ 34	$ 29

The following table reconciles the undiscounted cash flows to the finance and operating lease obligations included in the consolidated balance sheet at December 31, 2023 (in millions):

	Finance Leases	Operating Leases
2024	$ 158	175
2025	159	164
2026	154	155

Long-term portion of lease obligations	$ 1,343	$ 952

Springstone

Effective February 7, 2023, concurrently with the consummation of the Springstone Transaction, certain of the Company's subsidiaries entered into the Springstone Master Lease with certain affiliates of MPT, with respect to the 18 BHFs acquired. The Springstone Master Lease provides a 20-year term with two optional five-year renewal periods. The Company accounted for the Springstone Master Lease as a finance lease in accordance with ASC 842 and established an initial finance lease obligation of $545 million. Refer to Note 2 for further discussion of the Springstone Transaction.

MPT Lease Modifications

On August 1, 2021, the Company sold KershawHealth, which was subject to the Amended and Restated Master Lease Agreement with certain affiliates of MPT, dated March 21, 2016 (the "Capella Master Lease") and paid $28 million to MPT to terminate its lease obligation associated with KershawHealth. The removal of KershawHealth from the Capella Master Lease triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the reclassification of right-of-use operating lease assets and obligations of $98 million and $106 million, respectively, related to certain other properties subject to the Capella Master Lease, to property and equipment and finance lease obligations of $129 million and $137 million, respectively.

Effective December 23, 2021, the Company terminated the Capella Master Lease, the Amended and Restated Hot Springs Master Lease Agreement with certain affiliates of MPT dated March 21, 2016 and the Master Lease Agreement with certain affiliates of MPT dated December 17, 2019, and certain subsidiaries of the Company entered into a new master lease agreement with certain affiliates of MPT, dated December 23, 2021, with respect to ten of the Company's facilities (the "2021 Master Lease"). The entry into the 2021 Master Lease triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the reclassification of right-of-use operating lease assets and obligations of $61 million and $66 million, respectively, to property and equipment and finance lease obligations of $41 million and $46 million, respectively. All of the facilities subject to the 2021 Master Lease are accounted for as finance leases as of December 31, 2023.

Effective May 1, 2022, the Company sold Western Plains, which was subject to the 2021 Master Lease. In connection therewith, the 2021 Master Lease was amended. The purchase of Western Plains from MPT triggered a lease modification for accounting purposes in accordance with ASC 842, which resulted in the derecognition of a $33 million finance lease obligation related to Western Plains, and the recognition of additional property assets and finance lease obligations of $6 million related to certain other properties subject to the 2021 Master Lease.

Effective December 13, 2022, the 2021 Master Lease was amended to, among other things, provide for a five-year extension and amendment of certain financial covenants. Additionally, as a result of increases in the discount rates associated with the 2021 Master Lease, the Company's finance lease obligations include a non-cash end-of-term deferred gain of $462 million.

Non-Core Real Estate Financing Transaction

Effective September 19, 2023, the Company and certain of its subsidiaries (such subsidiaries, the "Lifepoint OpCos") entered into a Master Transaction Agreement (the "Master Transaction Agreement") with DSB Holdings, Inc., an indirect parent company of Lifepoint ("DSB Holdings"), Realpoint Properties, LLC, a subsidiary of DSB Holdings ("Realpoint"), and certain of Realpoint's subsidiaries (such subsidiaries, the "Realpoint PropCos"). Under the terms of the Master Transaction Agreement, the Lifepoint OpCos contributed to the Realpoint PropCos, by deed or 99-year ground lease as applicable, 36 medical office buildings, one skilled nursing facility and one assisted living facility. In connection with the foregoing transactions contemplated by the Master Transaction Agreement, the applicable Lifepoint OpCos entered into separate triple-net leases for the contributed properties, which have a 15-year term and aggregate initial base rent of approximately $25 million per year, subject to a 3% annual escalator. In addition, in connection with the foregoing transactions, under the Master Transaction Agreement, Realpoint distributed approximately $225 million in cash to the Company, and the Company retained approximately $169 million of Class B preferred interests in Realpoint, having a liquidation preference of approximately $169 million with a 9.5% annual preferred return, and approximately 2% of the outstanding Class A common interests in Realpoint. In addition, the Company entered into asset management agreements with Realpoint or the Realpoint PropCos, as applicable, under which Lifepoint will provide certain administrative and management services to them in exchange for management fees of approximately $0.3 million per year, in the aggregate, subject to a 3% annual escalator. DSB Holdings, the Company and one of its subsidiaries serve as guarantor for each of the triple-net leases, and DSB Holdings and the Company have provided an environmental indemnity and a non-recourse carveout guaranty on Realpoint's financing of the acquisition of the real estate from the Lifepoint OpCos. These transactions are referred to, collectively, as the "Non-Core Real Estate Financing Transaction."

The Company accounted for the Lifepoint OpCos' contributions of $149 million net book value of real property assets to the Realpoint PropCos in accordance with ASC 805-50, as a transaction between entities under common control and accounted for the leases of the properties transferred to the Realpoint PropCos as operating leases under ASC 842. The Company recognized $219 million of right-of-use operating lease assets and right-of-use operating lease obligations under the captions "Right-of-use operating lease assets" and "Long-term portion of right-of-use operating lease obligations", respectively, in its accompanying consolidated balance sheet as of December 31, 2023. The Company accounts for the equity investment in Realpoint under ASC 323 and the carrying value of the Company's investment in Realpoint was $166 million and is included under the caption "Investments" in its accompanying consolidated balance as of December 31, 2023. The Lifepoint OpCos' contributions of real property assets to the Realpoint PropCos and the initial equity investment in Realpoint resulted in a net equity adjustment of $245 million recorded under the caption "Net equity adjustments related to common control transactions" in the Company's accompanying consolidated statements of equity for the year ended December 31, 2023.

Lease Covenants

Certain of the Company's lease agreements, including the 2021 Master Lease and the Springstone Master Lease, contain financial covenants, including required minimum lease coverage and fixed charge coverage ratios. The Company's lease agreements generally include non-financial covenants, which may include those requiring the Company to maintain licenses necessary for operation of a facility or required for certification under Medicare or Medicaid. The failure to comply with or obtain a waiver of such covenants or otherwise cure such non-compliance could result in an event of default under the applicable lease. Certain of the Company's lease agreements, including the 2021 Master Lease and the Springstone Master Lease, are structured as master leases under which certain defaults related to one facility may result in a default on the entire portfolio subject to the applicable master lease agreement.

Note 8. Investments and Notes Receivable

Investments

The Company accounts for its investments in entities in which the Company does not control under either the cost method or the equity method of accounting in accordance with ASC 321 or ASC 323, respectively. The Company does not consolidate its cost and equity method investments, but rather measures them at their initial costs and then subsequently adjusts their carrying values through income for their respective shares of the earnings or losses during the period or evaluates them for impairment and observable price changes. Investment income is included under the caption "Other operating expenses, net" in the accompanying consolidated statements of operations.

The following table presents the changes in the Company's investments during the years ended December 31, 2023 and 2022 (in millions):

Balance at January 1, 2022	$	655
Income [(a)]		102
Contributions		26
Distributions and other [(a)]		(99)
Balance at December 31, 2022		684
Income		57
Contributions [(b)]		397
Net change in other comprehensive income attributable to equity method investment		(7)
Distributions and other [(b)]		(274)
Balance at December 31, 2023	$	857

_____

(a) Includes a gain of approximately $60 million recognized in connection with the receipt of a dividend associated with a cost method investment.

(b) Includes real property contributions of $394 million and cash distributions of $225 million, respectively, related to the Non-Core Real Estate Financing Transaction. The Company retained approximately $169 million of Class B preferred interests in Realpoint.

ScionHealth Class B Units

In connection with the Kindred Transaction during the year ended December 31, 2021, Lifepoint acquired the Class B Units with an aggregate initial value of $350 million. The Class B Units in ScionHealth, a privately held company, do not have a readily determinable fair value, and therefore, the Company has accounted for the Class B Units using the measurement alternative in accordance with ASC 321. The Company's investment in the Class B Units was recorded at $350 million and is included under the caption "Investments" in the accompanying consolidated balance sheets at December 31, 2023 and 2022. The Company noted no observable price changes or transactions between the date of acquisition and December 31, 2023 and did not recognize any impairment charges related to the Class B Units during the years ended December 31, 2023, 2022 and 2021. The Class B Units are perpetual non-convertible, non-voting units that accrue cumulative dividends at the rate of 10.00% per annum and, upon liquidation, are entitled to a return of their nominal value issue price of $350 million plus accrued, unpaid dividends.

Realpoint Investments

In connection with the Non-Core Real Estate Financing Transaction, Lifepoint retained approximately $169 million of Class B preferred interests in Realpoint, having a liquidation preference of approximately $169 million with a 9.5% annual preferred return, and approximately 2% of the outstanding Class A common interests in Realpoint. The Company accounts for its equity investment in Realpoint in accordance with ASC 323. Under ASC 323, the Company recognizes its proportionate share of Realpoint income and loss in its accompanying consolidated statement of operations. The Company recognizes its proportionate share of Realpoint other comprehensive income and loss as an increase or decrease to stockholders' equity through accumulated other comprehensive income (loss). In applying the equity method of accounting, the Company allocates its share of earnings and losses, including other comprehensive income using a hypothetical liquidation at book value method. The Company's investment is reported at cost and adjusted each period for the Company's share of Realpoint income or loss, including other comprehensive income, and dividends paid, if any. For the year ended December 31, 2023, the Company recognized investment income of $4 million included under the caption "Other operating expenses, net" in the accompanying consolidated statement of operations and other comprehensive loss of $7 million included under the caption "Net change in other comprehensive income attributable to equity method investment" in the accompanying consolidated statements of equity. The carrying value of the Company's investment in Realpoint was $166 million and is included under the caption "Investments" in its accompanying consolidated balance sheet as of December 31, 2023. The Company assesses its investment for impairment whenever events or changes in circumstances indicate that the carrying value of an investment may not be recoverable.

Investments Related to Lifepoint Forward Innovation Strategy

In connection with the Lifepoint Forward innovation strategy, the Company made investments of cash and contributions of existing investments and securities into certain unconsolidated but affiliated entities owned by the Company, Parent, ScionHealth and other affiliated entities (collectively, "Forward Health Ventures"). Forward Health Ventures, in turn, makes targeted and strategic investments in new and existing early-stage enterprises primarily focused on developing meaningful solutions to enhance quality, increase access to care, and improve value across our enterprise, including a significant focus on digital health capabilities that span the healthcare continuum. In exchange for the Company's investments of cash and contributions of existing investments and securities, Forward Health Ventures has issued to Lifepoint noncontrolling equity interests and perpetual cumulative preferred instruments. The equity interests in Forward Health Ventures, a privately held company, do not have a readily determinable fair value, and therefore, the Company has accounted for the equity interests using the measurement alternative in accordance with ASC 321. At December 31, 2023 and 2022, in the aggregate, the Company's cost method investment in Forward Health Ventures totaled $54 million and $53 million, respectively. The Company noted no observable price changes or transactions between the date of initial investment and December 31, 2023 and did not recognize any impairment charges related to the investment in Forward Health Ventures during the years ended December 31, 2023, 2022 and 2021. In addition to the cost method investment in Forward Health Ventures, the Company also entered into management and administrative services arrangements with Forward Health Ventures and commercial arrangements with certain underlying early-stage enterprises, including pilot and services agreements and a revolving credit facility that the Company provides to one of these enterprises. The revolving credit facility provides for loans up to approximately $15 million, has a 5-year maturity (or earlier upon our demand) and bears interest at 9.00%. At December 31, 2023, $14 million was drawn and outstanding.

Notes Receivable

On March 10, 2022, certain of the Company's subsidiaries invested approximately $47 million for an aggregate $50 million principal amount of ScionHealth's senior secured term loan (the "Term Loan Note Receivable"). The Term Loan Note Receivable matures on December 23, 2028 and bears interest at a rate equal to, at ScionHealth's option, (a) a eurocurrency rate plus an applicable margin of 5.25% or (b) a base rate plus an applicable margin of 4.25%. The Company has accounted for the Term Loan Note Receivable in accordance with ASC 310, "Receivables". As of December 31, 2023, the Term Loan Note Receivable had a carrying value of approximately $46 million and is included under the caption "Other long-term assets" on the Company's accompanying consolidated balance sheet.

Note 9. Noncontrolling Interests and Redeemable Noncontrolling Interests

Noncontrolling Interests

Noncontrolling interests represent the portion of equity in a subsidiary not attributable, directly or indirectly, to a parent. The Company's accompanying consolidated financial statements include all assets, liabilities, revenues and expenses of consolidated subsidiaries at their consolidated amounts, which include the amounts attributable to the Company and the noncontrolling interest. The Company recognizes the portion of income or loss attributable to noncontrolling interests based on the portion of the entity not owned by the Company as a separate component within equity and earnings.

The following table presents the changes in the Company's noncontrolling interests during the years ended December 31, 2023 and 2022 (in millions):

Balance at January 1, 2022	$	351
Net income attributable to noncontrolling interests		65
Cash distributions, net of contributions		(84)
Finalization of the purchase price allocations for the Kindred Transaction		(24)
Non-cash contributions from joint venture partners		17
Balance at December 31, 2022		325
Net income attributable to noncontrolling interests		67
Cash distributions, net of contributions		(57)
Non-cash contributions from joint venture partners		34
Reclassification of equity to noncontrolling interests related to joint venture activity		14
Net impact to noncontrolling interests related to acquisitions and divestitures		(14)
Balance at December 31, 2023	$	369

Redeemable Noncontrolling Interests

Certain of the Company's noncontrolling interests include redemption features that cause these interests not to meet the requirements for classification as equity in accordance with ASC 480-10-S99-3, "Distinguishing Liabilities from Equity." Redemption features related to these interests could require the Company to deliver cash, if exercised. Accordingly, these redeemable noncontrolling interests are classified in the mezzanine section of the Company's accompanying consolidated balance sheets under the caption "Redeemable noncontrolling interests." Changes in the fair value of the Company's redeemable noncontrolling interests are recognized as adjustments to consolidated stockholders' equity.

The following table presents the changes in the Company's redeemable noncontrolling interests during the years ended December 31, 2023 and 2022 (in millions):

Balance at January 1, 2022	$	139
Net income attributable to redeemable noncontrolling interests		1
Sale of redeemable noncontrolling interest units		5
Distributions and repurchases		(5)
Fair value adjustments		3
Balance at December 31, 2022		143
Net income attributable to redeemable noncontrolling interests		(1)
Redeemable noncontrolling interests recognized in connection with the Springstone Transaction		4
Distributions and repurchases		(15)
Fair value adjustments		12
Balance at December 31, 2023	$	143

Note 10. Fair Value of Financial Instruments

Fair Value Hierarchy

Fair value is a market-based measurement, not an entity-specific measurement. Therefore, a fair value measurement should be determined based on the assumptions that market participants would use in pricing the asset or liability. As a basis for considering market participant assumptions in fair value measurements, the Company utilizes the fair value hierarchy pursuant to ASC 820, "Fair Value Measurements and Disclosures" ("ASC 820") that distinguishes between market participant assumptions based on market data obtained from sources independent of the reporting entity (observable inputs that are classified within Levels 1 and 2 of the hierarchy) and the reporting entity's own assumption about market participant assumptions (unobservable inputs classified within Level 3 of the hierarchy).

The inputs used to measure fair value are classified into the following fair value hierarchy:

Level 1: Quoted market prices in active markets for identical assets or liabilities.
Level 2: Observable market-based inputs or unobservable inputs that are corroborated by market data.
Level 3: Unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Level 3 includes values determined using pricing models, discounted cash flow methodologies, or similar techniques reflecting the Company's own assumptions.

In instances where the determination of the fair value hierarchy measurement is based on inputs from different levels of the fair value hierarchy, the level in the fair value hierarchy within which the entire fair value measurement falls is based on the lowest level input that is significant to the fair value measurement in its entirety. The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment of factors specific to the asset or liability.

Cash and Cash Equivalents, Accounts Receivable, Accounts Payable and Other Current Liabilities

The carrying amounts reported in the accompanying consolidated balance sheets for cash and cash equivalents, accounts receivable, accounts payable and other current liabilities approximate fair value because of the short-term nature of these instruments.

Long-Term Debt

The carrying amounts and fair values of the Company's long-term debt instruments, excluding unamortized debt issuance costs, as of December 31, 2023 and December 31, 2022 were as follows (in millions):

	Carrying Amount		Fair Value	
	December 31, 2023	December 31, 2022	December 31, 2023	December 31, 2022
ABL Facility	$ 35	$ -	$ 35	$ -
ABL Last-Out Revolving Credit Facility	$ 80	$ -	$ 80	$ -
Term Loan Facility	$ 1,850	$ 3,215	$ 1,843	$ 3,014
6.75% Secured Notes	$ -	$ 600	$ -	$ 563
4.375% Secured Notes	$ 600	$ 600	$ 554	$ 506
9.875% Secured Notes	$ 800	$ -	$ 808	$ -
11.0% Secured Notes	$ 1,100	$ -	$ 1,159	$ -
9.75% Unsecured Notes	$ 1,270	$ 1,270	$ 1,257	$ 1,024
5.375% Unsecured Notes	$ 500	$ 500	$ 368	$ 281
Other Secured Debt	$ 20	$ -	$ 20	$ -

The fair values of the Company's long-term debt instruments were estimated based on the average bid and ask price as determined using published rates and categorized as Level 2 within the fair value hierarchy in accordance with ASC 820.

Interest Rate Swap

The Company measured its Interest Rate Swap at fair value on a recurring basis. The fair value of the Company's Interest Rate Swap was based on quotes from its counterparty. The Company considers those inputs to be Level 2 in the fair value hierarchy.

The Company did not designate its Interest Rate Swap as a cash flow hedge in accordance with ASC 815, "Derivatives and Hedging." Accordingly, all changes in the fair value of the Company's Interest Rate Swap were recognized through interest expense in its statements of operations. The Company recognized non-cash interest income of $4 million and $27 million during the years ended December 31, 2022 and 2021, respectively, related to changes in the fair value of its Interest Rate Swap. The Interest Rate Swap terminated on February 19, 2022.

Financial Liabilities

The Company has a contingent consideration liability payable to the former owners of Canyon Vista Medical Center ("Canyon Vista") that represents the Level 3 estimated fair value of the contingent consideration using unobservable inputs and assumptions available to the Company. The key assumptions used in estimating the fair value of the Canyon Vista contingent consideration liability are the range of probabilities that the payments will be earned by the seller and a discount rate adjusted for the Company's credit risk.

At December 31, 2023 and 2022, the Canyon Vista contingent consideration liability was recorded at an estimated fair value of $11 million and $12 million, respectively, of which $1 million is included under the caption "Other current liabilities" at December 31, 2023 and 2022, and $10 million and $11 million, respectively, is included under the caption "Other long-term liabilities" in the Company's accompanying consolidated balance sheets. For the year ended December 31, 2022, the Company recognized a non-cash gain of $4 million, related to the change in the estimated fair value of the Canyon Vista contingent consideration liability, which is included under the caption "Other non-operating losses, net" on the accompanying consolidated statement of operations.

Note 11. Employee Benefit Plans

Defined Benefit Pension Plans

The Company maintains certain assets and assumed certain liabilities associated with two separate defined benefit pension plans (i) associated with certain employees of Marquette General Hospital covered by a collective bargaining agreement (the "Marquette Pension Plan") and (ii) associated with certain non-union employees of Bell Hospital (the "Bell Pension Plan" and, collectively with the Marquette Pension Plan, the "Pension Plans"). Both Pension Plans are closed to new participants. Participants in the Marquette Pension Plan are required to make annual contributions totaling 6% of annual compensation to the Marquette Pension Plan to continue accruing benefits. Participants in the Bell Pension Plan no longer accrue benefits. The Company makes contributions to the Pension Plans sufficient to meet its minimum funding requirements as prescribed by the Employee Retirement Income Security Act of 1974, as amended.

Status and Expense

The following table presents the changes in the benefit obligations and plan assets of the Pension Plans during the years ended December 31, 2023 and 2022 and the unfunded liability of the Pension Plans at December 31, 2023 and 2022 (in millions):

	2023	2022
Change in benefit obligations:		
Benefit obligations at beginning of year	$ 55	$ 73
Service costs	-	1
Interest costs	3	2
Actuarial loss (gain)	3	(19)
Benefits paid	(3)	(2)
Benefit obligations at end of year	58	55
Change in plan assets:		
Fair value of plan assets at beginning of year	47	59
Actual return on plan assets	7	(11)
Employer contributions	-	1
Benefits and expenses paid	(3)	(2)
Fair value of plan assets at end of year	51	47
Unfunded pension benefit obligations	$ 7	$ 8

The Company recognizes changes in the funded status of the Pension Plans as a direct increase or decrease to stockholders' equity through accumulated other comprehensive income (loss). For the years ended December 31, 2023 and 2022, the Company recognized comprehensive gains that were nominal and $4 million, respectively, as an increase in equity. These adjustments were primarily related to changes in the Company's unfunded pension liability due to changes in the discount rates and mortality assumptions used to measure the projected benefit obligation.

The following table summarizes the weighted-average assumptions used by the Company to determine its benefit obligations as of December 31, 2023 and 2022 (in millions):

	2023	2022
Discount rate	4.9 %	5.1 %
Rate of compensation increases, when applicable	3.0 %	3.0 %

Plan Assets

At December 31, 2023, the Pension Plans' investments include a balance of mutual funds and money market funds in order to achieve an overall rate of return that minimizes the need for additional employer contributions. The Company measures the fair value of its Pension Plans' assets in accordance with ASC 820. The Pension Plans' investments in mutual funds are valued at the net asset value ("NAV") of shares reported in the active market in which the funds are traded. Because quoted prices are available for mutual funds and the markets in which they are traded are generally considered active, the Company has classified each of them as a Level 1 investment. The Pension Plans' investments in money market funds are valued at quoted prices in markets that are not active by a combination of inputs, including but not limited to dealer quotes who are market makers in the underlying funds and other directly and indirectly observable inputs. Because the inputs used to value money market funds are either directly or indirectly observable, but are not quoted prices in active markets, the Company has classified these assets as Level 2 investments. The Pension Plans' investments in pooled, common and collective funds are valued at the NAV of shares owned based on the readily determinable quoted market price that each fund publishes at the end of each day. While the underlying assets are actively traded on an exchange, the pooled, common and collective funds are not and, therefore, the Company has not classified these assets in the fair value hierarchy. No investment is classified as Level 3 as of December 31, 2023 and 2022.

The following table summarizes the assets of the Pension Plans, measured at fair value as of December 31, 2023 and 2022, by major asset category and aggregated by level within the fair value hierarchy (in millions):

	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	NAV
December 31, 2023:				
Mutual funds	$ 35	$ 35	$ -	$ -
Money market funds	1	-	1	-
Pooled, Common and Collective Funds	15	-	-	15
Total	$ 51	$ 35	$ 1	$ 15
December 31, 2022:				
Mutual funds	$ 32	$ 32	$ -	$ -
Money market funds	1	-	1	-
Pooled, Common and Collective Funds	14	-	-	14
Total	$ 47	$ 32	$ 1	$ -

The Company expects to make nominal contributions to the Pension Plans during the year ended December 31, 2024. Additionally, the Company expects to make future benefit payments from the Pension Plans as follows for the years indicated (in millions):

2024	$ 3
2025	3
2026	3
2027	4
2028	4
Five years thereafter	19
	$ 36

Multiemployer Pension Plan

The Company has the obligation to contribute to a multiemployer pension plan on behalf of certain employees covered by collective bargaining agreements, in accordance with the terms of such collective bargaining agreements. The Company's contributions to the multiemployer pension plan are determined based on the terms of the applicable collective bargaining agreements. Multiemployer plans are different from single-employer plans because assets contributed to the multiemployer plan by one employer may be used to provide benefits to employees of other participating employers. Also, if a participating employer stops contributing to the plan, the unfunded obligations of the plan may be borne by the remaining participating employers. If the Company stops participating in the multiemployer plan, the Company may be required to pay a withdrawal liability based on its portion of the unfunded status of the plan. Currently, the Company does not anticipate ending its participation in this plan.

Defined Contribution Plans

During the year ended December 31, 2023, the Company maintained a defined contribution retirement plan covering a majority of its employees. This defined contribution plans contains discretionary matching contribution formulas and definite non-elective contribution formulas for employees at certain facilities. The Company's expense related to its defined contribution plans was $31 million, $28 million and $30 million for the years ended December 31, 2023, 2022 and 2021, respectively.

Deferred Compensation Plans

The Company maintains supplemental deferred compensation plans with respect to certain of its employees and affiliated physicians. As of December 31, 2023 and 2022, the assets associated with these deferred compensation plans were $51 million and $45 million, respectively, and the liabilities were $64 million and $56 million, respectively. These amounts are included under the captions "Other long-term assets" and "Other long-term liabilities", respectively, on the accompanying consolidated balance sheets at December 31, 2023 and 2022.

Note 12. Stock-Based Compensation

The Parent is authorized to issue Units to employees, executives, directors, and other service providers of the Company, under the terms and conditions of the Parent Partnership Agreement. The Company has determined that the Units are a substantive class of members' equity for accounting purposes because the Units are legal equity of the Parent, they have participation features, including distribution and liquidation rights, which allow them to participate in the residual returns of the Parent, and vested interests are retained upon termination, subject to certain repurchase rights. As a result, these awards are accounted for under ASC 718.

In June 2021, certain affiliates of the Parent completed the sale of the Parent, including the Company and its subsidiaries, to other affiliates of the Parent (the "Parent Transaction"). Following the Parent Transaction, the Company continues to be owned by affiliates of the Parent and the transaction had no business or operational impact on the Company. However, in connection with the Parent Transaction, all unvested and outstanding Units held by certain current employees, executives, and directors of the Company became vested. The Company has accounted for this event as a modification in accordance with ASC 718 and recognized additional stock-based compensation expense of $112 million during the nine months ended September 30, 2021 related to the modification and accelerated vesting of such Units. Additionally, for the nine months ended September 30, 2021, the Company made cash distributions to the Parent of $93 million to partially fund the Parent's repurchase of certain previously issued Units and capital units, primarily held by certain former employees, as well as certain current employees, executives, and directors of the Company.

Following the Parent Transaction, on June 25, 2021, an aggregate of 20,775,000 Units were granted to certain executives and employees of the Company under the Parent Partnership Agreement and a newly adopted equity incentive plan and an additional 1,000,000 Units were granted on September 28, 2021. Approximately 2,800,000 Units were granted in 2022 to certain executives, directors, and certain of our employees and our affiliates' employees.

Service Units

Service Units of Parent ("Service Units") have been granted to certain members of the Company's Board of Directors (the "Board"), and Tranche A Units of Parent ("Tranche A Units") have been granted to certain of our employees and executives and certain of our affiliates' employees. Service Units vest on a time-basis only, on the date that is the earliest of (i) six months and one day following grant date or (ii) the date of the applicable director's termination of service due to death, disability or as a result of the director's removal from the Board other than for cause. Tranche A Units vest in equal installments on the last day of each of the first twenty calendar quarters that commence on or after the grant date, subject to continued service. Service Units and Tranche A Units will automatically vest upon the sale of the Company. In the event of an initial public offering, all unvested Service Units and Tranche A Units will remain outstanding and continue to vest based on the stated vesting pattern. Unvested Service Units and Tranche A Units are forfeited upon a holder's termination of service. As of December 31, 2023, there were approximately 7.9 million outstanding Service Units, approximately 4.7 million of which are unvested.
